7449 **1936 Wisconsin MS68 NGC.** Essentially silver interiors give way to border hues, primarily canary-yellow but with stark arcs of claret at upper obverse and lower reverse. Impressively smooth and carefully preserved, this MS68 survivor is tied for numerically finest in the combined certified population (9/11). (#9447)

7450 **Five-Piece Set of York Half Dollars With Display Card.** All five coins have varying levels of gold and crimson patina; two are graded **MS66 PCGS** and three **MS65 PCGS.** Also included with this lot is a five-coin display card from York National Bank of Saco, Maine.(Total: 5 coins)(#9449)

## COMMEMORATIVE GOLD

7451 **1903 Louisiana Purchase/Jefferson MS65 PCGS.** Orange and mint-green compete for space on this Gem Jefferson gold dollar, the first commemorative gold dollar along with its McKinley counterpart. The surfaces are relatively unmarked for the grade and quite attractive.(#7443)

7452 **1903 Louisiana Purchase/Jefferson MS66 PCGS. CAC.** Gleaming yellow-gold luster takes on occasional sun-orange aspects. A finely detailed Premium Gem with a single copper spot just off the bridge of Jefferson's nose.(#7443)

### 1903 Louisiana Purchase Gold Dollar, MS67
### Popular Jefferson Design

7453 **1903 Louisiana Purchase/Jefferson MS67 PCGS. CAC.** The 1903 Louisiana Purchase gold dollars enjoyed a business-strike distribution of 35,000 pieces, evenly split between the Jefferson and McKinley types. This spectacular Superb Gem represents the Jefferson design, with razor-sharp design elements and vibrant mint luster over vivid orange-gold and lemon-yellow surfaces. Population: 72 in 67, 0 finer (12/11).
*From The Jim O'Neal Gold Type Collection.* (#7443)

7454 **1903 Louisiana Purchase/McKinley MS65 ANACS.** Well-defined and frosty. This Gem is predominantly yellow-gold but has a number of reddish copper spots along the borders. Housed in a small-format holder.(#7444)

### Superb Gem 1903 Louisiana Purchase Dollar McKinley Design

**7455 1903 Louisiana Purchase/McKinley MS67 NGC.** The 1903 McKinley gold dollar enjoyed the same 17,500 piece distribution figure as its Jefferson counterpart, both issues commemorating the centennial of the Louisiana Purchase. This delightful Superb Gem is sharply detailed throughout, with vibrant mint luster and no mentionable distractions. (#7444)

### 1903 McKinley Portrait Gold Dollar, MS67 Only Four Finer at NGC

**7456 1903 Louisiana Purchase/McKinley MS67 NGC.** A stunning Superb Gem, this McKinley portrait commemorative gold dollar exhibits frosty luster with rich yellow surfaces. The obverse has considerable pale mint toning with splashes of light blue on the reverse. NGC has only certified four finer examples of this variety (11/11).
*From The Stephen L. Schechter Collection.* (#7444)

### 1903 Louisiana Purchase Gold Dollar, MS67 McKinley Variant

**7457 1903 Louisiana Purchase/McKinley MS67 PCGS. CAC.** Certainly in the upper echelon of Mint State survivors, this Superb example is struck with the exactness of detail that is nearly expected of the issue and boasts satiny surfaces of impeccable quality. Even close inspection fails to provide a mentionable disturbance. Population: 76 in 67, 1 finer (12/11). (#7444)

**7458 1904 Lewis and Clark MS62 PCGS.** Variegated color characterizes the appearance on both sides of this attractive Lewis and Clark. The centers (portraits) on each side show a distinctive lilac appearance with deeper reddish-gold elsewhere. Lightly abraded.(#7447)

### Near-Gem 1904 Lewis and Clark Gold Dollar

**7459 1904 Lewis and Clark MS64 NGC.** Rich yellow-gold luster with occasional orange aspects. Excellent detail through the portraits' hair and a pleasing near-Gem example of this first Lewis and Clark gold dollar issue. Though dated 1904, the year of the St. Louis Exposition, the Lewis and Clark issue was intended for the Portland, Oregon Exposition, held in 1905. (#7447)

### 1904 Lewis and Clark Dollar, MS64

**7460 1904 Lewis and Clark MS64 PCGS.** The 1904 Lewis and Clark gold dollars are far more elusive in the higher Mint State grades than their earlier counterparts, the 1903-dated Louisiana Purchase-McKinley and Jefferson issues. This near-Gem boasts high-end appeal for the grade, with lovely, deep mellow orange-gold coloration in the fields and daubs of hazel on the high points. Certified in a green-label holder. (#7447)

### 1904 Lewis and Clark Gold Dollar, MS64 Attractive Color and Luster

**7461 1904 Lewis and Clark MS64 NGC. CAC.** Lemon-yellow hues complement attractive luster on each side of the near-Gem 1904 Lewis and Clark. The Native American guide and interpreter Sacagawea accompanied Meriwether Lewis and William Clark thousands of miles from North Dakota to the Pacific Ocean in 1804 through 1806, but she had to wait nearly another 100 years after the gold dollars were issued for a numismatic commemoration. (#7447)

### 1904 Lewis and Clark Dollar, MS65 Well Struck

7462 **1904 Lewis and Clark MS65 PCGS.** The 1904 commemorative gold dollar (and its 1905-dated companion) commemorated the Lewis and Clark expedition of 1804 to 1806. The peach-gold surfaces of this Gem display pleasing luster. Both sides reveal isolated areas of "orange-peel" effect, and each exhibits well struck design elements. No post-strike blemishes are readily evident. (#7447)

### MS65+ 1904 Gold Dollar Lewis and Clark Exposition

7463 **1904 Lewis and Clark MS65+ NGC.** Attractively toned with light sea-green borders and canary-gold fields and devices. The strike is essentially full, and neither side displays any detectable detractions. Although this coin is dated 1904, the Lewis-Clark Exposition was held the following year. (#7447)

### Toned MS66 1904 Lewis and Clark Gold Dollar

7464 **1904 Lewis and Clark MS66 PCGS.** The 1904-05 Lewis and Clark gold dollar issues followed hard on the heels of the 1903 Louisiana Purchase coins, the first U.S. gold commemoratives. Hazel, orange, and mint-green hues grace each side of this marvelous Premium Gem example, surpassed in grade by only 16 submissions at PCGS (12/11). (#7447)

### Unabraded MS66+ 1904 Lewis and Clark Dollar

7465 **1904 Lewis and Clark MS66+ NGC.** Glimpses of mint-green and orange-gold alternate on the unabraded surfaces of this Premium Gem Lewis and Clark 1904 gold dollar. Even under a loupe, there are no mentionable distractions, but it does confirm the excellent strike and broad eye appeal. Census: 2 in 66+, 23 finer (11/11). (#7447)

7466 **1905 Lewis and Clark MS62 PCGS.** Saturated yellow-gold luster has considerable reflectivity. The plastic over the obverse shows a scratch that should not be interpreted as damage to the coin, though abrasions are present in the right reverse field. (#7448)

### Choice 1905 Lewis and Clark Gold Dollar Second Year of Type

7467 **1905 Lewis and Clark MS64 NGC.** Semireflective luster through saturated yellow-gold fields. This second-year Lewis and Clark gold dollar is softly struck on the portraits but clearly unworn. In the initial years of the classic commemorative series, more gold dollars were issued than silver half dollars. (#7448)

### Choice 1905 Lewis and Clark Gold Dollar Key to the Commemorative Gold Series

7468 **1905 Lewis and Clark MS64 NGC.** Although the 1905 Lewis and Clark gold dollar enjoyed roughly the same distribution figure as its 1904 counterpart (about 10,000 pieces each), it is considerably harder to locate in today's market. This attractive Choice example is well-detailed and lustrous, with pleasing yellow-gold surfaces. (#7448)

## 1905 Lewis and Clark Gold Dollar, MS65

**7469** **1905 Lewis and Clark MS65 NGC.** The 1905 is the second and scarcer issue in this two-coin set of commemorative gold pieces. This is a lovely, upper-end example that is remarkably free from abrasions. The surfaces show soft mint frost that has reddish-gold and lilac intermingled over each side. As often seen, there is a bit of metal flow around the peripheral legends. (#7448)

**7470** **1915-S Panama-Pacific Gold Dollar MS66 PCGS.** Orange and peach overtones lace this lovely Premium Gem Panama-Pacific gold dollar. Softly sweeping luster enlivens carefully preserved surfaces.(#7449)

**7471** **1915-S Panama-Pacific Gold Dollar MS66 NGC.** Frosty butter-yellow luster shows elements of orange. This pleasingly detailed Premium Gem has a single small copper spot in the middle of the lower dolphin's body.(#7449)

**7472** **1915-S Panama-Pacific Quarter Eagle — Improperly Cleaned — NGC Details. AU.** This Panama-Pacific quarter eagle likely served as a pocket-piece, as suggested by the lightly rubbed and "shiny" surfaces. Readily collectible despite a handful of pinscratches around Columbia's figure.(#7450)

**7473** **1915-S Panama-Pacific Quarter Eagle AU58 PCGS.** Just the slightest luster is missing from the high points of the design, while the fields retain almost complete mint frost. Lightly abraded. The deep orange-gold surfaces are surrounded by reddish patina at the margins.(#7450)

## 1915-S Pan-Pac Quarter Eagle, MS63
## Deep Orange-Red, Attractive Surfaces

**7474** **1915-S Panama-Pacific Quarter Eagle MS63 PCGS.** The hybrid design is half Charles Barber and half George T. Morgan, although many collectors find the obverse design more original and appealing. This was the first gold quarter eagle commemorative, one of a series for the important 1915 exposition in San Francisco. This piece displays deep orange-red color with a tinge of hazel. The surfaces are suggestive of a higher grade except for a few minor ticks. (#7450)

## 1915-S Panama-Pacific Two and a Half, MS63
## Vibrant Mint Luster, Vivid Color

**7475** **1915-S Panama-Pacific Quarter Eagle MS63 NGC.** A sharply detailed Select specimen of the 1915-S Panama-Pacific quarter eagle, from a small distribution of only 6,749 pieces. This light yellow-gold example is brightly lustrous, with a few minor contact marks, and excellent eye appeal. The coins were sold singly and as part of a five-coin set. (#7450)

## Near-Gem 1915-S Two and a Half
## Panama-Pacific Exposition

**7476** **1915-S Panama-Pacific Quarter Eagle MS64 PCGS.** Peach-gold toning dominates although olive-green hues are also present. Satiny and intricately struck with mark-free surfaces save for a single faint hairline noted beneath the eagle's neck. Housed in a green label holder. (#7450)

## 1915-S Panama-Pacific Quarter Eagle, MS66
## Only 21 Finer Coins at PCGS

**7477** **1915-S Panama-Pacific Quarter Eagle MS66 PCGS. CAC.** Five commemorative coin issues were created during the Panama-Pacific Exposition to celebrate the opening of the Panama Canal, including the 1915-S quarter eagle. This delightful Premium Gem is sharply detailed and lustrous, with vivid lemon-yellow surfaces. PCGS has graded only 21 finer specimens (12/11). (#7450)

**7478** **1916 McKinley MS65 NGC.** Pale wheat-gold luster with a hint of amber along the lower obverse border. This first-year McKinley gold dollar shows softness on the portrait but bolder reverse detail. (#7454)

7479 **1916 McKinley MS65 NGC. CAC.** Pale yellow interiors take on a deeper hue close to the margins. This Gem has the usual subtly textured luster with brilliant streaks above the memorial. (#7454)

7480 **1916 McKinley MS66 NGC.** Sun-yellow and apricot shadings mingle on this Premium Gem McKinley dollar. The frosty luster is seen mostly in contrast with the brilliant streaks at the upper reverse.(#7454)

## Surprisingly Colorful 1916 McKinley Gold Dollar, MS67

7481 **1916 McKinley MS67 PCGS.** The 1916 McKinley gold dollar is more available than the 1917, but both are elusive at the Superb Gem level. The surprising color palette on this MS67 example of the 1916 includes saffron, mint-green, sunset-orange, and ice-blue. This well-struck example is tied with several dozen of its fellows at the top of the class at PCGS (12/11). (#7454)

7482 **1917 McKinley MS65 PCGS.** Saturated orange-gold luster is flashy on this 1917 McKinley dollar, particularly the reverse. Decently struck with great eye appeal for the challenging issue. (#7455)

7483 **1917 McKinley MS65 PCGS.** Deep orange-red cedes in portions of the reverse to stunning hazel-blue shades on this lovely Gem 1917 McKinley gold dollar, a more elusive issue grade-for-grade than the 1916 issue.(#7455)

7484 **1917 McKinley MS66 PCGS.** Pale wheat-gold interiors are frosty, while the margins have a slightly richer yellow. Decently struck for the issue with solid all-around preservation. PCGS has certified 53 pieces as MS67 or better (11/11).(#7455)

## Seldom-Seen 1917 McKinley Dollar, MS67 None Finer at Either Service

7485 **1917 McKinley MS67 NGC.** The 1917 McKinley is seen far less often in Superb Gem condition than the 1916 issue of the same design. This piece is among 47 so graded at NGC, with none finer (12/11). The satiny surfaces are wheat-gold with orange accents, extremely attractive, well-struck, and essentially unmarked. (#7455)

## Superb Gem 1917 McKinley Gold Dollar Small Distribution

7486 **1917 McKinley MS67 NGC.** The 1917 McKinley commemorative gold dollar has a much smaller distribution total than its 1916 counterpart (about 5,000 1917 examples versus 15,000 1916 specimens). This example is a lovely Superb Gem with satiny pink-gold surfaces and excellent design definition. Census: 47 in 67, 0 finer (11/11).
*From The Jim O'Neal Gold Type Collection.* (#7455)

## 1917 McKinley Gold Dollar, MS67 None Finer

7487 **1917 McKinley MS67 PCGS. CAC.** The McKinley Memorial dated 1917 is far more elusive in higher grades than the 1916-dated coins, with a price differential to match. This splendid Superb Gem offers delicate mattelike surfaces that are essentially contact-free. Both sides show glints of jade and cherry along with the predominating orange-gold coloration. Population: 53 in 67, 0 finer (12/11). (#7455)

7488 **1922 Grant No Star MS63 PCGS.** Bright orange-gold color is seen over each side of this lustrous piece. The striking details are especially strong and there are no mentionable abrasions. (#7458)

7489 **1922 Grant No Star MS65 NGC.** Pale yellow through the lower obverse and the reverse, while the upper and center parts of the former side have a more orange cast. Fantastic luster is this "plain" Gem's greatest asset.(#7458)

7490 **1922 Grant No Star MS65 PCGS.** The detail through Grant's hair is more delicate than usual but still complete. A pleasingly lustrous "plain" Gem gold dollar with light yellow color.(#7458)

7491 **1922 Grant No Star MS65 NGC. CAC.** Pale yellow surfaces remain amply lustrous and pleasingly preserved. Grant has solid hair detail through the back of his head, and the roof of the birthplace also has decent definition.(#7458)

### Pristine MS67 1922 Grant No Star Dollar

**7492** **1922 Grant No Star MS67 NGC.** The 1922 Grant No Star gold dollars are about equally as rare as the With Star pieces, unsurprising since they had the same net distribution of 5,016 coins each. This MS67 No Star piece is surpassed at NGC by a mere three examples (12/11). The surfaces show generous luster and deep orange-red color, and General Grant's cheek and other areas are pristine and unabraded. (#7458)

### Superb Gem 1922 Grant Gold Dollar No Star Variety

**7493** **1922 Grant No Star MS67 PCGS. CAC.** The 1922 Grant gold dollar with No Star enjoyed a distribution of 5,015 pieces, roughly equal to its With Star counterpart. This lovely Superb Gem is sharply detailed, with vibrant mint luster and vivid lemon-yellow surfaces. PCGS has graded no coins in higher numeric grades (12/11). *From The Jim O'Neal Gold Type Collection.* (#7458)

### 1922 Grant Gold Dollar, MS67 No Star Variant

**7494** **1922 Grant No Star MS67 PCGS. CAC.** Exquisite tones of honey, golden-brown, and crimson adorn the flawless surfaces of this Superb Gem commemorative. From a tiny mintage of just 5,000 pieces, Grant No Star gold dollars are traditionally found in high grade, but examples are seldom encountered at this exalted grade level. No finer pieces are PCGS certified (12/11). (#7458)

**7495** **1922 Grant With Star MS63 PCGS.** Deep, even, rich reddish-gold color characterizes this Select example. The mint luster is strong and there are no obvious abrasions, suggesting a better appearance than one might expect from an MS63.(#7459)

**7496** **1922 Grant With Star MS63 NGC. CAC.** Pale yellow-gold overall with bold orange at the right obverse and upper right reverse. A sharply struck, modestly abraded example that is housed in a "fat" older NGC holder.(#7459)

**7497** **1922 Grant With Star MS64 NGC.** Predominantly butter-yellow with occasional paler color. Luster is uniformly strong. Impressively detailed on Grant's hair. A pleasing With Star near-Gem.(#7459)

**7498** **1922 Grant With Star MS65 NGC.** Yellow-gold with ample luster on each side, more satiny on the obverse and brighter on the reverse. An excellent strike, as evidenced by the fine detail at the back of Grant's head.(#7459)

### 1922 Grant With Star Gold Dollar MS66

**7499** **1922 Grant With Star MS66 NGC. CAC.** This piece is an MS66 Grant With Star, although NGC here uses the Star (or asterisk) to represent the design rather than as a suffix to the grade. The eye appeal would certainly merit a Star designation although none is present, mellow golden-yellow color with pristine preservation. A nice example for the grade. (#7459)

### 1922 Grant With Star Dollar, MS67 Only One Finer PCGS Coin

**7500** **1922 Grant With Star MS67 PCGS. CAC.** Impressively preserved with elements of orange on the obverse of this otherwise butter-yellow With Star Superb Gem. Both sides offer pleasing detail and great all-around eye appeal. Housed in a green label holder. PCGS has certified only one example as MS68 or better (11/11). (#7459)

**7501** **1926 Sesquicentennial MS64+ NGC.** A softly frosted example in pale yellow-gold with occasional deeper color, suspended between excellent near-Gem quality and the next grade. Tiny reed marks are hidden in the folds of the gown and run on to the midsection. *Seller is donating 100% of their proceeds, and Heritage is donating 100% of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*(#7466)

## Smithsonian

**7502** **1926 Sesquicentennial MS65 PCGS.** An attractive Gem specimen of this popular commemorative issue, with well-detailed design elements and vibrant mint luster. The surfaces are a pleasing lemon-yellow color, with no mentionable distractions, and ample eye appeal. From a fairly generous distribution of 46,019 pieces. (#7466)

**7503** **1926 Sesquicentennial MS65 PCGS.** The design-by-committee approach failed on the low-relief 1926 Sesquicentennial halves and quarter eagles, but today the gold coins, at least, are more popular; collectors seem to purchase the silver half only for the sake of completeness. This gold Gem quarter eagle shows deep orange-gold color with a decent strike; a few stray marks are confined mostly to the reverse(#7466)

**1926 Quarter Eagle Sesquicentennial**
**Lustrous MS66**

7504 **1926 Sesquicentennial MS66 PCGS.** The 150th anniversary of the signing of the Declaration of Independence was commemorated with two coins—a half dollar and a two and one-half dollar gold coin, both dated 1926. This Premium Gem two and one-half displays yellow-gold lustrous surfaces with hints of light green. Both sides are well struck and minimally abraded. PCGS has seen none finer. (#7466)

**Premium Gem 1926 Sesquicentennial**
**Two and a Half, Amazing Color**

7505 **1926 Sesquicentennial MS66 PCGS.** With no Superb Gem examples of this famous conditionally elusive issue certified by PCGS (11/11), Registry collectors look to the scarce Premium Gems of this date to fill their collections. This gorgeous example is not merely a hole-filler, however; it is a gorgeous coin with uncommonly fine detail and glorious peach-gold color with occasional apricot variations. A small copper spot about two-thirds of the way down the torch may serve as a future pedigree marker. *From The Jim O'Neal Gold Type Collection.* (#7466)

## MODERN ISSUES

7506 **1994-P P.O.W. Silver Dollar PR70 Deep Cameo PCGS.** Stunning white-on-black contrast endows this POW dollar proof. Spectacular surfaces reveal just a hair-thin mark on the lower-left reverse. Population: 13 in 70 Deep Cameo (12/11). (#9691)

7507 **1996-P Olympic/Paralympics Silver Dollar PR70 Deep Cameo PCGS.** A fantastic Cameo contrast and immaculately preserved surfaces affirm the PR70 Deep Cameo designation. What at first appears as fine criss-cross scratches at the ES of GAMES is actually on the holder. Population: 9 in 70 Deep Cameo (12/11). (#9727)

7508 **1996-W Olympic/Cauldron Gold Five Dollar MS69 PCGS.** A satiny and immaculate commemorative that has a full strike and consistent brass-gold color. A tiny planchet flake in the central reverse is all that stands in the way of a perfect MS70 grade. (#9738)

7509 **1997-S Jackie Robinson Silver Dollar MS70 PCGS.** The untoned, highly lustrous, immaculate surfaces confirm the MS70 grade. Population: 49 in 70 (12/11).(#9757)

7510 **2008-W Louisa Adams MS70 NGC.** A perfect Mint State example from the First Spouse Series, boldly defined in brilliant and frosty light yellow gold.(#395698)

## MODERN BULLION COINS

**1986 First Strike Ceremony Silver Eagles, MS69**
**A Pair Framed with Related Documents**

7511 **Pair of Silver American Eagles from the 1986 First Strike Ceremony MS69 NGC.** The First Strike Ceremony for the silver American Eagle took place on October 29, 1986, at the United States Assay Office in San Francisco, CA. This lot has two silver American Eagles from that ceremony, now encapsulated by NGC as MS69 with attestation to their origin, as well as documents related to the ceremony. These include an invitation, a name badge and ribbon for a Mr. Luis Vigdor, and a schedule of events. All documents are matted and framed alongside the pair of coins. (Total: 2 coins)

7512 **1987 Silver Eagle MS70 NGC.** This 1987 Silver Eagle is a coin of surpassing quality and visual appeal. The design elements are fully struck and the vibrant mint luster swirls around the surfaces without interruption.(#9808)

7513 **1987 Silver Eagle MS70 NGC.** This second year silver eagle is perfect in every way. The strike is complete, the surfaces are immaculate, and the shimmering luster is intense. (11/11). (#9808)

7514 **1987 Silver Eagle MS70 NGC.** The classic Walking Liberty design never appeared to better advantage than on this magnificent Silver Eagle. The design elements are fully brought up and the brilliant, lustrous fields are free of imperfections.(#9808)

7515 **1988 Silver Eagle MS70 NGC.** The potential of the beautiful Walking Liberty design is fully realized on this popular modern issue. The design elements are fully brought up, a feat that was impossible on the early half dollars of this design. The surfaces of this magnificent coin are brightly lustrous and free of imperfections. (#9816)

7516 **1990 Silver Eagle MS70 NGC.** Ex: 20th Anniversary Coll. This perfect Mint State silver Eagle has brilliant white luster with essentially perfect surfaces.(#9836)

7517 **1990-W One-Ounce Gold Eagle PR69 Deep Cameo PCGS.** A particularly fine specimen earlier in the gold American Eagle proof series. Remarkably smooth surfaces are just a couple of tiny rim defects away from a perfect score, and milk-spotting is minimal. *Seller is donating 100% of their proceeds, and Heritage is donating 100% of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#9845)

Smithsonian

## Seldom-Seen 1991 Silver Eagle, MS70

7518 **1991 Silver Eagle MS70 NGC.** The early Silver American Eagles are not only extremely popular, they are less often seen in this ultimate MS70 grade than many of their later counterparts. And the popularity of the series as a whole can scarcely be overestimated. This example is every bit as flawless and mark-free as expected, with excellent eye appeal. (#9846)

7519 **1992 Silver Eagle MS70 NGC.** A technically perfect example of this popular modern issue, with fully struck design elements and vibrant satiny mint luster. The overall visual appeal is tremendous. (#9856)

## MS70 1993 Silver Eagle

7520 **1993 Silver Eagle MS70 NGC.** Suffice it to say that there are far fewer examples of the Mint State American Silver Eagles, particularly the early dates, than there are collectors of the series, making demand for these perfect MS70 specimens intense. While NGC has certified somewhat more than 100 examples including this perfect piece, there are likely thousands of potential buyers and bidders for it. (#9866)

7521 **1994 Silver Eagle MS70 NGC.** This incredible 1994 Silver Eagle is a technically perfect coin, fully struck with vibrant satiny mint luster and no detectable imperfections. Census: 4 in 70 (11/11). (#9876)

## 1995-W Silver Eagle PR69 Ultra Cameo

7522 **1995-W Silver Eagle PR69 Ultra Cameo NGC.** Distribution of the so-called 10th Anniversary American Eagles sets created an instant rarity for collectors, with a distribution of just 30,125 sets. Perhaps the incorrect anniversary label was the reason for low sales. This impressive Ultra Cameo proof has amazing field-to-device contrast with brilliant white surfaces. (#9887)

## 1995-W Silver Eagle, PR69 Deep Cameo So-Called 10th Anniversary

7523 **1995-W Silver Eagle PR69 Deep Cameo PCGS.** This is an impressive Superb Gem proof, virtually perfect, with brilliant white surfaces and incredible mint frost on the devices, floating over deeply mirrored fields. PCGS has only certified five finer examples of this issue (12/11). (#9887)

## Key 1995-W Silver Eagle PR69 Deep Cameo

7524 **1995-W Silver Eagle PR69 Deep Cameo PCGS.** The key to the American Silver Eagle series, with the expected black-and-white contrast and unmarked surfaces expected of a near-perfect example. Most collectors got "left behind the door" on this issue due to its odd packaging and sale with the four-piece Gold American Eagles, and the resultant demand has steadily increased ever since. (#9887)

## 1996 Silver Eagle, MS70

7525 **1996 Silver Eagle MS70 NGC.** Despite the production of several million pieces and the extremely large submission of pieces from the original owners to the grading services, few receive the perfect MS60 grade, just 128 in this instance (11/11). Both sides are fully lustrous with brilliant white surfaces and bold design features. (#9900)

7526 **1999-W Tenth-Ounce Gold Eagle MS70 PCGS.** This diminutive gold eagle has brilliant yellow-gold luster and perfect surfaces. Population: 18 in 70 (12/11).(#99940)

## MS70 2000 American Silver Eagle
## Popular 'Y2K' Issue

7527 **2000 Silver Eagle MS70 NGC.** Made at West Point despite the lack of a mintmark, the 2000 American Silver Eagle Mint State one-ounce coins are popular for their Y2K date, along with their 2000-P proof counterparts, made in Philadelphia. A perfect silver specimen of this bullion coin in the ultimate grade. (#9949)

7528 **2001 Silver Eagle MS70 PCGS.** Close inspection with a loupe reveals flawless surfaces on this decade-old silver eagle, save for a pin-point fleck left of the Y in LIBERTY. Population: 8 in 70 (12/11).(#9954)

7529 **2006-W One-Ounce Gold 20th Anniversary PR69 Ultra Cameo NGC.** A striking reverse proof one-ounce gold eagle from the 20th Anniversary sets that were issued in 2006. This piece is nearly perfect in every way.(#89997)

7530 **2006-W Four-Piece Platinum American Eagle Set MS70 NGC.** A flawless four-coin grouping with the satin Uncirculated finish on all pieces. Includes **tenth-ounce, quarter-ounce, half-ounce,** and **one ounce** sizes.(Total: 4 coins)

7531 **2007-W Half-Ounce Gold Eagle MS69 PCGS.** A nearly perfect Mint State example in brilliant yellow-gold with frosty luster. There is no obvious reason to call this piece less than MS70. (#150430)

7532 **2008-W Half-Ounce Gold Eagle MS69 PCGS.** Fully brilliant with frosty yellow-gold luster and exceptional eye appeal. A nearly perfect half-ounce gold Eagle.(#393066)

7533 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 NGC.** A perfect-graded, greenish-gold example of the 2009 Ultra High Relief. This design re-created with as much fidelity as possible the Saint's original concept, although four additional stars were added to represent the 50 states, and the Roman numeral date reads MMIX for 2009, of course. Includes original box and book. (#407404)

7534 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 PCGS.** These MS70 2009 Ultra High Relief coins may be bullion coins in the literal sense, but today they command a substantial premium in the perfect MS70 grade, due to their aesthetic appeal and high collector demand.(#407404)

7535 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 PCGS.** Although certified as "business strikes," many of the 2009 Ultra High Relief coins show a prooflike surface to one degree or another. This MS70 piece is as pristine as the last, with the typically seen green-gold color.(#407404)

7536 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 PCGS.** The 2009 Ultra High Relief coins achieved a wider release than was possible with the 1907 Arabic numerals coins — an issue whose design, modified by Charles Barber, enervated the vitality of Saint-Gaudens original concept. This MS70 specimen show much prooflike surface and is encapsulated in a special PCGS gold-insert holder.(#407404)

7537 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 PCGS.** Three years after their release, the market for the 2009 Ultra High Relief coins seems to be undergoing a renaissance, as many weak hands have sold off already and fewer specimens in this "ultimate grade" enter the market. One ounce of pure gold, certified MS70, equally perfect in grade and aesthetics. (#407404)

7538 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 PCGS.** The new PCGS holders for these 2009 Ultra High Reliefs allow the 50 stars along the edge to be viewed as well, a definite plus for these beautiful, medal-like tributes to Augustus Saint-Gaudens. With special PCGS gold insert, a perfect MS70. (#407404)

7539 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 PCGS.** This MS70 2009 Ultra High Relief has the typical greenish-gold surface appearance, pristine and extraordinary. Certified in a special PCGS gold insert reading "Ultra High Relief Double Eagle."(#407404)

7540 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 PCGS.** The 2009 Ultra High Relief coins caused perhaps as great a response in 2009 as the original coins did back in 1907. This MS70 piece is housed in a slab with special PCGS gold insert. (#407404)

7541 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 PCGS.** An MS70 2009 Ultra High Relief in perfect grade, encapsulated in the special gold-insert PCGS holder, one ounce of reflective pure gold.(#407404)

7542 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 NGC.** The popular one-ounce-of-pure gold 2009-dated tribute to Saint-Gaudens, here in perfect, as-struck form. One wonders what "the Saint" would think about the Mint's century-later update of his design.(#407404)

7543 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 NGC.** A perfect grade, one ounce of pure gold, this 2009 Ultra High Relief certified by NGC in a specially designed insert that shows the ASG monogram and legend "Saint-Gaudens Ultra High Relief."(#407404)

7544 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 NGC.** The 2009 Ultra High Relief coins created a sensation when released, although one wonders why the Mint took two extra years after the centennial of the original Ultra High Reliefs to issue them. A brilliant, perfect Mint State specimen.(#407404)

7545 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 NGC.** By striking the 2009 Ultra High Reliefs in pure 24-karat gold, the Mint was able to make the pieces somewhat smaller and still maintain the required relief. Another perfect piece with the special NGC custom insert.(#407404)

7546 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 NGC.** The striking of the 2009 Ultra High Relief coins in pure 24-karat gold was not only a way to make the minting easier, it also increased their appeal to many collectors who desired pure gold coins over coins made with copper alloy. Perfection in yellow gold. (#407404)

7547 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 NGC.** The 2009 Ultra High Relief coins re-create the extremely rare, double-thick, small diameter patterns that Augustus Saint-Gaudens proposed in 1907 (Judd-1917), now in the National Numismatic Collection of the Smithsonian. This 2009 Ultra High Relief is a fitting tribute, modern perfection in one ounce of pure gold.(#407404)

7548 **2009 One-Ounce Gold Ultra High Relief Twenty Dollar MS70 NGC.** The *Guide Book* calls the 2009 Ultra High Relief coins "made as a tour de force to demonstrate how technical advances in minting techniques can now accomplish manufacturing such a coin." The grade is as perfect as the gold is pure.(#407404)

7549 **2011 25th Anniversary Silver American Eagle Five-Piece Set, Early Releases NGC.** All coins are in the ultimate Grade. Includes the **2011 Eagle MS70, 2011-S Eagle MS70, 2011-W Eagle MS70, 2011 Reverse Proof Eagle PR70,** and the **2011-W Eagle PR70 Ultra Cameo.**(#555555)

## COINS OF HAWAII

### MS63 Red and Brown
### 1847 Crosslet 4 Hawaii Cent

7550 **1847 Hawaii Cent MS63 Red and Brown PCGS. CAC. Crosslet 4, M. 2CC-2.** The initial brick-red color fills the margins, although the open fields and devices are primarily chocolate-brown. Well struck and attractive with infrequent minor field marks. One speculation for the scarcity of Hawaiian cents proposes they were tossed into active volcanoes as a gift or sacrifice.
*Ex: Sacramento ANA (Heritage, 3/2011), lot 4322, which realized $2,990.* (#10966)

### Deeply Toned Mint State
### 1883 Hawaiian Silver Dollar

7551 **1883 Hawaii Dollar MS61 NGC.** Deep purplish tones cede to cobalt-blue around the rims of this Hawaiian dollar, which shows moderate luster remaining under the deep toning. A few stray abrasions account for the grade, but this remains an impressive example of this largest Hawaiian denomination. Census: 11 in 61, 52 finer (11/11). (#10995)

### Choice AU 1879 Hawaii One Bit Token
### T.H. Hobron, Kahului and Wailuku Railroad

7552 **1879 Hawaii T.H. Hobron 12 1/2 Cents Token AU55 NGC. Medcalf 2TE-8.** The Kahului and Wailuku Railroad tokens are better known as Hobron tokens due to their issuer's surname. They were denominated as one bit in an era when Mexican silver coins dominated Hawaiian commerce. This is a superior example with chocolate-brown toning, a bold strike, and mark-free surfaces. Listed on page 397 of the 2012 *Guide Book*. (#600515)

### Choice AU One Rial Hawaii Token
### Haiku Sugar Plantation

7553 **1882 Hawaii Haiku Plantation Token, One Rial AU55 NGC.** The Haiku Sugar Company was located east of Wailuku. The denomination, one rial, was based on the Spanish real and was equivalent to about a day's wages for a laborer on the plantation. Per Medcalf, the Haiku Plantation tokens are considered "the most artistic and well struck of the early metal tokens." This walnut-brown example shows light wear but is boldly impressed and unabraded. Listed on page 397 of the 2012 *Guide Book*. (#600518)

### 1891 Hawaii Pattern Silver Dollar
### Struck in 1893 by Reginald Huth
### Queen Liliuokalani Type

7554 **1891 Huth Hawaii Silver Dollar PR61 NGC. Medcalf 2MH-1.** The obverse features a young Queen Liliuokalani, facing left. A map of the Hawaiian Islands set in the frosted globe background of the Pacific Ocean centers the reverse. The queen was deposed in January 1893 and Hawaii became a U.S. territory instead of a monarchy. A mere 50 pieces of these beautifully designed Liliuokalani patterns are believed to have been struck, with Reginald Huth behind the issue. Survivors are eager sought by both numismatic enthusiasts and collectors of Hawaiiana alike. This is a well struck specimen with deep golden-brown, forest-green, and dove-gray toning. The cheek, right obverse field, and globe display moderate marks obscured by the patina. Listed in Unusual World Coins, Third Edition (1992) by Colin R. Bruce II as XM1.

# GSA DOLLARS

### Gem 1878-CC VAM-11 Dollar
### Housed in GSA Soft Pack

**7555** **1878-CC GSA Soft Pack MS65 NGC. VAM-11.** A Top 100 Variety. As of (12/11), NGC has certified 26 examples of the 1878-CC VAM-11 in GSA soft packs, and this MS65 is the sole finest among them. The upper obverse and lower-left reverse show gold-orange patina that stands out against the dominant pale gray color. The die polishing lines at the lower part of the left wing are clear on close inspection.

### GSA 1879-CC Dollar, MS62
### With Box and Certificate

**7556** **1879-CC MS62 NGC.** Modestly toned with blue and gold shadings against a dominant silver backdrop. Despite a mintage of more than three-quarters of a million pieces, the 1879-CC dollar had low representation in the GSA holdings, and Mint State examples are available only for a price. Comes in the black GSA holder (band-certified) with box and certificate number 79000846. (#7086)

### 1879-CC Dollar from the GSA, MS62
### Box Included

**7557** **1879-CC MS62 NGC.** A minimally toned example of this popular Carson City Morgan dollar issue, less frequently saved than many of its peers and thus rarer in Mint State grades. Scattered luster scrapes and small marks are present, but the overall eye appeal is solid for the designation. Band-certified in the black GSA holder of issue and accompanied by box. (#7086)

### GSA 1879-CC Morgan Dollar, MS62
### Lustrous Key Date

**7558** **1879-CC MS62 NGC.** Perfect Mintmark. This silver-white example is enclosed in the GSA box but has no certificate. Generous luster proceeds from each side, with a few scattered, mostly minor ticks and scrapes typical of the bag storage these dollars underwent for the better part of a century. A small, triangular dark area appears between the tail feathers and the wreath. (#7086)

### Band-Certified 1879-CC GSA Dollar, MS62

**7559** **1879-CC MS62 NGC.** Low representation in the GSA holdings translates to high prices for this second-year Carson City Morgan dollar issue. This example has modest cartwheel luster through the fields and frosted high points with a violet patch between ONE and DOLLAR adding color to otherwise pale and medium-gray surfaces. Band-certified in the black GSA holder of issue and offered alone (no box or papers). (#7086)

### Select Mint State 1879-CC Morgan Dollar
### GSA Origin, Box and Certificate

**7560** **1879-CC MS63 NGC.** Both sides of this well-defined Select GSA dollar have semiprooflike silver-white fields under dappled dots of grayish patina. A desirable piece that spent close to a century in government storage, band-certified in the black GSA holder of issue and accompanied by box and certificate number 79002099. (#7086)

### Select 1879-CC GSA Dollar
### Frosty and Minimally Toned

7561 **1879-CC MS63 NGC.** Among the more available GSA dollars, the 1879-CC stands out as distinctly smaller in distribution than its peers, though still available for a price. This frosty example is minimally toned save for a crimson spot on the right (facing) wing. A couple of long horizontal abrasions on the cheek account for the grade. Band-certified in the black GSA holder and offered as a standalone, without box or certificate. (#7086)

### Select 1879-CC Capped Die Dollar
### VAM-3, A GSA Selection

7562 **1879-CC Capped Die MS63 NGC. VAM-3.** A Top 100 Variety. The Medium over Small CC reverse, or "Capped Die," offered here as a Select GSA coin with a pale silver-blue overtone but little in the way of rich patina. A lightly abraded but attractive piece, band-certified in the black GSA holder of issue and offered alone (no box or certificate). (#7088)

7563 **1880-CC MS65 NGC.** A frosty and minimally toned representative with minor softness on the hair over Liberty's ear but impressive all-around preservation. Band-certified in the black GSA holder. Comes with a box but no certificate.(#7100)

7564 **1880-CC MS65 NGC.** The minor peach accents on the obverse pale in comparison to the strong rainbow patina on the lower two-thirds of the reverse. This GSA dollar is band-certified in the black holder of issue. Offered alone (no box or papers). (#7100)

7565 **1880/79-CC Reverse of 1878 MS65 NGC. VAM-4.** A Top 100 Variety. Frosty and well-defined devices are surrounded by cartwheel luster in similarly silvery fields. A few small luster breaks and marks are as expected even on a Gem specimen this strong. A remarkable example of this Top 100 variety, band-certified in the black GSA holder of issue (no box or certificate).(#7108)

7566 **1880/79-CC Reverse of 1878 MS65 NGC. VAM-4.** A Top 100 Variety. Gorgeous all-around frosty luster with few surface grazes and even fewer marks of any depth. Band-certified in the black GSA holder of issue and offered with box and certificate number 80061322.(#7108)

7567 **1881-CC MS66 NGC.** Beautifully contrasted between semiprooflike fields and frosted, sharply struck devices, all brilliant save for tiny pinpoints of auburn patina. Band-certified in the black GSA holder of issue (no box or certificate).(#7126)

### Surprising Superb Gem 1881-CC Dollar
### A GSA Piece with Frosty Silver Luster

7568 **1881-CC MS67 NGC.** Frosty silver luster is virtually pristine on this Superb Gem, and the surface preservation is downright stunning. A beautifully detailed GSA dollar from the high end of the grading curve, band-certified in the black GSA holder of issue and offered with box and certificate number 81066940. (#7126)

### Marvelously Toned 1883-CC GSA Dollar
### MS66 ★ Prooflike

7569 **1883-CC MS66 ★ Prooflike NGC.** NGC has apparently awarded the Star designation due to the superlative color, alternating waves of canary, pink, purple, and sage on the obverse, and yet the complete prooflikeness underneath the deep obverse toning is obvious. The reverse is untoned, with deep cameo contrast. Complete with GSA box and certificate. (#7145)

## REDFIELD DOLLARS

7570 **1891-CC MS65 Paramount (MS62 NGC). VAM-3.** Ex: Redfield. A Top 100 Variety. This Redfield dollar is a "Spitting Eagle" with gold-orange and blue patina embracing the margins, more so on the reverse. In an "MS65" Paramount holder with NGC sticker-tab seals and label.(#7206)

7571 **1891-CC Morgan Dollar MS65 Paramount (MS63 NGC). VAM-3.** A Top 100 Variety. Ex: Redfield Collection. Sharply struck and lustrous with light peripheral golden-brown toning. The fields are clean, and the cheek displays faint grazes. Housed in a red Mint State 65 Paramount International Coin Corp. Redfield holder, with a label affixed by NGC that states their grade.

7572 **1899-S Morgan Dollar MS65 Paramount (MS63 NGC).** Ex: Redfield Collection. Sealed in the old Paramount holder with a grade label applied by NGC. Gold-orange and blue border toning graces this Select coin, though the latter color is all but nonexistent on the reverse. Great luster and visual appeal.

7573 **1900-S Morgan Dollar MS65 Paramount (MS64 NGC).** Ex: Redfield Collection. Sealed in the old Paramount holder with a grade label applied by NGC. Better-defined than often seen with bright luster and prominent yellow and blue-green toning which extends into the centers a fair way.

7574 **1902-S Morgan Dollar MS65 Paramount (MS63 NGC).** Ex: Redfield Collection. Sealed in the old Paramount holder with a grade label applied by NGC. Green-gold and sage toning appears at the borders, while the centers are essentially silver-white. Softly struck with light abrasions but still appealing.

7575 **1902-S Morgan Dollar MS65 Paramount (MS63 NGC).** Ex: Redfield Collection. Sealed in the old Paramount holder with a grade label applied by NGC. Gold, orange, and blue outer shadings yield to bright silver at the partly frosted interiors. This Select Redfield example offers great overall eye appeal.

7576 **1927-S Peace Dollar MS65 Paramount (MS63 NGC).** Ex: Redfield Collection. Sealed in the old Paramount holder with a grade label applied by NGC. Well struck with frosty, lightly marked silver interiors framed in speckled blue.

## BETTS MEDAL

### 1783 'Communi Consensu' Medal, MS61
### White Metal Striking

7577 **1783 Communi Consensu Medal MS61 PCGS.** White metal, 44 mm. Betts-unlisted. Though rather obscure today, the Communi Consensu medal was known to 19th century numismatists. In the December 1866 edition of the *American Journal of Numismatics*, the Secretary of the Boston Numismatic Society described seeing the "large Libertas Americana in silver" — what today's collectors call the "Libertas Americana" — as well as the "smaller medal, with the reverse 'Communi Consensu.'" This is a white metal striking of the "smaller medal," which has Minerva and a France-and-Liberty allegory with words LIBERTAS AMERICANA above for the two sides. The surfaces have dappled pale gray and gold-green colors with a cylinder of reddish-gray through the medal appearing as dots at the lower obverse and reverse.

## SO-CALLED DOLLARS

### 1900 Lesher Dollar, MS63
### First Bumstead Type

7578 **1900 Lesher Dollar — A.B. Bumstead, First Type, #198 — MS63 PCGS. Zerbe 2, HK-788, R.5.** Joseph Lesher issued his Referendum dollars in 1900 and 1901 from his home in Victor, Colorado. They are souvenirs of the silver movement of 1896 and 1900. This fully lustrous Select Mint State piece exhibits lovely ivory and steel-blue surfaces with excellent eye appeal. Listed on page 391 of the 2012 *Guide Book*.

7579 **1900 Lesher Dollar — A.B. Bumstead, Second Reverse, #637 — AU53 PCGS. Zerbe-3, HK-789, R.5.** The second A.B. Bumstead type without a line over COLO. Estimates suggest that about 500 of these were struck. Both sides have minor handling marks but retain nearly full luster with silver-gray surfaces and hints of champagne toning. Listed on page 391 of the 2012 *Guide Book*.

7580 **1900 Lesher Dollar — A.B. Bumstead, Second Reverse, #738 — AU55 PCGS. Zerbe-3, HK-789, R.5.** The second type of the popular Bumstead issue, the most plentiful issue of all Lesher dollars. This piece is deeply toned in violet and steel with nearly full underlying luster. Listed on page 391 of the 2012 *Guide Book*.

7581 **1901 Lesher Dollar — Imprint Type, Without Imprint — XF45 PCGS. Zerbe-5, HK-791, R.6.** The imprint type without any merchant imprint or number is the basic representative of the Lesher design. This piece has medium gray surfaces with hints of gold toning. Listed on page 391 of the 2012 *Guide Book*.

7582 **1901 Lesher Dollar — Imprint Type, J.M. Slusher, #11 — AU50 PCGS. Zerbe-6, HK-792, R.5.** J.M. Slusher, a merchant in Cripple Creek, Colorado, imprinted about 250 Lesher dollars. This violet-gray example has pleasing surfaces with peripheral iridescent toning. It is an attractive example from a popular merchant. Listed on page 391 of the 2012 *Guide Book*.

7583 **1901 Lesher Dollar — Imprint Type, Sam Cohen, #410 — AU53 PCGS. Zerbe-7, HK-793, R.7.** Sam Cohen of Victor, Colorado, was one of the popular merchants who imprinted certain Lesher dollars. It is believed that Cohen stamped about 50 pieces. This one has reflective fields with gold, magenta, and blue toning. Listed on page 391 of the 2012 *Guide Book*.

7584 **1901 Lesher Dollar — Imprint Type, Boyd Park, #611 — AU53 PCGS. Zerbe-10, HK-796, R.6.** Another popular merchant today, Boyd Park operated in Denver, and reportedly issued about 150 of these Lesher dollars with his imprint. This pleasing piece has light gray surfaces with traces of luster and deeper peripheral toning Listed on page 391 of the 2012 *Guide Book*.

7585 **1901 Lesher Dollar — Imprint Type, W.F. White, #16 — AU53 PCGS. Zerbe-14, HK-1019, R.8.** The W.F. White Merc. Co., was located at Grand Junction, Colorado. This splendid specimen is an important rarity, one of just five to 10 known, according to the new HK book that uses a rarity scale of 1 to 10. Both sides have excellent luster shining through steel-blue toning. Listed on page 391 of the 2012 *Guide Book*.

### Remarkable MS64 Reverse Die Cap on a Copper-Nickel Indian Cent

7586 **Undated Copper-Nickel Indian Cent — Reverse Die Cap — MS64 NGC.** The copper-nickel alloy indicates the coin was between 1860 and 1864. A cent (not the present coin) clung to the obverse die after its strike. The present piece was then fed between the reverse die and the previously struck cent. This initial strike caused it to adhere to the reverse die with an incused and reversed impression (a brockage) of the reverse design on its obverse. It then struck additional fed planchets, causing the present piece to expand in diameter, though it is not cup-shaped since the collar die was apparently blocked or broken away. The additional strikes caused the obverse brockage to expand and become misshapen, although ONE CENT and other incused, reverse design elements are recognizable. Well preserved with olive-brown and orange-gold toning.

### Double Struck 1865 Indian Cent, VF20 Second Strike 20% Off Center

7587 **1865 Fancy 5 Indian Cent — Double Struck, Second Strike 20% Off Center — VF20 PCGS.** The first strike was normally centered and the second strike was 20% off center at 1 o'clock on this important error. Both sides have chocolate and steel-brown surfaces with generous portions of iridescent toning.

### 1869 Indian Cent AU55 Struck on a Silver Dime Planchet

7588 **1869 Indian Cent — Struck on a Silver Dime Planchet — AU55 PCGS.** Although Lincoln cents struck on dime planchets regularly appear at auction, wrong planchet mint errors on Indian cents are rare, particularly from an early a date as 1869. This is a bright and glossy example with attractive ocean-blue, orange-gold, and ruby-red toning along the obverse periphery. The remainder of the coin has only a hint of tan patina. Aligned with the collar at 5 o'clock, with dentils off the flan opposite near 11 o'clock on the obverse and 5 o'clock on the reverse. Due to the undersized flan, the strike is soft on the feathertips and wreath bow.

### 1906 Off Center Indian Cent MS63 Brown

7589 **1906 Indian Cent — Struck 35% Off Center — MS63 Brown PCGS.** Struck off center toward 9 o'clock on the obverse. Excellent eye appeal for this scarce error coin and a delightful match to the 1907 off center Indian cent. Close examination will note a few faint pin lines over Liberty's ear but this one has very attractive light brown toning on both sides. Another very dramatic error that will find many who desire to own it.

### 1907 Indian Cent, MS64 Brown 50% Off Center

7590 **1907 Indian Cent — Struck 50% Off Center — MS64 Brown PCGS.** Struck off center toward 2 o'clock on the obverse. A simply stunning error coin that is very dramatically off center and toned with alluring light tan with darker brown surrounding the devices with traces of mint red. The surfaces are very pleasing as well, with virtually no value impairing nicks to distract the eye. An outstanding opportunity for the advanced error specialist to purchase a highly appealing coin.

### 1908 Indian Cent, MS64 Brown
### 35% Off Center

7591 **1908 Indian Cent — Struck 35% Off Center — MS64 Brown PCGS.** Struck prominently off center toward 1:30. OF is completely absent, while STATES and AMERICA are missing several letters due to the mint error. Light olive and ruby patina. Well preserved from a technical perspective, numerous tiny mint-made strike-thrus are noted on the reverse.

### 1952-S Cent on a Dime Planchet, MS63

7592 **1952-S Lincoln Cent — Struck on Silver Dime Planchet — MS63 PCGS.** This off-metal cent is orange-gold and wheat-gold, lighter in hue than expected for a red copper cent. Other clues that something is amiss: the strike is soft on Lincoln's shoulder and the O in ONE, the obverse border has a dished appearance, and the tops of E PLURIBUS UNUM are off the flan, all due to the unexpectedly smaller flan.

### 1957-D Lincoln Cent, MS62
### Struck on a Washer

7593 **1957-D Lincoln Cent — Struck on a Washer — MS62 PCGS.** An incredibly curious error that occurred when a random washer was mixed with cent planchets. It is fascinating to speculate about the source of the washer. Was it part of a coining press or some other piece of mint machinery, or possible from some other source?

### 1962 Lincoln Cent, MS65
### On a Philippine 10 Centavo Blank

7594 **1962 Lincoln Cent — Struck on a Philippine 10 Centavo Blank — MS65 NGC.** 2.03 grams. The Philadelphia Mint struck coins for various foreign governments, including the Philippines in 1962. The blank was left in a bin that was later filled with cent planchets for U.S. coinage. This piece has excellent detail with brilliant luster and light champagne toning.

### 1964-D Cent on a Silver Dime Planchet
### Strongly Lustrous AU55

7595 **1964-D Lincoln Cent — Struck on a Silver Dime Planchet — AU55 PCGS.** One of the last opportunities to errantly strike a coin on a silver dime planchet was taken by this error, a modestly rubbed but still amply lustrous 1964-D cent. The date and mintmark are complete, though the 4 is fanned out. The L of LIBERTY is cut off.

*Seller is donating 100% of their proceeds, and Heritage is donating 100% of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

Smithsonian

### Gem Proof 1886 Liberty Nickel
### Quarter-Inch Planchet Crack

7596 **1886 Liberty Nickel — Quarter-Inch Planchet Crack — PR65 PCGS.** The planchet, die, and striking characteristics of proof coins are supposed to be special and carefully attended. It is not surprising that occasional mistakes, such as this piece with a prominent planchet crack reaching from just right of the date into the portrait, would occur. It is, however, remarkable that this piece escaped the Mint. Weakness at the three rightmost stars may have had the planchet crack as a contributing factor. The 1886 is a key date within the Liberty nickel series.

### 1889 Liberty Nickel, MS64
### 20% Off Center

**7597 1889 Liberty Nickel — Struck 20% Off Center — MS64 PCGS.** Struck off-center at 1 o'clock, this Choice Mint State Liberty nickel is highly lustrous with frosty surfaces and bold design details as usual for an off center coin. Light champagne toning visits the obverse and reverse, enhancing the eye appeal.

### Fascinating 1891 Nickel on a Foreign Planchet
### Likely Venezuelan, MS64

**7598 1891 Liberty Nickel — Struck on a Foreign Planchet — MS64 NGC.** 3.0 gm. 86% copper, 14% nickel. The only international copper-nickel coinage struck at the Philadelphia Mint to that time were centavo and two-and-a-half centavo pieces for Venezuela. One of the latter came between Liberty nickel dies, resulting in this near-Gem with bold reddish-orange toning. Outlandishly appealing.
*Seller is donating 100% of their proceeds, and Heritage is donating 100% of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

Smithsonian

### 1902 Nickel, Flip-Over Double Strike, AU53

**7599 1902 Liberty Nickel — Flip-Over Double Struck — AU53 PCGS.** Quite an interesting error. Each side shows design elements from the other side. Specifically, the obverse rim shows portions of ES OF AMERICA. The reverse repeats the date and all or part of five stars. Good remaining luster with light, even toning.

### 98% Off Center Buffalo Nickel, MS62

**7600 Undated Buffalo Nickel — Struck 98% Off Center — MS62 PCGS.** Struck very widely off center toward 1 o'clock. UNITED and a sliver of the bison's hump are present, as well as portions of the Indian's shoulder and central feather. The struck portion appears pristine. The unstruck portion is stone-gray with glimpses of chestnut toning and the expected number of minute planchet abrasions.

### MS63 Buffalo Nickel, 75% Off Center

**7601 Undated Buffalo Nickel — Struck 75% Off Center — MS63 PCGS.** Widely off center toward 10:30, with LIBERTY, UNITED, and the denomination and any mintmark off the flan. A small portion of the date is present, enough to indicate this nickel is from either 1924 or 1934. OF AMERICA is present and exhibits metal flow toward the border, characteristic of an off center error. Lustrous with light tan-gray toning.

### Double Struck in Collar, 5% Indented Reverse
### 1918 Buffalo Nickel, MS64

**7602 1918 Buffalo Nickel — Double Struck in Collar, 5% Indented Reverse + Partial Collar — MS64 PCGS.** The first strike was apparently normal, but the coin did not eject. It rotated a couple of degrees counter-clockwise within the collar, and was struck again, this time receiving a partial collar impression. The collar could not cover all of the edge, since a planchet (not included) was fed between the reverse and the reverse die between strikes. That planchet was fed 95% off center and was indented into the reverse at 1:30, where it spread the letters AMERI from the first strike. Satiny and toned dove-gray with minor peripheral carbon.

### 1919 Buffalo Nickel, AU53
### Broadstruck on Clipped Planchet

7603 **1919 Buffalo Nickel — Broadstruck on Curved Clip Planchet — AU53 NGC.** This Buffalo nickel has two apparently unrelated mint errors, since the curved clip (a planchet cutting error) should not have affected the status of the collar die. The clip is approximately 7% and is present between 3 and 5 o'clock. A nicely centered broadstrike with a wide band of unstruck surface around the struck portion. Diagnostic for a clip, metal flow is present toward the clip.

### Near-Gem 1919-? Buffalo Nickel
### Coined 10% Off Center

7604 **1919-? Buffalo Nickel — Struck 10% Off Center at 1 O'Clock — MS64 NGC.** This prominently off center example displays a broad arc of unstruck surface centered at 6:30. The mintmark area and much of LIBERTY is off the flan. The portion of LIBERTY that is present shows distortion from metal flow toward the unconstrained rim. The gunmetal-gray surfaces are lustrous although a few tiny flecks are near the chin.

### 20% Off Center 1920-? Nickel, MS62

7605 **1920-? Buffalo Nickel — Struck 20% Off Center at 10 O'Clock — MS62 NGC.** Struck sufficiently off center that the mintmark area is not present, although a Philadelphia origin is more likely than either Denver or San Francisco. A wide quarter-moon of unstruck surface is widest at 4:30. LIBERTY, AMERICA, UNITED, and the bison's head all exhibit varying degrees of distortion from unconstrained metal flow. Light caramel-gold and stone-gray with infrequent minor carbon.

### 1920 Buffalo Nickel, MS64
### 10% Off Center

7606 **1920 Buffalo Nickel — Struck 10% Off Center — MS64 PCGS.** Struck 10% off-center at 6:30. This Choice Mint State piece has frosty nickel-gray luster with hints of champagne toning to enhance its eye appeal. The strike is a trifle weak at the centers, but still sharper than most normally struck pieces.

### 1920-? Nickel, MS64
### Struck 15% Off Center

7607 **1920-? Buffalo Nickel — Struck 15% Off Center at 12:30 — MS64 NGC.** Sufficiently off center that much of LIBERTY and the denomination are off the flan. The mintmark area is also absent. A broad arc of unstruck surface is widest at 6:30. Toned medium tan-gray with pinpoint carbon near the right borders.

### MS63 Buffalo Nickel
### Struck 10% Off Center

7608 **1935 Buffalo Nickel — Struck 10% Off Center at 10 O'Clock — MS63 NGC.** This moderately off center Buffalo nickel has all design details intact, but the appearance is nonetheless unusual due to the wide arc of unstruck surface centered at 4 o'clock. Peripheral metal flow is evident along the right border, while the Indian's braid and Bison's shoulder show uncommon sharpness due to closer spacing of the dies unrestrained by the collar. Satiny and unabraded with steel-gray toning and small olive spots near the lower left obverse margin.

### 5% Off Center Choice 1935 Nickel

**7609 1935 Buffalo Nickel — Struck 5% Off Center — MS64 NGC.** Noticeably off center toward 7 o'clock. A crescent of unstruck surface, widest at 1 o'clock, first alerts the viewer to the mint error status. All design details are intact. The bison's shoulder and the Indian's nose are curiously flat, given that the Indian's braid has sharp detail. The slate-gray surfaces are lustrous and essentially unabraded.

### 1936-? Buffalo Nickel, MS62
### Coined 15% Off Center

**7610 1936-? Buffalo Nickel — Struck 15% Off Center — MS62 NGC.** The mintmark area is absent, so we cannot confirm the mint of origin. Nearly all of LIBERTY is also missing. The date is present, as is most of the bison. AMERICA shows the distortion and spreading typical of the peripheral legends of genuine off center errors. A satiny example with steel-gray and caramel-gold toning.

### MS63 1936-? Buffalo Nickel
### 10% Indent Reverse, Partial Collar

**7611 1936-? Buffalo Nickel — 10% Indent Reverse & Partial Collar — MS63 PCGS.** Two nickel planchets were simultaneously fed between the dies. The planchet facing the obverse die (the present coin) was properly centered, while the second planchet was aligned far off center facing the reverse die. The strike pressed the second planchet into the present coin, causing an indent where the two pieces overlapped, namely the location of the denomination and mintmark. Thus we do not know the mint location of the present coin, unless its uniface reverse mate shows up someday, somewhere. The off center flan prevented full operation of the collar die. Satiny and unabraded with light tan-gold patina and a couple of aqua flecks within the date.

### 1936-Dated Buffalo Nickel, MS63
### 15% Off Center at 10 O'Clock

**7612 1936-? Buffalo Nickel — Struck 15% Off Center at 10 O'Clock — MS63 NGC.** Most legends are intact but the mintmark area is absent so the location of coining is open to speculation. The peripheral letters display the moderate irregularity often seen on off center errors, where no collar is present to impede metal flow. The centers, however, are sharply impressed. Satiny and undisturbed with olive-gold toning.

### Select Mint State 1936 Nickel
### Struck 15% Off Center

**7613 1936 Buffalo Nickel — Struck 15% Off Center at 2 O'Clock — MS63 NGC.** LIBERTY is fully off the flan, but the date is intact, as is enough of the mintmark area to confirm a Philadelphia origin. Common to this error type, the centers are fully struck, while AMERICA is distorted from metal flow toward the border, which was unrestrained by a collar die.

### 1936 Buffalo Nickel, MS64
### 15% Off Center

**7614 1936 Buffalo Nickel — Struck 15% Off Center — MS64 PCGS.** This lustrous Choice Mint State Buffalo nickel has a bold strike, 15% off center at 7 o'clock. All design details are sharply defined as usual for off center pieces. Light champagne toning adds to the eye appeal of this lovely error.

### Choice 1936 Buffalo Nickel
### Struck 15% Off Center

**7615 1936 Buffalo Nickel — Struck 15% Off Center — MS64 PCGS.** Significantly off center toward 10 o'clock. The date and mintmark area are intact, though the leftmost portion of the bison's head is off the flan. A wide crescent of unstruck surface is centered at 3:30. Lustrous and lightly toned with a needle-sharp strike at the centers. The legends near the right border exhibit distortion from metal flow unrestrained by the collar die.

### 1937-S Nickel on a Cent Planchet, AU53

**7616 1937-S Buffalo Nickel — Struck on a Cent Planchet — AU53 PCGS.** Off-metal errors on Buffalo nickels are rare. According to the consignor, only two 1937-S nickels are known struck on cent planchets, and the present piece is the higher graded. Ideally centered with the date and mintmark intact, although LIBERTY and OF AMERICA are partly off the flan. The lavender-brown surfaces are slightly glossy and exhibit light wear.

### 15% Off-Center 1891 Seated Dime, AU58
### An Uncommon 19th Century Error

**7617 1891 Dime — Struck 15% Off-Center — AU58 PCGS.** An unusual final-year Seated dime error, struck 15% off-center toward 7 o'clock but with the date still readable. Parts of Liberty's rock and date digits, as well as the upper left part of the wreath, are cut off from the design. Faintly gold-toned in places with just a touch of rub; perhaps this piece circulated only briefly before being saved as unusual, or it may have acquired minor wear as a pocket-piece. In any event, a remarkable and desirable error.

### Undated Barber Dime Brockage, AU58
### Full Brockage of Reverse Design

**7618 Undated Barber dime — Full Brockage Obverse of Reverse — AU58 PCGS.** The obverse consists of the incuse, reverse design of a Barber dime. Both sides of this impressive piece have nearly full luster with a trace of wear. The surfaces are beautifully toned in various rainbow shades.

### Near-Mint Mercury Dime
### 55% Off Center with Obverse Brockage

**7619 Undated Mercury Dime — 55% Off Center with Mirror Brockage on Obverse — AU58 NGC.** Far off center toward 6 o'clock relative to the obverse. The struck portion of the obverse displays an incused and reversed image of the reverse: a first-strike or perfect brockage, albeit off center. This error occurred when a coin (not this one) stuck to the obverse die after the strike. It then acted as an obverse die for the present coin, which was fed off center between the reverse die and the previously struck coin.

### 1928-S Mercury Dime, MS64
### 15% Off Center at 12 O'clock

**7620 1928-S Mercury Dime — Struck 15% Off Center — MS64 PCGS.** Decisively off center toward 12 o'clock, nearly all of the E in LIBERTY is off the flan. Lustrous and beautifully preserved with gentle golden-brown toning. The major devices are razor-sharp, while the mintmark is greatly distorted by metal flow to the rim. A small spot beneath OF does not reduce the eye appeal. Full split bands as always on off center Mercury dimes.

### 1944 Mercury Dime, MS61
### 35% Off Center

7621 **1944 Mercury Dime — Struck 35% Off Center — MS61 PCGS.** A fully lustrous Mint State specimen, this sharply defined piece is struck 35% off center at 12:30. Both sides have wispy champagne toning over the satiny surfaces. A few reverse hairlines and other trivial blemishes limit the grade.

### 10% Off Center 1875-S Twenty Cent, VG10

7622 **1875-S Twenty Cent Piece — Struck 10% Off Center — VG10 NGC.** Noticeably off center toward 8 o'clock. A broad, raised arc is centered at 2 o'clock, where that part of obverse wrapped around the lip of the die. The cream-gray surfaces are unabraded aside from minor hairlines and a tiny dig near the E in TWENTY. A rare obsolete denomination for mint errors, since twenty cent pieces were struck for circulation for only two years and no one collected such "freaks" until many decades later.

### Superb Gem 1939 Quarter
### Struck on a Nickel Planchet

7623 **1939 Washington Quarter — Struck on a Five Cent Planchet — MS67 PCGS.** Aligned with the collar at 9 o'clock. The right-side borders display incomplete and stretched legends. Immaculate and lustrous with light to medium olive-gray toning. According to the consignor, this is the only known 1939 quarter struck on a nickel planchet, and is the second-earliest such mint error known for the Washington quarter type. Listed in Appendix C of the seventh edition (1982) of Judd.
*Ex: Milt Cohen.*

### Undated Washington Quarter, MS64
### Special Mint Set Issue
### Obverse Cud

7624 **Undated Washington Quarter — Obverse Cud Die Break — MS64 PCGS.** Type Three Reverse with leaf tip very close to the A in DOLLAR. This Special Mint Set quarter has satin luster and unabraded pearl-gray surfaces, but is noteworthy for its dramatic die break or "cud" on the lower obverse. The die break consumes all but a sliver of the date, and metal flow into the break weakens TES OF AM on the reverse, directly opposite the cud.

### 1976 Bicentennial Quarter
### Struck on a Dime, MS62

7625 **1976 Bicentennial Quarter — on a Struck Dime — MS62 PCGS.** Bicentennial errors are especially popular as they were only dated one year. Significant portions of the struck dime show including the date and peripheral obverse details. More of the dime was struck out on the reverse, but portions are still visible. The satiny mint luster shows just a bit of light reddish patina.

### Three-Piece Bicentennial Off-Center Set
### Remarkably Well-Matched, All MS64

7626 **Three-Piece Bicentennial Off-Center Set MS64 PCGS.** A surprisingly well-matched set of off-center errors from the Bicentennial designs, struck only in 1975 and 1976. Includes a **1976-D quarter struck 65% off-center toward 12 o'clock,** a **1976 half dollar struck 60% off-center toward 2 o'clock,** and a **1976-D Type 2 Eisenhower dollar struck 55% off-center toward 12 o'clock.** (Total: 3 coins)

### 1961 Franklin Half, MS63
### Struck on Silver Quarter Flan

7627 **1961 Franklin Half Dollar — Struck on Silver Quarter Planchet — MS63 PCGS.** A full date is visible on the obverse, and the top of the bell is visible on the reverse, proving that this piece was coined in Philadelphia. The surface have fully brilliant satin luster with no evidence of toning on either side.

### Undated Kennedy Half, MS64 Brown
### Struck on a Cent Planchet

7628 **Undated Kennedy Half Dollar — Struck on a Cent Planchet — MS64 Brown NGC.** Most of President Kennedy's profile is present on this diminutive piece. However, no date is visible, nor is the mintmark (if any). This Choice Mint State piece has lovely medium brown toning with hints of red, especially on the reverse.

### MS62 1980-P Half Dollar
### Struck on an Anthony Dollar Flan

7629 **1980-P Kennedy Half — Struck on an Anthony Dollar Planchet — MS62 NGC.** 8.0 gm. Aligned with the collar between 2 and 5 o'clock, and thus the coin has an uncentered appearance with the left-side legends partly off the flan. Well struck at the centers with metal flow toward the collar-unrestrained (left) border. Lustrous and lightly toned in honey-gray shades.

### 1921-S Morgan Dollar, MS62
### Struck 25% Off Center

7630 **1921-S Morgan Dollar — Struck 25% Off Center — MS62 PCGS.** Widely off center toward 7:30, a prized mint error on a famous silver type. The date is off the flan, though Morgan's nouveau rendition of his classic design ensures it is from 1921. The mintmark is bold. Lustrous with honey-gray toning and only minor marks. Unlike most 1921-S dollars, the wreath is close to fully struck.

### 1999-P Susan B. Anthony Dollar, MS64
### Struck over a Georgia Quarter

7631 **1999-P Anthony Dollar — Double Denomination on Struck Georgia Statehood Quarter — MS64 PCGS.** From the undertype, the P mintmark is visible, as is the date, GEORGIA, and MODERATION from the state motto. The Anthony mintmark is bold, and the date is readable. Aligned with the collar near the 5 o'clock, and the piece thus appears slightly off-center toward 11 o'clock, though it is merely uncentered within the collar die. Sun-gold toning visits lustrous and unblemished surfaces.

### Double Struck 1999-P Anthony Dollar, MS65
### Second Strike Off Center

7632 **1999-P Anthony Dollar — Double Struck, Second Strike 40% Off Center — MS65 PCGS.** The first strike was normal, but the piece failed to eject and was struck a second time, widely off center toward 5 o'clock. The second strike is at 4 o'clock relative to the first strike. Both mintmarks show, and the date is confirmed by the tail of the second 9 from the first strike, which is mostly effaced but still ghostly visible.

7633 **Four-Piece Sacagawea-Presidential Dollar Blank and Planchet Set NGC.** A **2000-P Sacagawea dollar** and a **James K. Polk Presidential dollar** (mint unknown) are encapsulated in a custom holder with Type One and Type Two planchets for the same. An attractive "stages of production" grouping.
*Seller is donating 100% of their proceeds, and Heritage is donating 100% of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*(Total: 4 coins)

Smithsonian

### Gem 2000-P Sacagawea Dollar
### Struck Six Times

7634 **2000-P Sacagawea Dollar — Struck Six Times — MS65 PCGS.** After the first, normal strike, this oval-shaped piece was only partially ejected from the dies and lodged against another object, such as a die collar, at 3 o'clock. It was then struck five additional times, widely off center toward 7:30. The spread between the last five strikes is narrow, but evident on LIBERTY and DOLLAR.

### Split Planchet After Strike on a
### 2000-D Sacagawea Dollar, MS62

7635 **2000-D Sacagawea Dollar — Planchet Split after the Strike — MS62 ANACS.** The obverse of this first-year Sacagawea dollar has a normal appearance, but the reverse has a granular texture and displays an incused and reversed image of the obverse, as impressed by the obverse die through the obverse. Prior to the strike, the planchet perhaps had an occlusion, or a gas trapped within the flan due to an improper strip preparation. Upon ejection from the dies, or sometime later, the coin separated into two pieces along the edge, leaving the obverse fragment as the present lot. The reverse fragment is not included in the lot. No abrasions or spots are present that would indicate why the assigned grade was only MS62.

7636 **2008 John Q. Adams Dollar, Satin Finish — Missing Edge Lettering — SP68 PCGS.** The satin finish used to strike Mint sets shows minor variations in color. The edge is smooth and lacks identifying information. Of interest on the reverse is a die crack from the rim down Liberty's torch.
*Seller is donating 100% of their proceeds, and Heritage is donating 100% of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

Smithsonian

### Broadstruck 1906-D Twenty, AU58
### Unusual Mint Error on Gold Coin

7637 **1906-D Double Eagle — Broadstruck — AU58 NGC.** Housed in a newer NGC holder with the edge largely visible, this first-year Denver Mint twenty has a plain edge, which indicates the collar die was jammed or broken away when this coin was struck. The right borders near the dentils show evidence of metal flow, but it is the left borders that are expanded somewhat in diameter and exhibit a raised edge. Lustrous and nearly unabraded with a hint of friction on the curls. A butter-gold example of an error category fairly common on minor coins but rarely seen on a double eagle.

### 1999 Silver Eagle, Strike-Through Plastic
### MS66, Piece of Plastic Included

7638 **1999 Silver Eagle — Reverse Strike-Through Plastic — MS66 NGC.** A large comma-shaped piece of plastic came between the reverse die and the planchet of this 1999 Uncirculated-finish silver American Eagle. That area shows a bright silver shine, compared to the light satin present elsewhere. Most significantly, the plastic piece, which fell away from the coin, has been kept with it and is also offered with this lot. The (extremely delicate!) plastic retains a partial impression of the eagle, a few stars, and parts of letters from two legends. (Total: 2 pieces) (#9947)

## INGOT

### San Francisco Mint Silver Ingot
### 15.62 Ounces

7639 **San Francisco Mint Silver Ingot. 15.62 ounces.** This silver-gray ingot bears the oval seal of the San Francisco Mint on the upper portion of the front side, with serial number 738 directly beneath. 15.62 OZS and 999.75 FINE are impressed on the lower part of the front of the ingot. The lower side of the ingot is punched with the number 2. The other three sides and the bottom of the ingot are featureless. Likely made during the 1950s, since the style of the punches resembles dated silver San Francisco ingots from that era.

## NUGGETS

### Three Small Gold Nuggets

7640 **Three Small Gold Nuggets.** Included are: (2) small nuggets with a combined weight of 1.3 grams; and (1) larger nugget of 3.8 grams. The larger one has slight bits of quartz intermixed. Be careful handling these. They are fresh and "spiky" and small bits will flake off. (Total: 3 pieces)

### Three Slightly Larger Gold Nuggets

**7641** **Three Gold Nuggets.** Included are: (1) small nugget, 2.90 grams, with interesting quartz and other unknown minerals included in the matrix; (1) small nugget, 6.91 grams; and (1)10.89-gram larger nugget. All three have smoothed edges from either handling or slight alluvial friction. (Total: 3 pieces)

### Quartz-Laden Gold Nugget, 8.81 Grams

**7642** **Quartz-Laden Gold Nugget. 8.81 grams.** 8.81 grams. A really interesting nugget. The quartz looks like snow, and it takes up at least half of the mass of this lovely piece. Quite a showpiece nugget.

### Gold Nugget With Some Quartz
### 10.58 Grams, Interesting Formation

**7643** **Gold Nugget With Quartz. 10.58 Grams.** Another interesting nugget with a significant amount of quartz imbedded. An above-ground find, the nugget is "spiky" and is interestingly formed.

### Gold Nugget, 10.60 Grams

**7644** **Gold Nugget. 10.60 Grams.** Probably an alluvial nugget as there are no "spikes" and there are large, smoothed areas. This could also be from handling. Oval-shaped.

### Gold Nugget Used as a Watch Fob, 12.82 Grams

**7645** **Triangular Nugget Used as a Watch Fob. 12.82 Grams.** Obviously handled a great deal over the years and smooth as a result, the mount is still attached. Roughly triangular in shape.

### 14.46 Gram Gold Nugget
### Significant Presence of Quartz

**7646** **Heavy Quartz-Laden Gold Nugget. 14.46 Grams.** This interesting nugget appears to be more quartz than gold. Visually interesting from several angles, this should prove to be a popular nugget with collectors of these fascinating items from the natural world.

### Flat-Surfaced Gold and Quartz Nugget
### 17.43 Grams

**7647** **Larger, Flat-Surfaced Gold-Quartz Nugget. 17.43 Grams.** Roughly triangular in shape and flat on both sides, this piece is 4 mm thick. Significant quartz is intermixed with the gold, probably more than half of the piece is quartz. The surfaces are coated with what appears to be lacquer, probably to keep the gold from wearing away from handling.

### Irregular-Shaped Gold Nugget, 24.94 Grams

7648 **Gold Nugget. 24.94 Grams.** This fair-sized nugget is mostly gold, the only visible area of quartz is in the recesses of a depression on one side. The high points are mostly smooth, presumably from friction.

### Compact Gold Nugget, 59.61 Grams

7649 **Gold Nugget. 59.61 Grams.** This heavy nugget is compact and is roughly square in shape. Either alluvial in origin or extensively handled, one side shows much smoothness.

### Sparkling Large Gold Nugget 79.61 Grams

7650 **Large Gold Nugget. 79.61 Grams.** This is a real sparkler. The nugget shows hundreds of rectangular gold facets. It has the "spikey" look and feel of a newly discovered nugget that has not been handled. The back side has a large blob of quartz covering most of that side. Like other such nuggets, careful handling is necessary as the tiny facets will flake off in handling.

## HOBO NICKEL

7651 **1929 Hobo Nickel Uncertified.** Lacking OHNS certification. Probably Average quality. The profile, hat, and hat band are hand carved. The beard and hair are punched in. Full date.

## MISCELLANEOUS

### *The Offering*, Sculpture of Sacagawea from 1999 Made by Glenna Goodacre, Donated by Artist

7652 ***The Offering*, Sculpture by Glenna Goodacre, 1999.** Height 7 1/2" with base, depicting Sacagawea standing with her son on her back and her arms held out, her hands positioned to hold a 2000-P Sacagawea dollar (included); Ms. Goodacre has her greatest numismatic fame from designing the Sacagawea dollar's obverse. Item 218 in an edition of 300, a beautiful piece from the sculptor herself; another from the edition is in the National Numismatic Collection. Comes with a copy of the book, *Glenna Goodacre: Sculpture*.
*Seller is donating 100% of their proceeds, and Heritage is donating 100% of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution.* *See page 3 for details.*

Smithsonian

**Study for the Sacagawea Dollar Obverse Donated by Sculptor Glenna Goodacre**

7653 ***Study for the Obverse of the Sacagawea Dollar* by Glenna Goodacre, 2000.** Diameter 7 1/2". An image of Sacagawea with infant son, showing none of the statutory inscriptions of the Sacagawea dollar and an earlier form of Sacagawea's features. Patina is deep brown save for the skin of Sacagawea and her son, where the color is a lighter copper shade. Number 82 from an edition of 200, wired for a hanging mount on the back. Another from the edition is part of the National Numismatic Collection. Comes with a copy of the book, *Glenna Goodacre: Sculpture*.
*Seller is donating 100% of their proceeds, and Heritage is donating 100% of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

Smithsonian

7654 **Pitcher with Early U.S. Coinage Motifs.** *Circa* 1820, no maker's mark. Base diameter 3 3/8", height 5 1/8". Grape-and-vine motif around the top, white against blue; on the body, Columbia's caduceus flanked by cornucopias and banner reading "Peace & Plenty." To either side, motifs as on early gold coinage, a Capped Bust Right to the left of the spout and a Heraldic Eagle to the right. The handle has been restuck. Personal inspection recommended on this fascinating piece of Americana.

Smithsonian

7655 ***Histoire Metallique de la Republique de Hollande* by Bizot.** This book on the coinage of Holland was printed in 1687 in Paris. Hardcover, main text 317 pages, considerable wear and some separation to cover, a degree of water damage to back pages, though the text remains legible throughout. Cover dimensions 12 3/4" x 9 3/4".

7656 **Ancient Coin - Attica, Athens, c. 440-404 BC. Silver tetradrachm (17.01 gm).** Head of Athena right wearing Attic helmet ornamented with three laurel leaves and vine scroll / Owl standing right, head facing, olive spray and crescent to left, A E to right, all within incuse square. Banker's mark on check. NGC VF 5/5 strike - 2/5 surface.
A pleasing example of the most important trade coin of its day, the Athens "owl," which circulated during the heyday of Classical Athens. "Owls" such as this one helped finance construction of the Parthenon and made Athens a world power strong enough to resist the Persian Empire.
*Seller is donating 100% of their proceeds, and Heritage is donating 100% of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

Smithsonian

7657 **Ancient Coin - Lucania, Velia, c. 293-280 BC, Silver Nomos or Stater.** Mounted in an ornate gold button. Head of Athena left wearing crested Attic helmet ornamented with leaping griffin, on neckguard helmet and AP monogram behind head / Lion advancing right, concealed by mounting. Cf. SNG ANS 1391. The coin toned very fine, the setting quite tasteful. A nice piece of ancient coin jewelry.

9134 **1854 MS63 Red and Brown NGC.** C-1. NGC Census: (16/65). PCGS Population (37/68). Mintage: 55,358. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $520. (#1231)

9135 **1855 AU55 NGC.** C-1. NGC Census: (17/544). PCGS Population (34/418). Mintage: 56,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $150. (#1233)

9136 **1855 — Improperly Cleaned — NGC Details. Unc.** C-1. NGC Census: (5/486). PCGS Population (5/338). Mintage: 56,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $180. (#1233)

9137 **1855 MS64 Red and Brown PCGS.** PCGS Population (142/20). NGC Census: (76/56). Mintage: 56,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $600. (#1234)

9138 **1857 PCGS Genuine.** The PCGS number ending in .92 suggests Cleaning as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable.

9139 **1857 XF45 PCGS.** PCGS Population (21/282). NGC Census: (5/343). Mintage: 35,180. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $143. (#1239)

9140 **1857 MS62 Brown NGC.** C-1. NGC Census: (66/193). PCGS Population (52/116). Mintage: 35,180. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $350. (#1239)

9141 **1857 MS63 Red and Brown NGC.** NGC Census: (50/57). PCGS Population (81/34). Mintage: 35,180. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $610. (#1240)

## LARGE CENTS

9142 **1793 Wreath Cent, Vine and Bars — Obv Scratched, Planchet Flaws — NGC Details. Good.** (#1347)

9143 **1794 Head of 1794, S-24, B-8, R.1 PCGS Genuine.** The PCGS number ending in .94 suggests Altered Surfaces as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. (#35537)

9144 **1794 Head of 1795 Fair 2 NGC.** NGC Census: (12/382). PCGS Population (9/467). Mintage: 918,521. (#1365)

9145 **1794 Head of 1795 — Damaged — ANACS. Fine 12 Details.** S-31. NGC Census: (21/324). PCGS Population (29/368). Mintage: 918,521. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $800. (#1365)

9146 **1794 Head of 1795 — Corroded, Cleaned — ANACS. Fine 12 Details.** S-70. NGC Census: (21/324). PCGS Population (29/368). Mintage: 918,521. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $800. (#1365)

9147 **1794 Head of 1795 — Burnished, Tooled — ANACS. VF20 Details.** S-43. NGC Census: (21/288). PCGS Population (48/288). Mintage: 918,521. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $1,950. (#1365.17)

9148 **1795 Plain Edge Brown — Improperly Cleaned — NGC Details. Fine.** S-76b. NGC Census: (0/0). PCGS Population (0/0). Mintage: 501,500. (#1380)

9149 **1795 Plain Edge — Edge Damaged, Tooled — NGC Details. Fine.** NGC Census: (10/99). PCGS Population (22/239). Mintage: 501,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $725. (#1380)

9150 **1795 Plain Edge — Environmental Damage — NGC Details. Fine.** NGC Census: (10/99). PCGS Population (22/239). Mintage: 501,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $725. (#1380)

9151 **1795 Plain Edge — Corrosion — NGC Details. VF.** NGC Census: (4/85). PCGS Population (26/193). Mintage: 501,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $1,350. (#1380)

9152 **1795 Plain Edge — Corroded, Scratched — ANACS. VF30 Details.** S-76B. NGC Census: (6/72). PCGS Population (20/151). Mintage: 501,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF30: $2,000. (#1380)

9153 **1795 Plain Edge, S-76b, B-4b, R.1 PCGS Genuine.** The PCGS number ending in .97 suggests Environmental Damage as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. (#35723)

9154 **1796 Liberty Cap — Scratched — ANACS. Fine 15 Details.** S-81. NGC Census: (6/51). PCGS Population (11/82). Mintage: 109,825. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 15: $1,270. (#1392.16)

9155 **1796 Draped Bust, Reverse of 1796 Fair 2 NGC.** NGC Census: (4/55). PCGS Population (0/75). Mintage: 363,375. (#1401)

9156 **1797 Reverse of 1797, Stems — Corroded — ANACS. Fine 12 Details.** S-137. NGC Census: (6/95). PCGS Population (18/176). Mintage: 897,510. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $575. (#1422)

9157 **1798 First Hair Style — Environmental Damage — NGC Details. XF.** NGC Census: (11/55). PCGS Population (19/34). Mintage: 1,841,745. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $1,750. (#1431)

9158 **1798 First Hair Style — Corrosion — NGC Details. Fine.** NGC Census: (15/119). PCGS Population (15/139). Mintage: 1,841,745. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $400. (#1431)

9159 **1798 First Hair Style — Corrosion — NGC Details. Fine.** NGC Census: (15/119). PCGS Population (15/139). Mintage: 1,841,745. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $400. (#1431)

9160 **1798 Second Hair Style VF25 PCGS.** PCGS Population (17/143). NGC Census: (14/53). Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: $859. (#1434)

9161 **1798 First Hair Style — Corroded — ANACS. VF30 Details.** S-167. NGC Census: (18/78). PCGS Population (15/73). Mintage: 1,841,745. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF30: $1,180. (#1431)

9162 **1798 First Hair Style — Corroded — ANACS. XF40 Details.** S-166. NGC Census: (11/55). PCGS Population (19/34). Mintage: 1,841,745. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $1,750. (#1431)

9163 **1798 First Hair Style, S-157, B-15, R.2 — Corroded — ANACS. XF40 Details.** NGC Census: (0/0). PCGS Population (1/4). (#36035)

9164 **1798 Second Hair Style, S-168, B-27, R.3 Good 6 PCGS.** PCGS Population (1/1). NGC Census: (0/0). (#36074)

9165 **1800 80 Over 79, Style Two Hair, S-192, B-6, R.4 Good 6 PCGS.** PCGS Population (1/3). NGC Census: (0/0). (#36155)

9166 **1801 100/000, S-221, B-5, R.2 Good 6 PCGS.** PCGS Population (2/2). NGC Census: (0/0). (#36284)

9167 **1801 S-224, B-13, R.1 Fine 12 PCGS.** PCGS Population (1/1). NGC Census: (0/0). (#36254)

9168 **1800 — Corrosion — NGC Details. Fine.** NGC Census: (11/63). PCGS Population (8/73). Mintage: 2,822,175. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $330. (#1449)

9169 **1802 Fine 12 PCGS. CAC.** PCGS Population (25/326). NGC Census: (23/247). Mintage: 3,435,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $225. (#1470)

9170 **1802 — Corroded, Improperly Cleaned, Corrosion — NGC Details. VF.** NGC Census: (22/201). PCGS Population (36/261). Mintage: 3,435,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $375. (#1470)

9171 **1802 — Corroded — ANACS. VF30 Details.** S-236. NGC Census: (19/158). PCGS Population (33/193). Mintage: 3,435,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF30: $645. (#1470)

9172 **1802 — Burnished, Corroded — ANACS. XF40 Details.** S-233. NGC Census: (30/110). PCGS Population (51/95). Mintage: 3,435,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $1,050. (#1470)

9173 **1802 No Stems, S-231, B-9, R.1 PCGS Genuine.** The PCGS number ending in .97 suggests Environmental Damage as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. (#36344)

9174 **1802 S-237, B-10, R.2 VG8 PCGS.** PCGS Population (1/3). NGC Census: (0/0). (#36320)

9175 **1802 1/000 VF35 NGC.** NGC Census: (0/0). PCGS Population (3/7). Numismedia Wsl. Price for problem free NGC/PCGS coin in VF35: $1,177. (#1473)

9176 **1803 Small Date, Small Fraction — Improperly Cleaned — NGC Details. Fine.** NGC Census: (23/305). PCGS Population (18/329). Mintage: 3,131,691. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $215. (#1482)

9177 **1803 Small Date, Small Fraction — Corrosion — NGC Details. Fine.** NGC Census: (23/305). PCGS Population (18/329). Mintage: 3,131,691. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $215. (#1482)

9178 **1803 Small Date, Small Fraction — Corroded, Rim Damaged — NGC Details. VF.** NGC Census: (20/263). PCGS Population (34/271). Mintage: 3,131,691. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $450. (#1482)

9179 **1803 Small Date, Small Fraction — Scratches — NGC Details.** NGC Census: (20/263). PCGS Population (34/271). Mintage: 3,131,691. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $450. (#1482)

9180 **1803 Small Date, Small Fraction VF30 PCGS.** PCGS Population (33/189). NGC Census: (18/222). Mintage: 3,131,691. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF30: $650. (#1482)

9181 **1803 Small Date, Small Fraction, S-254, B-13, R.1 — Corroded — ANACS. VF35 Details.** S-254. NGC Census: (0/0). PCGS Population (0/3). (#36377)

9182 **1803 Small Date, Large Fraction, S-260, B-19, R.1 VF30 PCGS.** PCGS Population (1/3). NGC Census: (0/0). (#36404)

9228 **1857 Large Date MS62 Brown PCGS.** PCGS Population (36/115). NGC Census: (71/229). Mintage: 333,456. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $325. (#1928)

9229 **1857 Small Date PCGS Genuine.** The PCGS number ending in .94 suggests altered surfaces as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. (#1931)

9230 **1857 Small Date AU58 PCGS. CAC.** N-2. PCGS Population (16/25). NGC Census: (0/0). (#1931)

## FLYING EAGLE CENTS

9231 **1857 Double Die Obverse AU53 ANACS.** NGC Census: (27/2188). PCGS Population (66/2691). Mintage: 17,450,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $175. (#2016)

9232 **1857 — Improperly Cleaned — NGC Details. Unc.** NGC Census: (12/1976). PCGS Population (40/2317). Mintage: 17,450,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $300. (#2016)

9233 **1857 MS62 PCGS.** PCGS Population (390/1871). NGC Census: (278/1605). Mintage: 17,450,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $460. (#2016)

9234 **1858 Large Letters AU58 NGC.** NGC Census: (12/329). PCGS Population (91/1289). Mintage: 24,600,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $260. (#2019)

## INDIAN CENTS

9235 **1859 PCGS Genuine.** RPD, S-1, FS-301 (FS-006.3). The PCGS number ending in .92 suggests cleaning as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. Mintage: 36,400,000. (#2052)

9236 **1859 PCGS Genuine.** The PCGS number ending in .91 suggests Artificial Color as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. Mintage: 36,400,000. (#2052.91)
*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

### Smithsonian

9237 **1859 AU58 ANACS.** FS-006.3 S-1. RPD. NGC Census: (1/12). PCGS Population (182/1437). Mintage: 36,400,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $200. (#2052)

9238 **1859 MS63 NGC.** NGC Census: (1/8). PCGS Population (500/722). Mintage: 36,400,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $535. (#2052)
*From The Paul J. Seaton Collection.*

9239 **1859 MS63 PCGS.** PCGS Population (500/722). NGC Census: (1/8). Mintage: 36,400,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $535. (#2052)

9240 **1860 Type 2 Rounded Bust MS60 ANACS.** NGC Census: (2/886). PCGS Population (11/1000). Mintage: 20,566,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $140. (#2058)

9241 **1860 MS63 PCGS. CAC.** PCGS Population (277/601). NGC Census: (205/534). Mintage: 20,566,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $290. (#2058)

9242 **1860 MS64 PCGS.** PCGS Population (399/202). NGC Census: (359/175). Mintage: 20,566,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $440. (#2058)
*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

9401 **1909-S — Edge Damage — NGC Details. Fine.** NGC Census: (218/2558). PCGS Population (241/2325). Mintage: 309,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $460. (#2238.33)

9402 **1909-S — Obverse Planchet Flaw — NGC Details. VF.** NGC Census: (220/2114). PCGS Population (248/1823). Mintage: 309,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $530. (#2238)

9403 **1909-S — Obv Repaired — NGC Details. VF.** NGC Census: (220/2114). PCGS Population (248/1823). Mintage: 309,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $530. (#2238)

9404 **1909-S VF25 NGC.** NGC Census: (196/1918). PCGS Population (257/1566). Mintage: 309,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: $545. (#2238)

9405 **1909-S VF35 PCGS.** PCGS Population (259/999). NGC Census: (184/1416). Mintage: 309,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF35: $597. (#2238)

9406 **1909-S — Obverse Improperly Cleaned — NGC Details. XF.** NGC Census: (234/1182). PCGS Population (271/728). Mintage: 309,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $640. (#2238)

9407 **1909-S — Improperly Cleaned — NGC Details. XF.** NGC Census: (234/1182). PCGS Population (271/728). Mintage: 309,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $640. (#2238)

9408 **1909-S XF45 NGC.** NGC Census: (326/856). PCGS Population (203/525). Mintage: 309,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $652. (#2238)

9409 **1909-S — Rev Damage — NGC Details. XF.** NGC Census: (0/413). PCGS Population (0/762). Mintage: 309,000. (#2239)

## PROOF INDIAN CENTS

9410 **1861 PR62 PCGS.** PCGS Population (11/114). NGC Census: (10/126). Mintage: 1,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR62: $775. (#2256)

9411 **1862 PR64 PCGS.** PCGS Population (136/108). NGC Census: (204/216). Mintage: 550. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $1,025. (#2259)

9412 **1862 PR64 NGC.** NGC Census: (204/216). PCGS Population (136/108). Mintage: 550. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $1,025. (#2259)

9413 **1863 PR64 NGC.** NGC Census: (96/74). PCGS Population (73/30). Mintage: 460. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $1,075. (#2262)

9414 **1864 Copper-Nickel PR63 PCGS.** PCGS Population (53/139). NGC Census: (19/91). Mintage: 370. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $740. (#2265)

9415 **1867 PR63 Red and Brown NGC.** NGC Census: (26/204). PCGS Population (30/121). Mintage: 625. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $375. (#2289)

9416 **1867 PR64 Red and Brown NGC.** NGC Census: (112/92). PCGS Population (86/35). Mintage: 625. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $565. (#2289)

9417 **1868 PR63 Red and Brown NGC.** Ex: Richmond Collection. NGC Census: (18/129). PCGS Population (25/104). Mintage: 600. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $400. (#2292)

9418 **1870 PR63 Red and Brown NGC.** Ex: Richmond Collection. NGC Census: (26/184). PCGS Population (31/120). Mintage: 1,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $425. (#2298)

9419 **1870 PR64 Red NGC.** NGC Census: (38/28). PCGS Population (30/27). Mintage: 1,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $1,000. (#2299)

9420 **1871 PR63 Red PCGS.** PCGS Population (6/68). NGC Census: (0/46). Mintage: 960. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $525. (#2302)

9421 **1872 PR64 Red and Brown PCGS.** PCGS Population (118/75). NGC Census: (112/106). Mintage: 950. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $685. (#2304)

9422 **1873 Closed 3 — Improperly Cleaned — NGC. Proof.** NGC Census: (0/47). PCGS Population (0/28). Mintage: 1,100. (#2306)
*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

Smithsonian

9423 **1873 Closed 3 PR64 Red and Brown PCGS.** PCGS Population (143/36). NGC Census: (68/61). Mintage: 1,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $500. (#2307)

9424 **1873 Closed 3 PR64 Red and Brown PCGS. CAC.** PCGS Population (143/36). NGC Census: (68/61). Mintage: 1,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $500. (#2307)

9425 **1874 PR63 Brown NGC.** NGC Census: (6/26). PCGS Population (9/7). Mintage: 700. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $190. (#2309)

9426 **1874 PR64 Red and Brown ANACS.** NGC Census: (36/51). PCGS Population (98/42). Mintage: 700. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $480. (#2310)
*From The Paul J. Seaton Collection.*

9427 **1874 PR64 Red PCGS.** PCGS Population (24/15). NGC Census: (12/26). Mintage: 700. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $700. (#2311)

9428 **1875 PR61 Red and Brown PCGS.** PCGS Population (1/164). NGC Census: (0/238). Mintage: 700. (#2313)

9429 **1876 PR63 Red and Brown PCGS.** PCGS Population (42/146). NGC Census: (38/230). Mintage: 1,150. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $335. (#2316)

9430 **1876 PR65 Red and Brown NGC.** NGC Census: (92/32). PCGS Population (46/8). Mintage: 1,150. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $700. (#2316)

9431 **1878 PR63 Red and Brown PCGS.** PCGS Population (72/212). NGC Census: (42/292). Mintage: 2,350. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $265. (#2322)

9432 **1878 PR64 Red and Brown PCGS.** Ex: Eagle Eye Photo Seal. PCGS Population (160/52). NGC Census: (166/126). Mintage: 2,350. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $460. (#2322)

9433 **1878 PR65 Cameo NGC.** NGC Census: (8/2). PCGS Population (8/5). (#82323)
*From The Paul J. Seaton Collection.*

9434 **1879 PR64 Red and Brown NGC.** NGC Census: (150/206). PCGS Population (158/109). Mintage: 3,200. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $320. (#2325)

9435 **1880 PR65 Red and Brown NGC.** NGC Census: (138/60). PCGS Population (61/23). Mintage: 3,955. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $505. (#2328)

9436 **1880 PR65 Red and Brown PCGS.** Ex: Eagle Eye Photo Seal. PCGS Population (61/23). NGC Census: (138/60). Mintage: 3,955. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $505. (#2328)

9437 **1880 PR65 Red and Brown NGC. CAC.** NGC Census: (138/60). PCGS Population (61/23). Mintage: 3,955. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $505. (#2328)

9438 **1880 PR63 Red ANACS.** NGC Census: (2/102). PCGS Population (11/129). Mintage: 3,955. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $250. (#2329)
*From The Paul J. Seaton Collection.*

9439 **1880 PR64 Red PCGS.** Ex: Eagle Eye Photo Seal. PCGS Population (45/84). NGC Census: (30/72). Mintage: 3,955. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $400. (#2329)

9440 **1880 PR65 Red PCGS.** PCGS Population (61/23). NGC Census: (50/22). Mintage: 3,955. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $935. (#2329)

9441 **1881 PR64 Brown NGC.** NGC Census: (26/36). PCGS Population (27/25). Mintage: 3,575. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $200. (#2330)
*From The Paul J. Seaton Collection.*

9442 **1881 PR64 Red and Brown PCGS.** PCGS Population (172/93). NGC Census: (158/234). Mintage: 3,575. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $295. (#2331)

9443 **1881 PR65 Red and Brown PCGS.** PCGS Population (79/14). NGC Census: (148/86). Mintage: 3,575. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $440. (#2331)

9444 **1882 Proof Brown PCGS Genuine.** The PCGS number ending in .91 suggests questionable color as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable.

9445 **1882 PR64 Brown NGC.** NGC Census: (86/188). PCGS Population (51/78). Mintage: 3,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $240. (#2333)

9446 **1882 PR64 Red NGC.** NGC Census: (12/18). PCGS Population (26/32). Mintage: 3,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $460. (#2335)

9447 **1883 PR64 Red and Brown ANACS.** NGC Census: (154/302). PCGS Population (217/139). Mintage: 6,609. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $340. (#2337)
*From The Paul J. Seaton Collection.*

9448 **1883 PR64 Red and Brown PCGS.** PCGS Population (217/139). NGC Census: (154/302). Mintage: 6,609. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $340. (#2337)

9449 **1883 PR64 Red and Brown PCGS.** PCGS Population (217/139). NGC Census: (154/302). Mintage: 6,609. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $340. (#2337)

9450 **1883 PR65 Red and Brown NGC.** NGC Census: (232/70). PCGS Population (106/33). Mintage: 6,609. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $400. (#2337)

9451 **1884 PR64 Brown NGC.** NGC Census: (88/152). PCGS Population (42/54). Mintage: 3,942. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $230. (#2339)

9452 **1884 PR64 Red and Brown PCGS.** PCGS Population (168/168). NGC Census: (79/150). Mintage: 3,942. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $300. (#2340)

9453 **1884 PR65 Red and Brown PCGS.** Ex: Eagle Eye Photo Seal. PCGS Population (109/59). NGC Census: (87/63). Mintage: 3,942. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $460. (#2340)

9454 **1884 PR65 Red and Brown PCGS.** Ex: Eagle Eye Photo Seal. PCGS Population (109/59). NGC Census: (87/63). Mintage: 3,942. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $460. (#2340)

9455 **1884 PR66 Red and Brown PCGS.** Ex: Eagle Eye Photo Seal. PCGS Population (43/16). NGC Census: (53/10). Mintage: 3,942. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $810. (#2340)

9456 **1884 PR66 Red and Brown PCGS.** PCGS Population (43/16). NGC Census: (53/10). Mintage: 3,942. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $810. (#2340)

9457 **1884 PR65 Red PCGS.** PCGS Population (48/40). NGC Census: (48/34). Mintage: 3,942. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $900. (#2341)

9458 **1885 PR65 Brown NGC.** Ex: Eagle Eye Photo Seal. NGC Census: (174/114). PCGS Population (47/56). Mintage: 3,790. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $300. (#2342)

9459 **1885 PR66 Brown PCGS.** Ex: Eagle Eye Photo Seal. PCGS Population (48/8). NGC Census: (92/22). Mintage: 3,790. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $650. (#2342)

9460 **1885 PR63 Red and Brown PCGS.** PCGS Population (54/274). NGC Census: (12/346). Mintage: 3,790. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $225. (#2343)

9461 **1885 PR65 Red and Brown NGC.** NGC Census: (122/116). PCGS Population (101/51). Mintage: 3,790. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $420. (#2343)

9462 **1886 Type One PR63 Red and Brown PCGS.** PCGS Population (40/207). NGC Census: (19/231). Mintage: 4,290. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $240. (#2346)

9463 **1886 Type One PR64 Red and Brown NGC.** NGC Census: (80/151). PCGS Population (109/98). Mintage: 4,290. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $300. (#2346)

9464 **1886 Type Two PR65 Red and Brown PCGS. CAC.** Pale copper-gold and light blue-green hues mingle on this Gem specimen. A single prominent spot is deep brown just south of 3 o'clock on the obverse rim.
*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

9500 **1904 PR65 Brown NGC.** NGC Census: (4/8). PCGS Population (3/1). Mintage: 1,817. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $320. (#2399)

9501 **1905 PR66 Brown NGC.** Ex: Larry Shepherd Collection. NGC Census: (8/4). PCGS Population (1/0). Mintage: 2,152. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $400. (#2402)

9502 **1905 PR64 Red and Brown PCGS.** PCGS Population (108/62). NGC Census: (108/138). Mintage: 2,152. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $280. (#2403)

9503 **1905 PR65 Red and Brown PCGS.** PCGS Population (43/19). NGC Census: (90/48). Mintage: 2,152. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $400. (#2403)

9504 **1906 PR63 Red and Brown PCGS.** PCGS Population (38/134). NGC Census: (30/200). Mintage: 1,725. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $175. (#2406)

9505 **1906 PR65 Red and Brown PCGS.** PCGS Population (25/2). NGC Census: (68/34). Mintage: 1,725. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $460. (#2406)

9506 **1907 PR64 Red and Brown NGC.** NGC Census: (106/82). PCGS Population (77/53). Mintage: 1,475. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $265. (#2409)

9507 **1908 PR63 Red and Brown ANACS.** NGC Census: (14/133). PCGS Population (44/174). Mintage: 1,620. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $160. (#2412)
*From The Paul J. Seaton Collection.*

9508 **1908 PR64 Red and Brown PCGS.** PCGS Population (110/64). NGC Census: (50/83). Mintage: 1,620. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $300. (#2412)

## LINCOLN CENTS

9509 **1909 VDB MS65 Red PCGS.** PCGS Population (4531/2124). NGC Census: (2991/1484). Mintage: 27,995,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $105. (#2425)

9510 **1909 VDB MS66 Red NGC.** NGC Census: (1383/101). PCGS Population (1917/207). Mintage: 27,995,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $220. (#2425)
*From The Paul J. Seaton Collection.*

9511 **1909 VDB MS66 Red NGC.** NGC Census: (1383/101). PCGS Population (1917/207). Mintage: 27,995,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $220. (#2425)

9512 **1909 VDB MS66 Red PCGS.** PCGS Population (1917/207). NGC Census: (1383/101). Mintage: 27,995,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $220. (#2425)

9513 **1909 VDB MS66 Red PCGS.** PCGS Population (1917/207). NGC Census: (1383/101). Mintage: 27,995,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $220. (#2425)

9514 **1909 VDB MS66 Red PCGS.** PCGS Population (1917/207). NGC Census: (1383/101). Mintage: 27,995,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $220. (#2425)

9515 **1909 VDB MS66 Red PCGS.** PCGS Population (1917/207). NGC Census: (1383/101). Mintage: 27,995,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $220. (#2425)

9516 **1909 VDB MS66 Red PCGS.** PCGS Population (1917/207). NGC Census: (1383/101). Mintage: 27,995,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $220. (#2425)

9517 **1909 VDB DDO MS65 Red ANACS.** NGC Census: (8/0). PCGS Population (17/8). (#82425)
*From The Paul J. Seaton Collection.*

9518 **1909-S VDB Fine 12 PCGS.** PCGS Population (361/6914). NGC Census: (361/3690). Mintage: 484,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $850. (#2426)

9519 **1909-S VDB — Reverse Rim Damage, Environmental Damage — NGC Details. Fine.** NGC Census: (361/3690). PCGS Population (361/6914). Mintage: 484,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $850. (#2426)

9520 **1909-S VDB VF20 NGC.** NGC Census: (272/3058). PCGS Population (545/5774). Mintage: 484,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $915. (#2426)

9521 **1909-S VDB VF25 NGC.** NGC Census: (240/2818). PCGS Population (507/5267). Mintage: 484,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: $933. (#2426)

9522 **1909-S VDB VF30 NGC.** NGC Census: (241/2577). PCGS Population (590/4677). Mintage: 484,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF30: $965. (#2426)

9523 **1909-S VDB — Damaged, Improperly Cleaned, Rev Damage — NGC Details. XF.** NGC Census: (261/2148). PCGS Population (688/3353). Mintage: 484,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $1,040. (#2426)

9524 **1909-S VDB XF40 NGC.** NGC Census: (261/2148). PCGS Population (688/3353). Mintage: 484,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $1,040. (#2426)

9525 **1909-S VDB — Improperly Cleaned — NGC Details. AU.** NGC Census: (125/1662). PCGS Population (369/2216). Mintage: 484,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $1,150. (#2426)

9526 **1909-S VDB — Improperly Cleaned — NGC Details. AU.** NGC Census: (125/1662). PCGS Population (369/2216). Mintage: 484,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $1,150. (#2426)

9527 **1909-S VDB — Harshly Cleaned — NGC Details. Unc.** NGC Census: (2/914). PCGS Population (16/935). Mintage: 484,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $1,340. (#2426)

9528 **1909-S VDB PCGS Genuine.** The PCGS number ending in .91 suggests Artificial Color as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. Mintage: 484,000. (#2427)
*From The Paul J. Seaton Collection.*

9529 **1909 MS65 Red NGC.** NGC Census: (700/346). PCGS Population (981/543). Mintage: 72,702,616. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $145. (#2431)

9530 **1909 MS65 Red PCGS.** PCGS Population (981/543). NGC Census: (700/346). Mintage: 72,702,616. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $145. (#2431)

9531 **1909 MS66 Red PCGS.** PCGS Population (483/60). NGC Census: (336/10). Mintage: 72,702,616. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $340. (#2431)

9532 **1909 MS66 Red PCGS.** PCGS Population (483/60). NGC Census: (336/10). Mintage: 72,702,616. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $340. (#2431)

9533 **1909 MS66 Red PCGS.** PCGS Population (483/60). NGC Census: (336/10). Mintage: 72,702,616. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $340. (#2431)

9534 **1909-S PCGS Genuine.** The PCGS number ending in .91 suggests Artificial Color as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. Mintage: 1,825,000. (#2432)
*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

9583 **1914 MS64 Red PCGS.** PCGS Population (184/153). NGC Census: (57/54). Mintage: 75,238,432. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $240. (#2470)

9584 **1914-D — Improperly Cleaned — NGC Details. VG.** NGC Census: (508/4402). PCGS Population (401/3976). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VG8 : $170. (#2471)

9585 **1914-D Fine 12 ANACS.** NGC Census: (566/3412). PCGS Population (455/3097). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $240. (#2471)

9586 **1914-D — Improperly Cleaned — NGC Details. Fine.** NGC Census: (566/3412). PCGS Population (452/3087). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $240. (#2471)

9587 **1914-D — Reverse Scratched — NGC Details. Fine.** NGC Census: (566/3412). PCGS Population (452/3087). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $240. (#2471)

9588 **1914-D Fine 15 PCGS.** PCGS Population (482/2605). NGC Census: (480/2932). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 15: $275. (#2471)

9589 **1914-D VF20 PCGS.** PCGS Population (443/2162). NGC Census: (408/2524). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $340. (#2471)

9590 **1914-D VF20 NGC.** NGC Census: (408/2524). PCGS Population (443/2162). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $340. (#2471)

9591 **1914-D VF20 PCGS.** PCGS Population (443/2162). NGC Census: (408/2524). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $340. (#2471)

9592 **1914-D VF20 ANACS.** NGC Census: (408/2524). PCGS Population (443/2162). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $340. (#2471)

9593 **1914-D VF20 PCGS.** PCGS Population (444/2166). NGC Census: (408/2524). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $340. (#2471)

9594 **1914-D VF25 NGC.** NGC Census: (414/2110). PCGS Population (337/1825). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: $399. (#2471)

9595 **1914-D VF25 NGC.** NGC Census: (414/2110). PCGS Population (337/1825). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: $399. (#2471)

9596 **1914-D VF35 ANACS.** NGC Census: (260/1466). PCGS Population (341/1112). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF35: $596. (#2471)

9597 **1914-D VF35 NGC.** NGC Census: (260/1466). PCGS Population (341/1112). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF35: $596. (#2471)

9598 **1914-D — Improperly Cleaned — NGC Details. XF.** NGC Census: (288/1178). PCGS Population (338/774). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $760. (#2471)

9599 **1914-D XF40 PCGS.** PCGS Population (338/774). NGC Census: (288/1178). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $760. (#2471)

9600 **1914-D XF40 NGC.** NGC Census: (288/1178). PCGS Population (338/774). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $760. (#2471)

9601 **1914-D XF40 NGC.** NGC Census: (288/1178). PCGS Population (338/774). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $760. (#2471)

9602 **1914-D — Obverse Improperly Cleaned — NGC Details. AU.** NGC Census: (90/776). PCGS Population (106/406). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $1,175. (#2471)

9603 **1914-D — Whizzed — NGC Details. AU.** NGC Census: (90/776). PCGS Population (106/406). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $1,175. (#2471)

9604 **1914-D — Corrosion — NGC Details. AU.** NGC Census: (90/776). PCGS Population (106/406). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $1,175. (#2471)

9605 **1914-D — Cleaned, Corroded — ANACS. AU55 Details.** NGC Census: (156/528). PCGS Population (117/235). Mintage: 1,193,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $1,415. (#2471)
*From The Paul J. Seaton Collection.*

9606 **1914-S MS64 Brown ANACS.** NGC Census: (66/16). PCGS Population (40/8). Mintage: 4,137,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $525. (#2474)
*From The Paul J. Seaton Collection.*

9607 **1914-S MS62 Red and Brown ANACS.** NGC Census: (14/194). PCGS Population (7/208). Mintage: 4,137,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $340. (#2475)
*From The Paul J. Seaton Collection.*

9608 **1915 MS65 Brown PCGS.** PCGS Population (28/1). NGC Census: (52/14). Mintage: 29,092,120. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $200. (#2477)

9609 **1915 MS64 Red PCGS.** PCGS Population (188/206). NGC Census: (66/82). Mintage: 29,092,120. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $210. (#2479)
*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

## Smithsonian

9610 **1915-D MS64 Red and Brown PCGS. CAC.** PCGS Population (252/38). NGC Census: (242/120). Mintage: 22,050,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $200. (#2481)

9611 **1915-D MS65 Red and Brown PCGS.** PCGS Population (37/1). NGC Census: (120/0). Mintage: 22,050,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $420. (#2481)

9612 **1915-D MS65 Red and Brown PCGS. CAC.** PCGS Population (37/1). NGC Census: (120/0). Mintage: 22,050,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $420. (#2481)

9613 **1915-S MS62 Red and Brown ANACS.** NGC Census: (14/214). PCGS Population (1/193). Mintage: 4,833,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $200. (#2484)
*From The Paul J. Seaton Collection.*

9614 **1916 MS64 Red and Brown PCGS.** PCGS Population (251/113). NGC Census: (262/212). Mintage: 131,833,680. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $66. (#2487)

9615 **1916 MS65 Red NGC.** NGC Census: (256/66). PCGS Population (381/241). Mintage: 131,833,680. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $270. (#2488)

9616 **1916 MS65 Red PCGS.** PCGS Population (381/241). NGC Census: (256/66). Mintage: 131,833,680. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $270. (#2488)

9617 **1916 MS65 Red PCGS.** PCGS Population (381/241). NGC Census: (256/66). Mintage: 131,833,680. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $270. (#2488)

9618 **1916 MS65 Red PCGS.** PCGS Population (381/241). NGC Census: (256/66). Mintage: 131,833,680. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $270. (#2488)

9619 **1916 MS66 Red PCGS.** PCGS Population (207/34). NGC Census: (60/6). Mintage: 131,833,680. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $525. (#2488)

9620 **1916-D MS65 Red and Brown PCGS.** PCGS Population (38/0). NGC Census: (43/4). Mintage: 35,956,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $720. (#2490)

9621 **1916-D MS63 Red PCGS.** PCGS Population (20/162). NGC Census: (22/106). Mintage: 35,956,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $210. (#2491)

9622 **1916-S MS65 Red and Brown PCGS.** PCGS Population (31/0). NGC Census: (102/4). Mintage: 22,510,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $850. (#2493)

9623 **1917 MS64 Red PCGS.** PCGS Population (261/365). NGC Census: (174/167). Mintage: 196,429,792. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $135. (#2497)
*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

9856 **1938 PR66 Red PCGS.** PCGS Population (229/28). NGC Census: (121/13). Mintage: 14,734. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $300. (#3341)

9857 **1938 PR66 Red PCGS. CAC.** PCGS Population (229/28). NGC Census: (121/13). Mintage: 14,734. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $300. (#3341)

9858 **1939 PR64 Red NGC.** NGC Census: (226/450). PCGS Population (583/947). Mintage: 13,520. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $88. (#3344)

9859 **1939 PR66 Red NGC.** NGC Census: (149/28). PCGS Population (284/27). Mintage: 13,520. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $280. (#3344)

9860 **1941 PR65 Red PCGS.** PCGS Population (472/102). NGC Census: (0/0). Mintage: 21,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $120. (#3350)

9861 **1941 PR65 Red PCGS.** PCGS Population (472/102). NGC Census: (0/0). Mintage: 21,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $120. (#3350)

9862 **1942 PR65 Red PCGS.** PCGS Population (457/97). NGC Census: (234/68). Mintage: 32,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $100. (#3353)

9863 **1942 PR66 Red ANACS.** NGC Census: (67/1). PCGS Population (94/3). Mintage: 32,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $650. (#3353)
*From The Paul J. Seaton Collection.*

9864 **1942 PR63 Cameo NGC.** NGC Census: (4/58). PCGS Population (5/35). Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $200. (#83353)

9865 **1942 PR65 Cameo NGC.** NGC Census: (20/15). PCGS Population (8/4). Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $950. (#83353)

9866 **1950 PR65 Cameo PCGS.** PCGS Population (122/65). NGC Census: (101/112). Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $170. (#83359)

9867 **1952 PR68 Red NGC.** NGC Census: (76/0). PCGS Population (5/0). Mintage: 81,980. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR68: $575. (#3365)

9868 **1961 PR68 Deep Cameo PCGS.** PCGS Population (46/9). NGC Census: (28/5). Numismedia Wsl. Price for problem free NGC/PCGS coin in PR68: $360. (#93395)

## TWO CENT PIECES

9869 **1864 Small Motto VG10 PCGS.** PCGS Population (16/336). NGC Census: (7/336). Mintage: 19,847,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in VG10: $251. (#3579)

9870 **1864 Small Motto VF25 PCGS.** PCGS Population (13/271). NGC Census: (4/302). Mintage: 19,847,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: $480. (#3579)

9871 **1864 Large Motto MS64 Brown NGC.** NGC Census: (430/260). PCGS Population (250/47). Mintage: 19,847,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $200. (#3576)

9872 **1864 Large Motto MS64 Red and Brown PCGS. CAC.** PCGS Population (886/297). NGC Census: (505/661). Mintage: 19,847,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $280. (#3577)

9873 **1864 Large Motto MS65 Red and Brown NGC.** NGC Census: (565/96). PCGS Population (287/10). Mintage: 19,847,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $480. (#3577)

9874 **1865 MS62 Brown NGC.** NGC Census: (230/1322). PCGS Population (67/431). Mintage: 13,640,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $130. (#3582)

9875 **1865 MS63 Brown PCGS.** PCGS Population (216/215). NGC Census: (332/990). Mintage: 13,640,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $155. (#3582)

9876 **1865 MS65 Red and Brown NGC.** NGC Census: (657/132). PCGS Population (258/20). Mintage: 13,640,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $500. (#3583)

9877 **1866 MS65 Red and Brown PCGS.** PCGS Population (55/5). NGC Census: (142/18). Mintage: 3,177,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $625. (#3589)

9878 **1867 MS60 Brown ANACS.** NGC Census: (0/355). PCGS Population (3/103). Mintage: 2,938,750. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $94. (#3591)

9879 **1867 MS65 Red and Brown PCGS.** PCGS Population (51/2). NGC Census: (152/24). Mintage: 2,938,750. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $535. (#3592)

9880 **1868 MS64 Red and Brown PCGS. CAC.** PCGS Population (152/43). NGC Census: (192/166). Mintage: 2,803,750. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $380. (#3598)

9881 **1869 AU58 PCGS.** PCGS Population (22/96). NGC Census: (30/286). Mintage: 1,546,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $115. (#3603)

9882 **1869 MS64 Brown NGC.** NGC Census: (134/44). PCGS Population (37/3). Mintage: 1,546,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $310. (#3603)

9883 **1871 AU53 PCGS. CAC.** PCGS Population (12/208). NGC Census: (10/450). Mintage: 721,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $150. (#3609)

9884 **1871 MS64+ Red and Brown PCGS. CAC.** PCGS Population (106/26). NGC Census: (57/60). Mintage: 721,250. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $625. (#3610)

9885 **1872 Good 4 NGC.** NGC Census: (8/301). PCGS Population (9/286). Mintage: 64,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in Good 4 : $275. (#3612)
*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

Smithsonian

9886 **1872 Fine 12 PCGS.** PCGS Population (17/232). NGC Census: (32/221). Mintage: 64,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $525. (#3612)

## PROOF TWO CENT PIECE

9887 **1869 PR64 Brown PCGS.** PCGS Population (11/6). NGC Census: (18/23). Mintage: 600. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $460. (#3639)

## THREE CENT SILVER

9888 **1851 — Bent — ANACS. AU50 Details** and an **1837 Feuchtwanger Cent — Corroded — ANACS. VF20 Details.** (Total: 2 coins)

9889 **1851 MS62 PCGS.** PCGS Population (131/948). NGC Census: (107/874). Mintage: 5,447,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $200. (#3664)

9890 **1852 MS62 ANACS.** NGC Census: (136/1007). PCGS Population (169/959). Mintage: 18,663,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $210. (#3666)

9891 **1852 MS62 PCGS.** PCGS Population (169/959). NGC Census: (136/1007). Mintage: 18,663,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $210. (#3666)

9892 **1852 MS62 PCGS.** PCGS Population (169/959). NGC Census: (136/1007). Mintage: 18,663,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $210. (#3666)

9893 **1857 AU55 ANACS.** NGC Census: (4/282). PCGS Population (11/224). Mintage: 1,042,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $220. (#3673)

9894 **1858 MS63 PCGS.** PCGS Population (101/194). NGC Census: (93/241). Mintage: 1,604,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $585. (#3674)

9895 **1859 MS64 NGC.** NGC Census: (88/53). PCGS Population (80/39). Mintage: 364,200. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $465. (#3677)

9896 **1862 AU55 NGC.** NGC Census: (10/980). PCGS Population (42/990). Mintage: 343,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $155. (#3680)

9897 **1862 AU58 NGC.** NGC Census: (49/931). PCGS Population (52/937). Mintage: 343,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $165. (#3680)

9898 **1870 — Obv Scratched — NGC Details. XF.** FS-501. NGC Census: (0/83). PCGS Population (1/62). Mintage: 3,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $450. (#3691)

9899 **1872 — Rev Damage — NGC Details. VF.** NGC Census: (0/39). PCGS Population (0/43). Mintage: 1,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $425. (#3693)

## THREE CENT NICKELS

9900 **1865 MS65 NGC.** NGC Census: (131/17). PCGS Population (100/39). Mintage: 11,382,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $480. (#3731)

9901 **1869 MS64 PCGS.** PCGS Population (96/66). NGC Census: (129/63). Mintage: 1,604,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $235. (#3735)

9902 **1869 MS65 NGC. CAC.** NGC Census: (50/13). PCGS Population (49/17). Mintage: 1,604,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $665. (#3735)

9903 **1880 XF40 NGC.** NGC Census: (1/166). PCGS Population (6/197). Mintage: 21,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $145. (#3748)

9904 **1880 MS64 PCGS.** PCGS Population (34/120). NGC Census: (32/94). Mintage: 21,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $420. (#3748)

9905 **1881 MS65 PCGS.** PCGS Population (72/50). NGC Census: (48/12). Mintage: 1,080,575. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $535. (#3749)

9906 **1883 — Cleaned — ANACS. AU50 Details.** NGC Census: (0/30). PCGS Population (7/37). Mintage: 4,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $375. (#3751)

9907 **1889 MS65 NGC.** NGC Census: (28/24). PCGS Population (22/36). Mintage: 18,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $625. (#3758)

## PROOF THREE CENT NICKELS

9908 **1866 PR64 PCGS.** PCGS Population (108/75). NGC Census: (91/76). Mintage: 725. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $515. (#3762)

9909 **1869 PR65 PCGS.** PCGS Population (71/11). NGC Census: (85/12). Mintage: 600. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $720. (#3765)

9910 **1869 PR65 Cameo NGC.** NGC Census: (44/23). PCGS Population (36/8). (#83765)

9911 **1870 PR64 NGC.** NGC Census: (110/97). PCGS Population (121/66). Mintage: 1,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $435. (#3766)

9912 **1871 PR65 NGC.** NGC Census: (111/42). PCGS Population (89/26). Mintage: 960. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $775. (#3767)

9913 **1872 PR65 NGC.** NGC Census: (135/22). PCGS Population (87/17). Mintage: 950. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $640. (#3768)

9914 **1872 PR65 NGC.** NGC Census: (135/22). PCGS Population (87/17). Mintage: 950. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $640. (#3768)

9915 **1872 PR64 Cameo PCGS.** PCGS Population (17/30). NGC Census: (8/46). (#83768)

9916 **1872 PR64 Cameo PCGS.** PCGS Population (17/30). NGC Census: (8/46). (#83768)

9917 **1873 Closed 3 PR64 NGC.** NGC Census: (159/136). PCGS Population (228/114). Mintage: 1,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $340. (#3769)

9918 **1873 Closed 3 PR65 NGC.** NGC Census: (107/29). PCGS Population (104/10). Mintage: 1,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $710. (#3769)

9919 **1874 PR62 NGC.** NGC Census: (3/233). PCGS Population (9/294). Mintage: 700. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR62: $230. (#3770)

9920 **1874 PR65 PCGS.** PCGS Population (84/22). NGC Census: (100/24). Mintage: 700. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $610. (#3770)

9921 **1874 PR65 NGC.** NGC Census: (100/24). PCGS Population (84/22). Mintage: 700. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $610. (#3770)

9922 **1874 PR66 NGC.** NGC Census: (22/2). PCGS Population (21/1). Mintage: 700. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $975. (#3770)

9923 **1875 PR64 NGC.** NGC Census: (114/77). PCGS Population (138/110). Mintage: 700. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $420. (#3771)

9924 **1876 PR65 PCGS.** PCGS Population (84/12). NGC Census: (96/28). Mintage: 1,150. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $715. (#3772)

9925 **1876 PR65 NGC.** NGC Census: (96/28). PCGS Population (84/12). Mintage: 1,150. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $715. (#3772)

9926 **1876 PR63 Cameo PCGS.** PCGS Population (6/63). NGC Census: (3/54). (#83772)

9927 **1878 PR64 PCGS.** PCGS Population (238/324). NGC Census: (129/326). Mintage: 2,350. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $730. (#3774)

9928 **1878 PR65 NGC.** NGC Census: (177/149). PCGS Population (231/93). Mintage: 2,350. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $800. (#3774)

9929 **1879 PR65 NGC.** NGC Census: (302/235). PCGS Population (296/221). Mintage: 3,200. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $480. (#3775)

9930 **1879 PR65 NGC.** NGC Census: (302/235). PCGS Population (296/221). Mintage: 3,200. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $480. (#3775)

9931 **1879 PR66 NGC.** NGC Census: (174/61). PCGS Population (177/44). Mintage: 3,200. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $680. (#3775)

9932 **1880 PR65 PCGS.** PCGS Population (360/248). NGC Census: (347/263). Mintage: 3,955. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $480. (#3776)

9933 **1880 PR65 NGC.** NGC Census: (347/263). PCGS Population (360/248). Mintage: 3,955. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $480. (#3776)

9934 **1880 PR66 NGC.** NGC Census: (215/48). PCGS Population (214/34). Mintage: 3,955. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $690. (#3776)

9935 **1880 PR66 NGC.** NGC Census: (215/48). PCGS Population (214/34). Mintage: 3,955. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $690. (#3776)

9936 **1880 PR65 Cameo PCGS.** PCGS Population (20/34). NGC Census: (10/19). (#83776)

9937 **1881 PR62 PCGS.** PCGS Population (26/969). NGC Census: (12/776). Mintage: 3,575. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR62: $230. (#3777)

9938 **1881 PR65 NGC.** NGC Census: (280/292). PCGS Population (321/307). Mintage: 3,575. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $490. (#3777)

9939 **1881 PR65 NGC.** NGC Census: (280/292). PCGS Population (321/307). Mintage: 3,575. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $490. (#3777)

9940 **1882 PR65 PCGS.** PCGS Population (322/365). NGC Census: (283/324). Mintage: 3,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $485. (#3778)

9941 **1882 PR65 NGC.** NGC Census: (283/324). PCGS Population (322/365). Mintage: 3,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $485. (#3778)

9942 **1882 PR66 Cameo PCGS.** PCGS Population (73/60). NGC Census: (44/33). (#83778)

9943 **1883 PR65 NGC.** NGC Census: (494/371). PCGS Population (499/413). Mintage: 6,609. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $480. (#3779)

9944 **1883 PR65 NGC.** NGC Census: (494/371). PCGS Population (499/413). Mintage: 6,609. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $480. (#3779)

9945 **1883 PR66 PCGS.** PCGS Population (346/67). NGC Census: (287/84). Mintage: 6,609. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $690. (#3779)

9946 **1883 PR66 Cameo NGC.** NGC Census: (44/19). PCGS Population (63/34). (#83779)

9947 **1884 PR63 PCGS.** PCGS Population (112/934). NGC Census: (57/839). Mintage: 3,942. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $320. (#3780)

9948 **1884 PR65 PCGS.** PCGS Population (364/214). NGC Census: (353/257). Mintage: 3,942. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $500. (#3780)

9949 **1884 PR65 NGC.** NGC Census: (353/257). PCGS Population (364/214). Mintage: 3,942. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $500. (#3780)

9950 **1885 PR65 NGC.** NGC Census: (295/176). PCGS Population (297/173). Mintage: 3,790. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $535. (#3781)

9951 **1885 PR65 NGC.** NGC Census: (295/176). PCGS Population (297/173). Mintage: 3,790. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $535. (#3781)

9952 **1885 PR65 NGC.** NGC Census: (295/176). PCGS Population (297/173). Mintage: 3,790. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $535. (#3781)

9953 **1886 PR65 NGC.** NGC Census: (334/247). PCGS Population (370/264). Mintage: 4,290. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $500. (#3782)

9954 **1886 PR65 NGC.** NGC Census: (334/247). PCGS Population (370/264). Mintage: 4,290. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR65: $500. (#3782)

9955 **1886 PR65 Cameo NGC.** NGC Census: (18/37). PCGS Population (16/51). (#83782)

9956 **1886 PR65 Cameo NGC.** NGC Census: (18/37). PCGS Population (16/51). (#83782)

9957 **1887 PR63 NGC.** NGC Census: (38/268). PCGS Population (64/387). Mintage: 2,960. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR63: $335. (#3783)

## PROOF JEFFERSON NICKELS

10234 **1938 PR67 PCGS.** PCGS Population (218/11). NGC Census: (179/11). Mintage: 19,365. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR67: $230. (#4175)

10235 **1938 PR67 PCGS.** PCGS Population (218/11). NGC Census: (179/11). Mintage: 19,365. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR67: $230. (#4175)

10236 **1939 Reverse of 1938 PR66 NGC.** NGC Census: (217/70). PCGS Population (518/131). Mintage: 12,535. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $115. (#4176)

10237 **1942-P Type Two PR67 PCGS.** PCGS Population (313/12). NGC Census: (354/16). Mintage: 27,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR67: $170. (#4180)

10238 **1942-P Type Two PR67 NGC.** NGC Census: (354/16). PCGS Population (313/12). Mintage: 27,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR67: $170. (#4180)

10239 **1942-P Type Two PR67 NGC. CAC.** NGC Census: (354/16). PCGS Population (313/12). Mintage: 27,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR67: $170. (#4180)

10240 **1957 PR69 NGC.** NGC Census: (76/0). PCGS Population (2/0). Mintage: 1,247,952. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR69: $65. (#4189)

10241 **1961 PR68 Deep Cameo PCGS.** PCGS Population (61/12). NGC Census: (18/6). Numismedia Wsl. Price for problem free NGC/PCGS coin in PR68: $265. (#94193)

## BUST HALF DIMES

10242 **1829 — Bent — NGC Details. AU.** NGC Census: (10/534). PCGS Population (26/458). Mintage: 1,230,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $200. (#4276)

10243 **1832 —Cleaned— ANACS. XF40 Details.** LM-12; **1836 —Cleaned— ANACS. XF40 Details.** LM-5 and a **1842 —Cleaned— ANACS. AU50 Details.** (Total: 3 coins)

10244 **1832 MS61 NGC.** LM-3. NGC Census: (43/539). PCGS Population (22/386). Mintage: 965,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $375. (#4279)

10245 **1832 MS63 PCGS.** PCGS Population (97/200). NGC Census: (129/297). Mintage: 965,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $700. (#4279)

10246 **1833 MS63 PCGS.** PCGS Population (85/120). NGC Census: (94/181). Mintage: 1,370,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $685. (#4280)

10247 **1836 Large 5C AU55 ANACS.** LM-6. NGC Census: (16/287). PCGS Population (23/181). Mintage: 1,900,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $250. (#4287)

10248 **1836 Small 5C MS63 PCGS.** PCGS Population (6/18). NGC Census: (0/0). (#4288)

10249 **1837 Large 5C — Improperly Cleaned — NGC Details. AU.** NGC Census: (5/144). PCGS Population (9/115). Mintage: 871,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $195. (#4289)

10250 **1837 Large 5C AU55 PCGS. CAC.** PCGS Population (14/97). NGC Census: (13/127). Mintage: 871,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $275. (#4289)

## SEATED HALF DIMES

10251 **1837 No Stars, Large Date (Curl Top 1) MS63 PCGS.** PCGS Population (132/236). NGC Census: (125/463). Mintage: 1,405,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $775. (#4311)

10252 **1838-O No Stars — Environmental Damage — NGC. XF Details.** NGC Census: (4/23). PCGS Population (8/26). Mintage: 70,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $1,000. (#4314)

10253 **1838 Large Stars, No Drapery AU58 PCGS. CAC.** PCGS Population (54/325). NGC Census: (65/498). Mintage: 2,225,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $180. (#4317)

10254 **1840 No Drapery MS62 PCGS.** PCGS Population (19/129). NGC Census: (30/153). Mintage: 1,000,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $300. (#4321)

10255 **1841 AU53 PCGS. CAC.** PCGS Population (5/96). NGC Census: (2/152). Mintage: 1,150,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $100. (#4328)

10256 **1845 MS63 NGC. CAC.** NGC Census: (37/77). PCGS Population (28/79). Mintage: 1,564,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $325. (#4335)

10257 **1847 MS64 NGC.** NGC Census: (42/29). PCGS Population (30/35). Mintage: 1,274,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $550. (#4337)

10258 **1852-O VF20 PCGS.** PCGS Population (4/53). NGC Census: (1/40). Mintage: 260,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $125. (#4350)

10259 **1858 MS64 PCGS.** PCGS Population (117/131). NGC Census: (175/174). Mintage: 3,500,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $480. (#4367)

10260 **1858-O MS64 NGC.** NGC Census: (74/27). PCGS Population (53/16). Mintage: 1,660,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $510. (#4369)

10261 **1862 MS64 NGC.** NGC Census: (157/153). PCGS Population (119/128). Mintage: 1,492,550. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $340. (#4381)

10262 **1862 MS65 NGC.** NGC Census: (90/63). PCGS Population (69/59). Mintage: 1,492,550. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $765. (#4381)

10263 **1863-S AU50 NGC.** NGC Census: (2/81). PCGS Population (5/49). Mintage: 100,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $260. (#4383)

10264 **1864-S AU55 PCGS.** PCGS Population (7/26). NGC Census: (3/36). Mintage: 90,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $425. (#4385)

10265 **1873-S AU58 NGC.** NGC Census: (21/223). PCGS Population (19/205). Mintage: 324,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $100. (#4405)

## PROOF SEATED HALF DIMES

10266 **1863 PR64 PCGS.** PCGS Population (69/43). NGC Census: (54/39). Mintage: 460. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $765. (#4446)

10267 **1868 PR64 NGC.** NGC Census: (57/42). PCGS Population (49/32). Mintage: 600. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $650. (#4451)

10268 **1868 PR64 PCGS.** PCGS Population (49/32). NGC Census: (57/42). Mintage: 600. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR64: $650. (#4451)

## EARLY DIME

10269 **1805 4 Berries Fair 2 NGC.** JR-2. NGC Census: (5/245). PCGS Population (14/363). Mintage: 120,780. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fair 2 : $200. (#4477)

## BUST DIMES

10270 **1820 Small 0 VG10 PCGS.** PCGS Population (2/26). NGC Census: (0/0). Numismedia Wsl. Price for problem free NGC/PCGS coin in VG10: $56. (#4493)

10271 **1827 XF45 PCGS.** PCGS Population (15/194). NGC Census: (12/219). Mintage: 1,300,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $410. (#4504)

10272 **1827 XF45 NGC.** NGC Census: (12/219). PCGS Population (15/194). Mintage: 1,300,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $410. (#4504)

10273 **1828 Small Date — Scratched — ANACS. XF45 Details.** JR-1. NGC Census: (4/26). PCGS Population (2/48). Mintage: 125,000. (#4510)

10274 **1830 Medium 10C VF30 PCGS.** PCGS Population (8/177). NGC Census: (3/152). Mintage: 510,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF30: $135. (#4516)

10275 **1830 Medium 10C VF30 PCGS. CAC.** PCGS Population (8/177). NGC Census: (3/152). Mintage: 510,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF30: $135. (#4516)

10276 **1835 XF40 PCGS.** PCGS Population (42/364). NGC Census: (11/397). Mintage: 1,410,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $220. (#4527)

10277 **1835 — Cleaned — ANACS. AU53 Details.** JR-9. NGC Census: (9/349). PCGS Population (16/253). Mintage: 1,410,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $325. (#4527)

10278 **1836 MS62 PCGS.** PCGS Population (17/59). NGC Census: (27/65). Mintage: 1,190,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $800. (#4528)

## SEATED DIMES

10279 **1837 No Stars, Large Date AU50 NGC.** NGC Census: (11/307). PCGS Population (32/233). Mintage: 682,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $560. (#4561)

10280 **1838-O No Stars VF20 PCGS. CAC.** PCGS Population (11/165). NGC Census: (2/133). Mintage: 406,034. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $400. (#4564)

10281 **1838-O No Stars VF25 NGC.** NGC Census: (6/127). PCGS Population (11/154). Mintage: 406,034. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: $440. (#4564)

10282 **1838-O No Stars — Improperly Cleaned — NGC. XF.** NGC Census: (17/94). PCGS Population (21/106). Mintage: 406,034. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $685. (#4564)

10283 **1838 Large Stars MS61 NGC.** NGC Census: (13/228). PCGS Population (6/181). Mintage: 1,992,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $350. (#4568)

10284 **1838 Large Stars MS62 NGC.** AH-5. NGC Census: (33/195). PCGS Population (24/157). Mintage: 1,992,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $500. (#4568)

10285 **1838 Large Stars MS63 PCGS.** A-4. PCGS Population (41/116). NGC Census: (39/156). Mintage: 1,992,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $650. (#4568)

10286 **1838 Large Stars MS63 NGC.** AH-2. NGC Census: (39/156). PCGS Population (41/116). Mintage: 1,992,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $650. (#4568)

10287 **1839 No Drapery MS62 NGC.** AH-1. NGC Census: (24/118). PCGS Population (19/81). Mintage: 1,053,115. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $500. (#4571)

10288 **1839 No Drapery MS63 NGC.** AH-4. NGC Census: (28/90). PCGS Population (20/61). Mintage: 1,053,115. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $675. (#4571)

10289 **1840 No Drapery MS63 NGC.** NGC Census: (14/40). PCGS Population (17/23). Mintage: 981,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $650. (#4573)

10290 **1841 MS63 NGC.** NGC Census: (11/32). PCGS Population (18/23). Mintage: 1,622,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $635. (#4579)

10291 **1842-O XF45 NGC.** NGC Census: (9/35). PCGS Population (13/34). Mintage: 2,020,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $554. (#4582)

10292 **1843 AU58 NGC.** NGC Census: (8/42). PCGS Population (11/35). Mintage: 1,370,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $200. (#4583)

10293 **1843 MS62 NGC.** NGC Census: (9/32). PCGS Population (5/29). Mintage: 1,370,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $515. (#4583)

10294 **1843 MS63 NGC.** NGC Census: (13/19). PCGS Population (9/20). Mintage: 1,370,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $660. (#4583)

10295 **1844 — Obv Scratched — NGC Details. VG.** NGC Census: (4/56). PCGS Population (18/170). Mintage: 72,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in VG8 : $200. (#4585)

10296 **1844 VF25 NGC.** NGC Census: (5/27). PCGS Population (24/80). Mintage: 72,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: $470. (#4585)

10297 **1849-O XF40 PCGS.** PCGS Population (7/41). NGC Census: (2/45). Mintage: 300,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $325. (#4592)

10298 **1850 MS62 NGC.** A-1, R-4. NGC Census: (11/66). PCGS Population (18/46). Mintage: 1,931,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $380. (#4593)

10299 **1851-O —Cleaned—ANACS. VF20 Details** and an **1875-S Trade Dollar —Cleaned, Graffiti— ANACS. XF40 Details.** (Total: 2 coins)

10300 **1852 MS62 PCGS.** AH-3a, R-6. PCGS Population (12/69). NGC Census: (7/45). Mintage: 1,535,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $400. (#4597)

10301 **1852 MS63 NGC.** AH-2. NGC Census: (9/36). PCGS Population (15/54). Mintage: 1,535,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $615. (#4597)

10302 **1853 No Arrows — Improperly Cleaned — NGC Details. Fine.** NGC Census: (3/87). PCGS Population (2/96). Mintage: 95,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $140. (#4599)

10303 **1853 Arrows MS61 NGC.** A-5, R-5. NGC Census: (36/492). PCGS Population (11/448). Mintage: 12,078,010. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $325. (#4603)

10304 **1855 Arrows MS63 NGC.** DDO, AH-1, Greer 101. NGC Census: (19/37). PCGS Population (22/20). Mintage: 2,075,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $800. (#4607)

10305 **1856 Small Date — Obv Scratched — NGC Details. AU.** NGC Census: (4/165). PCGS Population (5/117). Mintage: 5,780,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $120. (#4609)

10306 **1856 Small Date MS63 NGC.** 1856/6, AH-3, R-4. NGC Census: (38/59). PCGS Population (24/49). Mintage: 5,780,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $475. (#4609)

10307 **1857 MS64 NGC.** NGC Census: (88/49). PCGS Population (49/20). Mintage: 5,580,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $775. (#4614)

10308 **1857-O AU55 ANACS.** NGC Census: (10/130). PCGS Population (9/104). Mintage: 1,540,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $250. (#4615)

11000 **1934-D Medium Motto MS65 NGC.** NGC Census: (136/44). PCGS Population (238/69). Mintage: 3,527,200. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $725. (#5796)

***End of Session 9***

# SESSION TEN

Heritage Live!™, Internet, Fax, and Mail Only Session
Sunday, January 8, 2012 | 9:00AM CT | Dallas, Texas | Lots 11001 - 13994

A 15% Buyer's Premium ($14 minimum) Will Be Added To All Lots
To view full descriptions, enlargeable images and bid online, visit HA.com/1166

## SPECIAL INTERNET BIDDING FEATURE

Online proxy bidding ends at HA.com two hours prior to the opening of the live auction. Check the Time Remaining on individual lots for details. After Internet proxy bidding closes, live bidding will take place through Heritage Live™, our bidding software that lets you bid live during the actual auction. Your secret maximum will compete against those bids, and win all ties. To maximize your chances of winning, enter realistic secret maximum bids before live bidding begins. (Important note: Due to software and Internet latency, bids placed through Live Internet Bidding may not register in time and those bidders could lose lots they would otherwise have won, so be sure to place your proxy bids in advance.)

## WASHINGTON QUARTERS

11001 **1934-D Medium Motto MS65 PCGS.** PCGS Population (238/69). NGC Census: (136/44). Mintage: 3,527,200. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $725. (#5796)

11002 **1935 MS66 PCGS.** PCGS Population (623/80). NGC Census: (565/116). Mintage: 32,484,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $106. (#5797)

11003 **1935-D MS64 ★ NGC.** NGC Census: (318/366). PCGS Population (666/564). Mintage: 5,780,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $250. (#5798)

11004 **1935-D MS66 PCGS.** PCGS Population (166/13). NGC Census: (94/12). Mintage: 5,780,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $750. (#5798)

11005 **1935-S MS66 PCGS.** PCGS Population (201/20). NGC Census: (118/29). Mintage: 5,660,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $420. (#5799)

11006 **1936 PCGS Genuine.** DDO FS-101. (FS-011). The PCGS number ending in .92 suggests Cleaning as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. Mintage: 41,303,836. (#5800)
*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

Smithsonian

11007 **1936 MS66 PCGS. CAC.** PCGS Population (495/60). NGC Census: (419/89). Mintage: 41,303,836. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $135. (#5800)

11008 **1936 MS67 PCGS.** Ex: The Tom Mershon Collection. PCGS Population (60/0). NGC Census: (88/1). Mintage: 41,303,836. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS67: $400. (#5800)

11009 **1936-D — Improperly Cleaned — NGC Details. AU.** NGC Census: (16/900). PCGS Population (24/1643). Mintage: 5,374,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $170. (#5801)

11010 **1936-D MS64 NGC.** NGC Census: (301/207). PCGS Population (627/398). Mintage: 5,374,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $740. (#5801)

11011 **1936-S MS64 NGC.** NGC Census: (387/574). PCGS Population (882/1002). Mintage: 3,828,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $140. (#5802)

11012 **1936-S MS65 PCGS.** PCGS Population (762/240). NGC Census: (426/148). Mintage: 3,828,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS65: $260. (#5802)

11013 **1936-S MS66 PCGS.** PCGS Population (214/26). NGC Census: (139/9). Mintage: 3,828,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $400. (#5802)

11014 **1937 MS66 PCGS.** PCGS Population (329/53). NGC Census: (266/56). Mintage: 19,701,542. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $140. (#5803)

11015 **1937-D MS66 PCGS.** PCGS Population (257/31). NGC Census: (155/16). Mintage: 7,189,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $330. (#5804)

11016 **1937-D MS66 PCGS.** PCGS Population (257/31). NGC Census: (155/16). Mintage: 7,189,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $330. (#5804)

11017 **1937-S MS66 NGC.** NGC Census: (130/26). PCGS Population (150/21). Mintage: 1,652,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $520. (#5805)

11018 **1937-S MS66 PCGS.** PCGS Population (150/21). NGC Census: (130/26). Mintage: 1,652,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $520. (#5805)

11019 **1938 MS66 PCGS.** PCGS Population (239/34). NGC Census: (214/57). Mintage: 9,480,045. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $300. (#5806)

11020 **1938-S MS66 PCGS.** PCGS Population (350/34). NGC Census: (231/41). Mintage: 2,832,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $280. (#5807)

11021 **1939-D MS66 PCGS.** PCGS Population (424/42). NGC Census: (329/61). Mintage: 7,092,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $145. (#5809)

11022 **1939-S MS66 NGC.** NGC Census: (218/31). PCGS Population (276/19). Mintage: 2,628,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $300. (#5810)

11023 **1939-S MS66 PCGS.** PCGS Population (276/19). NGC Census: (218/31). Mintage: 2,628,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $300. (#5810)

11024 **1940 MS67 PCGS.** PCGS Population (93/1). NGC Census: (156/0). Mintage: 35,715,248. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS67: $265. (#5811)

11025 **1940 MS67 PCGS. CAC.** PCGS Population (93/1). NGC Census: (156/0). Mintage: 35,715,248. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS67: $265. (#5811)

11026 **1940-D MS66 PCGS.** PCGS Population (289/20). NGC Census: (257/39). Mintage: 2,797,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $315. (#5812)

11027 **1941-D MS66 PCGS.** PCGS Population (291/22). NGC Census: (270/98). Mintage: 16,714,800. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $145. (#5815)

11028 **1941-S MS66 PCGS.** PCGS Population (299/34). NGC Census: (356/76). Mintage: 16,080,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS66: $145. (#5816)

11060 **1950 PR66 PCGS. CAC.** PCGS Population (617/271). NGC Census: (328/321). Mintage: 51,386. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $71. (#5982)

11061 **1952 "Superbird" PR66 PCGS.** FS-901. PCGS Population (649/413). NGC Census: (288/430). Mintage: 81,980. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR66: $46. (#5984)

11062 **1958 PR67 Deep Cameo PCGS.** PCGS Population (30/27). NGC Census: (19/11). Numismedia Wsl. Price for problem free NGC/PCGS coin in PR67: $340. (#95990)

11063 **1959 PR69 W Cameo NGC.** NGC Census: (70/0). PCGS Population (9/0). Numismedia Wsl. Price for problem free NGC/PCGS coin in PR69: $280. (#85991)

11064 **1963 PR68 Ultra Cameo NGC.** NGC Census: (280/111). PCGS Population (313/110). Numismedia Wsl. Price for problem free NGC/PCGS coin in PR68: $80. (#95995)

11065 **1968-S PR66 PCGS.** DDO FS-101. PCGS Population (87/184). NGC Census: (60/403). Mintage: 3,041,506. (#6000)
*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.*

Smithsonian

11066 **1976-S Clad PR70 Deep Cameo PCGS.** PCGS Population (78). NGC Census: (0). Numismedia Wsl. Price for problem free NGC/PCGS coin in PR70: $340. (#96007)

## PROOF NATIONAL PARKS QUARTERS

11067 **2010-S Proof National Parks Quarter Set, First Release PR70 Deep Cameo ANACS. This set includes: Hot Springs; Yellowstone; Yosemite; Grand Canyon and Mount Hood.** All ANACS certified #391 of 989. Wooden display box included. (Total: 5 coins)

## EARLY HALF DOLLARS

11068 **1795 2 Leaves — Plugged — NGC Details. Good.** O-102. NGC Census: (29/817). PCGS Population (44/1296). Mintage: 299,680. Numismedia Wsl. Price for problem free NGC/PCGS coin in Good 4 : $875. (#6052)

11069 **1795 Two Leaves, A/E—Repaired—NGC Details. Good.** O-113a. NGC Census: (0/0). PCGS Population (0/7). (#39254)

11070 **1803 Large 3 PCGS Genuine.** The PCGS number ending in .94 suggests Altered Surfaces as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. Mintage: 188,234. (#6066)

11071 **1806 Pointed 6, No Stem VF35 NGC.** O-109. NGC Census: (0/0). PCGS Population (30/154). (#6073)

11072 **1806 Pointed 6, No Stem VF35 NGC.** O-109. NGC Census: (0/0). PCGS Population (30/154). (#6073)

11073 **1806 Pointed 6, Stem VG8 ANACS.** O-125. NGC Census: (31/1684). PCGS Population (22/943). Mintage: 839,576. Numismedia Wsl. Price for problem free NGC/PCGS coin in VG8 : $240. (#6071)

11074 **1806 Pointed 6, Stem — Cleaned — ANACS. Fine 12 Details.** O-115. NGC Census: (52/1599). PCGS Population (63/838). Mintage: 839,576. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $330. (#6071)

11075 **1806 Pointed 6, Stem — Improperly Cleaned — NGC Details. VF.** NGC Census: (68/1476). PCGS Population (80/683). Mintage: 839,576. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $600. (#6071)

11076 **1807 Draped Bust — Improperly Cleaned — NGC Details. VF.** O-105. NGC Census: (41/1350). PCGS Population (103/763). Mintage: 301,076. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $590. (#6079)

11077 **1807 Draped Bust VF20 PCGS. CAC.** PCGS Population (103/763). NGC Census: (41/1350). Mintage: 301,076. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $590. (#6079)

11078 **1807 Draped Bust VF25 NGC.** O-106. NGC Census: (48/1302). PCGS Population (98/665). Mintage: 301,076. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: $693. (#6079)

## BUST HALF DOLLARS

11079 **1807 Large Stars, 50 Over 20 PCGS Genuine.** The PCGS number ending in .92 suggests Cleaning as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. Mintage: 750,500. (#6086)

11080 **1807 Large Stars, 50 Over 20 PCGS Genuine.** The PCGS number ending in .98 suggests Damage as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. Mintage: 750,500. (#6086)

11081 **1808 — Cleaned — ANACS. Fine 12 Details.** O-110A. NGC Census: (15/403). PCGS Population (11/522). Mintage: 1,368,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $94. (#6090)

11082 **1810 AU55 NGC.** O-103. NGC Census: (53/184). PCGS Population (66/121). Mintage: 1,276,276. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $825. (#6095)

11083 **1811 Small 8 VF35 PCGS.** O-105a. PCGS Population (29/283). NGC Census: (0/0). (#6097)

11084 **1812 PCGS Genuine.** The PCGS number ending in .91 suggests Artificial Color as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable.

11085 **1812 AU50 PCGS.** PCGS Population (58/412). NGC Census: (30/491). Mintage: 1,628,059. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $450. (#6100)

11086 **1813 VF20 PCGS.** PCGS Population (13/515). NGC Census: (9/676). Mintage: 1,241,903. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $145. (#6103)

11087 **1813 AU50 PCGS.** PCGS Population (63/239). NGC Census: (26/516). Mintage: 1,241,903. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $525. (#6103)

11088 **1813 AU55 PCGS.** PCGS Population (62/135). NGC Census: (65/418). Mintage: 1,241,903. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $865. (#6103)

11089 **1814/3 PCGS Genuine.** The PCGS number ending in .92 suggests Cleaning as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. (#6106.92)

11090 **1814/3 PCGS Genuine.** The PCGS number ending in .98 suggests Damage as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. (#6106)

11091 **1814/3 VF25 PCGS. CAC.** PCGS Population (11/126). NGC Census: (8/411). Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: $370. (#6106)

11092 **1817/3 Fine 15 PCGS.** PCGS Population (9/160). NGC Census: (4/127). Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 15: $326. (#6111)

11093 **1817 181.7 Fine 15 PCGS.** PCGS Population (1/49). NGC Census: (0/0). (#6110)

11094 **1818 — Damaged — NGC Details. XF.** NGC Census: (44/411). PCGS Population (70/451). Mintage: 1,960,322. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $185. (#6113)

11095 **1818 XF40 PCGS.** PCGS Population (70/451). NGC Census: (44/411). Mintage: 1,960,322. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $185. (#6113)

11096 **1818 — Improperly Cleaned — NGC Details. AU.** NGC Census: (39/313). PCGS Population (83/282). Mintage: 1,960,322. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $375. (#6113)

11097 **1819/8 Small 9 VF25 ANACS.** O-103A. NGC Census: (7/259). PCGS Population (8/183). Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: $187. (#6118)

11098 **1819/8 Large 9 — Improperly Cleaned — NGC Details. AU.** O-102. NGC Census: (0/0). PCGS Population (15/72). (#6119)

11099 **1819/8 Large 9 AU50 PCGS.** PCGS Population (15/72). NGC Census: (0/0). (#6119)

11100 **1819 VF30 PCGS.** O-115. PCGS Population (18/354). NGC Census: (18/307). Mintage: 2,208,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF30: $152. (#6117)

11101 **1819 XF40 PCGS.** O-113. PCGS Population (42/280). NGC Census: (26/276). Mintage: 2,208,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $200. (#6117)

11102 **1819 XF45 ANACS.** NGC Census: (40/236). PCGS Population (55/225). Mintage: 2,208,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $261. (#6117)

11103 **1819 — Obverse Improperly Cleaned — NGC Details. AU.** NGC Census: (26/210). PCGS Population (50/175). Mintage: 2,208,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $375. (#6117)

11104 **1819 AU55 PCGS.** PCGS Population (47/100). NGC Census: (47/139). Mintage: 2,208,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $595. (#6117)

11105 **1820/19 Square Base 2 PCGS Genuine.** The PCGS number ending in .92 suggests Cleaning as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. (#6125)

11106 **1820 Square 2, Large Date, Knob VF30 PCGS.** O-104. Ex: Witham. Mintage: 751,122. (#6122)

11107 **1820 Square Base 2, Large Date, Knob XF45 PCGS.** O-104. Ex: Frederick Collection. Mintage: 751,122. (#6122)

11108 **1820 Square Base Knob 2, Large Date — Improperly Cleaned — NCS. VF Details.** O-106. NGC Census: (0/0). PCGS Population (4/115). (#6122)

11109 **1821 XF45 PCGS.** PCGS Population (70/355). NGC Census: (56/355). Mintage: 1,305,797. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $286. (#6128)

11110 **1822 — Scratched — ANACS. VF30 Details.** O-103A. NGC Census: (13/503). PCGS Population (26/635). Mintage: 1,559,573. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF30: $159. (#6129)

11111 **1822 — Cleaned — ANACS. XF45 Details.** O-113. NGC Census: (65/394). PCGS Population (78/459). Mintage: 1,559,573. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $265. (#6129)

11112 **1823 AU50 PCGS.** PCGS Population (91/421). NGC Census: (38/461). Mintage: 1,694,200. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $385. (#6131)

11113 **1823 — Improperly Cleaned — NGC Details. AU.** NGC Census: (38/461). PCGS Population (91/421). Mintage: 1,694,200. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $385. (#6131)

11114 **1823 AU53 PCGS. CAC.** PCGS Population (49/372). NGC Census: (39/422). Mintage: 1,694,200. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $485. (#6131)

11115 **1824 — Cleaned — ANACS. Fine 15 Details.** O-114. NGC Census: (17/812). PCGS Population (16/868). Mintage: 3,504,954. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 15: $83. (#6137)

11116 **1824 VF30 NGC.** O-104. NGC Census: (21/762). PCGS Population (51/780). Mintage: 3,504,954. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF30: $127. (#6137)

11117 **1824 XF40 NGC.** NGC Census: (51/676). PCGS Population (73/656). Mintage: 3,504,954. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $170. (#6137)

11118 **1824/4 AU55 PCGS.** PCGS Population (19/36). NGC Census: (19/46). (#6140)

11119 **1825PCGS Genuine.** The PCGS number ending in .94 suggests Altered Surfaces as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable.

11120 **1825 XF45 NGC.** NGC Census: (88/739). PCGS Population (142/755). Mintage: 2,900,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $229. (#6142)

11121 **1825 AU50 PCGS.** PCGS Population (112/643). NGC Census: (56/683). Mintage: 2,900,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $300. (#6142)

11122 **1825 AU53 PCGS.** O-113. Ex: Witham. PCGS Population (85/558). NGC Census: (62/621). Mintage: 2,900,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $375. (#6142)

11123 **1825 AU53 PCGS.** PCGS Population (85/558). NGC Census: (62/621). Mintage: 2,900,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $375. (#6142)

11124 **1826 VF25 PCGS. CAC.** PCGS Population (29/1543). NGC Census: (17/1313). Mintage: 4,000,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: $99. (#6143)

11125 **1826 XF40 PCGS.** PCGS Population (157/1278). NGC Census: (53/1205). Mintage: 4,000,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $165. (#6143)

11126 **1826 — Improperly Cleaned — NGC Details. AU.** NGC Census: (70/1020). PCGS Population (150/939). Mintage: 4,000,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $285. (#6143)

11127 **1826 AU55 NGC.** NGC Census: (170/750). PCGS Population (208/612). Mintage: 4,000,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $410. (#6143)

11128 **1826 AU58 PCGS.** PCGS Population (212/400). NGC Census: (308/442). Mintage: 4,000,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $600. (#6143)

11129 **1827/6 — Cleaned — ANACS. AU Details, Net XF40.** NGC Census: (1/69). PCGS Population (16/126). Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $290. (#6147)

11130 **1827 Square Base 2 XF40 NGC.** NGC Census: (76/1696). PCGS Population (146/1413). Mintage: 5,493,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $170. (#6144)

11131 **1827 Square Base 2 XF45 NGC.** NGC Census: (159/1537). PCGS Population (218/1195). Mintage: 5,493,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $207. (#6144)

11132 **1827 Square Base 2 — Improperly Cleaned — NGC Details. AU.** NGC Census: (117/1420). PCGS Population (163/1032). Mintage: 5,493,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $275. (#6144)

11133 **1827 Square Base 2 AU50 ANACS.** O-133. NGC Census: (117/1420). PCGS Population (163/1032). Mintage: 5,493,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $275. (#6144)

11134 **1827 Square Base 2 AU53 PCGS.** PCGS Population (163/869). NGC Census: (127/1293). Mintage: 5,493,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $325. (#6144)

11135 **1827 Square Base 2 AU53 PCGS.** PCGS Population (163/869). NGC Census: (127/1293). Mintage: 5,493,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $325. (#6144)

11136 **1827 Square Base 2 MS60 ANACS.** O-112. NGC Census: (4/773). PCGS Population (25/349). Mintage: 5,493,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $850. (#6144)

11137 **1827 Square Base 2 MS61 NGC.** NGC Census: (92/681). PCGS Population (39/310). Mintage: 5,493,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $1,025. (#6144)

11138 **1828 Curl Base 2, No Knob XF40 NGC.** NGC Census: (51/855). PCGS Population (37/478). Mintage: 3,075,200. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $150. (#6148)

11139 **1828 Square Base 2, Small 8, Large Letters AU53 PCGS.** PCGS Population (39/206). NGC Census: (0/0). (#6151)

11140 **1829/7 XF40 PCGS.** PCGS Population (30/156). NGC Census: (9/156). Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $210. (#6155)

11141 **1829 Small Letters XF45 NGC.** NGC Census: (124/757). PCGS Population (190/786). Mintage: 3,712,156. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $212. (#6154)

11142 **1829 Small Letters — Whizzed — ANACS. AU50 Details.** O-112. NGC Census: (60/697). PCGS Population (132/654). Mintage: 3,712,156. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $290. (#6154)

11143 **1829 Small Letters AU50 PCGS.** PCGS Population (132/654). NGC Census: (60/697). Mintage: 3,712,156. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $290. (#6154)

11144 **1829 Small Letters AU58 PCGS.** PCGS Population (173/229). NGC Census: (216/265). Mintage: 3,712,156. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $575. (#6154)

11145 **1829 Small Letters AU58 PCGS.** PCGS Population (173/229). NGC Census: (216/265). Mintage: 3,712,156. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $575. (#6154)

11146 **1830 Small 0 PCGS Genuine.** O-112, High R.4. The PCGS number ending in .91 suggests Artificial Color as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. Ex: Frederick Collection.

11147 **1830 Small 0 AU50 NGC.** NGC Census: (94/1136). PCGS Population (132/826). Mintage: 4,764,800. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $270. (#6156)

11158 **1831 — Environmental Damage — NGC Details. AU.** NGC Census: (77/1072). PCGS Population (148/997). Mintage: 5,873,660. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $270. (#6159)

11159 **1831 AU58 NGC.** O-102. NGC Census: (334/443). PCGS Population (211/462). Mintage: 5,873,660. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $535. (#6159)

11160 **1831 AU58 PCGS.** PCGS Population (208/452). NGC Census: (330/439). Mintage: 5,873,660. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $535. (#6159)

11161 **1831 MS61 NGC.** NGC Census: (67/375). PCGS Population (41/404). Mintage: 5,873,660. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $975. (#6159)

11162 **1832 Small Letters XF40 PCGS.** PCGS Population (171/1508). NGC Census: (85/1553). Mintage: 4,797,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $140. (#6160)

11163 **1832 Small Letters XF40 PCGS.** O-105. PCGS Population (171/1508). NGC Census: (85/1553). Mintage: 4,797,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $140. (#6160)

11164 **1832 Small Letters — Cleaned — ANACS. AU Details, Net XF40.** NGC Census: (85/1553). PCGS Population (171/1508). Mintage: 4,797,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $140. (#6160)

11165 **1832 Small Letters AU50 NGC.** NGC Census: (125/1270). PCGS Population (201/1080). Mintage: 4,797,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $270. (#6160)

11166 **1832 Small Letters — Improperly Cleaned — NGC Details. AU.** NGC Census: (125/1270). PCGS Population (201/1080). Mintage: 4,797,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $270. (#6160)

11167 **1833 XF40 PCGS.** O-114. PCGS Population (116/1114). NGC Census: (56/1091). Mintage: 5,206,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $140. (#6163)

11168 **1833 XF45 PCGS.** O-108. PCGS Population (167/947). NGC Census: (114/977). Mintage: 5,206,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $186. (#6163)

11169 **1833 AU55 NGC.** NGC Census: (165/651). PCGS Population (199/515). Mintage: 5,206,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $350. (#6163)

11170 **1833 AU58 PCGS.** PCGS Population (206/311). NGC Census: (306/345). Mintage: 5,206,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $550. (#6163)

11171 **1833 — Obv Improperly Cleaned — NGC Details. Unc.** NGC Census: (1/344). PCGS Population (19/290). Mintage: 5,206,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $850. (#6163)

11172 **1834 Large Date, Large Letters XF45 PCGS.** O-101. PCGS Population (97/737). NGC Census: (178/1594). Mintage: 6,412,004. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $186. (#6164)

11173 **1834 Large Date, Large Letters — Cleaned — ANACS. AU50 Details.** O-112. NGC Census: (121/1473). PCGS Population (123/614). Mintage: 6,412,004. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $270. (#6164)

11174 **1834 Large Date, Large Letters — Improperly Cleaned — NGC Details. AU.** NGC Census: (121/1473). PCGS Population (123/614). Mintage: 6,412,004. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $270. (#6164)

11175 **1834 Large Date, Large Letters AU53 NGC.** NGC Census: (134/1339). PCGS Population (65/549). Mintage: 6,412,004. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $290. (#6164)

11176 **1834 Large Date, Large Letters AU55 NGC.** NGC Census: (263/1076). PCGS Population (166/383). Mintage: 6,412,004. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $375. (#6164)

11177 **1834 Large Date, Large Letters — Improperly Cleaned — NGC Details. Unc.** NGC Census: (6/611). PCGS Population (11/253). Mintage: 6,412,004. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $825. (#6164)

11178 **1834 Small Date, Small Letters XF40 NGC.** O-120. NGC Census: (0/0). PCGS Population (80/659). (#6166)

11179 **1834 Small Date, Small Letters AU55 PCGS.** PCGS Population (108/245). NGC Census: (0/0). (#6166)

11180 **1835 XF45 NGC.** NGC Census: (84/575). PCGS Population (97/525). Mintage: 5,352,006. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $186. (#6168)

11181 **1835 — Improperly Cleaned — NGC Details. AU.** NGC Census: (45/530). PCGS Population (89/436). Mintage: 5,352,006. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $270. (#6168)

11182 **1835 — Rev Planchet Flaw — NGC Details. AU.** NGC Census: (45/530). PCGS Population (89/436). Mintage: 5,352,006. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $270. (#6168.82)

11183 **1835 AU53 NGC.** NGC Census: (56/474). PCGS Population (66/370). Mintage: 5,352,006. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $300. (#6168)

11184 **1836 Lettered Edge VF35 NGC.** NGC Census: (22/1023). PCGS Population (69/1081). Mintage: 6,545,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF35: $117. (#6169)
*Seller is donating 100% of their proceeds, and Heritage is donating 100% of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution.* *See page 3 for details.*

## Smithsonian

11185 **1836 Lettered Edge — Cleaned — ANACS. AU50 Details.** O-104A. NGC Census: (59/776). PCGS Population (119/663). Mintage: 6,545,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $275. (#6169)

11186 **1836 Lettered Edge — Rev Damage, Cleaned — NGC Details. AU.** NGC Census: (59/776). PCGS Population (119/663). Mintage: 6,545,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $275. (#6169)

11187 **1836 Lettered Edge — Improperly Cleaned — NGC Details. AU.** NGC Census: (59/776). PCGS Population (119/663). Mintage: 6,545,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $275. (#6169)

11188 **1836 Lettered Edge MS61 NGC.** NGC Census: (43/257). PCGS Population (14/189). Mintage: 6,545,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $1,050. (#6169)

11189 **1836 50 Over 00 —Cleaned— ANACS. AU50 Details.** O-116. NGC Census: (1/45). PCGS Population (8/33). Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $635. (#6170)

## REEDED EDGE HALF DOLLARS

11190 **1837 AU55 NGC.** NGC Census: (120/725). PCGS Population (188/503). Mintage: 3,629,820. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $420. (#6176)

11191 **1838 —Cleaned—ANACS. XF45 Details** and an **1853 Arrows and Rays —Cleaned— ANACS. VF35 Details.** (Total: 2 coins)

11192 **1838 XF45 PCGS.** PCGS Population (134/600). NGC Census: (67/705). Mintage: 3,546,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $236. (#6177)

11193 **1838 AU50 PCGS. CAC.** PCGS Population (104/496). NGC Census: (46/659). Mintage: 3,546,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $320. (#6177)

11194 **1839 VF35 NGC.** NGC Census: (10/314). PCGS Population (29/355). Mintage: 1,392,976. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF35: $188. (#6179)

11195 **1839 AU55 NGC.** NGC Census: (49/183). PCGS Population (54/135). Mintage: 1,392,976. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $420. (#6179)

## SEATED HALF DOLLARS

11196 **1839 Drapery VF30 PCGS.** PCGS Population (1/144). NGC Census: (2/121). Mintage: 1,872,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF30: $150. (#6232)

11197 **1841-O AU58 PCGS.** PCGS Population (7/36). NGC Census: (16/30). Mintage: 401,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $535. (#6237)

11198 **1842 Medium Date, Large Letters AU53 PCGS.** PCGS Population (14/75). NGC Census: (4/47). Mintage: 2,012,764. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $275. (#6239)

11199 **1843 AU55 PCGS.** PCGS Population (35/58). NGC Census: (13/94). Mintage: 3,844,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $300. (#6243)

11200 **1843-O XF45 PCGS.** PCGS Population (15/69). NGC Census: (6/59). Mintage: 2,268,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $183. (#6244)

11201 **1846 Medium Date VF35 PCGS. CAC.** PCGS Population (3/116). NGC Census: (0/156). Mintage: 2,210,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF35: $113. (#6251)

11202 **1846 Tall Date XF45 PCGS. CAC.** PCGS Population (10/42). NGC Census: (0/0). (#6252)

11203 **1847 AU58 PCGS.** PCGS Population (19/32). NGC Census: (20/26). Mintage: 1,156,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $400. (#6257)

11204 **1848-O XF45 PCGS.** PCGS Population (14/49). NGC Census: (9/59). Mintage: 3,180,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $167. (#6261)

11205 **1850-O AU55 NGC.** NGC Census: (8/71). PCGS Population (5/68). Mintage: 2,456,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $400. (#6265)

11206 **1853-O Arrows and Rays XF45 PCGS.** PCGS Population (27/85). NGC Census: (24/89). Mintage: 1,328,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $465. (#6276)

11207 **1854 Arrows AU58 PCGS.** PCGS Population (38/99). NGC Census: (88/124). Mintage: 2,982,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $370. (#6279)

11208 **1854-O Arrows — Rev Damage — NGC Details. AU.** NGC Census: (27/406). PCGS Population (47/366). Mintage: 5,240,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $260. (#6280)

11209 **1854-O Arrows AU53 NGC.** NGC Census: (27/379). PCGS Population (31/335). Mintage: 5,240,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $310. (#6280)

11210 **1855-O Arrows — Scratched, Improperly Cleaned — NGC Details. AU.** NGC Census: (20/332). PCGS Population (38/296). Mintage: 3,688,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $240. (#6283)

11211 **1856 — Environmental Damage, Scratches — NGC Details. AU.** NGC Census: (1/74). PCGS Population (12/70). Mintage: 938,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $187. (#6287)

11212 **1856 AU53 PCGS.** PCGS Population (4/66). NGC Census: (5/69). Mintage: 938,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $200. (#6287)

11213 **1857-O — Improperly Cleaned — NGC Details. AU.** NGC Census: (2/33). PCGS Population (11/37). Mintage: 818,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $250. (#6291)

11214 **1858 — Improperly Cleaned — NGC Details. AU.** NGC Census: (27/316). PCGS Population (55/285). Mintage: 4,226,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $165. (#6293)

11215 **1858-O SS Republic Shipwreck Effect NGC.** Display box and COA included.

11216 **1858-O — Damaged — NGC Details. AU.** NGC Census: (24/196). PCGS Population (35/195). Mintage: 7,294,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $180. (#6294)

11217 **1859-O SS Republic Shipwreck Effect NGC.** Display box and COA included..

11218 **1859-O — Improperly Cleaned — NGC Details. AU.** NGC Census: (7/99). PCGS Population (21/118). Mintage: 2,834,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $200. (#6297)

11219 **1860-O AU58 NGC.** NGC Census: (29/98). PCGS Population (18/93). Mintage: 1,290,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $385. (#6300)

11220 **1860-S XF45 NGC.** NGC Census: (3/49). PCGS Population (14/56). Mintage: 472,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $198. (#6301)

11221 **1861-O AU55 PCGS.** PCGS Population (22/144). NGC Census: (22/143). Mintage: 2,532,633. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $300. (#6303)

11222 **1861-O MS60 NGC.** SS Republic Shipwreck Effect. NGC Census: (0/117). PCGS Population (4/112). Mintage: 2,532,633. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $425. (#6303)

11223 **1862 SS Republic Shipwreck Effect NGC.** Display box and COA are included.

11224 **1863-S AU55 NGC.** NGC Census: (8/63). PCGS Population (16/69). Mintage: 916,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $335. (#6310)

11225 **1870 XF45 PCGS.** PCGS Population (16/59). NGC Census: (5/46). Mintage: 633,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $168. (#6327)

11226 **1870-CC AG3 NGC.** NGC Census: (0/40). PCGS Population (1/115). Mintage: 54,617. Numismedia Wsl. Price for problem free NGC/PCGS coin in AG3 : $707. (#6328)

11227 **1871 MS61 PCGS. CAC.** PCGS Population (8/44). NGC Census: (9/53). Mintage: 1,204,560. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $500. (#6330)

11228 **1871-S — Cleaned — ANACS. AU50 Details.** NGC Census: (5/57). PCGS Population (16/59). Mintage: 2,178,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $225. (#6332)

11229 **1872-S — Improperly Cleaned — NGC Details. AU.** NGC Census: (3/23). PCGS Population (5/25). Mintage: 580,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $350. (#6335)

11230 **1873 Arrows XF45 ANACS.** NGC Census: (19/201). PCGS Population (30/196). Mintage: 1,815,700. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $253. (#6343)

11231 **1874 Arrows — Harshly Cleaned — NGC Details. XF.** NGC Census: (8/272). PCGS Population (18/293). Mintage: 2,360,300. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $200. (#6346)

11232 **1875 VF35 PCGS.** NGC Census: (3/266). PCGS Population (8/303). Mintage: 6,027,500. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF35: $78. (#6349)

11233 **1877 — Improperly Cleaned — NGC Details. AU.** NGC Census: (5/224). PCGS Population (15/223). Mintage: 8,304,510. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $160. (#6355)

11234 **1879 MS63 NGC.** WB-102, Type 2, R-3. NGC Census: (38/144). PCGS Population (75/174). Mintage: 4,800. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $1,100. (#6361)

## PROOF SEATED HALF DOLLARS

11235 **1861 PR53 PCGS.** PCGS Population (1/102). NGC Census: (0/88). Mintage: 1,000. (#6415)

11236 **1869 — Cleaning — PCGS Genuine. Unc Details.** NGC Census: (3/130). PCGS Population (3/172). Mintage: 600. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR60: $475. (#6427)

11237 **1870 PR62 NGC.** NGC Census: (25/80). PCGS Population (37/114). Mintage: 1,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR62: $725. (#6428)

11238 **1871 PR61 PCGS.** PCGS Population (12/126). NGC Census: (8/105). Mintage: 960. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR61: $525. (#6429)

11239 **1875 PR61 PCGS.** PCGS Population (10/143). NGC Census: (5/109). Mintage: 700. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR61: $475. (#6436)

11240 **1886 PR61 NGC.** NGC Census: (15/195). PCGS Population (13/202). Mintage: 886. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR61: $485. (#6447)

## BARBER HALF DOLLARS

11241 **1892 — Obv Scratched — NGC Details. AU.** NGC Census: (8/792). PCGS Population (39/1006). Mintage: 934,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $260. (#6461)

11242 **1892 Triple Die Reverse AU55 ANACS.** FS-007.8. NGC Census: (38/742). PCGS Population (97/872). Mintage: 934,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $350. (#6461)

11243 **1892 — Improperly Cleaned — NGC Details. Unc.** NGC Census: (3/646). PCGS Population (11/740). Mintage: 934,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $400. (#6461)

11244 **1892-O Fine 12 PCGS.** PCGS Population (6/277). NGC Census: (4/207). Mintage: 390,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $425. (#6462)

11245 **1892-O AU58 PCGS.** PCGS Population (34/115). NGC Census: (24/133). Mintage: 390,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $750. (#6462)

11246 **1893 MS64 NGC.** NGC Census: (28/16). PCGS Population (29/23). Mintage: 1,826,792. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $1,750. (#6465)

11247 **1893-O — Corrosion — NGC Details. VF.** NGC Census: (1/153). PCGS Population (7/216). Mintage: 1,389,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $200. (#6466)

11248 **1893-O MS62 PCGS.** PCGS Population (27/77). NGC Census: (20/87). Mintage: 1,389,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $765. (#6466)

11249 **1894-S VF25 PCGS.** PCGS Population (13/227). NGC Census: (3/153). Mintage: 4,048,690. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF25: $130. (#6470)

11250 **1894-S VF35 PCGS. CAC.** PCGS Population (14/201). NGC Census: (3/147). Mintage: 4,048,690. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF35: $182. (#6470)

11251 **1894-S — Improperly Cleaned — NGC Details. XF.** NGC Census: (1/146). PCGS Population (11/190). Mintage: 4,048,690. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $225. (#6470)

11252 **1894-S AU55 PCGS.** PCGS Population (17/134). NGC Census: (6/124). Mintage: 4,048,690. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $350. (#6470)

11253 **1894-S AU58 NGC.** NGC Census: (21/103). PCGS Population (18/116). Mintage: 4,048,690. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $425. (#6470)

11254 **1896-S Fine 15 PCGS. CAC.** PCGS Population (8/129). NGC Census: (2/58). Mintage: 1,140,948. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 15: $261. (#6476)

11255 **1896-S VF20 PCGS.** PCGS Population (9/120). NGC Census: (2/56). Mintage: 1,140,948. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $300. (#6476)

11256 **1897-O Fine 12 PCGS.** PCGS Population (23/128). NGC Census: (7/65). Mintage: 632,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $475. (#6478)

11257 **1897-S VG8 ANACS.** NGC Census: (10/88). PCGS Population (22/195). Mintage: 933,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in VG8 : $200. (#6479)

11258 **1897-S VG10 PCGS.** PCGS Population (19/176). NGC Census: (9/79). Mintage: 933,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in VG10: $244. (#6479)

11259 **1898 AU53 PCGS.** PCGS Population (14/194). NGC Census: (5/133). Mintage: 2,956,735. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $300. (#6480)

11260 **1898-O VF20 PCGS. CAC.** PCGS Population (6/123). NGC Census: (2/57). Mintage: 874,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $325. (#6481)

11261 **1898-O XF45 NGC.** NGC Census: (7/46). PCGS Population (15/74). Mintage: 874,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $543. (#6481)

11262 **1899-O VF20 PCGS.** PCGS Population (8/149). NGC Census: (1/82). Mintage: 1,724,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $125. (#6484)

11263 **1902-S XF45 NGC.** NGC Census: (4/43). PCGS Population (6/60). Mintage: 1,460,670. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $296. (#6494)

11264 **1906 MS62 PCGS.** PCGS Population (55/160). NGC Census: (38/118). Mintage: 2,638,675. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $520. (#6504)

11265 **1906-S — Cleaned — ANACS. MS60 Details.** NGC Census: (1/58). PCGS Population (1/88). Mintage: 1,740,154. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $540. (#6507)

11266 **1907 PCGS Genuine.** The PCGS number ending in .92 suggests Cleaning as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable.

11267 **1907-O XF45 NGC.** NGC Census: (9/191). PCGS Population (22/222). Mintage: 3,946,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $215. (#6510)

11268 **1908-O AU53 PCGS. CAC.** PCGS Population (16/248). NGC Census: (6/165). Mintage: 5,360,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $295. (#6514)

11269 **1908-S VF35 PCGS.** PCGS Population (10/95). NGC Census: (2/44). Mintage: 1,644,828. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF35: $205. (#6515)

11270 **1909 AU55 NGC.** NGC Census: (9/260). PCGS Population (26/349). Mintage: 2,368,650. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $310. (#6516)

11271 **1910 MS63 PCGS.** PCGS Population (24/58). NGC Census: (9/40). Mintage: 418,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $925. (#6519)

11272 **1911-S AU55 PCGS. CAC.** PCGS Population (6/66). NGC Census: (1/41). Mintage: 1,272,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $375. (#6523)

11273 **1912 MS63 NGC.** NGC Census: (67/84). PCGS Population (88/110). Mintage: 1,550,700. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $700. (#6524)

11274 **1913 — Cleaning — PCGS Genuine. AU Details.**

11275 **1915-D XF40 PCGS. CAC.** PCGS Population (17/601). NGC Census: (2/454). Mintage: 1,170,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $160. (#6533)

11276 **1915-S VF35 PCGS. CAC.** PCGS Population (19/395). NGC Census: (3/301). Mintage: 1,604,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF35: $130. (#6534)

11277 **1915-S XF40 ANACS.** NGC Census: (6/295). PCGS Population (29/366). Mintage: 1,604,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $160. (#6534)

## PROOF BARBER HALF DOLLARS

11278 **1894 PR55 PCGS.** PCGS Population (1/296). NGC Census: (1/241). Mintage: 972. (#6541)

11279 **1908 PR62 NGC.** NGC Census: (14/120). PCGS Population (41/129). Mintage: 545. Numismedia Wsl. Price for problem free NGC/PCGS coin in PR62: $750. (#6555)

11280 **1913 PR58 PCGS.** PCGS Population (3/237). NGC Census: (1/172). Mintage: 627. (#6560)

## WALKING LIBERTY HALF DOLLARS

11281 **1916 XF40 PCGS.** PCGS Population (17/1341). NGC Census: (5/1086). Mintage: 608,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $185. (#6566)

11282 **1916 MS62 NGC.** NGC Census: (153/753). PCGS Population (137/932). Mintage: 608,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $425. (#6566)

11283 **1916-D VF35 PCGS.** PCGS Population (11/1687). NGC Census: (1/1264). Mintage: 1,014,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF35: $154. (#6567)

11284 **1916-D MS61 NGC.** NGC Census: (63/964). PCGS Population (24/1231). Mintage: 1,014,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $350. (#6567)

11285 **1916-D MS62 NGC.** NGC Census: (208/756). PCGS Population (165/1066). Mintage: 1,014,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $385. (#6567)

11286 **1917 MS63 PCGS.** PCGS Population (592/1072). NGC Census: (392/890). Mintage: 12,292,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $195. (#6569)

11287 **1917 MS64 NGC.** NGC Census: (646/244). PCGS Population (700/372). Mintage: 12,292,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $280. (#6569)

11288 **1917 MS64 PCGS.** PCGS Population (700/372). NGC Census: (646/244). Mintage: 12,292,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $280. (#6569)

## THREE DOLLAR GOLD PIECES

12730 **1854 — Mount Removed — Genuine PCGS.** Mintage: 138,618. (#7969)

12731 **1854 — Harshly Cleaned — NGC Details. XF.** NGC Census: (75/3538). PCGS Population (83/2609). Mintage: 138,618. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $1,552. (#7969)

12732 **1857-S — Cleaned, Repaired — ANACS. XF40 Details.** NGC Census: (25/119). PCGS Population (20/72). Mintage: 14,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $2,325. (#7977)

12733 **1874 XF45 ANACS.** NGC Census: (87/2424). PCGS Population (137/1820). Mintage: 41,800. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $1,552. (#7998)

12734 **1878 VF20 NGC.** NGC Census: (6/5286). PCGS Population (3/5399). Mintage: 82,304. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $1,552. (#8000)

12735 **1878 — Improperly Cleaned — NGC Details. AU.** NGC Census: (63/5114). PCGS Population (199/5013). Mintage: 82,304. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $1,552. (#8000)

## CLASSIC HALF EAGLES

12736 **1834 Plain 4 — Improperly Cleaned — NGC Details. XF.** NGC Census: (140/1606). PCGS Population (162/833). Mintage: 657,460. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $675. (#8171)

12737 **1834 Plain 4 XF40 PCGS.** PCGS Population (162/833). NGC Census: (140/1606). Mintage: 657,460. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $675. (#8171)

12738 **1836 XF45 ANACS.** NGC Census: (150/704). PCGS Population (136/354). Mintage: 553,147. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $881. (#8174)

## LIBERTY HALF EAGLES

12739 **1839 XF40 PCGS.** PCGS Population (25/88). NGC Census: (23/198). Mintage: 118,143. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $600. (#8191)

12740 **1839-D — Damaged — NGC Details. Fine.** NGC Census: (3/108). PCGS Population (2/110). Mintage: 18,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 12: $1,100. (#8193)

12741 **1839-D — Mount Removed — NGC Details. AU.** NGC Census: (9/49). PCGS Population (11/24). Mintage: 18,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $6,050. (#8193)

12742 **1840 Narrow Mill AU50 PCGS.** PCGS Population (25/64). NGC Census: (29/199). Mintage: 137,300. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $1,050. (#8194)

12743 **1844 AU50 PCGS.** PCGS Population (23/87). NGC Census: (21/221). Mintage: 340,330. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $460. (#8219)
*Seller is donating 100% of their proceeds, and Heritage is donating 100% of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution.* *See page 3 for details.*

## Smithsonian

12744 **1844-O AU53 NGC.** NGC Census: (73/328). PCGS Population (22/85). Mintage: 364,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $545. (#8222)

12745 **1847 AU58 PCGS. CAC.** PCGS Population (49/107). NGC Census: (239/160). Mintage: 915,981. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $600. (#8231)

12746 **1852 AU58 NGC.** NGC Census: (207/151). PCGS Population (45/91). Mintage: 573,901. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $565. (#8250)

12747 **1854 AU55 NGC.** NGC Census: (64/213). PCGS Population (18/62). Mintage: 160,675. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $600. (#8256)

12748 **1856 — Rim Filed — NGC Details. AU.** NGC Census: (34/265). PCGS Population (50/118). Mintage: 197,990. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $460. (#8266)

12749 **1856-C — Graffiti — NGC. XF.** NGC Census: (7/123). PCGS Population (18/73). Mintage: 28,457. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $2,075. (#8267)

12750 **1856-S — Scratched — NGC Details. XF.** NGC Census: (14/107). PCGS Population (14/81). Mintage: 105,100. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $550. (#8270)

12751 **1857 — Improperly Cleaned — NGC Details. Unc.** NGC Census: (2/43). PCGS Population (2/36). Mintage: 98,180. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $1,600. (#8271)

12752 **1859-D Medium D — Improperly Cleaned — NGC Details. VF.** NGC Census: (0/125). PCGS Population (1/120). Mintage: 10,366. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $1,050. (#8282)

12753 **1861 XF45 PCGS.** PCGS Population (57/621). NGC Census: (90/1338). Mintage: 688,150. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $454. (#8288)

12754 **1867-S — Improperly Cleaned — NGC Details. VF.** NGC Census: (2/72). PCGS Population (11/46). Mintage: 29,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF20: $1,000. (#8314)

12755 **1869-S Fine 15 ANACS.** NGC Census: (6/109). PCGS Population (6/67). Mintage: 31,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in Fine 15: $586. (#8318)

12756 **1873 Closed 3 AU53 ANACS.** NGC Census: (22/237). PCGS Population (17/115). Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $390. (#8329)

12757 **1873 Closed 3 MS61 NGC.** NGC Census: (34/27). PCGS Population (28/37). Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $950. (#8329)

12758 **1877 — Edge Cuts, Polished — ANACS. XF40 Details.** NGC Census: (2/35). PCGS Population (6/28). Mintage: 1,152. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF40: $1,750. (#8342)

12759 **1879-S MS61 PCGS.** PCGS Population (24/87). NGC Census: (78/86). Mintage: 426,200. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $575. (#8350)

12760 **1880 MS63 NGC.** NGC Census: (170/143). PCGS Population (135/84). Mintage: 3,166,436. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $1,100. (#8351)

12761 **1880-S MS64+ NGC.** NGC Census: (124/20). PCGS Population (74/2). Mintage: 1,348,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $1,300. (#8353)

12762 **1881 MS61 PCGS.** PCGS Population (1303/3734). NGC Census: (3845/8033). Mintage: 5,708,802. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $445. (#8354)

12763 **1881 Repunched Date FS-304 AU55 PCGS.** PCGS Population (1/10). NGC Census: (0/0). (#145717)

12764 **1882 MS61 ICG.** NGC Census: (1657/4136). PCGS Population (640/2025). Mintage: 2,514,568. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $445. (#8358)

12765 **1882-S MS64 PCGS.** PCGS Population (145/11). NGC Census: (215/30). Mintage: 969,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $1,325. (#8360)

12766 **1883-S MS61 PCGS.** PCGS Population (22/81). NGC Census: (41/63). Mintage: 83,200. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $765. (#8363)

12767 **1886-S VG8 NGC.** NGC Census: (2/7018). PCGS Population (0/3872). Mintage: 3,268,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in VG8 : $372. (#8370)

12768 **1886-S MS60 NGC.** NGC Census: (298/6231). PCGS Population (272/3036). Mintage: 3,268,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $430. (#8370)

12769 **1886-S MS64 NGC.** NGC Census: (377/53). PCGS Population (212/12). Mintage: 3,268,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $1,250. (#8370)

12770 **1892-CC AU55 ANACS.** NGC Census: (106/342). PCGS Population (71/127). Mintage: 82,968. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $825. (#8380)

12771 **1893-S MS63 PCGS.** PCGS Population (92/29). NGC Census: (136/41). Mintage: 224,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $985. (#8386)

12772 **1893-S MS63 PCGS.** PCGS Population (92/29). NGC Census: (136/41). Mintage: 224,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $985. (#8386)

12773 **1894-S AU58 NGC. CAC.** NGC Census: (47/25). PCGS Population (11/13). Mintage: 55,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $675. (#8389)

12774 **1896 MS64 NGC.** NGC Census: (30/5). PCGS Population (17/3). Mintage: 59,063. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $1,400. (#8392)

12775 **1898-S MS63 PCGS.** PCGS Population (61/39). NGC Census: (49/55). Mintage: 1,397,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $760. (#8397)

12776 **1899 MS62 NGC.** NGC Census: (3642/5717). PCGS Population (1859/2140). Mintage: 1,710,729. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $470. (#8398)

12777 **1899 MS63 NGC.** NGC Census: (3158/2559). PCGS Population (1425/715). Mintage: 1,710,729. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $760. (#8398)

12778 **1899 MS63 NGC.** NGC Census: (3158/2559). PCGS Population (1425/715). Mintage: 1,710,729. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $760. (#8398)

12779 **1899 MS64 PCGS.** PCGS Population (628/87). NGC Census: (1941/618). Mintage: 1,710,729. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $1,250. (#8398)

12780 **1899 MS64 NGC.** NGC Census: (1941/618). PCGS Population (628/87). Mintage: 1,710,729. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $1,250. (#8398)

12781 **1900 MS62 NGC.** NGC Census: (5439/5022). PCGS Population (2992/3169). Mintage: 1,405,730. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $470. (#8400)

12782 **1900 MS62 NGC.** NGC Census: (5439/5022). PCGS Population (2992/3169). Mintage: 1,405,730. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $470. (#8400)

12783 **1900 MS63 NGC.** NGC Census: (3222/1800). PCGS Population (2253/916). Mintage: 1,405,730. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $760. (#8400)

12784 **1900 MS63 NGC.** NGC Census: (3222/1800). PCGS Population (2253/916). Mintage: 1,405,730. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $760. (#8400)

12785 **1900 MS63 PCGS.** PCGS Population (2253/916). NGC Census: (3222/1800). Mintage: 1,405,730. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $760. (#8400)

12786 **1901 XF45 NGC.** NGC Census: (3/4707). PCGS Population (5/2871). Mintage: 615,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in XF45: $382. (#8402)

12787 **1901 MS63 NGC.** NGC Census: (833/648). PCGS Population (639/377). Mintage: 615,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $760. (#8402)

12788 **1901 MS63 PCGS.** PCGS Population (639/377). NGC Census: (833/648). Mintage: 615,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $760. (#8402)

12789 **1901 MS63 PCGS.** PCGS Population (639/377). NGC Census: (833/648). Mintage: 615,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $760. (#8402)

12790 **1901 MS63 PCGS.** PCGS Population (639/377). NGC Census: (833/648). Mintage: 615,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $760. (#8402)

12791 **1901 MS64 NGC.** NGC Census: (495/153). PCGS Population (313/64). Mintage: 615,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $1,065. (#8402)

12792 **1901/0-S AU58 NGC.** NGC Census: (53/246). PCGS Population (26/274). Mintage: 3,648,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $410. (#8403)

12793 **1901-S MS64 PCGS.** PCGS Population (890/273). NGC Census: (1140/456). Mintage: 3,648,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $1,065. (#8404)

12794 **1901-S MS64 NGC.** NGC Census: (1140/456). PCGS Population (890/273). Mintage: 3,648,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $1,065. (#8404)

12795 **1902 MS61 NGC.** NGC Census: (331/883). PCGS Population (115/579). Mintage: 172,400. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $445. (#8405)

12796 **1903 MS63 NGC.** NGC Census: (293/123). PCGS Population (215/92). Mintage: 226,800. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $760. (#8407)

12797 **1905-S MS61 NGC.** NGC Census: (145/101). PCGS Population (45/121). Mintage: 880,700. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $445. (#8412)

12798 **1907 MS61 PCGS.** PCGS Population (643/4098). NGC Census: (1460/5991). Mintage: 626,192. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $445. (#8416)

12799 **1907 MS63 NGC.** NGC Census: (1796/1050). PCGS Population (1558/751). Mintage: 626,192. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $760. (#8416)

12800 **1907 MS63 NGC.** NGC Census: (1796/1050). PCGS Population (1558/751). Mintage: 626,192. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $760. (#8416)

12801 **1908 MS63 PCGS.** PCGS Population (1270/1055). NGC Census: (1244/1210). Mintage: 421,874. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $760. (#8418)

12802 **1908 MS64 NGC.** NGC Census: (895/315). PCGS Population (837/218). Mintage: 421,874. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS64: $1,065. (#8418)

## INDIAN HALF EAGLES

12803 **1908 MS60 NGC.** NGC Census: (116/5262). PCGS Population (98/3864). Mintage: 577,800. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $500. (#8510)

12804 **1908 MS62 NGC.** NGC Census: (2231/1830). PCGS Population (1410/1996). Mintage: 577,800. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $985. (#8510)

12805 **1908 MS62 NGC.** NGC Census: (2231/1830). PCGS Population (1410/1996). Mintage: 577,800. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $985. (#8510)

12806 **1908-D MS63 PCGS.** PCGS Population (1271/329). NGC Census: (949/470). Mintage: 148,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $1,750. (#8511)

12807 **1908-S — Cleaned — ANACS. AU50 Details.** NGC Census: (14/429). PCGS Population (22/355). Mintage: 82,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU50: $475. (#8512)

12808 **1908-S AU58 NGC.** NGC Census: (109/235). PCGS Population (55/259). Mintage: 82,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $900. (#8512)

12809 **1909 — Reverse Improperly Cleaned — NGC Details. Unc.** NGC Census: (146/4048). PCGS Population (84/2643). Mintage: 627,138. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $500. (#8513)

12810 **1909 MS62 NGC.** NGC Census: (1741/946). PCGS Population (1107/1135). Mintage: 627,138. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $1,025. (#8513)

12811 **1909-D VF35 NGC.** NGC Census: (5/28987). PCGS Population (13/28279). Mintage: 3,423,560. Numismedia Wsl. Price for problem free NGC/PCGS coin in VF35: $383. (#8514)

12812 **1909-D MS62 PCGS.** PCGS Population (8751/11675). NGC Census: (9232/10209). Mintage: 3,423,560. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $920. (#8514)

12813 **1909-D MS62 NGC.** NGC Census: (9232/10209). PCGS Population (8751/11675). Mintage: 3,423,560. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $920. (#8514)

12814 **1909-D MS62 NGC.** NGC Census: (9232/10209). PCGS Population (8751/11675). Mintage: 3,423,560. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $920. (#8514)

12815 **1909-D MS62 PCGS.** PCGS Population (8751/11675). NGC Census: (9232/10209). Mintage: 3,423,560. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $920. (#8514)

12816 **1909-D MS62 PCGS.** PCGS Population (8751/11675). NGC Census: (9232/10209). Mintage: 3,423,560. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $920. (#8514)

12817 **1909-D MS62+ PCGS.** PCGS Population (8751/11675). NGC Census: (9232/10209). Mintage: 3,423,560. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $920. (#8514)

12818 **1909-D MS63 PCGS.** PCGS Population (9155/2531). NGC Census: (7749/2460). Mintage: 3,423,560. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $1,580. (#8514)

12819 **1909-D MS63 PCGS.** PCGS Population (9144/2531). NGC Census: (7749/2460). Mintage: 3,423,560. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $1,580. (#8514)

12820 **1910 — Obverse Scratched — NGC Details. Unc.** NGC Census: (124/3856). PCGS Population (85/2199). Mintage: 604,250. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS60: $500. (#8517)

12821 **1910-D AU55 ANACS.** NGC Census: (41/859). PCGS Population (48/803). Mintage: 193,600. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $410. (#8518)

12822 **1910-S AU58 PCGS.** PCGS Population (114/182). NGC Census: (430/272). Mintage: 770,200. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $650. (#8519)

12823 **1911 MS62 NGC.** NGC Census: (2820/1210). PCGS Population (1749/1277). Mintage: 915,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $985. (#8520)

12824 **1912 MS61 NGC.** NGC Census: (2152/4278). PCGS Population (905/3866). Mintage: 790,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS61: $735. (#8523)

12825 **1912 MS62 NGC.** NGC Census: (3070/1208). PCGS Population (2312/1554). Mintage: 790,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $985. (#8523)

12826 **1912 MS62+ NGC.** NGC Census: (3070/1208). PCGS Population (2312/1554). Mintage: 790,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $985. (#8523)

12827 **1912 MS63 PCGS. CAC.** PCGS Population (1107/447). NGC Census: (813/395). Mintage: 790,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS63: $1,700. (#8523)

12828 **1912-S AU58 NGC.** NGC Census: (460/213). PCGS Population (132/149). Mintage: 392,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $700. (#8524)

12829 **1912-S AU58 PCGS.** PCGS Population (132/149). NGC Census: (460/213). Mintage: 392,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $700. (#8524)

12830 **1913 AU58 NGC.** NGC Census: (1633/8032). PCGS Population (1025/5668). Mintage: 915,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $435. (#8525)

12831 **1913 MS62 PCGS.** PCGS Population (2511/1826). NGC Census: (3618/1499). Mintage: 915,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $985. (#8525)

12832 **1913 MS62 NGC.** NGC Census: (3618/1499). PCGS Population (2511/1826). Mintage: 915,900. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $985. (#8525)

12833 **1913-S AU53 NGC.** NGC Census: (126/1180). PCGS Population (47/515). Mintage: 408,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU53: $465. (#8526)

12834 **1914-D AU55 ANACS.** NGC Census: (83/2068). PCGS Population (151/1477). Mintage: 247,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU55: $410. (#8528)

12835 **1914-S AU58 NGC.** NGC Census: (479/440). PCGS Population (181/299). Mintage: 263,000. Numismedia Wsl. Price for problem free NGC/PCGS coin in AU58: $725. (#8529)

12836 **1915 MS62+ NGC.** NGC Census: (1445/1039). PCGS Population (1147/1202). Mintage: 588,075. Numismedia Wsl. Price for problem free NGC/PCGS coin in MS62: $985. (#8530)

13608 **2007 One-Ounce Gold Buffalo MS70 NGC.** .9999 Fine-Early Releases. NGC Census: (0). PCGS Population (239). Numismedia Wsl. Price for problem free NGC/PCGS coin in MS70: $1,600. (#149121)

13609 **2007 One-Ounce Gold Buffalo MS70 NGC.** .9999 Fine-Early Releases. NGC Census: (0). PCGS Population (239). Numismedia Wsl. Price for problem free NGC/PCGS coin in MS70: $1,600. (#149121)

13610 **2007 One-Ounce Gold Buffalo MS70 NGC.** .9999 Fine-Early Releases. NGC Census: (0). PCGS Population (239). Numismedia Wsl. Price for problem free NGC/PCGS coin in MS70: $1,600. (#149121)

13611 **2007 One-Ounce Gold Buffalo MS70 NGC.** .9999 Fine-Early Releases. NGC Census: (0). PCGS Population (239). Numismedia Wsl. Price for problem free NGC/PCGS coin in MS70: $1,600. (#149121)

13612 **2007 One-Ounce Gold Buffalo MS70 NGC.** .9999 Fine-Early Releases. NGC Census: (0). PCGS Population (239). Numismedia Wsl. Price for problem free NGC/PCGS coin in MS70: $1,600. (#149121)

13613 **2007 One-Ounce Gold Buffalo MS70 NGC.** .9999 Fine-Early Releases. NGC Census: (0). PCGS Population (239). Numismedia Wsl. Price for problem free NGC/PCGS coin in MS70: $1,600. (#149121)

13614 **2008 Reverse of 2007 Silver Eagle MS70 NGC.** NGC Census: (0). PCGS Population (1551). (#393057)

13615 **2008-W Tenth-Ounce Gold Buffalo MS70 NGC.** NGC Census: (0). PCGS Population (487). (#399926)

13616 **2008-W Tenth-Ounce Gold Buffalo, Early Release MS70 NGC.** .9999 Fine. NGC Census: (0). PCGS Population (429). (#399927)

13617 **2008-W One-Ounce Gold Eagle MS70 NGC.** NGC Census: (0). PCGS Population (40). (#393069)

13618 **2010 Half-Ounce Gold Eagle MS70 NGC.** NGC Census: (0). PCGS Population (18). (#415540)

## TERRITORIAL GOLD

13619 **(1842-52) A. Bechtler Dollar, 27G. 21C., Plain Edge — Repaired, Bent — NGC Details. AU.** This wavy example has extensively whizzed fields, but the legends remain bold. Listed on page 365 of the 2011 *Guide Book*.

## CALIFORNIA FRACTIONAL GOLD

13620 **1854 Liberty Octagonal 25 Cents, BG-105, R.3, MS64 PCGS.** PCGS Population (69/27). NGC Census: (8/8). (#10374)

13621 **1855/4 Liberty Octagonal 25 Cents, BG-106, R.3, MS61 NGC.** NGC Census: (4/33). PCGS Population (11/128). (#10375)

13622 **1855/4 Liberty Octagonal 25 Cents, BG-106, R.3, MS64 NGC.** NGC Census: (11/9). PCGS Population (36/14). (#10375)

13623 **1855/4 Liberty Octagonal 25 Cents, BG-106, R.3, MS64 PCGS.** PCGS Population (36/14). NGC Census: (11/9). (#10375)

13624 **1854 Liberty Octagonal 25 Cents, BG-108, Low R.4, MS64 NGC.** NGC Census: (0/0). PCGS Population (22/2). (#10377)

13625 **Undated Liberty Round 25 Cents, BG-206, High R.4, MS61 PCGS.** PCGS Population (6/36). NGC Census: (2/5). (#10391)

13626 **Undated Liberty Round 25 Cents, BG-222, R.2, MS63 PCGS.** PCGS Population (111/121). NGC Census: (19/31). (#10407)

13627 **1855 Liberty Round 25 Cents, BG-226, R.5, AU58 NGC.** NGC Census: (3/2). PCGS Population (5/29). (#10411)

13628 **1855 Liberty Round 25 Cents, BG-227, R.6, MS63 NGC.** NGC Census: (1/2). PCGS Population (21/6). (#10412)

13629 **1854 Liberty Octagonal 50 Cents, BG-308, R.4, MS62 PCGS.** PCGS Population (35/20). NGC Census: (7/2). (#10428)

13630 **1852 Liberty Round 50 Cents, BG-401, R.3, AU58 NGC.** NGC Census: (5/9). PCGS Population (37/87). (#10437)

13631 **1852 Liberty Round 50 Cents, BG-401, R.3, MS63 PCGS.** PCGS Population (25/13). NGC Census: (4/3). (#10437)

13632 **1852 Liberty Round 50 Cents, BG-401, R.3, MS64 PCGS.** PCGS Population (10/3). NGC Census: (2/1). (#10437)

13633 **1853 Liberty Octagonal 1 Dollar, BG-531, R.4, AU58 PCGS.** PCGS Population (30/33). NGC Census: (5/4). (#10508)

13634 **1859 Liberty Octagonal 25 Cents, BG-702, R.3, MS66 NGC.** NGC Census: (19/2). PCGS Population (2/0). (#10529)

13635 **1870 Liberty Octagonal 25 Cents, BG-763, Low R.4, MS62 PCGS.** PCGS Population (37/19). NGC Census: (7/6). (#10590)

13636 **1872/1 Indian Octagonal 25 Cents, BG-790, R.3, MS65 NGC.** NGC Census: (1/0). PCGS Population (30/4). (#10617)

13637 **1872 Indian Octagonal 25 Cents, BG-791, R.3, MS64 NGC.** NGC Census: (15/7). PCGS Population (94/17). (#10618)

13638 **1880 Indian Octagonal 25 Cents, BG-799K, R.6, MS65 Prooflike NGC.** NGC Census: (3/0). PCGS Population (0/0). (#710637)

13639 **1870 Liberty Round 25 Cents, BG-808, R.3, MS65 PCGS.** PCGS Population (51/14). NGC Census: (9/9). (#10669)

13640 **1871 Liberty Round 25 Cents, BG-813, R.3, — Improperly Cleaned — NGC Details. Unc.** NGC Census: (0/21). PCGS Population (2/140). (#10674)

13641 **1873 Liberty Round 25 Cents, BG-817, R.3, MS63 NGC.** NGC Census: (11/23). PCGS Population (66/70). (#10678)

13642 **1873 Liberty Round 25 Cents, BG-817, R.3, MS64 NGC.** NGC Census: (12/11). PCGS Population (47/23). (#10678)

13643 **1876 Indian Round 25 Cents, BG-849, High R.5, MS62 PCGS.** PCGS Population (3/17). NGC Census: (0/1). (#10710)

13644 **1876 Liberty Round 25 Cents, BG-855, R.7, MS62 PCGS.** PCGS Population (2/5). NGC Census: (0/2). (#10716)

13645 **1872/1 Indian Round 25 Cents, BG-870, R.3, MS62 PCGS.** PCGS Population (25/167). NGC Census: (10/10). (#10731)

13646 **1873 Indian Round 25 Cents, BG-871, High R.6, MS61 PCGS.** PCGS Population (2/12). NGC Census: (0/1). (#10732)

13647 **1874 Indian Round 25 Cents, BG-876, Low R.4, MS63 NGC.** NGC Census: (3/2). PCGS Population (24/54). (#10737)

13648 **1874 Indian Round 25 Cents, BG-876, Low R.4, MS64 PCGS.** PCGS Population (39/15). NGC Census: (1/1). (#10737)

13649 **1880/76 Indian Round 25 Cents, BG-885, R.3, MS64 PCGS.** PCGS Population (63/19). NGC Census: (9/0). (#10746)

13650 **1859 Liberty Octagonal 50 Cents, BG-902, Low R.4, MS63 NGC.** NGC Census: (3/9). PCGS Population (27/31). (#10760)

13651 **1864 Liberty Octagonal 50 Cents, BG-917, R.4, MS62 NGC.** NGC Census: (3/1). PCGS Population (18/7). (#10775)

13652 **1871 Liberty Octagonal 50 Cents, BG-925, High R.4, MS61 NGC.** NGC Census: (2/0). PCGS Population (8/29). (#10783)

13653 **1875 Indian Octagonal 50 Cents, BG-946, R.4, — Improperly Cleaned — NGC Details. Unc.** NGC Census: (0/4). PCGS Population (1/77). (#10804)

13654 **1881 Indian Octagonal 50 Cents, BG-957, Low R.6, MS64 Prooflike NGC.** NGC Census: (1/2). PCGS Population (0/0). (#710815)

13655 **1859 Liberty Round 50 Cents, BG-1002, High R.4, MS61 NGC.** NGC Census: (3/9). PCGS Population (2/46). (#10831)

Smithsonian
*National Museum of American History*
*Kenneth E. Behring Center*

The National Numismatic Collection, housed in the Smithsonian's National Museum of American History, is among the finest numismatic collections in the world. Its holdings of United States coins and currency are unparalleled. The collection consists of more than 1 million objects, including paper currency and 600,000 coins, tokens and medals. Two of the treasured specimens relate to the Smithsonian's own founding—its name and original funding came from British nobleman James Smithson, who bequeathed his estate to the United States of America in 1829 to create "an establishment for the increase and diffusion of knowledge among men." The bequest was paid in the form of newly minted British gold sovereigns, all but two of which were melted down. The last two originals are now preserved in the NNC.

The Smithsonian is proud to be the home of this great collection and recognizes its commitment to keep the NNC accessible both to scholars and the general public. Long-term preservation and extended access to the collection through exhibitions at the Museum, national tours, and online databases are among the Museum's priorities. But in recent years, federal funding alone has not provided sufficient resources to achieve these goals. To ensure a prominent place for numismatics at the Smithsonian and in American history, the Museum needs help from the community to create a dedicated fund devoted to the care, research, and accessibility of the NNC.

Heritage Auctions has generously offered to support the Museum's efforts to create a special fund to support the NNC during the Heritage auctions at the FUN show in January 2012. The Smithsonian is grateful to Heritage for their extraordinary efforts and generous support on behalf of the Museum. Your support will help the NNC prosper in many ways, including by enabling new acquisitions, traveling exhibits, and a comprehensive catalog of holdings online. Join forces with other collectors to help preserve one of the world's great treasures and provide support for the future of numismatics!

## *Details*

**Sellers**: To contribute to this endowment, sellers agreed to donate the full proceeds of the sale of their objects, or a percentage thereof, to the Smithsonian. Heritage will transfer these proceeds to NMAH. Donations to the Smithsonian are tax deductible to the extent they exceed the value of benefits received in return, and sellers/donors will receive an appropriate gift receipt from the Smithsonian.

**Purchasers**: Purchasers of the coins, currency, and other items are not entitled to charitable contribution deductions for any part of the payments they make for any object sold at auction.

**Buyer's Premium**: Heritage will charge a buyer's premium on all sales. However, for sellers donating 100% of the sales proceeds to the Smithsonian, Heritage is donating 100% of the buyer's premiums associated with those sales. For sellers donating less than 100% of the sales proceeds, Heritage is donating to the Smithsonian an equivalent percentage of the buyers' premiums associated with those sales.

**Smithsonian**: Please note that no collections or property of the Smithsonian, the NMAH, or the NNC will be auctioned and the consigned objects are not intended for acquisition by the Smithsonian, the NMAH, or the NNC. Neither the NNC, the NMAH, nor the Smithsonian make any representation or warranty as to the provenance, condition, grading, or value of any coin or other object for auction.

HERITAGE HA.com AUCTIONS

Dear Bidder:

Welcome to this special Platinum Night catalog dedicated to The Dr. and Mrs. Steven L. Duckor Collection. This magnificent grouping of Saint-Gaudens double eagles has been more than three decades in the making. As befits such a remarkable collection, each coin lot has at least a two-page spread dedicated to it, with prominent rarities such as the 1921 double eagle, MS66 PCGS Secure, getting as much space as needed to tell their important stories. An essential part of the storytelling process comes from David Akers, numismatic mentor and long-term consultant to Dr. Duckor; Mr. Akers has written a foreword and appreciation for the collection, and his insights into various issues appear throughout the following pages. The Signature® catalog's Dear Bidder letter has further information about Dr. Duckor and the other great Featured Collections for FUN 2012. Each successful bidder for a coin in this catalog will have a copy of our book, *The Coinage of Augustus Saint-Gaudens as Illustrated by the Morse and Duckor Collections*, delivered when it becomes available, projected for late 2012.

Before the auction, you can make your claim for these incredible coins with bids through HA.com, mail, fax, and e-mail. If you are available the night of the auction but cannot join us in Florida, you have the option to bid by telephone or through our award-winning proprietary online bidding platform, Heritage LIVE!™ As always, the Platinum Night auction room will be full of eager bidders like you who have made the trip, and many of the greatest rarities Heritage has auctioned have gone to a bidder holding up a card.

A great collection is about to be sold. Will you walk away with the coin of your dreams?

Sincerely,

Greg Rohan
President

Todd Imhof
Executive Vice President

# The Dr. and Mrs. Steven L. Duckor Collection of Saint-Gaudens Double Eagles, 1907 to 1932

## A Foreword and Appreciation by David Akers

Although his interest in coins dates back to his youth, Dr. Steven L. Duckor began the serious collecting for which he is now so well known in 1977. From the start, he was especially interested in the 20th Century U.S. coin issues and he quickly assembled complete sets of Buffalo nickels, Standing Liberty quarters, and Walking Liberty half dollars. At the same time, he began pursuing the goal of assembling the finest possible complete collections of all of the 20th Century gold coin series, namely Indian Head quarter eagles and half eagles as well as the beautiful Saint-Gaudens eagles and double eagles. Although Dr. Duckor decided to sell the non-gold issues and quarter eagles in the 1980's and his outstanding collection of Indian Head half eagles in 1990, he continued to work on his sets of Indian Head eagles and Saint-Gaudens double eagles for the next two decades. Dr. Duckor is the consummate collector, extremely knowledgeable about every issue in every series he collects and with an expert's discerning eye for quality, and so he steadily upgraded and improved his collections during this period whenever finer specimens were made available to him. In the early 1990's he also began putting together a complete set of business strike Barber half dollars and the end result was the finest such collection ever formed; it was sold by Heritage in Boston in August 2010 and will serve as the standard by which all future Barber half dollar collections will be judged. As the 21st century began, Dr. Duckor also assembled outstanding sets of Barber dimes and quarters; these sets were subsequently sold at auction as well.

Because he had improved his Indian Head eagle collection as much as he felt was both possible and reasonable, he decided to sell that prized collection in recent years so that he could concentrate solely on making his double eagle set, which had always been his favorite, one of the greatest sets of Saints ever assembled. The lots comprising his collection that follow show just how successful he was in accomplishing that goal. The final accomplishment is made even more amazing when one considers that in 1993 and 2000, Dr. Duckor sold some of the most important coins from his collections of Saints, most notable the 1909-D, 1920-S, 1921, 1926-D and 1927-D. However, the sale of his Indian Head eagles, including the amazing 1920-S in MS67+ which realized a record shattering $1,725,000 in 2007, made it possible for him to eventually replace virtually all of the Saints which he had sold earlier with other examples which were comparable or even finer. The only exception was the 1927-D. He had owned his MS66 example for nearly 15 years and did not feel compelled to own another.

There have been several sets of Saint-Gaudens double eagles sold in the past 15 years or so which were exceptional, including those formed by Dr. Thaine Price (1998), Phillip Morse (2005), and John Kutasi (2007). These collections contained some of the great coins from famous earlier sales such as Louis Eliasberg (1982), Amon Carter, Jr. (1984) and the Norweb Family (1988). As has been stated many times before, the "greatness" or exceptional quality of any collection of coins in general, and all of the aforementioned sets of Saints in particular, is measured entirely by the great individual coins it contains. In other words, one needs only to check out the quality of the rarest and most important coins in any set to determine if that set is truly a "great" one or not. It is not necessary to check out the quality of a set of Saints' 1908 No Motto, 1923-D, 1924, 1927 and 1928, to name some of the more obvious issues. Even if they were all MS67, 68 or 69, that wouldn't be enough to call that set of Saints great if the 1920-S, 1921 and 1925-S were "sliders," the 1924-S and 1926-D heavily bag marked MS60-62 coins, and all or most of the late dates from 1929-1932 were only MS63. The important coins in a set of Saints can be put into five logical groups which can be used to determine the quality and importance of any given set of Saints and how it compares to any other. It is a far better barometer of real quality than merely looking at "average grade" and percentage of completeness, although admittedly it takes a little more analysis. The five groups are as follows, numbered in descending order of priority.

1. **The super rarities:** 1927-D, 1921, and 1920-S. Some might include the 1907 MCMVII Extremely High Relief and 1933 in this group although they are not really a part of a set of regular issue business strikes. The Extremely High Relief is technically a pattern and the 1933 was not legally released (at least according to the U.S. government).

2. **The rare mintmarked issues of the mid-1920's:** 1924-S, 1925-S, 1926-D, 1927-S, 1924-D, 1925-D and 1926-S, especially the first four listed. Although the super rarities are obviously extremely important, this group of seven issues probably tells more about the overall quality of any given set of Saints than any other group.

3. **The late dates:** 1929-1932

4. **The early low-mintage issues**: 1907 MCMVII High Relief, 1908-S, 1909-D and 1913-S.

5. **The early P-Mint issues:** 1908 With Motto-1915, and the 1920. Although this is only No. 5 on our list of important groups, it is really a very underrated group that is not associated with a set of Saints being "great" as often as it should be, due no doubt to the fact that proofs were struck of all these issues except the 1909/8 and 1920 and so many of the great sets of the past featured the proofs of the early P-Mint issues rather than business strikes.

Using these five groups as the measuring stick to determine the level of excellence of a set of Saint-Gaudens double eagles, let us apply it to the Duckor collection in the form of an advance thumbnail preview. Doing so will quickly show why the Duckor set of Saints is one of the greatest such sets ever assembled.

1. **The super rarities:** Dr. Duckor previously owned a 1927-D in MS66 but he sold it in the 1990's after owning it for nearly 15 years. His 1920-S and 1921 are both super gems, grading MS66, and in both cases are one of only two graded at this high level.

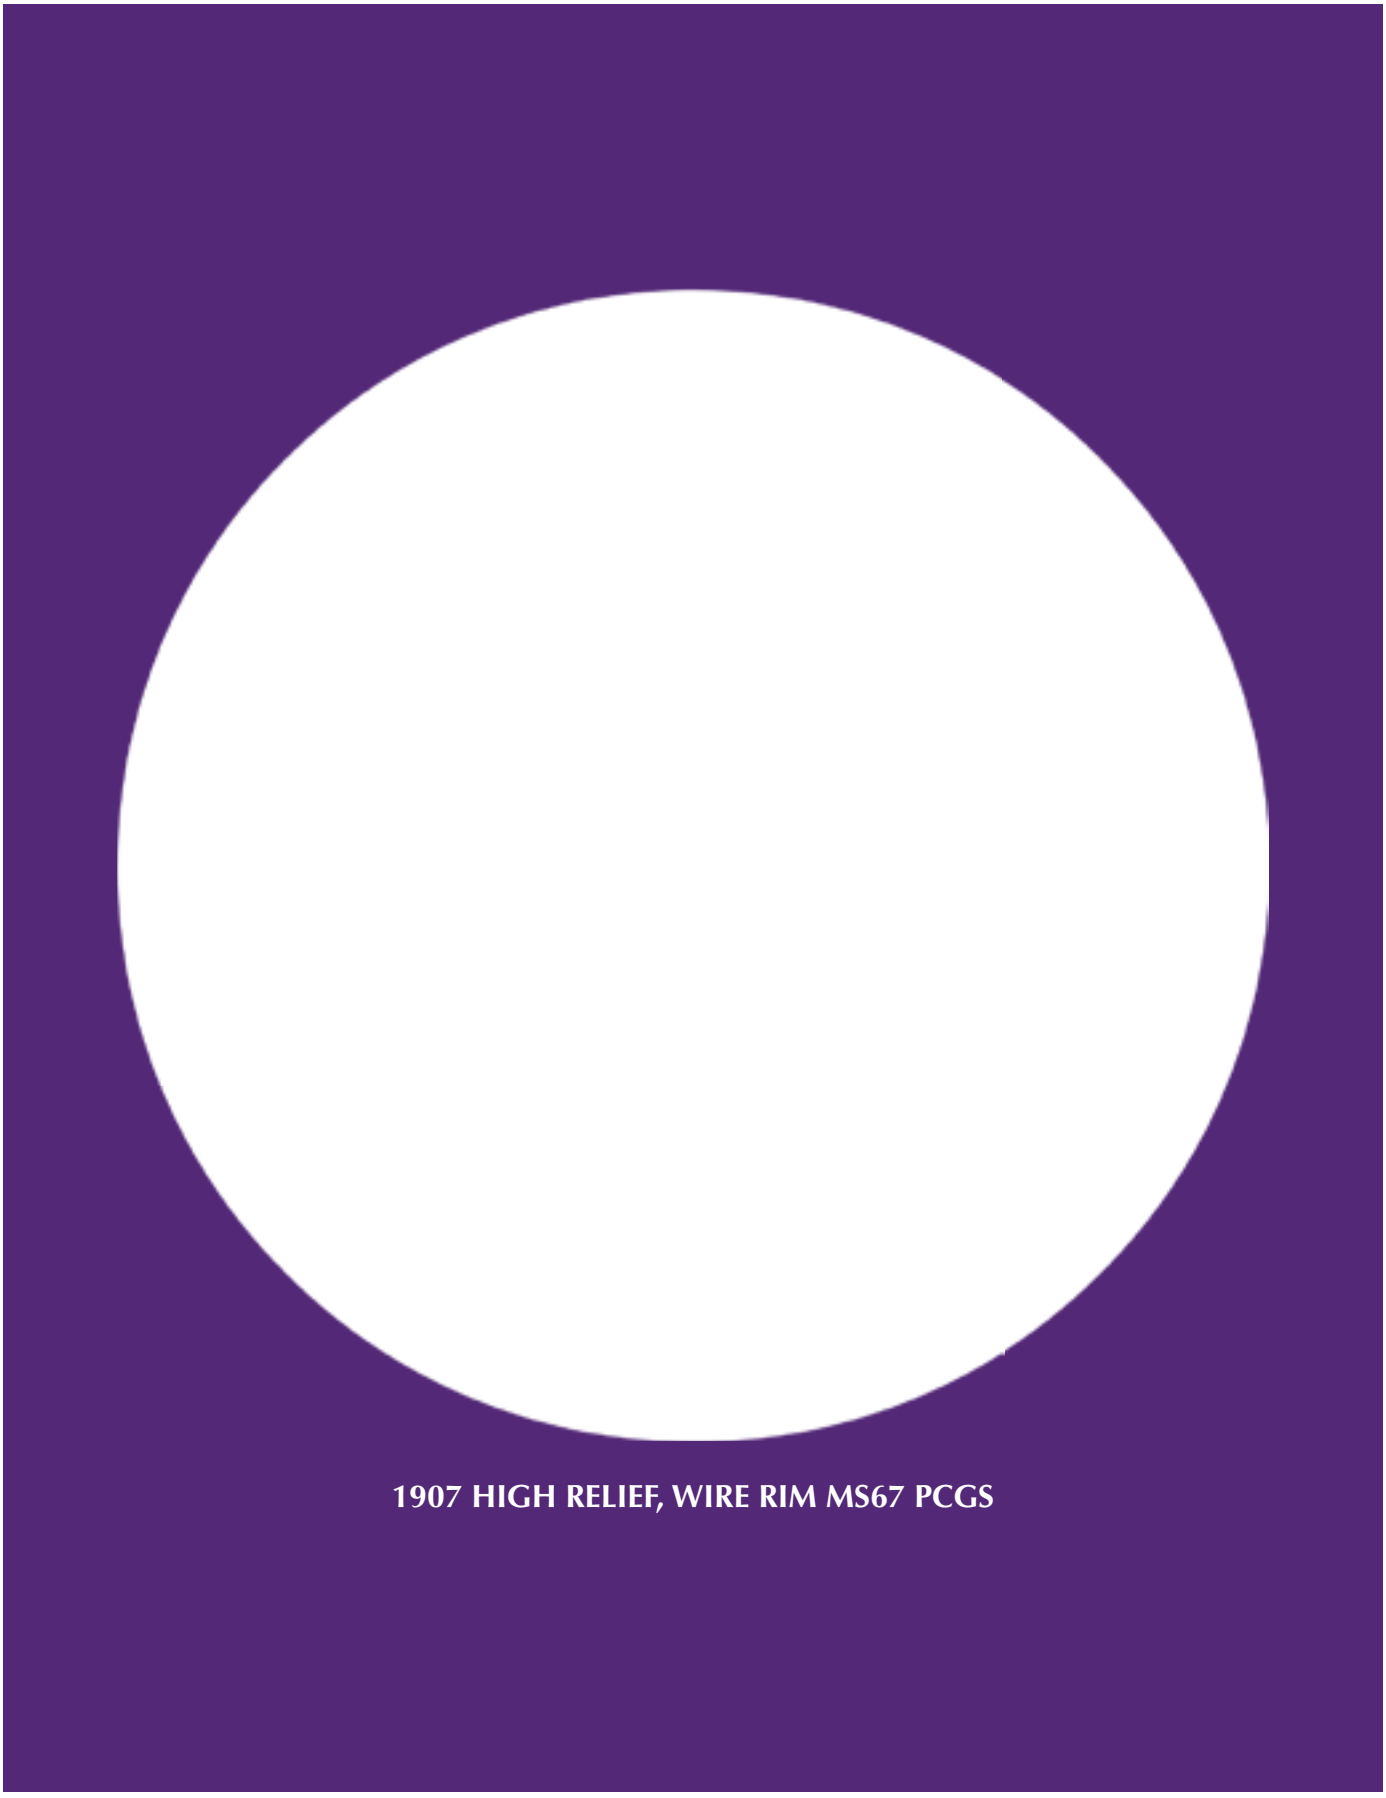
2. **The rare mintmarked issues of the mid-1920's**: The Duckor collection has superb gems of all of these issues except the 1924-S and 1925-D which are still condition census MS65 gems. The 1926-D, 1926-S and 1927-S are possibly finest known and the 1924-D and 1925-S are both among the top three or four known.

3. **The late dates:** All five of these rare and popular issues are represented in the Duckor collection by superb gem MS66 or 66+ specimens. The three rarest issues of the five, the 1930-S, 1931-D and 1932 are all possible finest knowns or at least tied for that distinction.

4. **The early low-mintage issues:** Both 1907 MCMVII high relief varieties are in the Duckor collection and grade superb gem MS67. The 1908-S is also a superb gem MS67 example and is possibly the finest known. It has such intense luster that is seems to have its own internal light source. The 1909-D is another superb gem, MS66, and the 1913-S is an original gem MS65 specimen.

5. **The early P-Mints:** There are 10 issues in this group, and seven of them, 1908 With Motto, 1909, 1909/8, 1910, 1911, 1912, and 1914, are represented in the Duckor collection by superb gem MS66 or better examples. The 1913, 1915 and 1920 in the Duckor collection are all beautiful, original gems. For all three of these issues it must be noted that no examples have been graded better than MS65, both are the single highest PCGS graded examples of their issues and possibly the finest known.

With the sale of his magnificent collection of Saint-Gaudens double eagles, Dr. Duckor is bringing to a close his successful 35-year collecting adventure of assembling the finest set of Saints possible, although his days as an active collector are far from over. He has already started a brand new collection which will take a number of years to complete and he will bring this endeavor the same high level of knowledge, expertise and collection acumen he always has shown in the past. No doubt the end result will be another memorable collection of incredibly high quality. From a perfectionist collector like Dr. Duckor, it would be foolish to expect anything less.



# SESSION FOUR — PLATINUM NIGHT - II

Floor, Telephone, Heritage Live!™, Internet, Fax, and Mail Signature® Auction # 1166
Thursday, January 5, 2012 | 7PM ET | Orlando | Lots 4600 - 4654

## HIGH RELIEF DOUBLE EAGLES

**1907 HIGH RELIEF, WIRE RIM MS67 PCGS**

**1907 HIGH RELIEF, WIRE RIM MS67 PCGS**

# MCMVII High Relief, Wire Rim Double Eagle
# MS67, Magnificent Surface Preservation
# The Most-Desired U.S. Gold Issue

**4600** **1907 High Relief, Wire Rim MS67 PCGS.** At the time Augustus Saint-Gaudens accepted the commission to refurbish the nation's gold coins, the $5,000 stipend was only a minor motivating factor. The sculptor was at the zenith of his popularity and had more commissions from wealthy patrons than he could ever hope to complete. Appreciation and a generous amount of flattery from President Theodore Roosevelt seem to have figured prominently into his acceptance and completion of the ten and twenty dollar gold designs.

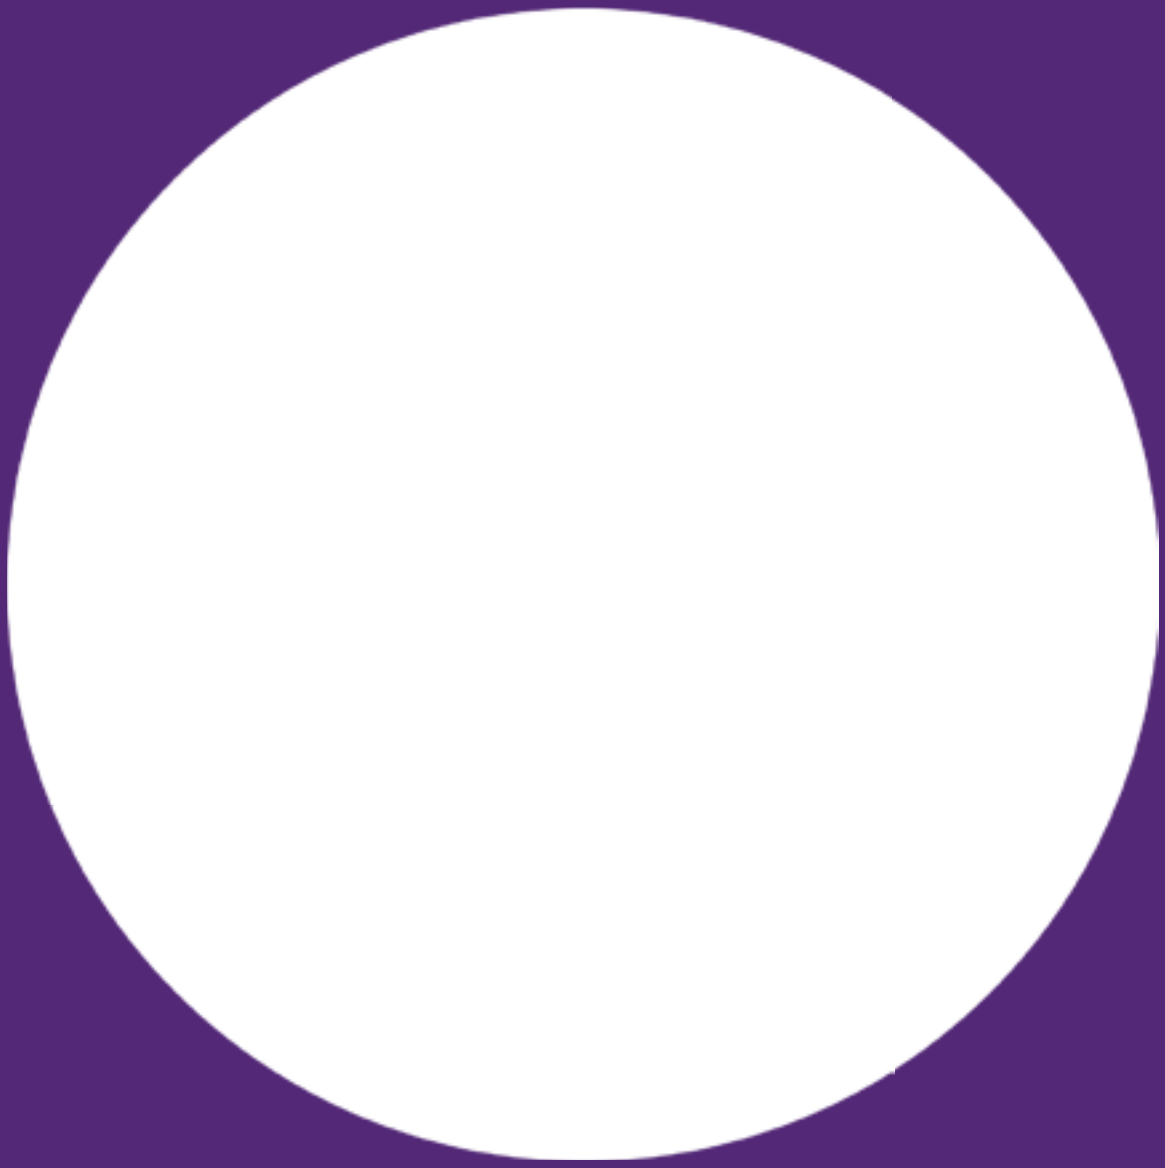
After Saint-Gaudens designed the unofficial inaugural medal for Roosevelt in July 1905, the president wrote: "I like the medals immensely; but that goes without saying: for the work is eminently characteristic of you." He added a complimentary flourish: "Thank heaven we have at last some artistic work of permanent worth, done for the government." Shortly afterward Saint-Gaudens accepted the task of redesigning the ten and twenty dollar gold pieces, no small feat for a man suffering from colon cancer. Accepting the coinage contract gave the sculptor a much wider circle of admirers than he could have ever achieved from his numerous public and private sculptural commissions.

The designs used on the ten and twenty dollar coins were largely "borrowed" from previous works. The obverse of the ten dollar piece was a variant of the Liberty figure on the Sherman monument, situated still today at the entrance to New York City's Central Park. The eagle on the reverse differed only slightly from Adolph Weinman's eagle on the 1905 inaugural medal. Saint-Gaudens admitted that the reverse of the twenty dollar coin was modeled after the Flying Eagle cent, a coin that Saint-Gaudens wrote later he was so impressed with, "... that I thought if carried out with some modifications, nothing better could be done. It is by all odds the best design on any American coin." The obverse of the twenty is somewhat more problematic, but it is clearly based on the Nike of Samothrace in the Louvre. The final design went through several modifications. The original plaster model showed Liberty with wings, which were soon omitted. All versions of the twenty dollar design were envisioned in high relief, a tribute to the high-relief coins of Ancient Greece.

The Wire Rim High Relief coins are the closest collectible representations of the original Hellenistic coinage concept of Roosevelt and Saint-Gaudens. The Ultra High Relief pieces were struck in minuscule amounts — on the order of 20 specimens or so, of which 16 to 18 survive today — and are out of reach of even most well-heeled collectors. The Wire Rim High Relief coins, especially in the higher Mint State grades, are far more available than the Flat Rim pieces, and as such they are perennially chased, bid up, coveted, and collected, a design that is certainly among the most popular of all U.S. coin designs.

The High Relief Saint-Gaudens twenties are listed at number 25 among the *100 Greatest U.S. Coins* by Jeff Garrett and Ron Guth. As we wrote in the present MS67 PCGS specimen's recent appearance with us, "even the diminished artistry of the High Relief twenty makes it one of the most accomplished and important U.S. coinage designs, and in the eyes of many, the best the nation has ever had." This coin is a magnificently preserved survivor, displaying luminous yellow-gold coloration under a moderate layer of patina with subtle peach accents within the eagle's wings. This gorgeous piece is not merely a coin; transformed by time, it is a work of art. Population: 19 in 67, 4 finer (10/11).

**David Akers Comments:**



The 1907 Extremely High Relief (also called Ultra High Relief) double eagle was arguably the most beautiful coin ever struck by the U.S. Mint. It was the faithful implementation of Augustus Saint-Gaudens' original Standing Liberty design even though both Henry Hering, Saint-Gaudens' assistant, and Charles Barber, the Chief Engraver of the Mint, knew perfectly well that such a coin could never be minted for general circulation. Saint-Gaudens had been commissioned by President Theodore Roosevelt to design a U.S. double eagle, which would match or exceed the beauty of the best Greek and Roman coins from 2,000 years earlier, many of which had very high relief portraits on deeply dished fields. Despite their concerns about the practicality of the design, Hering and Barber ordered some trial pieces to be struck, each of which took nine blows of the dies for the design to strike up fully. The resulting coins, technically patterns, were as beautiful as President Roosevelt and Saint-Gaudens himself envisioned, but pressing demands for large quantities of the new coins required immediate revisions to the design.

The next step in the process of bringing to reality the Saint-Gaudens design for general circulation was to reduce the relief to a more practical level while retaining as much of the original Greek type relief as possible. The result was this so-called High Relief issue. Unfortunately, this revision was just not enough because each coin required at least three blows from the dies to strike up properly. Furthermore, the coins had to be visually inspected by hand due to the high rate of rejection from a quality control standpoint. Obviously, this was an unacceptable situation when millions of coins were expected to be produced in a timely fashion. Only 12,367 pieces of the new High Relief design were minted until another decision was made to abandon the idea of ever having high relief devices on dished fields for a coin of which very high quantities would be needed.

The majority of High Relief double eagles are this Wire Rim variety (perhaps as many as 75%-85% of the total mintage) and, because the coins were so beautiful and different from anything previously seen by the public, they were largely saved and cared for, meaning that many exist today that are of gem or superb uncirculated quality. This Duckor specimen is one of the very finest examples known. It is also a very early strike with many areas in the fields showing evidence of heavy die polishing and swirls. These characteristics are consistent with some other examples that have been called proofs, although there is no conclusive evidence or even consensus opinion that true proofs were actually struck. Pieces such as this certainly seem sufficiently different, however, that perhaps being recognized as "First Strike" or "Specimen" would be appropriate.

(#9135)

**1907 HIGH RELIEF, FLAT RIM MS67 PCGS SECURE. CAC**

**1907 HIGH RELIEF, FLAT RIM MS67 PCGS SECURE. CAC**

# MCMVII High Relief, Flat Rim Twenty, MS67
# Far More Elusive Than the Wire Rim Variety

**4601** **1907 High Relief, Flat Rim MS67 PCGS Secure. CAC.** Ex: Akers. Only once before since the beginning of our Permanent Auction Archives in January 1993 have we offered an MS67 PCGS example of the Flat Rim variety, with only one finer MS68 PCGS coin making two previous appearances in our sales.

In the Auction '89 sale (Akers, 7/1989), lot 1456 was an MCMVII High Relief, Flat Rim MS67 PCGS "or better" example — a coin different from the present specimen but in the same grade. As part of that lot description, David Akers wrote:

> "There is no official mint record of the breakdown of the 11,250 High Relief Double Eagles minted into the number of Wire Rim pieces struck and the number of Flat Rim pieces minted. This is because it was not the mint's intention to strike two different varieties. The varieties actually occurred by accident when the first pieces struck (the Wire Rim coins) were struck using a collar that either did not fit properly or was insufficiently tight. The pressure from the repeated blows required to bring up the design properly forced metal up where the edge of the coin meets the collar to form a thin wire rim. When the collar problem was discovered and corrected (after the majority of High Reliefs had been struck), this so-called Flat Rim variety resulted. In our opinion based upon the relative rarity of the two varieties, two-thirds to three-fourths of the 11,250 pieces minted were the Wire Rim variety, the balance the Flat Rim variety. Since, in the past, the two varieties have usually brought more or less the same price, it is obvious that the Flat Rim variety is really very underrated and underpriced in comparison to the Wire Rim variety."

The mintage figure for both varieties of the High Relief, traditionally reported as 11,250 coins, has been revised to 12,367 pieces as a result of recent research. However, the division of Wire Rim and Flat Rim pieces remains unknown. The number of each that survive today, based on certification data, suggests that only about 1,800 Flat Rim coins were originally minted.

The Akers coin brought $110,000 in 1989 — a song compared to recent auctions of high-grade Flat Rims. More recently, the grade-for-grade price disparity has widened between Flat Rims and their Wire Rim counterparts: An MS67 PCGS Wire Rim brought $161,000 in our Chicago Platinum Night (Heritage, 8/2011), lot 7681. The last auction we know of a similarly graded Flat Rim coin, MS67 PCGS, was four years earlier, in American Numismatic Rarities' June 2006 offering, lot 2791, a coin that nonetheless brought $195,500.

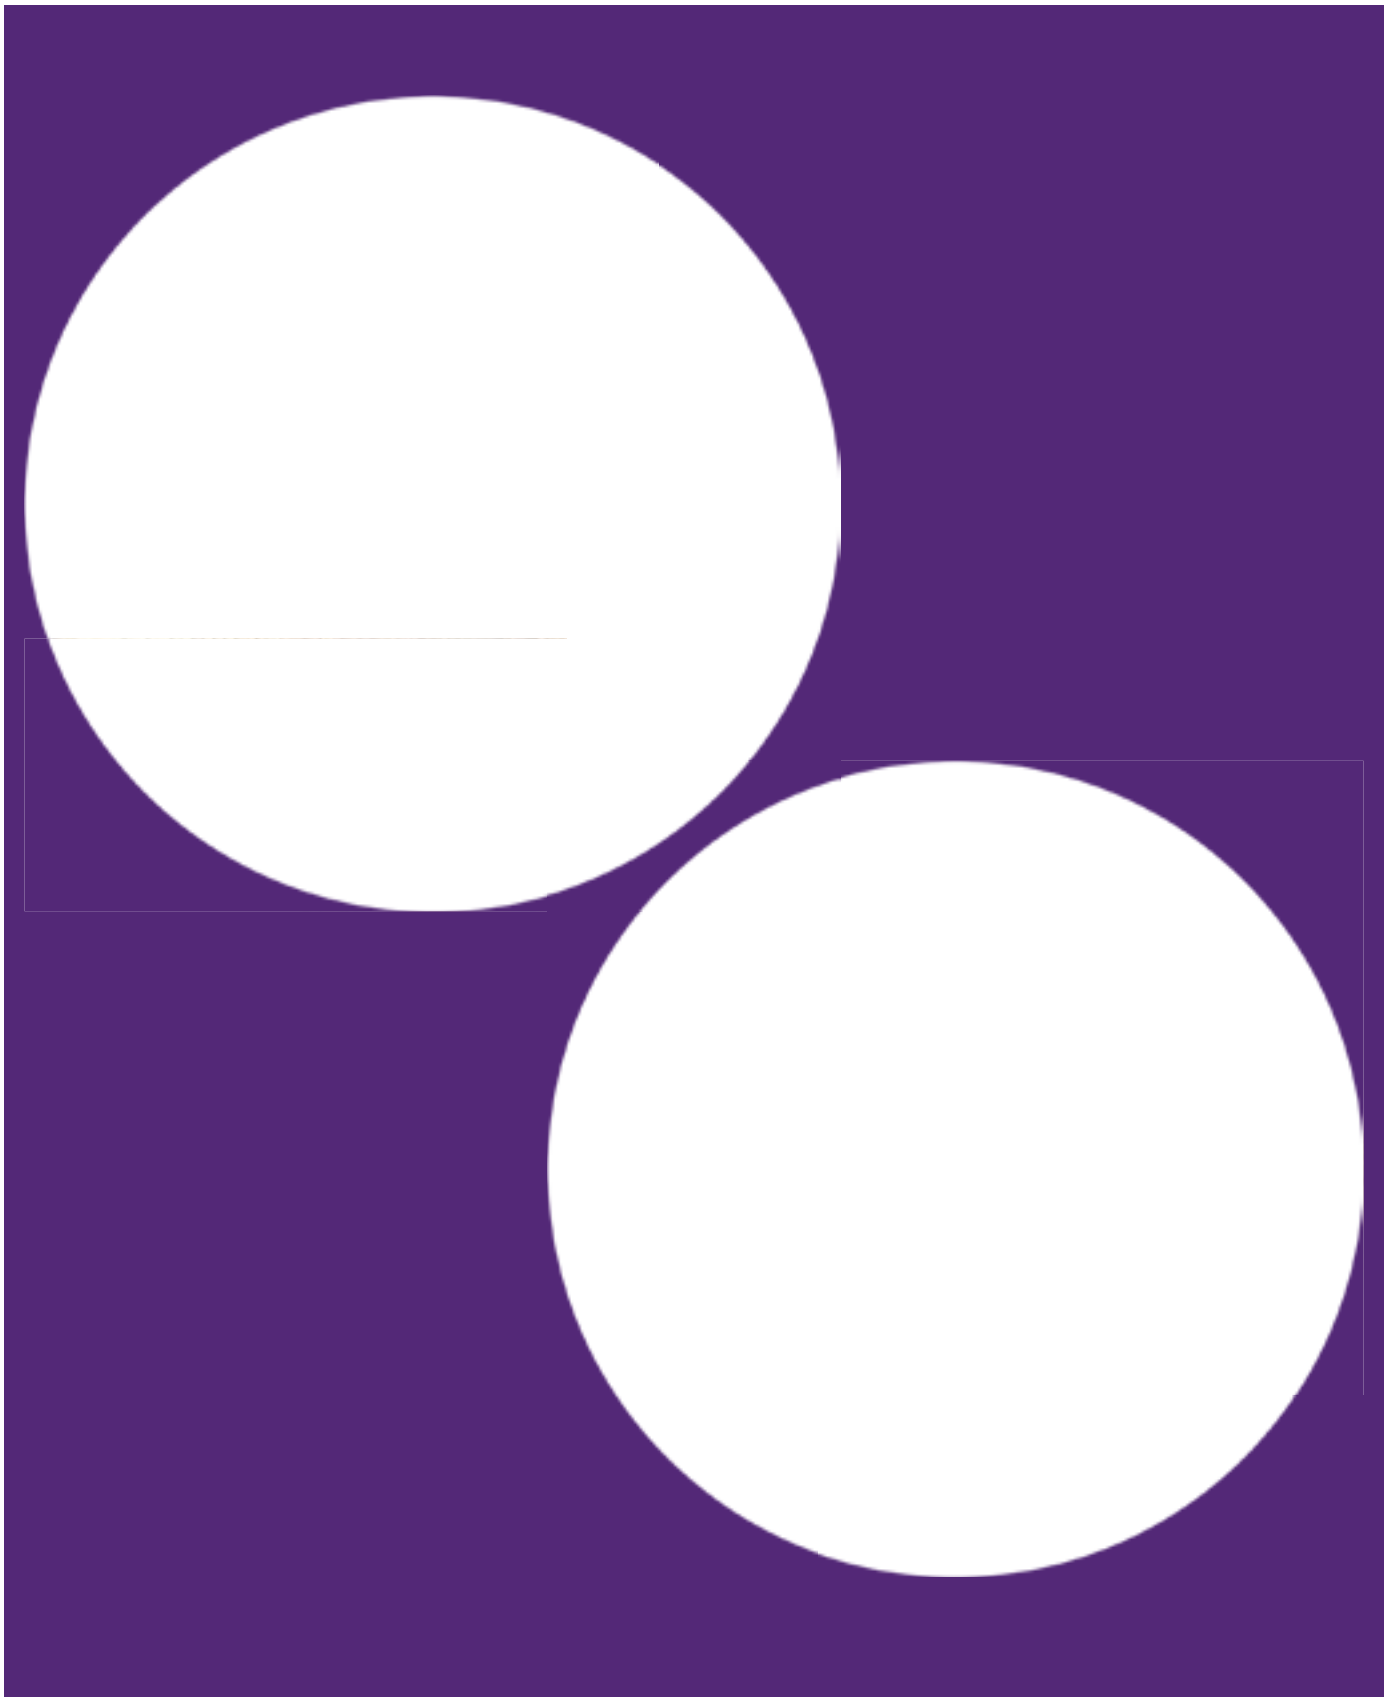
An MS67 NGC Wire Rim in the Goldberg's May 2011 auction, lot 1804, brought $123,625, while a Flat Rim in the same grade and service brought $172,500 in our FUN Signature (Heritage, 1/2011), lot 5305 — almost 40% more. Clearly, the market has become keenly aware of the greater rarity and price of Flat Rims versus Wire Rims since David Akers wrote the words above nearly 25 years ago.

Jeff Garrett and Ron Guth, in the second edition of their gold *Encyclopedia* (2008), note that the Flat Rim twenties are "much scarcer than the Wire Rim, by a margin of nearly five to one." That estimate seems conservative, given the current PCGS population data showing 4,022 submissions of Wire Rim coins versus 639 for the Flat Rims, a margin exceeding six to one.

The present Flat Rim example is certified MS67 by PCGS, with the added CAC green label. Pristine yellow surfaces display vivid orange toning complementing hints of pale blue and violet. Both sides are fully brilliant, exhibiting soft, frosty mint luster. The fields throughout show the characteristic swirling lines from die polishing, although they can be perceived best on portions of the reverse, including the sun's face, the field just above, and the field area between TWENTY DOLLARS and the eagle's upper wing. The bold strike shows no weakness on either side over unblemished surfaces. A loupe reveals a few tiny ebony flecks, including one on the left side of Liberty's neck. A small curved lint mark appears below the upright of the R in LIBERTY. PCGS Population: 8 in 67, 1 finer (10/11).

*Ex: Silvano De Genova; David Akers.*

**David Akers Comments:**



The Flat Rim variety of the beautiful High Relief design was struck with dies from the same hubs as the Wire Rim version, but with a slightly revised edge collar. This was necessary because the fine and often irregular Wire Rim resulting from the collars initially used was deemed unsightly and thus unacceptable. In all other respects the two varieties are identical. The entire mintage of the MCMVII High Relief, both varieties included, was only 12,367 pieces, by far the lowest mintage figure of any regularly issued Saint-Gaudens double eagle. Because they were so beautiful and unusual in comparison to the previous Liberty Head design, they were saved by the general public and rarely, if ever, actually used in normal commerce. So a large percentage of the original mintage has survived with most of them in choice uncirculated or higher grades including more truly superb examples than are known of all but a couple of other very common dates in the series. Of the two High Relief varieties, the Flat Rim is substantially the rarer, at least three to five times as rare as the Wire Rim variety, yet the price difference between the two varieties is minimal in comparison to the difference in rarity.

I purchased this coin at a coin show from dealer Silvano De Genova in the late 1980s and initially planned to keep it for my daughter because I thought it was so beautiful and exceptional, even by High Relief standards. The fact that it also was the much rarer Flat Rim variety made it all the more appealing. But I quickly had second thoughts and felt it really belonged in a superb, complete collection and so I sold it to Dr. Duckor instead.

(#9136)

## SAINT-GAUDENS DOUBLE EAGLES

# 1907 Arabic Numerals Twenty, MS66+
# Charles Barber's Low-Relief Interpretation

**4602** **1907 Arabic Numerals MS66+ PCGS Secure. CAC.** Much ink has been spilled over the deep-seated enmity between the "Obstructionist and the Visionary," respectively Mint Engraver Charles Barber and sculptor Augustus Saint-Gaudens. The feud stemmed from the brouhaha over the Columbian Exposition award medal of 1892 (Eglit-19, HK-223), celebrating the 400th anniversary of Columbus' discovery of America.

For such an august occasion, Saint-Gaudens sculpted a memorable obverse design. A larger-than-life Columbus appears to step out of the medal — as Columbus would have stepped from his ship into the great new land — head upturned, arms outstretched, transfixed by the grandeur of the New World. For the reverse, Saint-Gaudens designed a simple nude youth holding a torch and wreaths, with background eagle. The youth leans against a shield, the inscriptions subordinated to the dominant central figure, as on the obverse.

Saint-Gaudens' reverse design was criticized at the Mint and ultimately rejected. Whether the rejection was the product of "Victorian naughtiness and prudery," as Saint-Gaudens' son Homer maintained, or a matter of the artist's design being several months late, appears an open question. The replacement Charles Barber design comprised a congeries of kneeling seraphs, ships, sails, globes, torches, and a mass of lettering, a composition prosaic in the extreme.

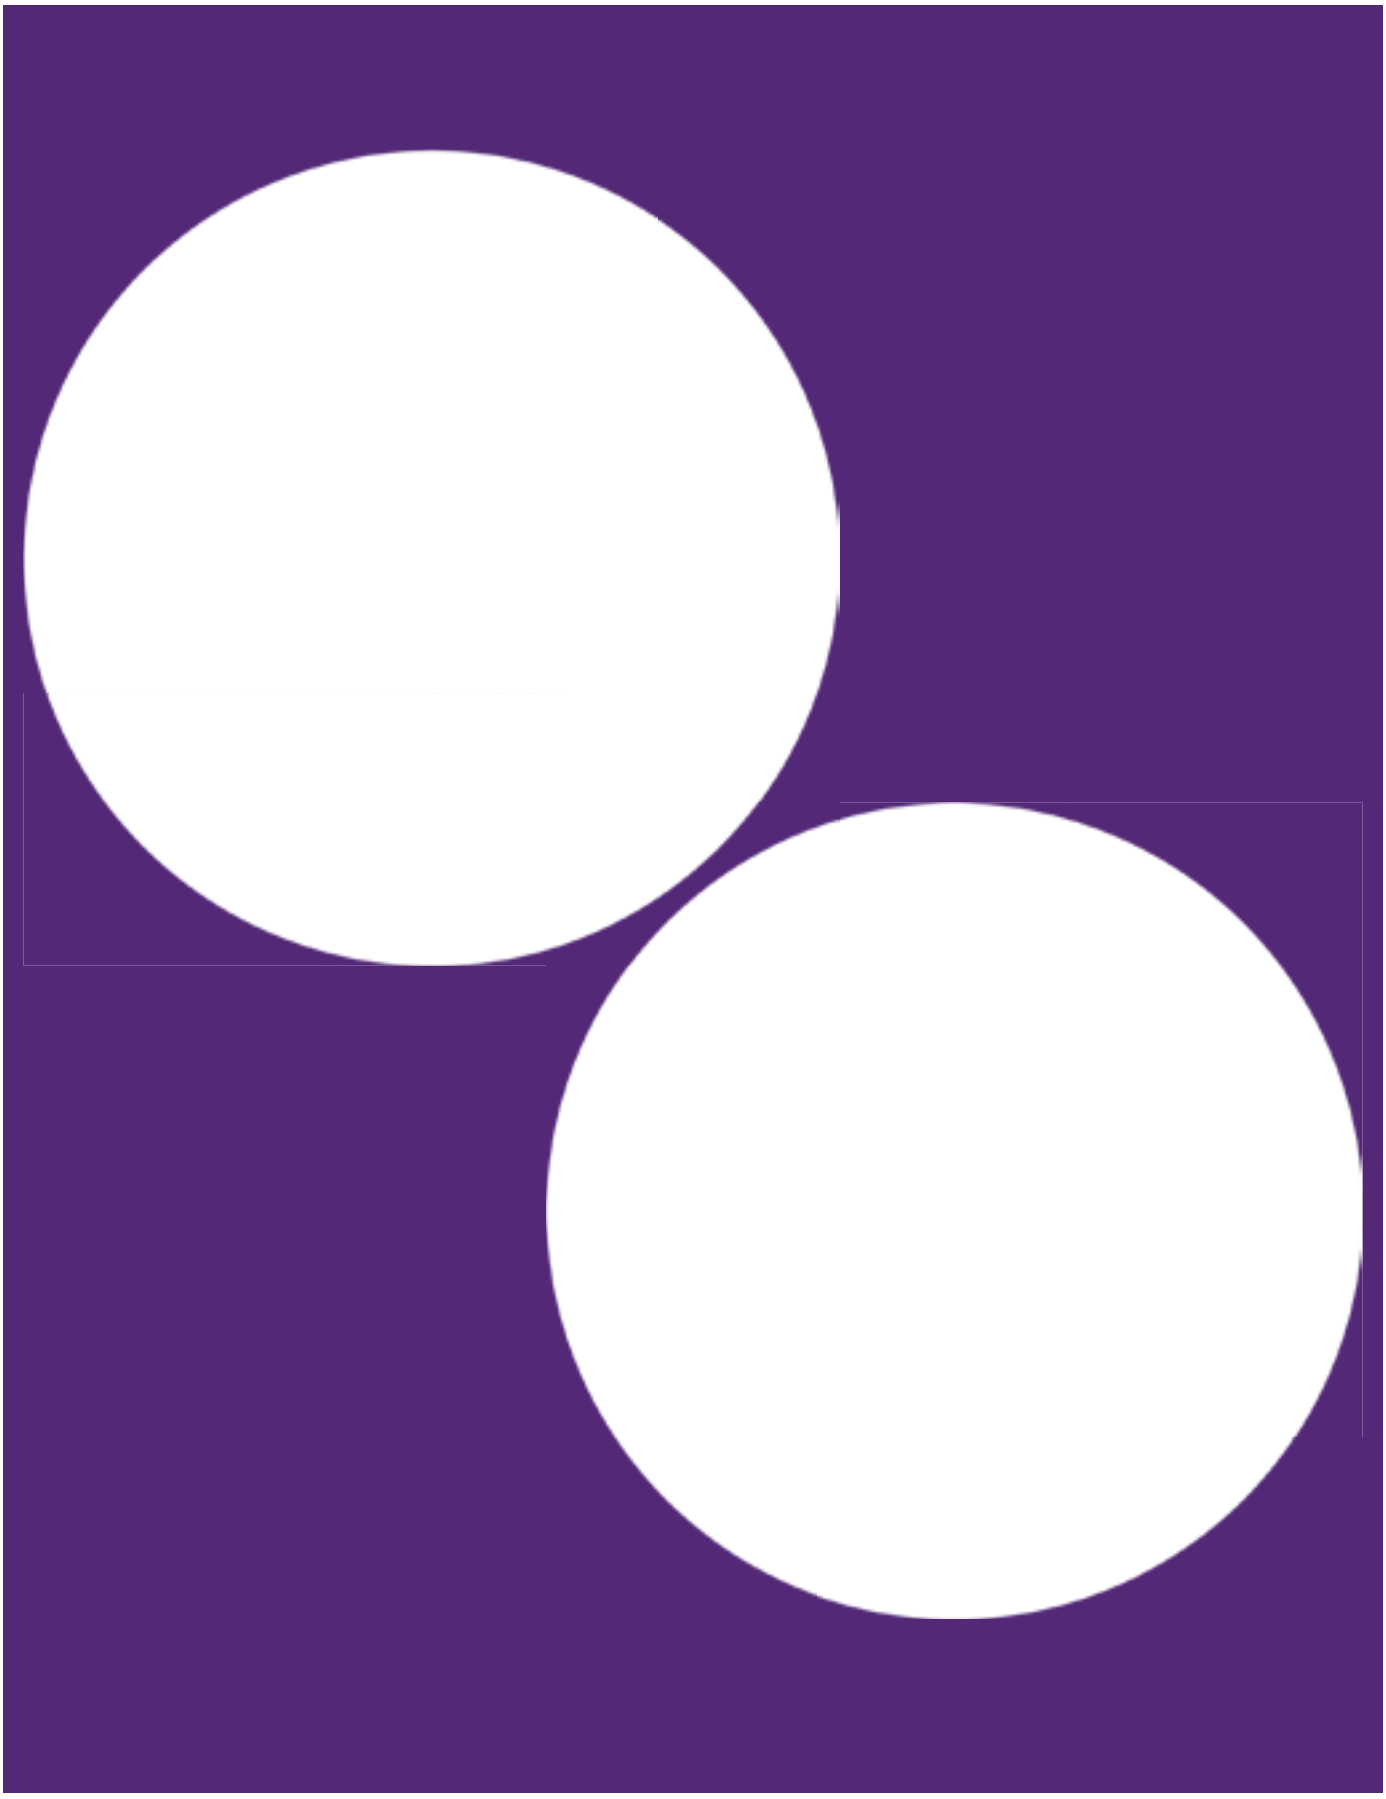
Saint-Gaudens would do no work for the Mint until near the close of his life. With the coinage redesign commencing in 1906, Barber and Saint-Gaudens found themselves again on opposite sides of controversy

In fairness, the much-maligned chief engraver was entirely correct in maintaining that the High Relief Saint-Gaudens double eagles were unsuited for production on the Mint's high-speed presses for circulation coinage; Roosevelt and Saint-Gaudens acknowledged that fact as well, and by June 1907 agreed that the Mint would strike a low relief version with the date in Arabic numerals.

Work on the ten dollar redesign and Saint-Gaudens' untimely death from colon cancer in August 1907 stymied the work on the double eagles. A fuming President Roosevelt arranged a compromise, the striking of the few thousand High Relief coins on a medal press before Barber prepared suitable low-relief dies for circulation strikes.

In fairness to Barber, he did his usual workmanlike job of translating the beauty of Saint-Gaudens' design to a low relief format, insofar as was possible. He put aside professional jealousy to craft viable circulation models of this most-beloved and widely collected U.S. gold coin design, an artistic collaboration born not out of camaraderie, but out of exigency and misfortune.

Is it any wonder that Barber was jealous of Saint-Gaudens? He was Salieri to Saint-Gaudens' Mozart. But he did a credible job with the coin designs of an artist he almost surely despised, one whose work as far back as 1892 — the year that the maligned Barber silver coinage made its debut — was judged artistically far superior.



The present MS66+ PCGS coin demonstrates how admirably Barber maintained the virtues of Saint-Gaudens' design. The surfaces are *incisively* struck, with full facial details and five full toes on Liberty's foot wearing the sandal. (The coins strike up so well, in large part, because Barber made sure not to oppose the design high points of each side, even at the new, lower relief.) Even the finest details of the eagle's plumage appear completely brought up. Lilac accents deep reddish-orange hues in the centers of each side. The dominant coloration cedes to jade tinges near the rims. Were it not for a couple of stray abrasions — one on the left (facing) skirt line, one on the lower left leg — this piece might lay claim to an even finer grade.

More than 360,000 examples of the 1907 Arabic Numerals twenties were struck, the first of the new design seen by the public at large. Even today it is an available issue save for the highest-graded pieces, making it the ultimate No Motto type coin for the series. Population: 11 in 66+, 15 finer (10/11).

(#9141)

# 1908 No Motto Twenty, MS67
# A Pre-Wells Fargo Example

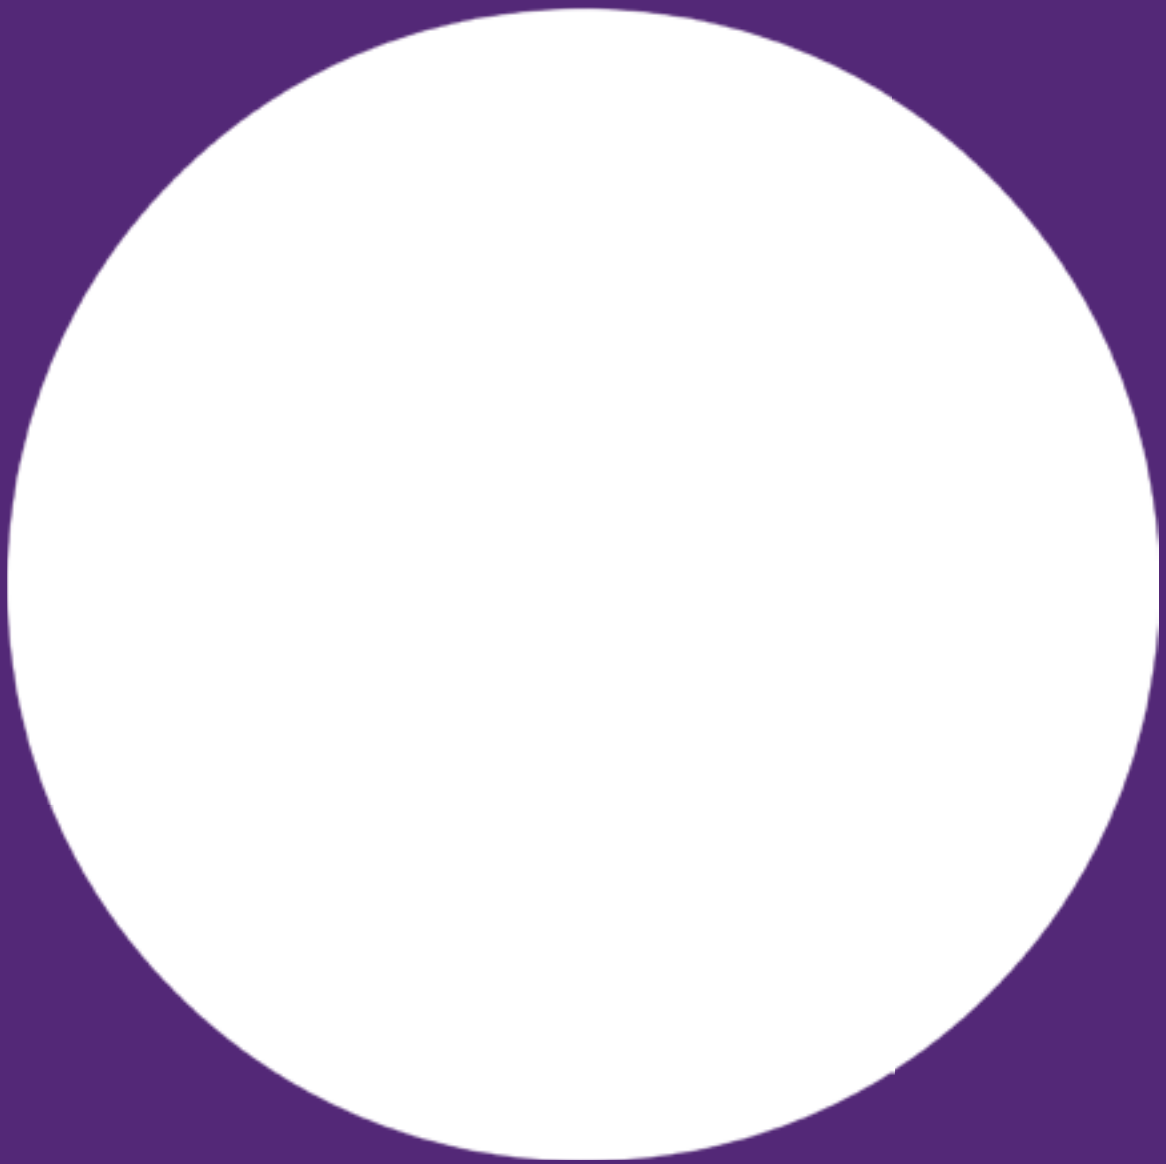
**4603** **1908 No Motto MS67 PCGS Secure. CAC.** Long Rays Obverse. The original No Motto, Arabic Numerals, Low Relief subtype continued into a second and final year, with Philadelphia and Denver both striking examples, while San Francisco would produce only the later With Motto version. Congress, despite President Theodore Roosevelt's contention that any reference to the deity on coinage was tantamount to sacrilege, mandated that IN GOD WE TRUST be placed on the gold pieces, and the motto was accordingly added just above the sun device at the lower reverse. The Philadelphia Mint struck an enormous quantity of more than 4.2 million No Motto coins, a production total that would be surpassed only with the 1924 and 1928 issues.

The 1908 No Motto twenties as an issue are, of course, best-known for their relation to the fabulous Wells Fargo Hoard, a collection of more than 19,000 specimens of the issue that dealer Ron Gillio bought in the 1990s. As quoted in Bowers' double eagle *Guide Book*, Gillio writes concerning the hoard:

> "Of all the different hoards I have bought in Europe, Asia, America, and elsewhere, this group of 1908s is the most interesting and highest quality group I have ever purchased. Here is the basic story, although some details must remain confidential:
>
> "In the 1990s I bought 19,900 pieces of 1908 No Motto twenties. The coins were stored in one place in bags of 500 coins, each with a seal. The seals on the bags of all 19,900 coins were all dated in the 1960s. When I first met with the owners there were several people involved, and I was on hand with a colleague. They had a special book that in which we had to register before they opened the first bag. The book contained the seal number and the date of the seal. We had to sign this book for every bag they opened. The person opening the bags was the person who sealed them originally.
>
> "At first glance I could tell the coins were fantastic and of high quality — as the bags were never tossed around or recounted over the years, in contrast to most bank hoards. ...

Gillio goes on to explain that except for rebagging from the original bags, which had deteriorated, the coins had remained "unmoved and untouched since 1917!" For the coins that were sent to PCGS, approximately half of the total, David Hall takes up the story on PCGS' Coin Facts website:

> "The hoard contained thousands of superb Gems graded MS66 by PCGS, nearly 1000 coins graded MS67 by PCGS, 101 coins graded MS68 by PCGS, and 10 virtually perfect gems graded MS69 by PCGS, the only Saints ever graded MS69 by PCGS (as of 2009)."



Today, a single MCMVII High Relief joins the 10 Wells Fargo 1908 No Mottos at the incredible MS69 level (10/11). The massive hoard made high-grade examples of the No Motto issues far more available for a price than they had been in the past, and made the coins among the most plentiful and well-produced Saint-Gaudens issues in the certified populations.

Dr. Steven Duckor purchased the present specimen, a coin that predates discovery of the hoard, in 1982. This Superb Gem is one of the few finest pre-Wells Fargo coins (there are two non-Wells Fargo examples finer, one in MS67+, one in MS68). This sharply struck, lustrous example shows lush mint-green and orange-gold competing for territory on each side, with lilac accents and sparkling luster. The obverse has more orange-gold toward the center yielding to jade-green near the rims, while the two hues intermingle on the reverse. The surfaces show a typical fine-grained, mattelike texture. Even a loupe reveals remarkably few signs of contact, of even the smallest sort.

**1908-D NO MOTTO MS66 PCGS SECURE. CAC**

**1908-D NO MOTTO MS66 PCGS SECURE. CAC**

# 1908-D No Motto Twenty, MS66
# The First Denver Mint Saint

**4604** **1908-D No Motto MS66 PCGS Secure. CAC.** Long Rays Obverse. Ex: Duckor/Akers. A small D mintmark appeared on middle-19th century U.S. coins, designating the gold-producing mint in Dahlonega, Georgia. Located in Lumpkin County, the community had a mere 997 residents, according to the 1850 Federal Census. The Dahlonega Mint was closed in the early days of the Civil War, never to reopen. Many years later, the D mintmark again appeared on coinage beginning in 1906, this time on coins produced in Denver, Colorado.

Although the Denver Mint operated as an assay office for four decades before 1906, it was always the intent of Congress to establish a mint at that location. In 1878 the Honorable Thomas M. Patterson of Colorado addressed the House Committee on Coinage, Weights, and Measures:

> "The propriety of a coinage mint at Denver is not a latter-day conception. As early as 1862 Congress passed an act to effect that object. Under its provisions a building and site were purchased and preparations for coinage commenced. The prolongation of the war, and the consequent disuse of coin as a circulating medium, caused these preparations to cease; but with the return of coin to circulation and the necessity for its immediate increase in quantity, what reason exists to effect? Denver, under the law, yet has a 'mint.' Section 3495 of the Revised Statutes clearly shows this."

A brief discussion of the old and new Denver Mint buildings appeared in Volume 42 of the *American Journal of Numismatics,* for 1907-08:

> "The building at Denver, Col., used for about forty years by the United States as an Assay Office, was torn down a few months ago, and the material of which it was constructed was carefully preserved by the contractors, with the expectation that sufficient quantities of the precious metal would be recovered, by suitable treatment, to pay for the trouble, as has been the experience in similar cases elsewhere. It was erected about 1863, under an Act of Congress authorizing the establishment of a Branch Mint in that place. We believe no coins were ever struck in this building, although large quantities of bullion bear the stamp of the Office, showing that it was there refined.
>
> "The new Mint in Denver, a fine building of stone, and equipped with the latest devices for coining, was opened on New Year's Day, 1906."

A large part of the 663,750-coin mintage of the 1908-D No Motto double eagle was stored in Treasury vaults to back the circulation of gold certificates, while many thousands of pieces were exported in the early 20th century. The former coins were likely melted in the 1930s, while the latter coins have been returned to the United States, especially from Central America, where they now serve the demand of collectors. Today, examples are readily available in lower Mint State grades through MS63. Finer coins that grade MS64 or MS65 are rare, and Premium Gem specimens such as the Duckor coin are extremely rare. This example from the Dr. and Mrs. Duckor Collection is only the ninth appearance of an MS66 PCGS example in any of our sales. The previous eight appearances represent just three different coins.

Deep, lush sunset-orange color dominates both sides with rolling cartwheel luster. Some deeper lilac shades intermingle in the sun's rays, further accentuating the incredible eye appeal. Fine-grained, mattelike surfaces show a thin ring of jade color at the extreme rims of each side. On the obverse, a couple of ticks appear on the fourth and fifth long rays from the right, and a small mark appears right of the head. A single tiny rim nick on the reverse near 9 o'clock will serve as a pedigree identifier, if one is ever needed, along with a couple of tiny contact marks well-hidden in the rear eagle feathers, and another on the sun. Despite these picayune identifiers, this coin is virtually mark-free. PCGS Population: 9 in MS66, 0 finer (10/11).

*Ex: David Akers.*

**David Akers Comments:**

Prior to 1983, the 1908-D No Motto was considered to be a scarce issue in mint state and a major rarity in Gem uncirculated condition. In fact, it was all but unobtainable in MS65 or higher grade and even an MS64 example was considered a rarity. The Eliasberg and Norweb Collections, both formed many years before 1983, contained some of the rarest and highest quality Saint-Gaudens double eagles in existence. However, both of those great and famous collections contained examples of the 1908-D No Motto that fell considerably short of the gem level. So did every other major collection of double eagles up to that time. Then, in 1983, a large hoard of U.S. double eagles, mostly Saints, but many Liberty Heads as well, was discovered in Central America. The hoard consisted of approximately 47,000 coins, more than 90% of them uncirculated, including many thousands which graded MS64, MS65, and even higher. The hoard was purchased by Manfra, Tordella and Brookes (MTB) and included a large number of 1908-D No Motto pieces of which this was one of the very finest. I was fortunate enough to be able to handle most of the best ones from the hoard, more than a hundred beautiful and completely original MS64, MS65, and MS66 specimens. Subsequently, other uncirculated examples of this issue, including many choice specimens, were located in Europe and sold in the late 1980s and early 1990s. As a result of the discovery and disbursement of these hoards, as many as 250-300 gems are now known of this previously impossible-to-find issue, although no more than a few, perhaps 12-15 at most, are superb gems like the Duckor specimen offered here.

**1908 MOTTO MS66 PCGS SECURE**

**1908 MOTTO MS66 PCGS SECURE**

# 1908 With Motto Saint, MS66
# Only One Finer PCGS Coin

**4605** **1908 Motto MS66 PCGS Secure.** Ex: Duckor/Akers. Following the production of more than 4 million 1908 No Motto double eagles, the motto IN GOD WE TRUST was added to the reverse, and another 156,258 coins were minted. The motto was omitted from the new gold designs that appeared in 1907 and 1908, due to the objections of President Theodore Roosevelt, who spearheaded the coinage redesign efforts of the early 20th century. In a letter published in the November 14, 1907, issue of *New York Times,* Roosevelt explained his objections:

> "My own feeling in the matter is due to my very firm conviction that to put such a motto on coins, or to use it in any kindred manner, not only does no good, but does positive harm, and is in effect irreverence, which comes dangerously close to sacrilege. A beautiful and solemn sentence such as the one in question should be treated and uttered only with that fine reverence which necessarily implies a certain exaltation of spirit.
>
> "Any use which tends to cheapen it, and, above all, any use which tends to secure its being treated in a spirit of levity, is from every standpoint profoundly to be regretted. It is a motto which it is, indeed, well to have inscribed on our great National monuments, in our temples of justice, in our legislative halls, and in buildings such as those at West Point and Annapolis — in short, wherever it will tend to arouse and inspire a lofty emotion in those who look thereon.
>
> "But it seems to me eminently unwise to cheapen such a motto by use on coins, just as it would be to cheapen it by use on postage stamps or in advertisements. As regards its use on the coinage, we have actual experience by which to go. In all my life I have never heard any human being speak reverently of this motto on the coins or show any signs of its having appealed to any high emotion in him, but I have literally, hundreds of times, heard it used as an occasion of and incitement to the sneering ridicule which it is, above all things, undesirable that so beautiful and exalted a phrase should excite."

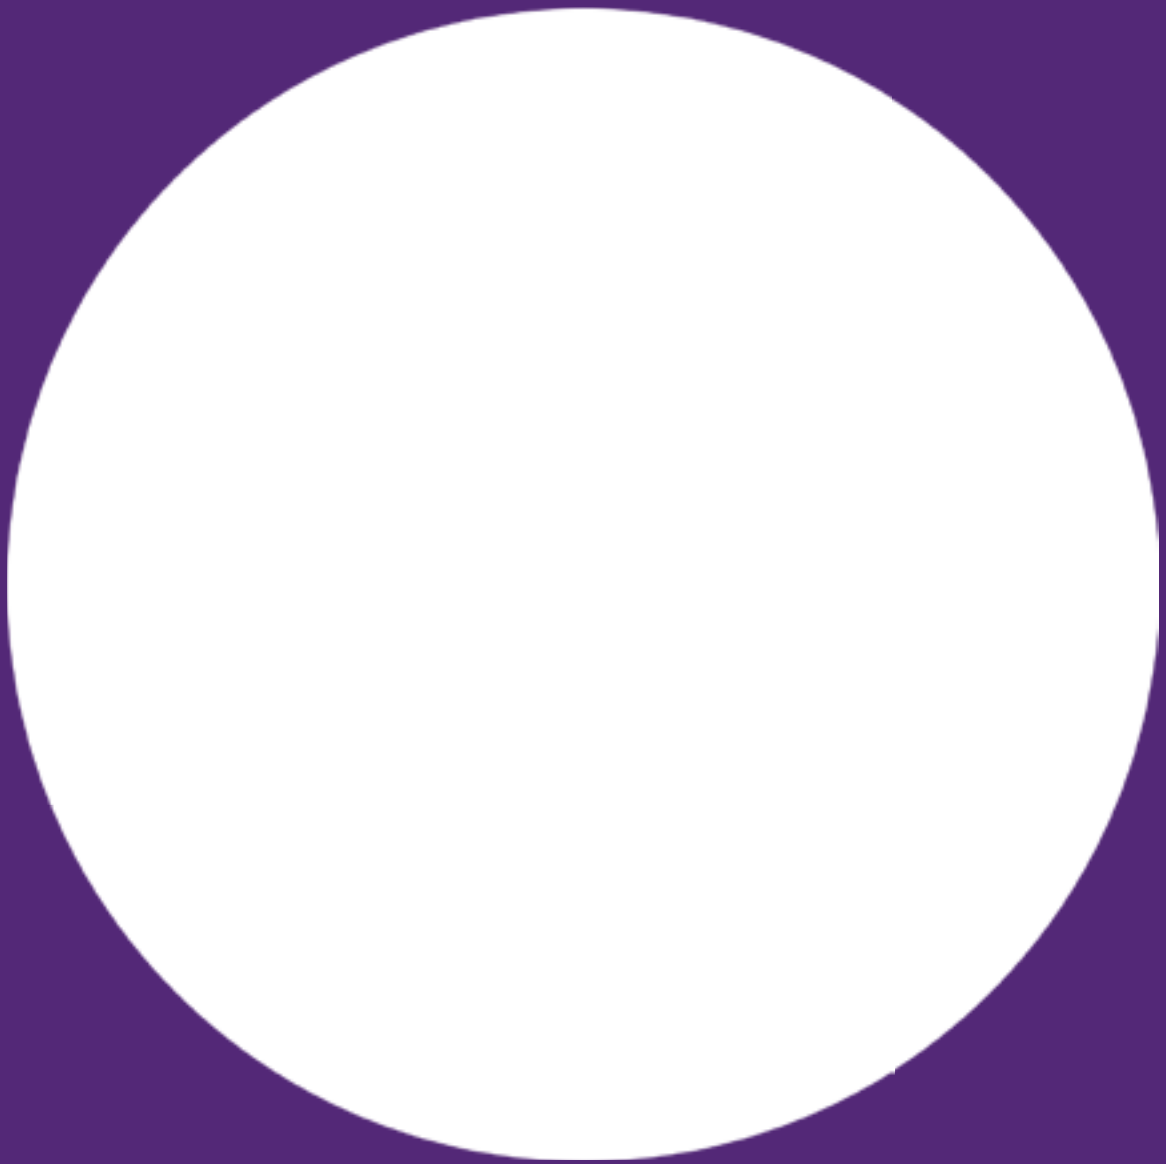
Unlike its No Motto counterpart, common in high grade via the famous Wells Fargo Hoard, there were no large hoards of the 1908 With Motto Saint-Gaudens double eagles. Pieces that may have been exported in the early 20th century and more recently imported back to the United States are invariably in lower numeric grades. The average PCGS grade of more than 2,200 certified examples of this date is just MS62. More than 1,900 of those 2,200 coins grade between MS61 and MS64. Collectors who seek coins that grade finer than MS65 are limited to only 11 PCGS certified submissions, a population that includes resubmissions (10/11).

Specialists will recognize the 1908 With Motto double eagle as the first year of a short four-year subtype of the Saint-Gaudens series, bearing 46 stars on the obverse, a subtype that continued only through 1911. Beginning in 1912, the obverse had 48 stars representing the addition of Arizona and New Mexico to the United States.

While an unknown part of the mintage may have been exported, it is likely that most were stored in Treasury vaults until they were melted in the 1930s. This issue clearly saw little use in commerce, given the small population of circulated coins. Less than 3% of the total PCGS population grades less than AU58.

Even yellow-gold surfaces are well-balanced and show scarcely a trace of green. A couple of tiny orange splashes appear in the left (facing) gown folds with a slight pinkish tinge on the eagle's neck and some of the feathers. This Premium Gem is fully struck. A small diagonal mark across Liberty's forehead will identify the provenance of Duckor specimen. This stunning specimen is an amazing exception to the usual low-level Mint State survivors.

*Ex: David Akers.*



**David Akers Comments:**

The P-Mint issues from the 1908 With Motto to the 1915 have been a largely underappreciated subset of the Saint-Gaudens double eagle series for many years. Recently, collectors trying to put together truly exceptional sets of the series have discovered just how difficult all the members of this nine coin group really are to find in superb mint state (MS66 or better) condition. Of all the 54 issues in the Saint-Gaudens series, including all of the many famous rarities, only three have had none graded by PCGS in MS66 or finer condition and two of those are in this early P-Mint group, the 1913 and 1915. To put this fact in proper perspective, there are at least three superb specimens graded of every one of the famous late date issues from 1929-1932 and at least two of every one of the famous rarities of the 1920's. Of course at the Gem MS65 level and below, each of these nine issues is more common than the major rarities but for the perfectionist, like Dr. Duckor, finding a great example of any of these early P-Mint issues is a real challenge.

Although for a long time the 1908 With Motto was considered one of the rarest of the group, it is now correctly seen to be the second most common in gem MS65 condition after the 1910 although it is not as rare as the 1910 in superb mint state. In fact, along with the 1911, the 1908 With Motto is the most available of the early P-Mint issues in MS66 or higher grade. Even so, only about 12-15 exist at that level with this Duckor specimen clearly in the condition census. It is one of the two or three finest I have ever personally handled as a dealer.

**1908-D MOTTO MS67 PCGS SECURE. CAC**

**1908-D MOTTO MS67 PCGS SECURE. CAC**

# 1908-D With Motto Double Eagle, MS67 From the 'Gold Rush Collection'

**4606** **1908-D Motto MS67 PCGS Secure. CAC.** The 1908-PDS With Motto double eagles were the first in the series produced after President Roosevelt lost his battle with Congress to keep IN GOD WE TRUST off of the new ten and twenty dollar gold pieces. David Akers notes that the details were sharpened when the new master hub was made, so that the 1908-D With Motto "appears to be much sharper and more defined on the obverse than the 1908-D No Motto."

When this Superb Gem crosses the auction block, it will be the seventh appearance of an MS67 PCGS specimen — but PCGS has certified only three distinct pieces, provenanced below (10/11).

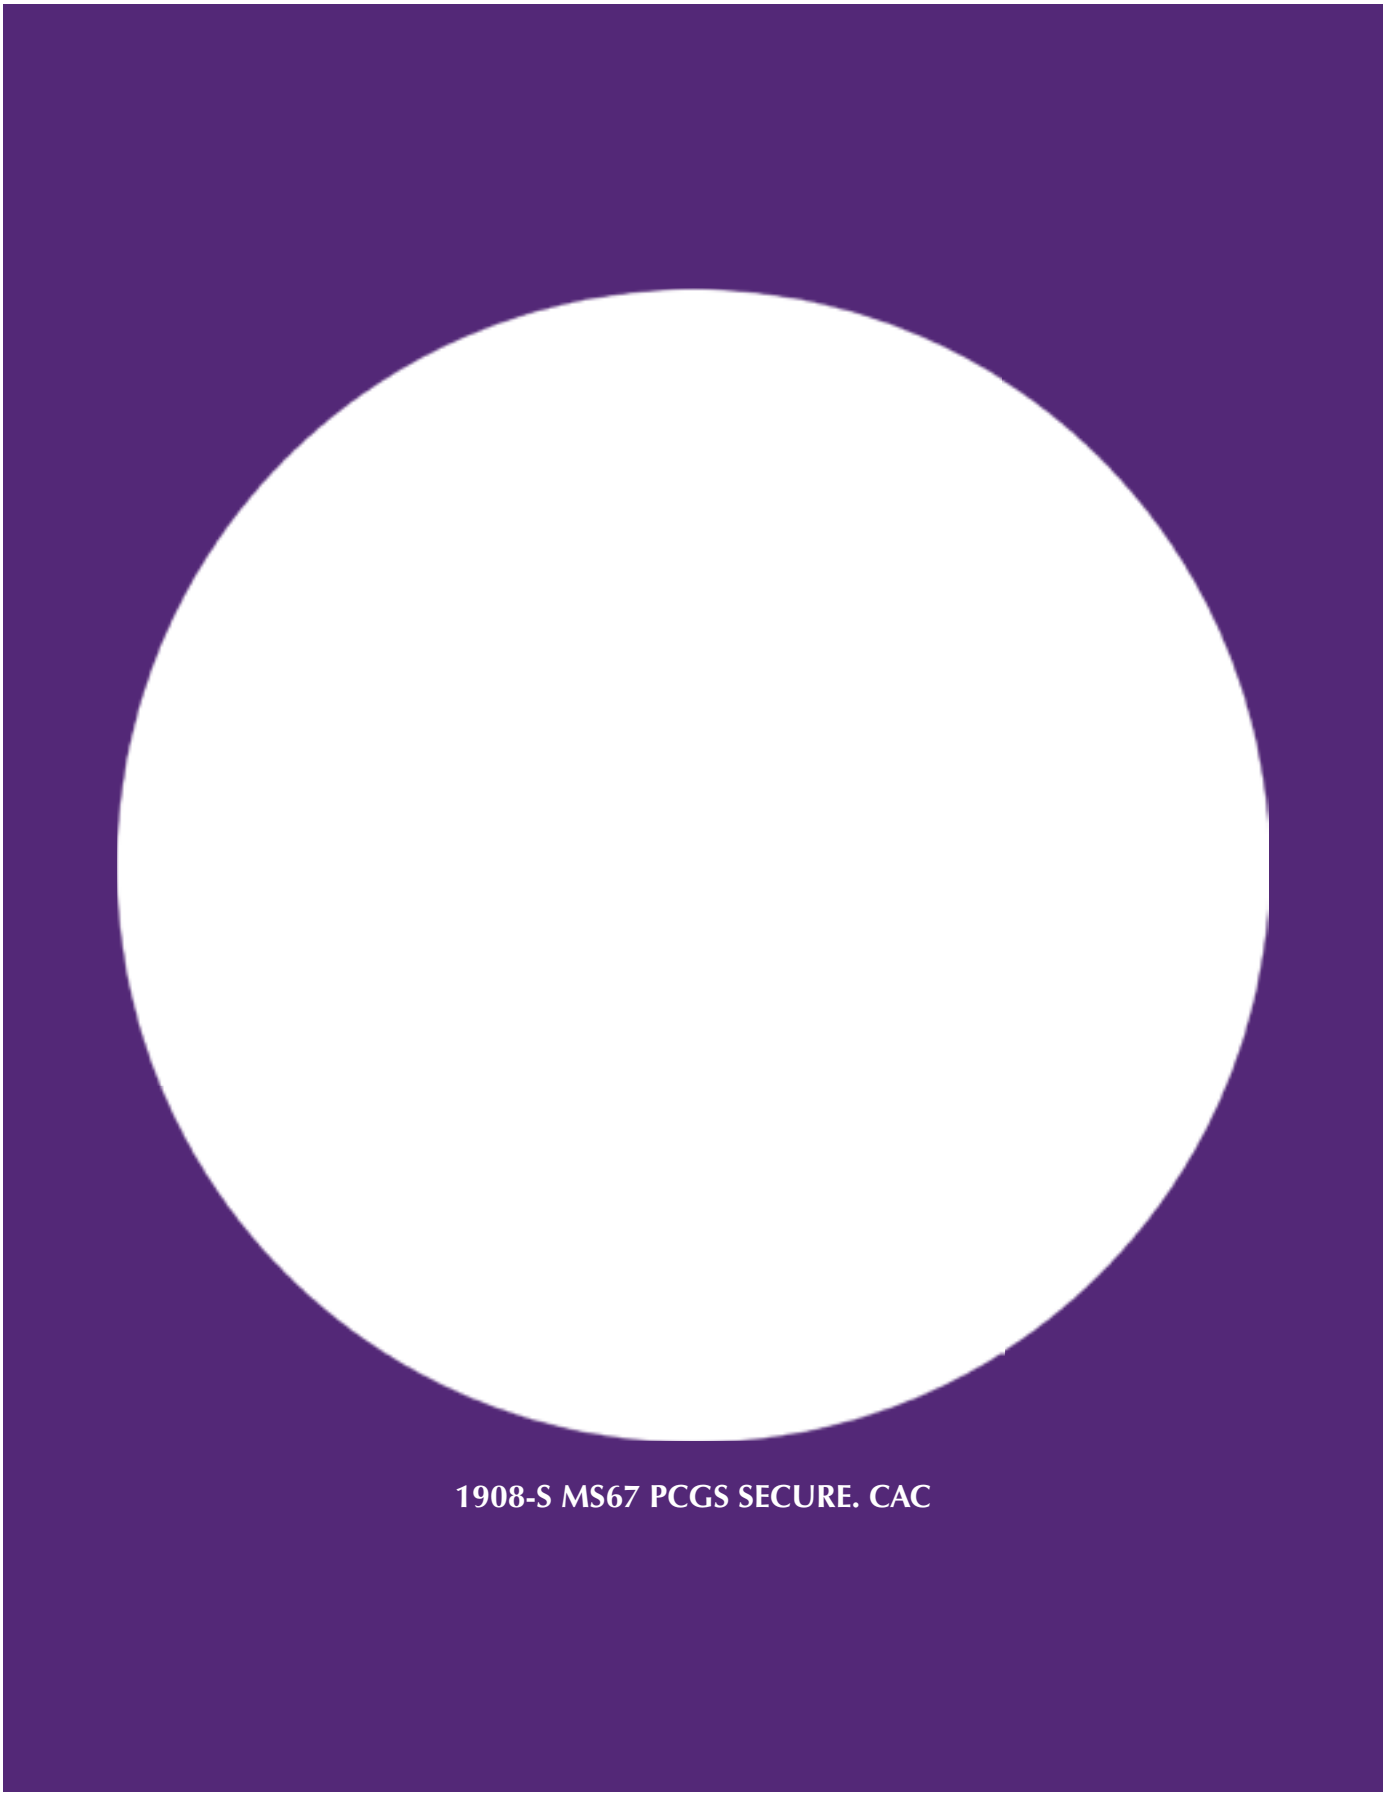
Although Dr. Steven Duckor formerly owned the Eliasberg-Duckor specimen, he sold that coin before purchasing this piece, which appeared in our offering of the remarkable Gold Rush Collection that was assembled by the consignor, working with Georgia numismatist Al Adams. The Gold Rush Collection catalog was the first appearance of an MS67 PCGS piece in our auctions. Due to its remarkable quality, we thought at the time that it might be the Eliasberg coin, which was unplated in the 1982 catalog. Later, when we offered the Eliasberg example, it became clear that the Gold Rush piece was a different coin. The surfaces are virtually flawless; in fact, it is the near-perfection of the surfaces on this and the few similarly graded pieces that makes provenance tracking and plate-matching difficult. Orange-gold and mint-green compete for space against rolling cartwheel luster. The surfaces on this Superb Gem show fine-grained, mattelike luster and are fully struck throughout, attesting to Akers' comment about the sharpened hub details. A few tiny abrasions nestle among the eagle's middle wing feathers, but they are imperceptible without a loupe.

**MS67 PCGS Examples**

**—MS67 PCGS Secure. CAC. The present specimen.** Florida collection, early 1980s; August Sale (Mid-American Rare Coin Auctions, 8/1987), lot 1243; Al Adams; Gold Rush Collection (FUN Signature, Heritage, 1/2005), lot 30083, in a first-generation small-size PCGS holder, which brought $66,125; later, Legend Numismatics; Heritage Auctions; Dr. Steven Duckor via private treaty. Tiny "apostrophe" fleck of dark toning in the obverse field just right of Liberty's head.

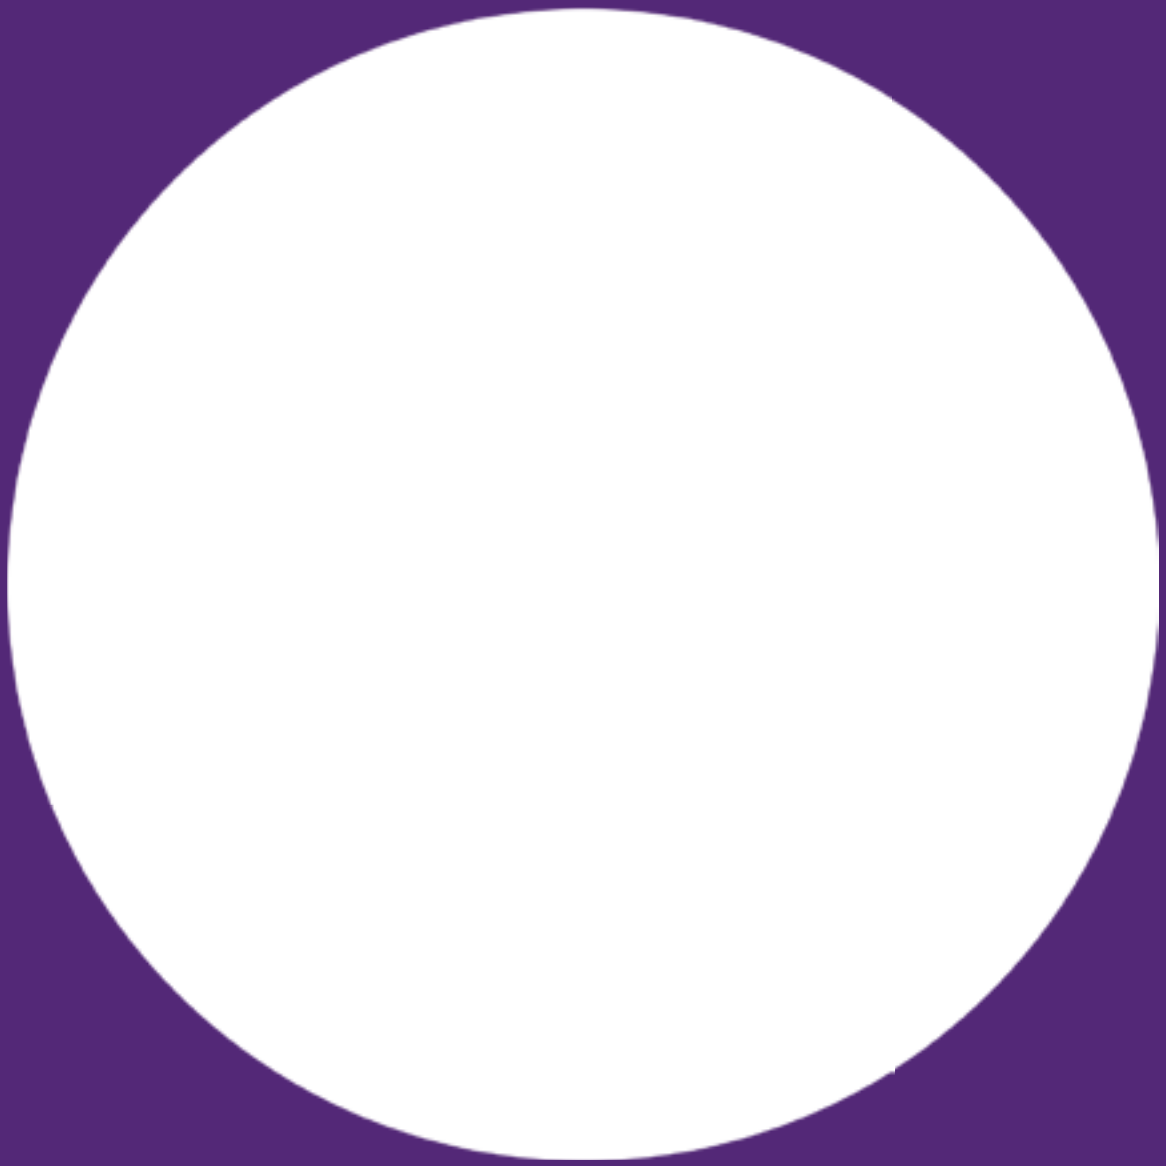
**—MS67 PCGS. CAC.** (Likely John H. Clapp, direct from the U.S. Mint in the year of manufacture; John M. Clapp; Clapp estate); Louis E. Eliasberg, Sr.; Eliasberg Estate ("U.S. Gold Collection," Bowers and Ruddy, 10/1982), lot 1028, which brought $10,450, cataloged as "Gem Brilliant Uncirculated, MS-67"; Dr. Steven Duckor; Phillip H. Morse Collection of Saint-Gaudens Coinage, Part Three (FUN Signature, Heritage, 1/2006), lot 3591, which brought $74,750; Jacob Collection of Saint-Gaudens Double Eagles (FUN Signature, Heritage, 1/2008), lot 3361, which brought $74,865; Stephen Stokely Collection, Part Five (ANA Signature, Heritage, 7/2008), lot 2085, which brought $92,000. Small obverse scratch parallels Liberty's branch arm in the field just above it, diagonal tick on arm just below that. A few mostly diagonal marks appear on the bodice and torso. Reverse has tiny mark or planchet flaw in the center-middle feathers of the forewing.

**—MS67 PCGS.** Jeff Browning; Dallas Bank Collection (Sotheby's/Stack's, 10/2001), lot 157; Phillip H. Morse Collection of Saint-Gaudens Coinage (Heritage, 11/2005), lot 6558, which brought $80,500; Simpson Collection. **Akers plate coin.** Tiny obverse ticks at midpoint of sun rays 3 and 6 counting to the right away from Liberty on the right (facing); small speck of dark color touches ray 4 (counting inward from the left obverse rim) just above the Capitol spire.



**David Akers Comments:**

Many of the comments I made with respect to the 1908-D No Motto apply to the 1908-D With Motto as well. Before 1983, it was very difficult to find examples of this issue that were better than MS63 although the 1908-D With Motto was never thought to be as rare and impossible to find in gem condition as the 1908-D No Motto. For example, both the Eliasberg and Norweb collections, formed decades prior to the early 1980s, contained gems of the With Motto issue; in fact, the Eliasberg specimen was a superb, nearly flawless coin which Dr. Duckor purchased at the famous 1982 sale of Eliasberg's gold coin collection. However, both collections contained only low quality mint state examples of the 1908-D No Motto. (Dr. Duckor sold the Eliasberg coin in 2000 along with several other coins from his set and so it is not the example offered here.)



In 1983, a huge hoard of U.S. double eagles was located in Central America and sold to MTB, a New York City rare coin and bullion dealer of renown. It contained many uncirculated examples of both the 1908-D With Motto and 1908-D No Motto, many of them grading choice to gem uncirculated with some superb MS66 and, in the case of the With Motto issue, one or two MS67 specimens included as well. Today, the 1908-D With Motto is only moderately scarce in gem condition and certainly not rare by any means. Superb MS66 examples remain rare, however, and MS67 specimens are extremely rare with only a handful known. This is one of the two or three finest pieces known and might be the finest from the hoard, although that pedigree cannot be stated with absolute certainty.

(#9148)

**1908-S MS67 PCGS SECURE. CAC**

**1908-S MS67 PCGS SECURE. CAC**

## The Norweb 1908-S Double Eagle, MS67
## Tied for the Finest Certified

**4607** **1908-S MS67 PCGS Secure. CAC.** Ex: Duckor/Norweb. Double eagles without the motto IN GOD WE TRUST were only coined in Philadelphia and Denver, while San Francisco coined its first examples of the Saint-Gaudens design after the motto was restored. In *Renaissance of American Coinage 1905-1908,* Roger Burdette points to difficulties with the edge lettering mechanism as the cause of the delay:

> "The mint struggled to re-invent a production quality, three-segment edge collar for the eagle and double eagle. ... It was not until September 1907 that the new mechanism was completely successful on the $10 gold coins, and it was December before the double eagle version was operating reliably at Philadelphia. Denver and San Francisco mints had additional problems with the mechanism and it was August 1908 before the San Francisco Mint could strike the new coins without damaging the presses."

Even after the problems were solved in San Francisco, it may have been some time before the mechanism was operating smoothly, judging from the limited coinage of only 22,000 double eagles during the last six months of the year, an average of only 150 coins per day based on a six-day work week. The mintage is the lowest of any Saint-Gaudens issue other than the High Relief coins. It is also known for its conditional rarity.

Unlike many later dates that were exported or remained dormant in Treasury vaults, the 1908-S apparently saw use in Western commerce. Well into the 20th century, few collectors were active in the San Francisco vicinity, and only a few others ordered new issues from that mint. The survival of high-grade 1908-S double eagles was a matter of chance.

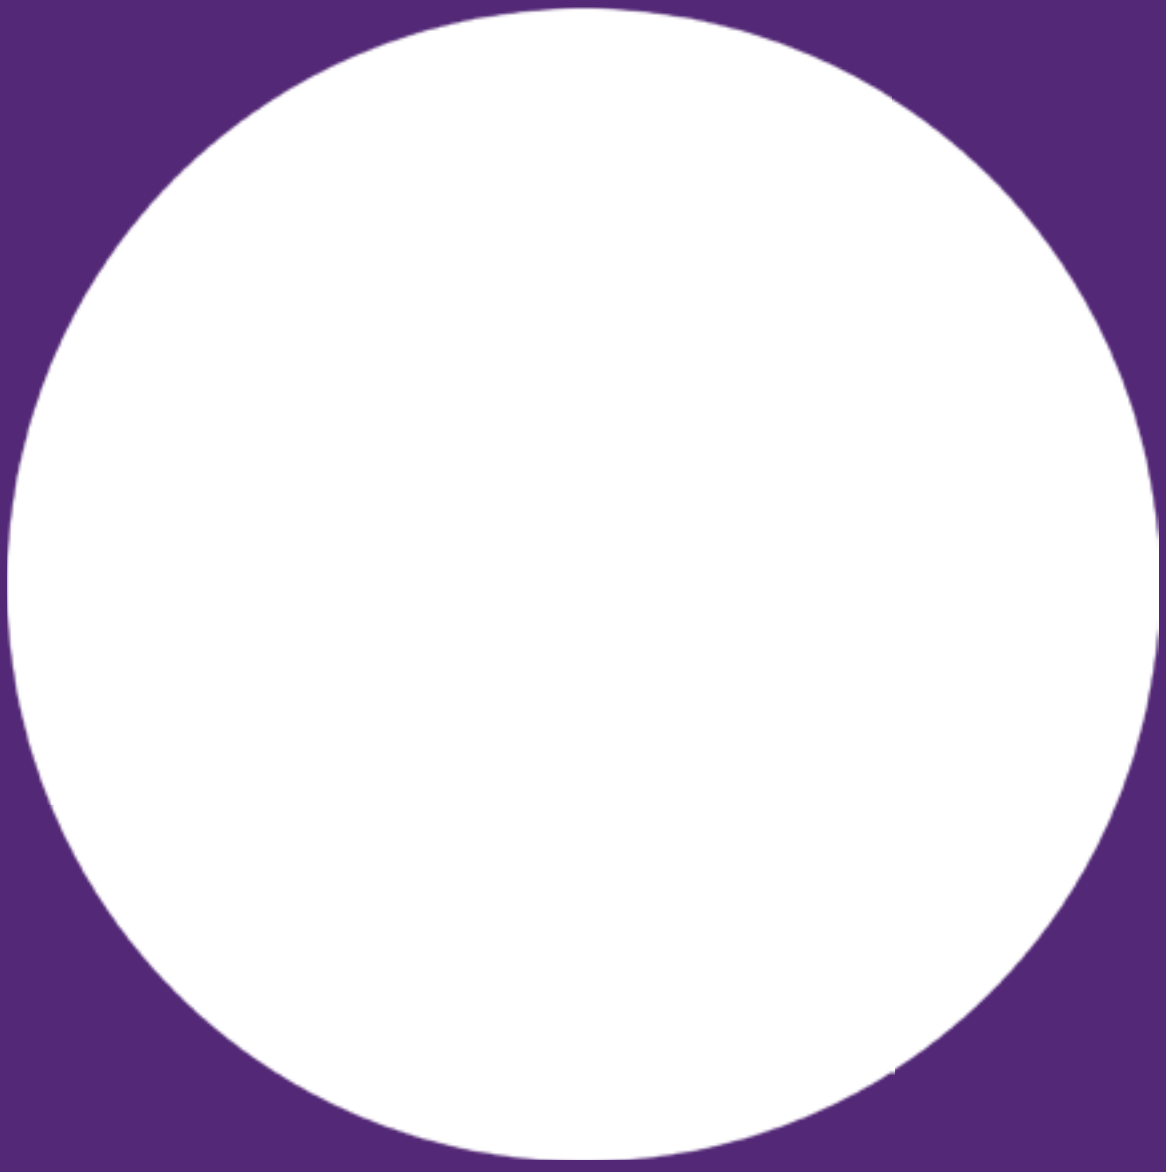
PCGS has certified 28 coins in MS65 or better grades, including just five in MS67 and none finer (10/11), the figures including resubmissions. The MS67 PCGS population remains unchanged since we published *The Coinage of Augustus Saint-Gaudens* late in 2006. For comparison, Consider also that PCGS has certified 442 submissions of 1908-S double eagles in all grades from Fine 12 to MS67, with an average grade of only AU55. NGC has never graded an MS67, their *Census Report* listing just seven in MS65 and six in MS66.

Since we began our Permanent Auction Archives in 1993, we have only presented three previous auction appearances of a Superb Gem example of this issue, and those three appearances represent just two different coins. The Duckor specimen becomes the third example, and in our opinion, easily the finest of the three coins we have handled, edging out the Phillip Morse specimen. The third piece, which we offered late in 2006 and again early in 2007, was previously certified MS66 PCGS, upgrading to MS67 prior to our November 2006 offering.

In his 1988 *Handbook of 20th-Century United States Gold Coins, 1907-1933,* David Akers described several exceptional pieces including Dr. Duckor's first specimen, an example in Auction '80, the present Norweb specimen, and coins in the collections of Louis Eliasberg, Harry Bass, Thaine Price, William Crawford, and a prominent Eastern collection, as well as the Browning specimen and two coins that Akers personally owned at the time. Only the Auction '80 specimen and the Norweb coin have reached the MS67 grading pinnacle.

The Norweb-Duckor specimen is arguably the most distinctive coin in the entire collection. It displays frosty orange-gold cartwheel luster rolling across both sides, with mottled carmine and violet-blue toning, especially along the obverse border, and a few sprinkles of similar color in the fields. The strike is bold, showing indistinct detail only at the Capitol building on the obverse. All fingers of both hands are separated, and the hair and facial details are fully evident. All of the eagle's feathers are full and sharp, including the tail feathers. Individual bagmarks and other blemishes can almost literally be counted on one hand.

*Ex: Norweb Collection (Bowers and Merena, 11/1988), lot 4090; David W. Akers; Dr. and Mrs. Steven L. Duckor.*



**David Akers Comments:**

This issue has the second lowest mintage figure of any regular issue Saint-Gaudens double eagle after the 1907 MCMVII High Relief. This low mintage figure, only 22,000 pieces, undoubtedly contributed to the esteem in which the 1908-S was held throughout the 1940s, 1950s and forward to the present day. At one time it was considered to be at the low end of the fourth tier of Saint-Gaudens double eagle rarity which also consisted of the 1920-S, 1922-S, 1924-D, 1925-S and the late date P-Mints 1929, 1931, and 1932. When offered for sale at auction, all of these issues typically realized only in the $200-$400 price range. Unlike almost all of the double eagle issues minted after World War I, the 1908-S issue was intended and used for general circulation. That is why a much larger percentage of known specimens of the 1908-S are in circulated grades than is the case with other prized dates of the series. Although less rare than the low mintage might imply, choice uncirculated and very choice ones are at least very scarce and gem quality MS65 examples are rare with only about 25-30 known. More superb MS66 and MS67 examples exist of this issue than of most of the other rare dates in the series, but they are still very rare with perhaps 15-18 known.

The specimen offered here is, in my opinion, the finest known 1908-S double eagle. I first saw it at the Norweb sale in the fall of 1988 and absolutely fell in love with it. I decided to buy it for myself even though I already owned three other beautiful original gems of the date at the time, including the Eliasberg specimen, also graded MS67 by PCGS. The price for this coin at the Norweb sale was $39,600, the same amount that I paid for the 1926-D, which I later sold to Dr. Thaine Price. The Saints in the Norweb sale were very conservatively and consistently undergraded. For example, the 1925-S and aforementioned 1926-D were graded only MS64 and MS63 respectively. I purchased both of them and subsequently sold them to Dr. Price. After they were sold with his collection in 1998, they were submitted for grading to PCGS and received grades of MS68 and MS66 respectively, the first and second finest of their issues graded. But of all the Saints in the Norweb sale, quality-wise, this 1908-S, graded only MS65 in the sale, was by far the finest. It is a one-of-a-kind Saint-Gaudens double eagle with luster and color that is simply extraordinary and fields and devices close to perfection. Personally, I think this is distinctly under graded in a 67 holder and once I bought it I told everyone that it was the one Saint I owned that I planned to keep "forever." However, in 1990 at the Seattle ANA convention, I made the mistake of showing it for the first time to Dr. Duckor. I had already sold him one of my other gems of the date, but this is the one he knew he just had to have. Over the next 15 years he did his best to convince me that I should sell it to him, that it really belonged in a complete collection of Saints of the quality he was putting together. I finally relented and agreed to sell it to him in 2005 and so "forever" in this case lasted for only 17 years. He was right, though; it did belong in his collection, and I am as proud of it being there as he is. I have to admit, though, despite my saying many times over the years that I never have "seller's remorse" after I decide to sell one of my own personal coins, that this coin is definitely the one exception to that rule.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9149)

**1909 MS66 PCGS SECURE. CAC**

**1909 MS66 PCGS SECURE. CAC**

# 1909 Normal Date Saint, MS66
# Rarity Equal to the Overdate

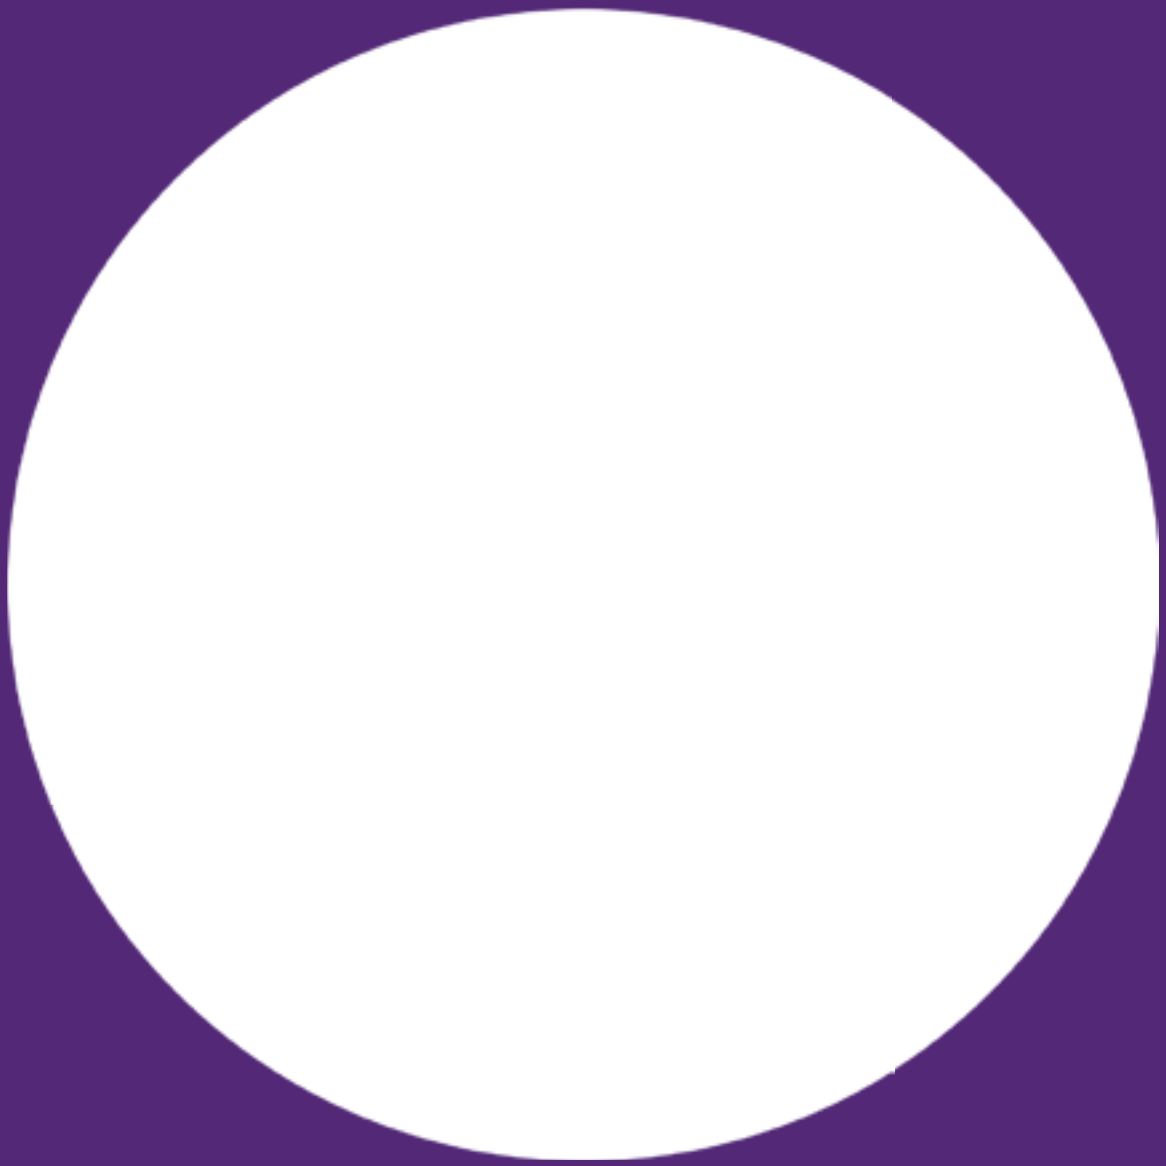
**4608** **1909 MS66 PCGS Secure. CAC.** Ex: Duckor/Akers. It is impossible to examine the 1909 double eagle and numismatic perceptions of it, both past and present, without comparing it to its overdated counterpart. Collectors have long been conditioned to think of overdates as special varieties, especially among 20th century coins. When one die out of hundreds is overdated, as was the case with issues such as the 1942/1 dime, then the pattern holds true. Yet the most famous gold overdate of the 20th century, the 1909/8 double eagle, is a dramatic exception; Q. David Bowers wrote in *A Guide Book of Double Eagle Gold Coins,* "The 1909/8 is believed to have constituted perhaps nearly half of the mintage of the 1909 Philadelphia double eagle."

Overabundant adverbs aside, if half the 1909 double eagles are overdates, then it stands to reason that the "perfect date" coins are of similar rarity. Writing from the perspective of 1982, David Akers noted in the double eagle volume of *U.S. Gold Coins: An Analysis of Auction Records* that "for years, the 1909 normal date was overshadowed by the popular 1909/8, but in the past decade or so the 1909 has come to be correctly recognized as the rarer of the two issues." A later Akers perspective comes from the 1998 catalog for the famous Dr. Thaine B. Price Collection, in which he writes:

> "Prior to the appearance on the market recently of a substantial number of mint state specimens, the 1909 Saint-Gaudens Double Eagle was generally considered to be much more scarce than it is now known to be. Hundreds of specimens have come onto the market over the past few years from one large hoard, and many of these specimens are attractive and fairly high quality, although most of them grade Choice Uncirculated or lower."

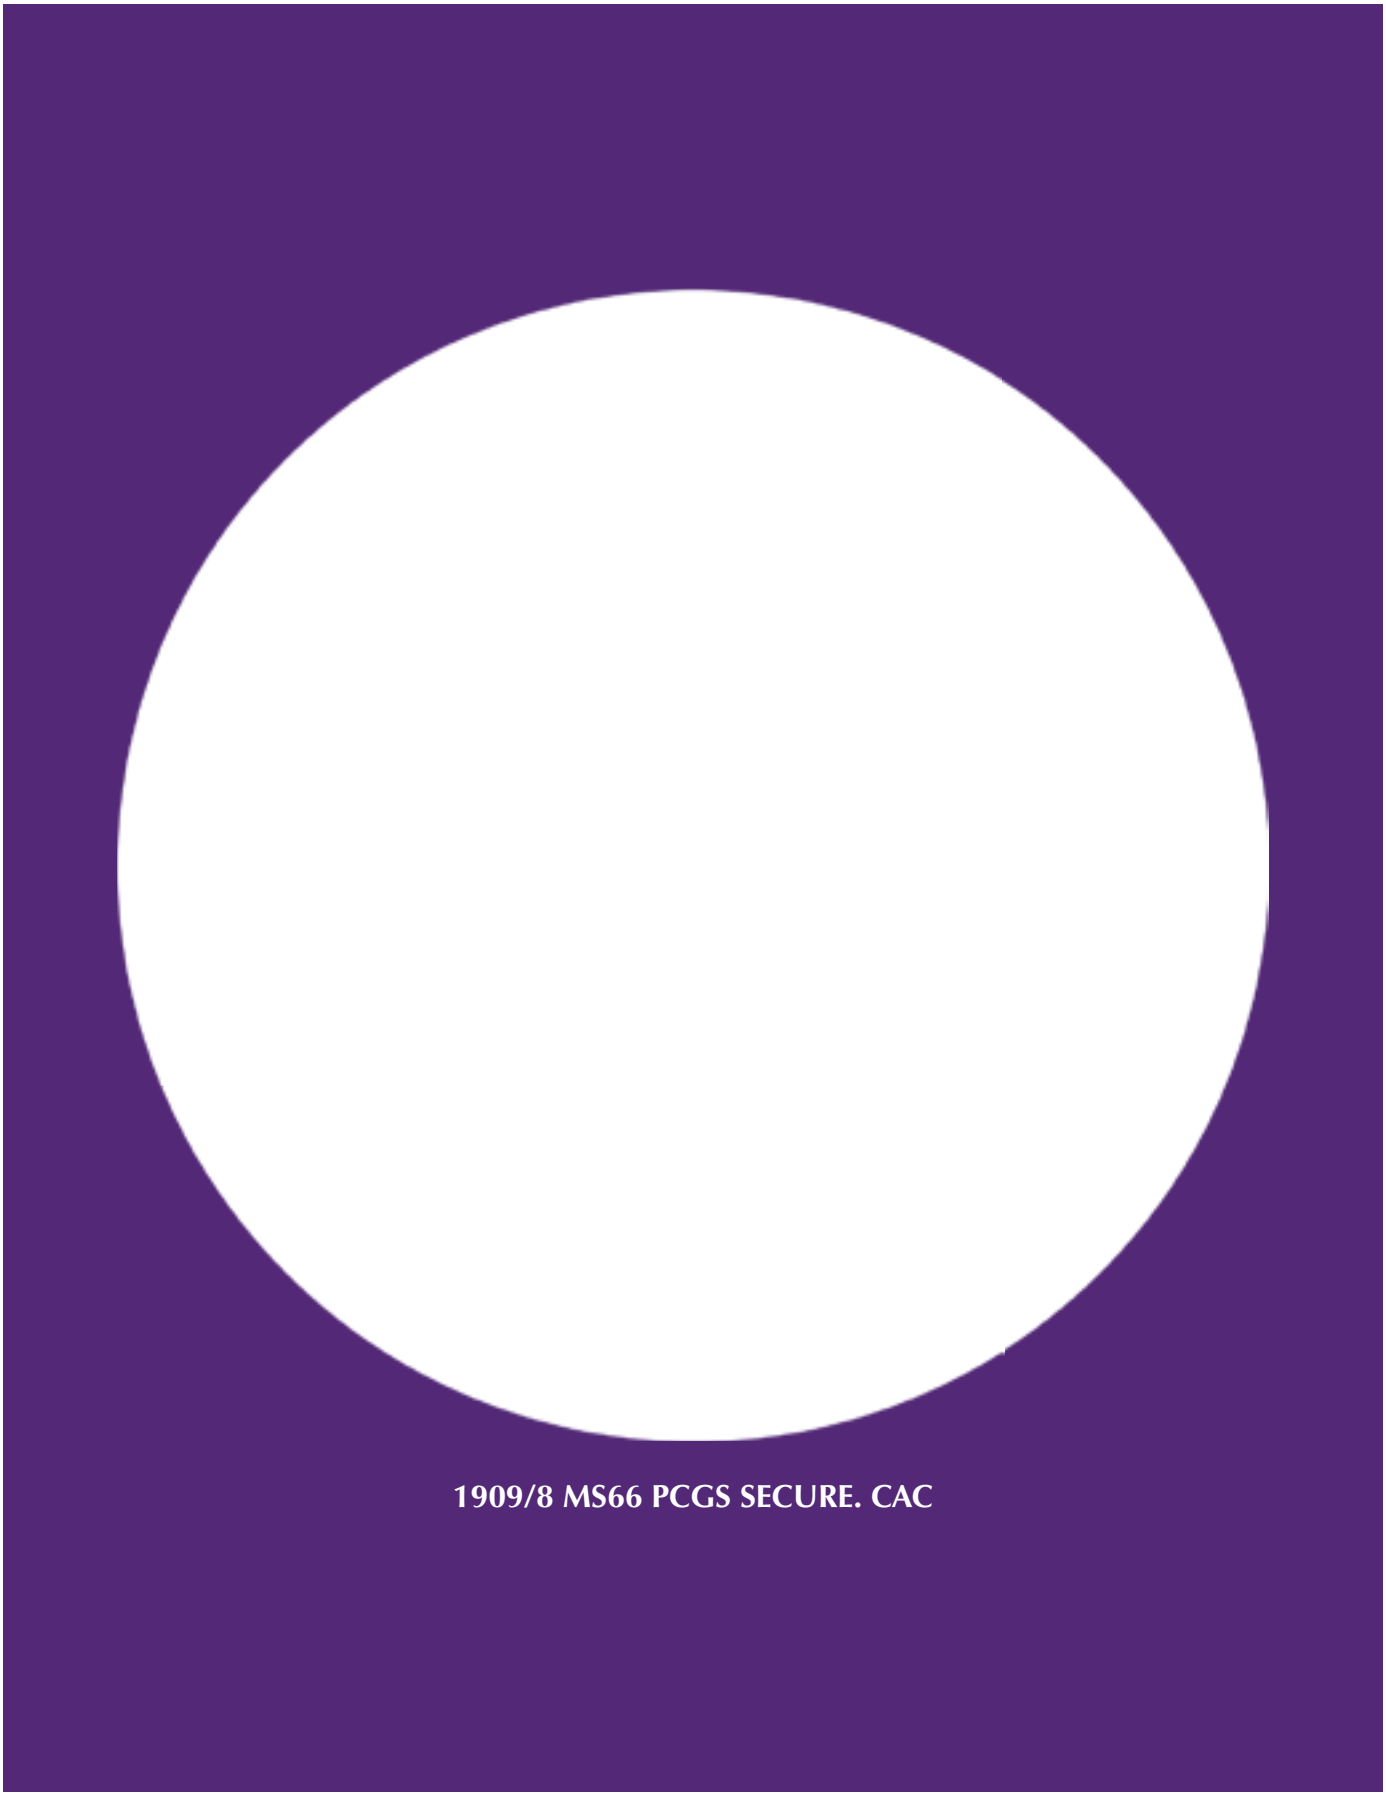
The increased Mint State availability of the "perfect date" between the two periods is reflected in current-day pricing for the two issues: their prices parallel each other through circulated grades, but the overdate commands a heavy premium in MS63 condition. The disparity in population, if not in price, has all but faded away by the MS65 level, where both overdate and "perfect date" coins are rarities. Go one more step, into MS66, and the "perfect date" PCGS *Population Report* shows just seven examples in that condition, with none finer (10/11). Ownership of an MS66 1909 Saint-Gaudens twenty has been the mark of many fine modern-era collections of the series; the Dr. Thaine B. Price specimen was later certified as MS66 by PCGS, and the Morse, Brahin, and Kutasi collections all had examples at the same grade level from the same service.

As might be expected from the Premium Gem grade, this is the quintessential 1909 "perfect date" double eagle. The strike is razor-sharp, and the luster is satiny, a characteristic never seen on the overdates. The color is orange-gold at the interiors, one of the few unusual characteristics for the issue, but a more familiar mint-green hue is present near the rims. The obverse is incredibly well-preserved, and aside from a few tiny marks in the rays on the reverse, that side is also largely abrasion-free. CAC and this cataloger agree that this is a coin of great quality, sure to please its next owner.



*Ex: David Akers.*

**David Akers Comments:**



Prior to about two decades ago, when a fairly large hoard of uncirculated examples was discovered in Europe, the 1909 was considered to be a very scarce issue in any grade and a rare one in choice uncirculated condition or better. The hoard changed all that, however, and now the 1909 is strictly a condition rarity, that is, one whose rarity is almost entirely dependent on the grade rather than the total number of specimens known. There were hundreds of choice and even very choice uncirculated specimens in the hoard and so at those levels the 1909 is now considered scarce rather than rare. However, the addition of the hoard specimens to the total population didn't diminish the rarity of gems of this date. They are still considered very rare and probably no more than 20-25 MS65 quality examples are known to exist, if that many. The number of superb MS66 quality specimens is much smaller, probably less than half the MS65 population, and none have been graded above that level. Over the years, I have changed my opinion several times as to whether I thought the 1909 or 1909/8 is the more rare issue in gem condition. Today, I consider the overdate to be slightly rarer at both of the top two grade levels, MS65 and MS66, while it brings a considerably higher price in those grades. The two best 1909 double eagles I have ever handled are this Duckor coin and the Dr. Thaine Price example which was sold at auction in 1998.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9150)

**1909/8 MS66 PCGS SECURE. CAC**

**1909/8 MS66 PCGS SECURE. CAC**

# 1909/8 Saint, MS66
# Discovered in 1910; Rediscovered in 1943

**4609** **1909/8 MS66 PCGS Secure. CAC.** Although Edgar Adams described the 1909/8 double eagle in the May-June 1910 issue of *The Numismatist,* the overdate remained largely unknown until Abe Kosoff "discovered" the variety in 1943. The following year, a listing was included in Wayte Raymond's *Standard Catalog,* and it has been included in every edition of the *Guide Book* since the first issue was published in 1946.

When Edgar Adams discussed the overdate, he was unclear about how it was made, but he did recognize the importance of the variety:

> "Overstruck dates are those where the die of one year has been altered to do service for the succeeding one. The last figure in the date is usually gouged out and replaced by the new one, but seldom is this operation conducted so skillfully that traces of it are not left. Of course the reason for this is to save money in the making of the dies, and the practice has by no means been abandoned altogether, for careful scrutiny of the Saint-Gaudens $20 piece of 1909 will reveal traces of what seems to have been the alteration of the figure 8 to 9."

Three decades after Adams reported the overdate, Abe Kosoff claimed that he discovered the variety. His article, "Interesting Overdates," appeared in the May-June 1943 issue of the *Coin Collector's Journal:*

> "One of the fascinations of our hobby is the possibility of discovering something about it which has escaped detection until YOU noticed it. Naturally, such opportunities are infrequent, especially in the U.S. series. We have, however, discovered an over date in the U.S. $20.00 series which has been kicking around for thirty four years.
>
> "Several years ago, the writer acquired a double eagle of 1909 which seemed to be struck over a 1908. It was sold to a California collector at a nominal price as something which 'might be scarce.' About two years ago, we offered another at auction listed as probably scarce. This sold at a nominal price to a New York collector. Some five months ago, the writer had the good fortune to obtain a third specimen which found its way into one of New York's largest collections.
>
> "The Clapp collection included the 1909 over 8 but apparently this fact was unknown to this great collector for when some of the duplicates were sold at a recent New York Auction, this coin was listed as of 1909 having escaped detection by the new owner and also the cataloguer. The purchaser, however, is aware of the fact. This accounts for four coins and, more recently, a fifth one has turned up. The probability is that many a collector has a 1909 over 8 double eagle in his collection listed as of 1909. It is quite likely that this overdate would be scarce in uncirculated condition."

The Philadelphia Mint coined 161,282 double eagles in 1909, and it is believed that half of those coins were the overdate. In all grades, PCGS has certified 2,070 examples of the 1909 double eagle, and 2,080 examples of the overdate. The average certified grade of the normal 1909 double eagle is MS61, while the average certified grade of the overdate is AU59. The certification data suggests that about 80,000 of each variety were minted, and about half of those entered circulation, the other half likely exported. Most important to current collectors is the knowledge that the present specimen is one of the four finest PCGS certified examples. The Duckor specimen is only the fourth MS66 PCGS appearance of the 1909/8 overdate in our sales.

Both sides of this brilliant orange-yellow Premium Gem exhibit satiny luster with only a few tiny marks, none that are of any use tracking the pedigree, as they are too small. In fact, the surfaces are pristine and so exceptional that we have made no attempt to trace the provenance. The overdate feature is bold and easily visible without magnification. All other design elements are similarly sharp on this spectacular specimen. Population: 4 in MS66, none finer (10/11).

*Ex: Park Avenue.*

**David Akers Comments:**

This is one of the most popular issues of the Saint-Gaudens double eagle series due to its unique status in the series as an overdate. Prior to the 1960s this issue was not seen very often in uncirculated condition but then substantial quantities were located in various Paris and Swiss banks by Paul Wittlin who served as a gold coin buyer for James Kelly (a famous Dayton, Ohio, coin dealer) and later Paramount International Coin Corporation. Other hoards were discovered over the next several decades as well and this issue is now relatively common in the lower uncirculated grades and only scarce at the MS63 grade level. At the very choice level, the 1909/8 is very scarce, if not moderately rare and true gems are very rare with possibly fewer than 20 specimens known. Superb uncirculated examples, that is, those grading MS66 are extremely rare and it is doubtful if more than 7-9 exist; none have been graded above that level. This is one of the prime condition rarities of the series, just slightly more rare, but considerably more popular and expensive, than the 1909 to which it is most typically, and obviously, compared. This specimen is one of the last coins in the series that Dr. Duckor added to his collection and it is not surpassed in overall quality and eye appeal by any other example known to me.

**1909-D MS66 PCGS SECURE. CAC**

**1909-D MS66 PCGS SECURE. CAC**

# 1909-D Double Eagle, MS66
# Likely the Second Finest Known

**4610** **1909-D MS66 PCGS Secure. CAC.** The Denver Mint coined 52,500 double eagles in 1909, beginning on Tuesday, January 5. That early date of production suggests that new obverse dies must have been completed the previous month in order to arrive in time. Dies for the three branch mints that operated in 1909 were produced in Philadelphia, and shipped upon request to Denver, New Orleans, and San Francisco. Double eagle dies include one obverse with a doubled mintmark, described today as a Large D over Small D. The doubled mintmark actually happened in Denver, as dies were shipped from Philadelphia without a mintmark. Dave Bowers was the first to describe that curious variety in the October 1988 catalog of the Norweb Collection. The Duckor specimen appears to have a minutely repunched mintmark that is different from the description that Bowers presented in the Norweb catalog, and may actually be from the die that Walter Breen described in his *Complete Encyclopedia,* when he wrote "sometimes with minor repunching on D."

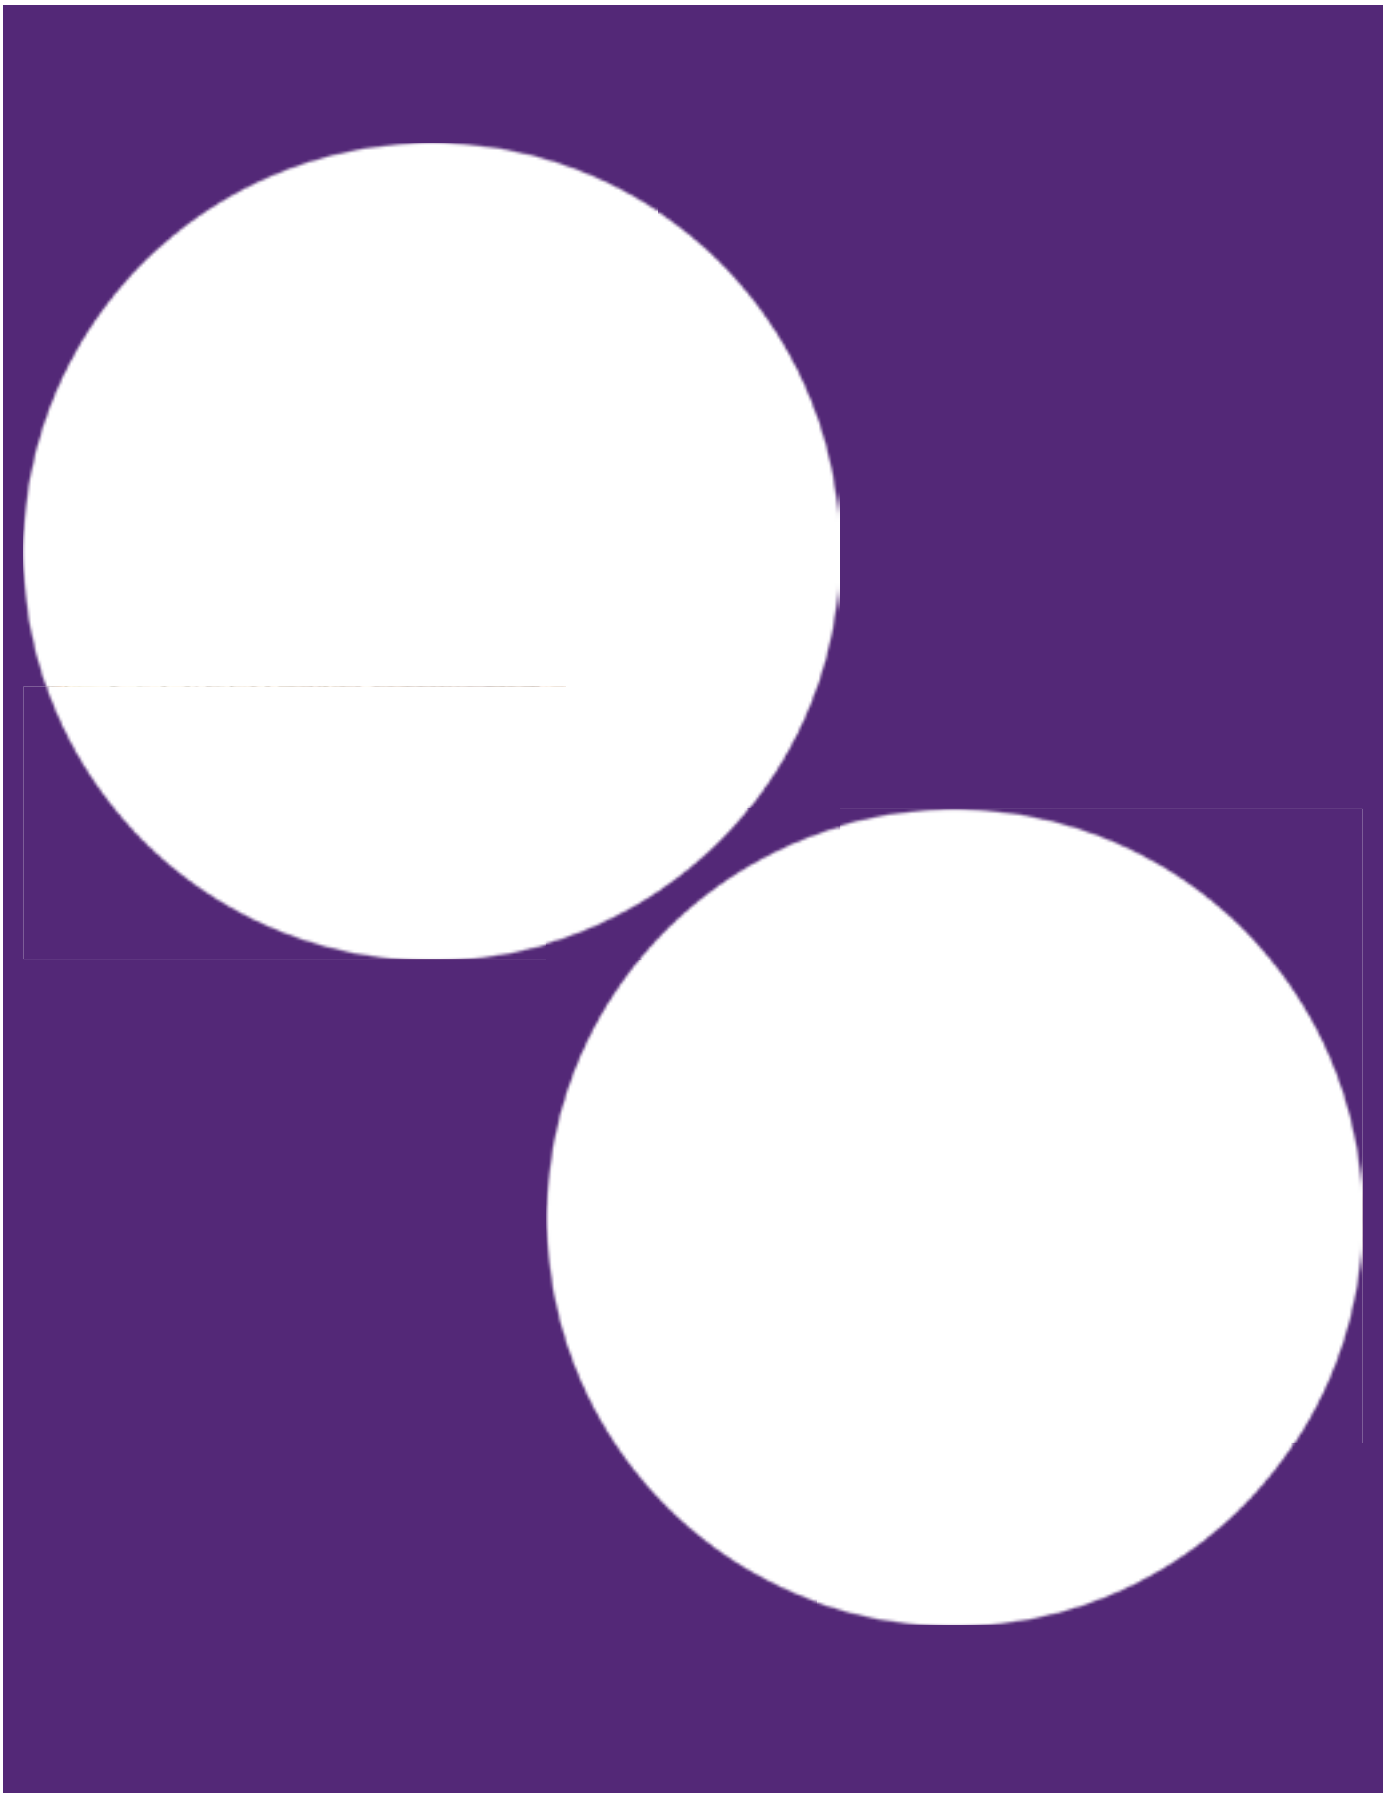
Only the High Relief coins, the 1908-S, and the 1913-S issues have lower mintages than the 1909-D. Until the early 1980s, the 1909-D was considered rarer than either the High Relief or the 1913-S. That changed when a hoard of double eagles surfaced in Central America. Several formerly rare dates became common, but in every case those dates, such as the 1909-D, remained extremely rare in Gem or finer grades. David Akers discussed the Central America hoard in *A Handbook of 20th-Century United States Gold Coins 1907-1933,* published in 1988:

> "Nearly all known Mint State examples come from a hoard of several hundred pieces that was discovered in Central America in 1983 ... Until the group was discovered in Central America, this issue was extremely rare in any Mint State grade and all but unobtainable in MS-63 or better condition. Now, however, the 1909-D can only be considered scarce in Mint State and, since many of the coins in the hoard were in choice condition, it is now fairly available up to and including the MS-63 grade. MS-64 examples remain rare, however, and gems are still nearly impossible to find."

PCGS and NGC combined have only certified 29 examples of this issue in MS65 or finer grades, including just four submissions finer than the Duckor specimen. More than one-third of all PCGS- and NGC-certified 1909-D double eagles grade less than MS60 and as low as VF30, suggesting that a significant portion of the original mintage entered circulation. Others were undoubtedly exported to Europe and, of course, Central America, as the 1983 hoard proves. Others likely remained in Treasury vaults, being melted in the 1930s.

Among the finest surviving examples are the Morse specimen, certified MS67 PCGS, which was part of Dr. and Mrs. Duckor's first collection of Saint-Gaudens double eagles and owned earlier by Louis E. Eliasberg, Sr.; the present piece from the second Duckor Collection, which is graded MS66 PCGS; and the Harry Bass coin, also MS66 PCGS. Akers also identified the Browning coin in the 2001 Dallas Bank sale as a Superb Gem, and a fourth in a private collection.

The Duckor specimen, earlier from the Kutasi Collection that we sold in January 2007, offers rich apricot-orange color with rolling cartwheel luster and accents of sage and mint-green. Both sides present extraordinary frost and mint brilliance over boldly detailed design motifs. Most of the panes are visible in the Capitol building, and excellent definition is apparent in Liberty's face, fingers, and toes. The surfaces are virtually pristine, and the grade is limited only by a few minuscule marks at the lower reverse and in the eagle's tail feathers. Population: 3 in 66, 3 finer (10/11).



*Ex: John P. Kutasi Collection (Heritage, 1/2007), lot 3268.*

**David Akers Comments:**

This issue has always been known to be a rare date due to its low mintage of just 52,500 pieces, the fourth lowest mintage figure of the series. With the exception of four really extraordinary examples known (Eliasberg, Norweb, Harry Bass, Jr., and Jeff Browning/Dallas Bank Collection), all of which are very similar in appearance and perhaps even assay pieces, in the "old days," meaning prior to 1983, the 1909-D was just not known or available in choice uncirculated or better condition. The finest collections of Saints offered at auction from the 1940's through the 1970's typically had a circulated specimen or the occasional unattractive, heavily bagmarked mint state one. When Gerald Bauman of Manfra, Tordella and Brookes called me one day in 1983 to tell me about the incredible hoard of U.S. double eagles they had just acquired from Central America, he said they had large quantities of scarce, beautiful, original high quality Liberty Heads (1901-S, 1902-S, and 1905-S among others), and also a great many incredible quality Saints including such dates as 1909-S, 1910-S, 1911-S, 1914-S, 1915-S, and 1916-S. Obviously, I was impressed and interested in seeing them and purchasing as many as I could. But then Bauman let the hammer drop and said the hoard also included hundreds of seldom, if ever seen, choice uncirculated and even better examples of the 1908-D No Motto, 1908-D With Motto, 1909-D and 1922-S. Needless to say, I could not get to New York City fast enough and it turned out that everything Bauman had said about the coins was absolutely true, perhaps even understated. After spending an entire afternoon looking at representative samples of each issue, we discussed the terms under which I could buy the coins I wanted. My greatest interest was in the four rarest issues, including the 1909-D, and Bauman said that I could pick out what I wanted on an individual basis if I were willing to pay a substantial premium price and would take a minimum guaranteed quantity of each issue. After seeing the quality of the coins it was clear this was a reasonable request on Bauman's part and an easy decision on mine to agree. I still rank this as one of my greatest thrills in the coin business, both for myself personally and for the many collectors to whom I sold the coins. The 1909-D and 1922-S were the real prizes of the hoard and it is not hyperbole to note that virtually all of the choice, very choice and gem uncirculated examples of both of these issues that are available to collectors today came from the Central American hoard. Dr. Duckor originally owned the Eliasberg coin, but sold it in 2000 because he was offered too large an amount for it to refuse. Subsequently, he was able to replace it with the superb coin now in his collection and offered here.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

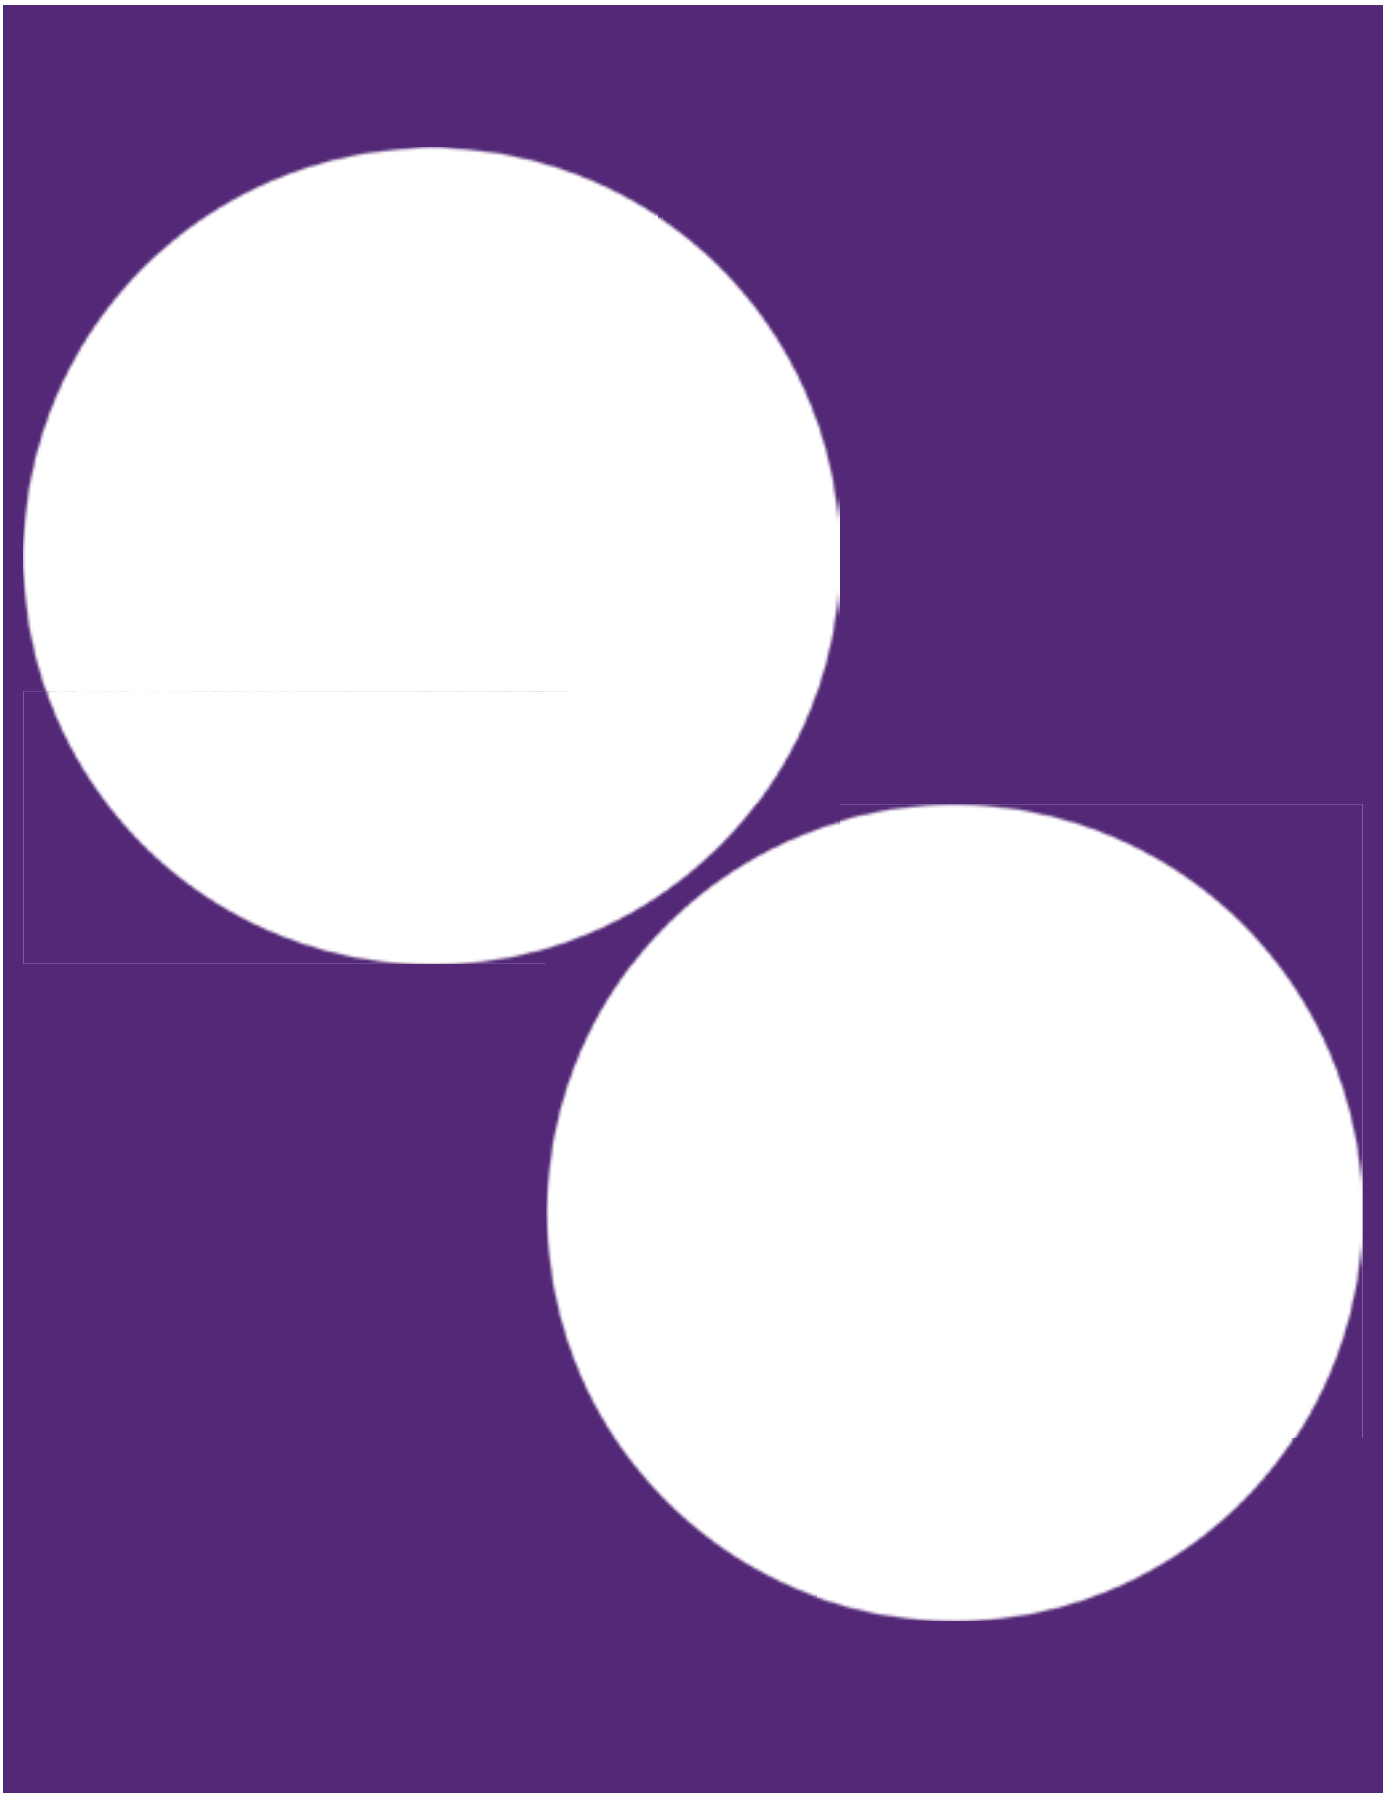
(#9152)

## 1909-S Twenty, MS66
## Important Condition Rarity

**4611** **1909-S MS66 PCGS Secure. CAC.** It is fascinating and often instructive to look back on the references and catalogs of decades past and examine the state of numismatic knowledge then compared with that of today. *U.S. Gold Coins: An Analysis of Auction Records,* the landmark six-volume series by David Akers, was completed in 1982 with the double eagle reference. In it, he noted of his experience with the 1909-S, "True gems are scarce but I have seen many very nice [Uncirculated examples] of this date. I have also handled hoards of Unc. 1909-S twenties numbering several hundred pieces at one time."

The double eagle reference is approaching its 30-year anniversary, and collector understanding of availability has evolved over that span. Though the 1909-S was not affected so dramatically as, for example, the 1857-S twenty (its Mint State population has gone from "definitely rare" to "definitive type coin" thanks to the *S.S. Central America* recovery), it was affected, and far sooner, by a Central America hoard of a different kind.

The year was 1983, the country El Salvador. A tiny nation south of Guatemala and east of Honduras, the only Central American country with just a Pacific coastline, El Salvador was in the midst of a civil war that stretched on for more than a decade. Against a backdrop of guerrilla violence and assassinations with Cold War implications, a stunning treasure, thousands ("several thousand," to quote Akers and Ambio in the updated *Handbook of 20th Century United States Gold Coins)* of 1909-S double eagles, mostly in Mint State, were found and repatriated to the United States. The El Salvador hoard dramatically altered availability and collector perception for the date, dropping it into the ranks of the type coins through MS64.



The 1909-S is far from a type coin any finer, though; Akers-Ambio notes that "most of the 1909-S Double Eagles that have been repatriated over the years are in lower Mint State grades ... with the result that this issue is scarce in MS-65. Coins that grade MS-66 are rare, and the 1909-S is virtually unobtainable as a Superb Gem." Indeed, PCGS lists only one coin in MS67 condition; that is the only example in the PCGS *Population Report* finer than Dr. Duckor's gorgeous MS66 example, which itself is one of only seven Premium Gems certified by that service (10/11).

On this spectacular specimen, the mintmark, while not the dramatic repunched mintmark variety, has some peculiar characteristics of its own. The mintmark is tilted slightly backward at the top, and the middle loops of the S extend out past the serifs at top and bottom, unlike on the 1910-S, which has a more squared-off mintmark. The date shows slight striking softness on the final 9 in the date, yet this is the only point of appreciable weakness on what is otherwise a fully detailed representative with particularly impressive definition on the Capitol building and Liberty's face. The luster, softly frosted and mattelike, rolls across the obverse and reverse. The Akers-Ambio *Handbook* suggests that "color is a strong suit for this issue," and considering the hues of the present coin, it is hard to disagree. The obverse has apricot-gold tones tinged in lilac, while a deeper lilac color graces the reverse rims and segues to jade-green at the interior. Three tiny parallel marks on the sun disc at the bottom reverse provide a pedigree identifier.

*Ex: David Akers.*

(#9153)

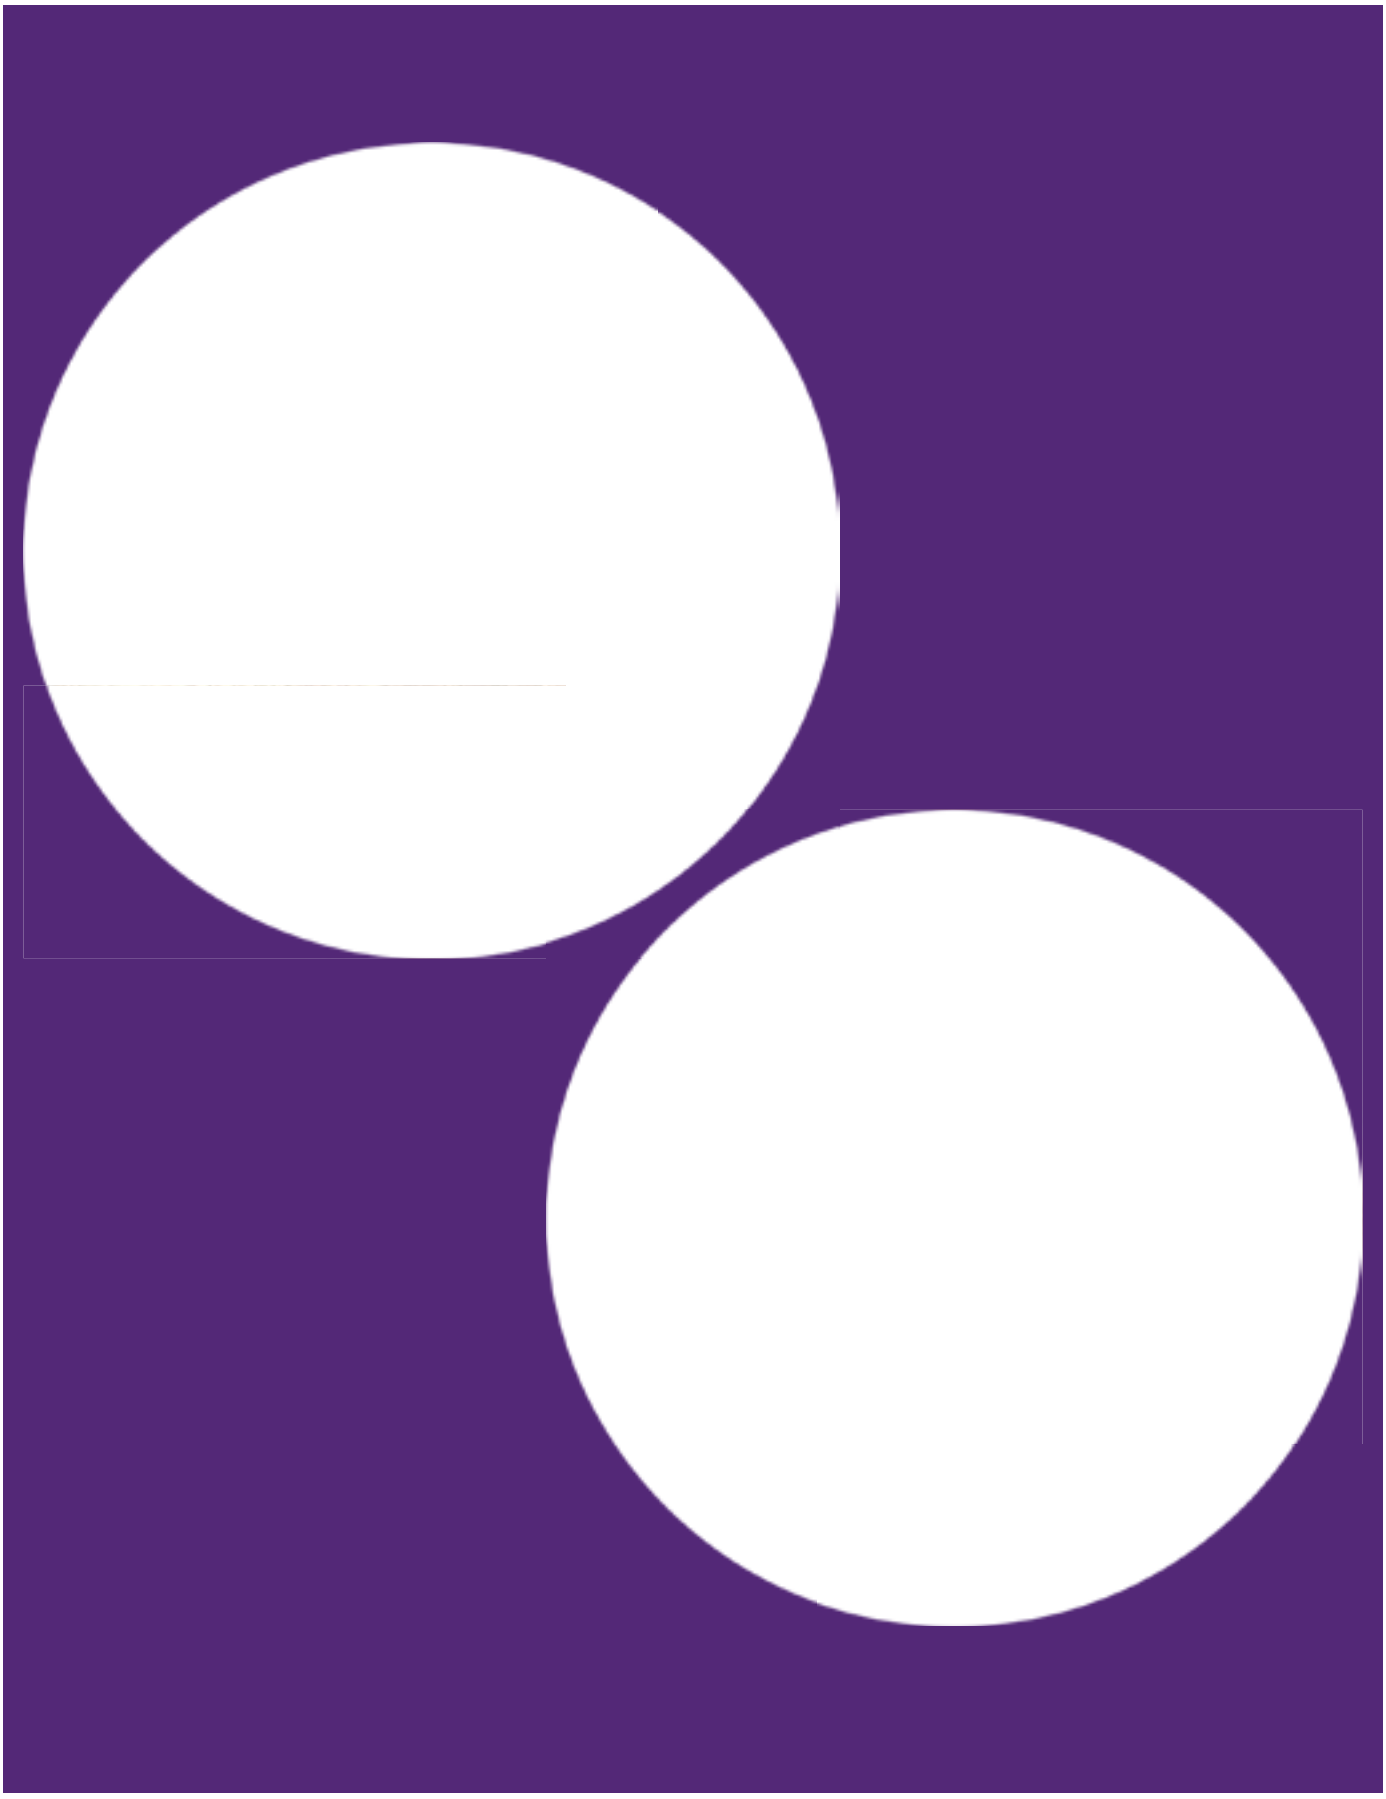
# 1910 Double Eagle, MS66+
# Finest at PCGS

**4612** **1910 MS66+ PCGS Secure. CAC.** The With Motto Philadelphia double eagles from 1908 to 1915 share many common traits, including low mintages relative to their San Francisco peers. The Philadelphia coins often are treated as a group in the numismatic literature, though there is no convenient shorthand for them. (For those of a musical or historical-fiction bent, this cataloger suggests the "Ragtime" twenties.) In the Jeff Ambio update to the David Akers *Handbook of 20th Century United States Gold Coins,* the general comments start as follows: "The 1910 is by far the most plentiful of the Philadelphia Mint Double Eagles from the 1908 Motto to the 1915. Coins that grade MS-60 to MS-64 are readily obtainable, although near-Gems can be a bit scarce from a market availability standpoint." Considering that the 1910 issue's mintage, though under half a million pieces, more than doubles up the production of any other issue in the range, this is hardly surprising.

As with the other dates in the first half of the With Motto Philadelphia double eagle series, however, the supply dries up in MS65. Gems are elusive; as put by Akers-Ambio, while the date is more accessible than those immediately nearby in such condition, "the 1910 is still rare in high grades when viewed in the wider context of the Saint-Gaudens Double Eagle series." A move to Premium Gem turns the 1910 double eagle into an extreme condition rarity, and Superb Gems are unknown to the combined certified population.

Dr. Duckor's current example of the 1910 double eagle is a great illustration of how he used lateral movement, or "sidegrading," within a technical grade to refine his collection's quality and eye appeal. In pure numeric terms, acquiring the Kutasi 1910 double eagle in January 2007 did nothing to improve his Saint-Gaudens double eagle Registry Set score; the weighted average saw only that he traded one MS66 coin for another. In terms of eye appeal, however, it is hard to argue that he did *not* upgrade his collection. (His previous MS66 PCGS 1910 double eagle, an impressive coin in its own right, found its way to the Jacob Collection of Saint-Gaudens double eagles and sold in the January 2008 Heritage FUN Auction for $48,875.) Dr. Duckor's eye for quality was rewarded when the Plus grading system was introduced; there are three MS66 1910 double eagles in the PCGS *Population Report* as of (10/11), and a single finer MS66+ example — the Kutasi-Duckor specimen.

On the five-year anniversary of Heritage's last offering of the present coin, it is worth looking back on the past description. The Kutasi Collection favored a distinct look and hue; the piece was described as having "a classic Kutasi color mix of warm peach-gold, orange-gold, and mint-green [adorning] frosty, well-preserved surfaces." This commentary is accurate as ever, and the strike is excellent, particularly on Liberty's face and the eagle's feathers. Those two places are also the sites of the few perceptible marks on the coin, but these minor flaws are easily forgotten as the viewer tilts the coin in the light and watches the rich cartwheels of the luster roll around. A mesmerizing coin that is sure to capture the imagination of discerning collectors.



*Ex: Kutasi Collection (Heritage, 1/2007), lot 3270, as MS66 PCGS, which realized $37,375.*

**David Akers Comments:**

The 1910 is a bit of an enigma, a classic example of a condition rarity. In any grade up to MS64, it is a common date, easily acquired at any time. Even MS65 quality gems are only scarce and not rare, making the 1910 by far the most available of the early P-Mints from 1908-1915 in gem condition; one can be located with only modest effort. Now we come to the condition rarity part. In superb uncirculated condition, that is, MS66 or higher grade as I use this term, the 1910 is extremely rare with just six to eight such pieces known. The Duckor specimen offered here is the only one graded MS66+ and is quite likely the finest example known, or at least tied for that distinction. So, for the collector desiring to put together a registry set caliber collection of Saints, the choice is simple. If you want a gem MS65 coin, there is no problem at all. The wait will be short and the price very reasonable. If you won't settle for anything less than a superb example you may be in for a long wait that is measured in years rather than months. And if you want the very best, bid very strongly on this coin or be disappointed.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9154)

# 1910-D Double Eagle, MS67
# Candidate for Finest Known

**4613** **1910-D MS67 PCGS Secure. CAC.** Ex: Duckor/O'Connor. The Denver Mint coined a substantial number of double eagles in its fifth year of operation, 429,000 according to Mint records, and surviving specimens are plentiful in all grades through MS65. However, finer pieces are rare. There are no reports of hoards in the literature, although repatriated European and South American exports undoubtedly account for most Mint State pieces known today.

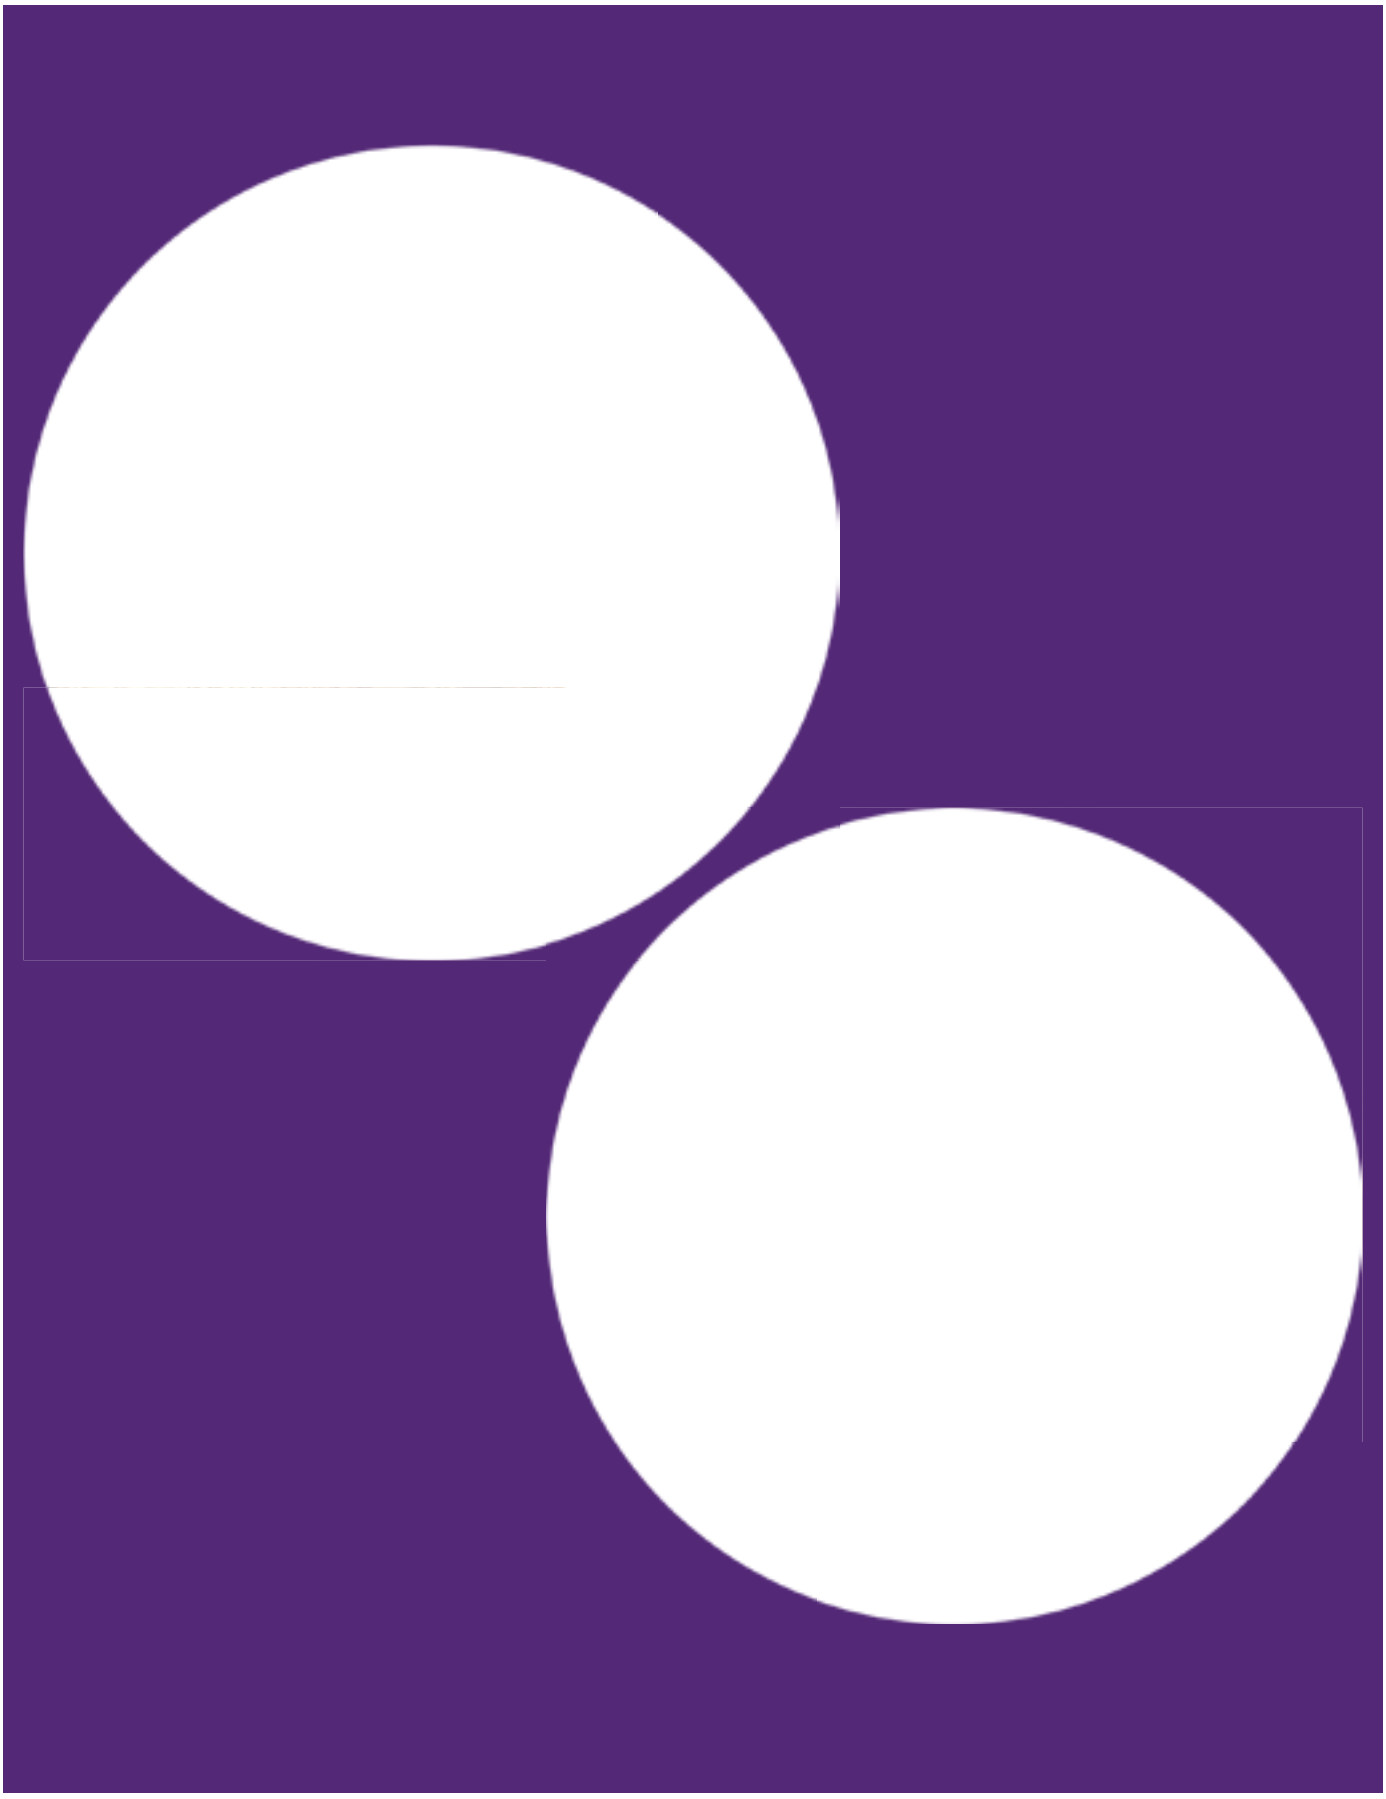
The actual production of double eagles at the Denver Mint was concentrated in the second half of the year, according to Mint records. The Mint's fiscal year ran from July 1, 1909, to June 30, 1910. During that period, the *Annual Report of the Director of the Mint* shows that only 750 double eagles were minted. George E. Roberts, the Mint director who filed the report, discussed the volume of coinage:

> "The principal reason for not doing more coinage was that automatic weighing machines were under construction which were expected to materially reduce the cost of weighing the individual coins, and pending their completion gold bullion was allowed to accumulate."

During their quarter-century of coin grading, PCGS has certified 6,221 examples of this issue in all grades, and almost 95% of those coins are graded MS60 or finer, suggesting that the 1910-D was likely never released into circulation. In his 1982 analysis of double eagle auction records, David Akers recorded a number of circulated examples in VF, XF, and AU grades. Many of those coins are probably certified Mint State today, and are likely in higher grades than the old catalog descriptions suggest.

Of all of those thousands of PCGS-certified coins, the present Duckor specimen and the one that was included in the first Duckor Collection, later in the Phillip Morse Collection, are the only two that PCGS has graded MS67 (10/11). The two Duckor specimens are undoubtedly the two finest known examples of this issue, and they appear to be virtual twins, although the present Duckor specimen seems to have slightly finer color and stronger eye appeal.

The incredible, rolling cartwheel luster is reminiscent of Morgan dollars from two or three decades previous. It complements rich, lavish reddish-orange color with greenish accents at the rims. Its appearance matches the typical example that Akers describes as "most often a light to medium orange gold, but some light greenish gold and orange ones exist as well." As with so many of these high-grade early Saints, the strike is needle-sharp, as full as practicable and never seen sharper. Note the sculptural quality of the small feathers on the eagle's midsection, the juncture visible between (claw and skin on the claws). Extensive searching with a loupe locates only the most trivial marks, confined largely to the eagle's feathers.



*Ex: Joe O'Connor.*

**David Akers Comments:**

The 1910-D is a condition rarity, that is, it is an issue that is rare only at or above a certain grade level. This is a very common issue in any grade up to and including gem MS65 condition and even superb MS66 examples can only be classified as scarce and not really rare as more than 100 such specimens exist. However, at the superb MS67 level, the 1910-D is extremely rare with only two or three examples graded so far. From a quality and eye appeal standpoint, this Duckor specimen is spectacular and a strong candidate for finest known.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9155)

## MS66+ 1910-S Saint
## Only Two Finer PCGS Coins

**4614** **1910-S MS66+ PCGS Secure. CAC.** Ex: Duckor/Akers. It is an often-forgotten aspect of pre-1933 U.S. gold coinage that even seemingly plentiful issues were affected by the mass melting that took place during the Franklin Roosevelt administration. Though several thousand coins appear in the combined certified population, that figure pales in comparison to the date's mintage of more than 2.1 million pieces. From Garrett and Guth, the *Encyclopedia of U.S. Gold Coins:*

> "The vast majority of 1910-S double eagles struck were melted during the 1930s, a time when all gold coins were called in by our government. Those that did survive were squirreled away in small collections or happened to end up overseas. A couple of small groups were discovered in European banks or El Salvador."

Even 1% of the mintage would amount to more than 21,000 coins, far above the certified tally. Of course, many 1910-S double eagles have gone uncertified up to now and likely will stay that way, owing to condition, storage, or the personal preferences of their owners. Even so, the figures throw into sharp relief just how exceptional the issue is when found in the better Mint State grades. Though the Akers-Ambio *Handbook of 20th Century United States Gold Coins* characterizes the 1910-S as "a common issue in all grades below MS-65," better examples are scarce, and in their opinion, more elusive than high-grade pieces from the immediately surrounding mintmarked issues. As is almost invariably the case among the mintmarked Saint-Gaudens double eagles, the vast majority of "Gem-and-better" coins are "only" Gems. In the PCGS *Population Report,* MS66 and better coins number just nine: five in MS66, two in MS66+, one in MS67, and one in MS68 (10/11). The MS67 example has an extensive pedigree stretching from Clapp and Eliasberg to Price and Morse, the last appearance coming in 2005. Dr. Duckor had the opportunity to acquire it at public auction and passed, a testimony in the trust he had that the coin offered here was the correct one for his collection. Judging from in-person examination, it is hard to disagree.

The eye appeal of the present MS66+ example is elegant and inspiring. The strike is sharp overall, almost uniformly so, with only a hint of softness on the foliage below the date; the date and mintmark are fully struck with rounded tops, the latter of the squared-off two-dimensional shape that distinguishes it from the predecessor (see the 1909-S double eagle in this auction for more information). The classic satiny luster and orange-gold color of the issue are on display here, but the piece also shows noteworthy lilac and jade accents. The marks on the obverse are so few as to be almost countable, with only a tiny lateral mark at Liberty's upper gown and a tick on her left (facing) thigh among the few warranting any sort of mention. The minor abrasions on the reverse's sun disk, though they would be ignored on any other coin, are the barrier to Superb Gem status on the present piece. The right obverse shows a few tiny grease stains around one ray in the right obverse field; these tiny stains only further the original character of the coin's appearance. Population: 2 in 66+, 2 finer (10/11).

*Ex: David Akers.*

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9156)

Christian Gobrecht's bronze model of the flying eagle, predecessor to the Gobrecht dollar reverse, Flying Eagle cent obverse, and reverse of Augustus Saint-Gaudens' twenty dollar.

**1911 MS67 PCGS SECURE. CAC**

**1911 MS67 PCGS SECURE. CAC**

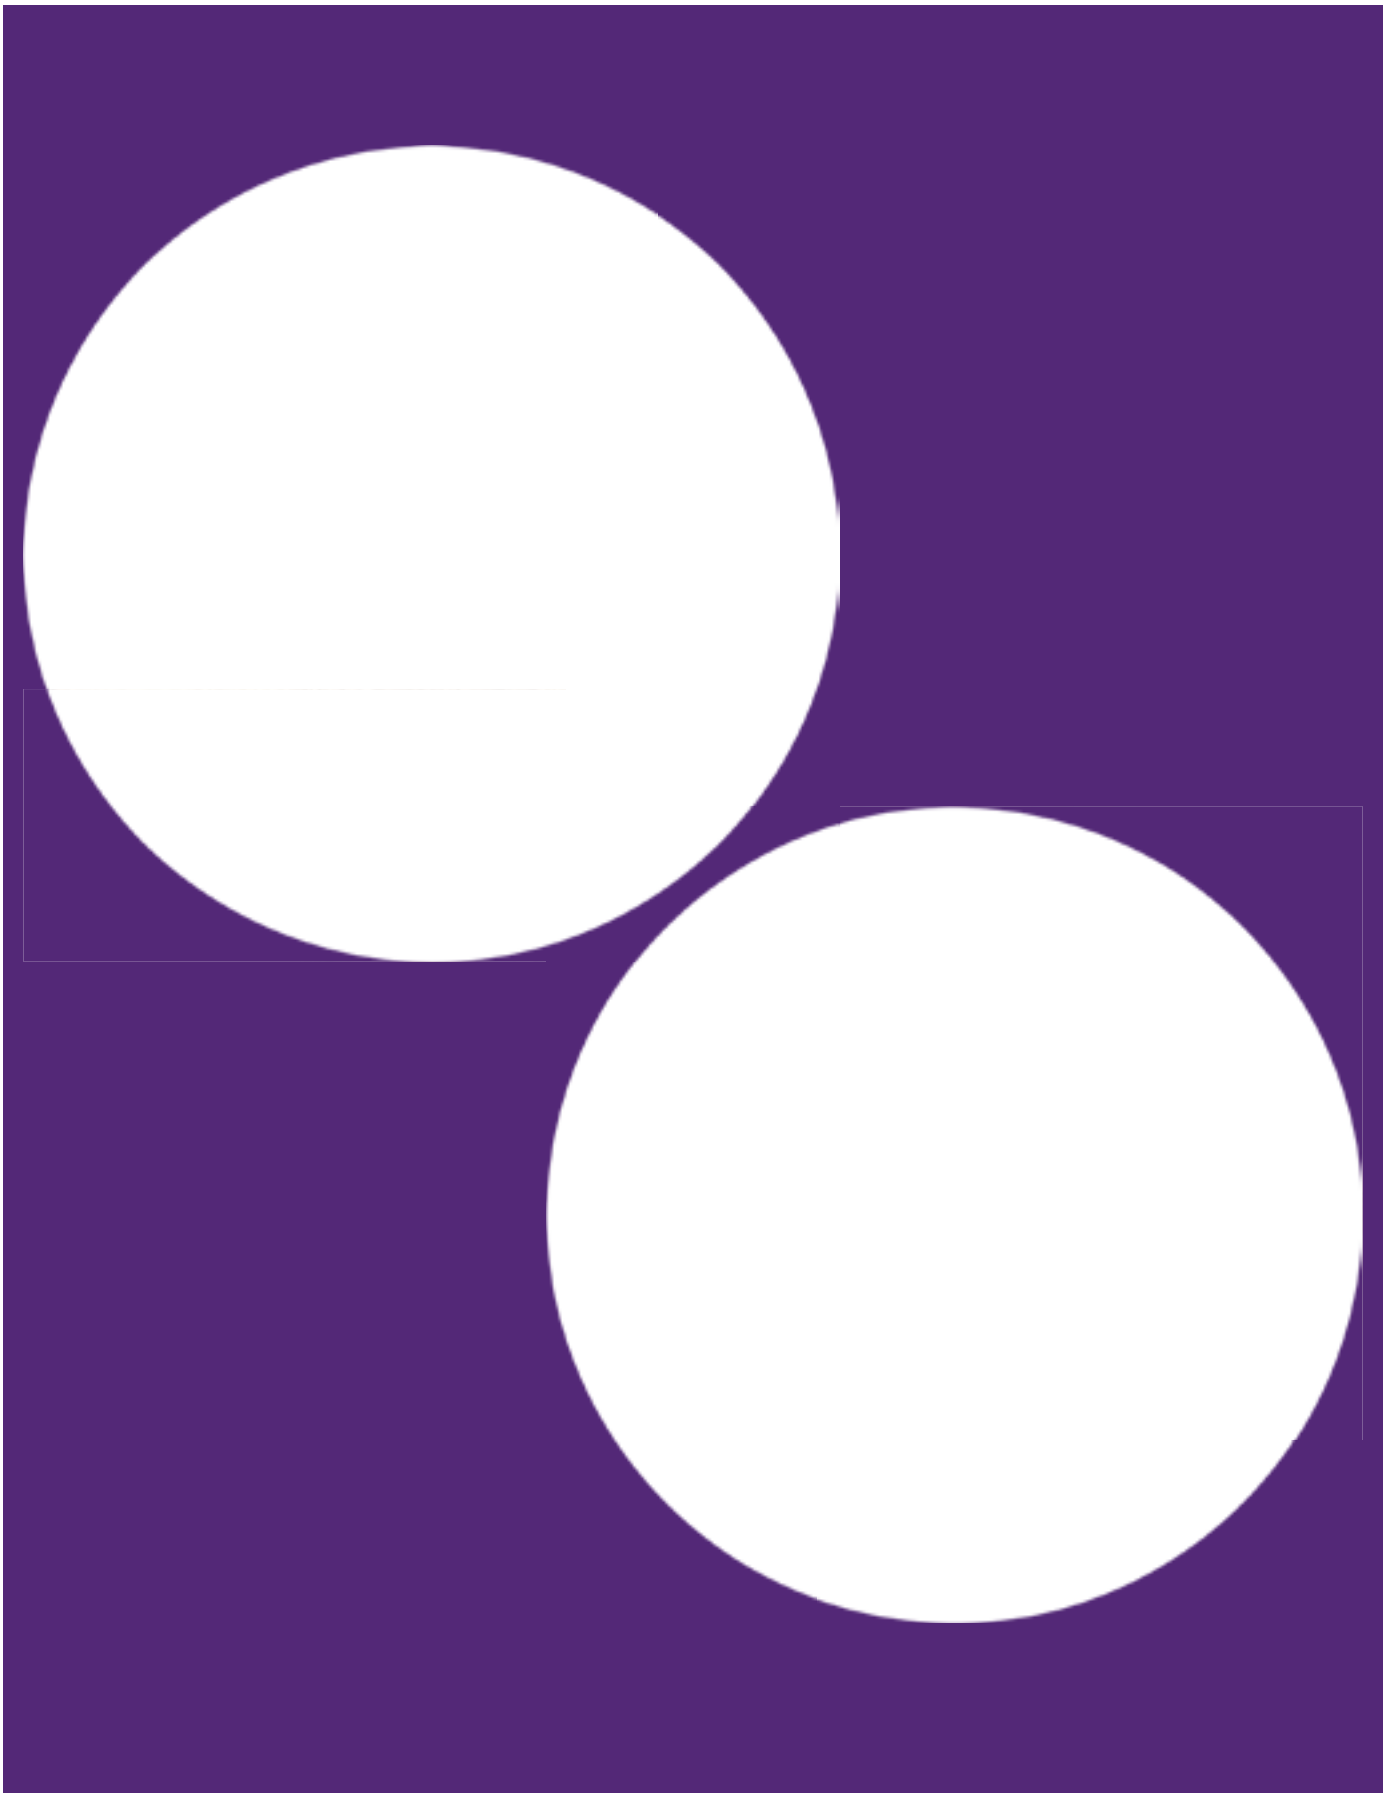
# 1911 Twenty, MS67
# The Single Finest PCGS Example

**4615** **1911 MS67 PCGS Secure. CAC.** Ex: Duckor/Akers. The Philadelphia Mint double eagles issued from 1911 through 1915 are each low-mintage issues that are scarce in top grades. The 1911 saw a production of 197,350 coins, which was actually the highest mintage during those years. The diminished coinage was related to the stock of gold held in the Treasury and perceived useless. In the previous *Annual Report* for 1910, Mint Director Roberts observed:

> "In the report of this bureau for the fiscal year 1902, the director called attention to the uselessness of coining all the gold bullion and foreign coins received at the mints, and again in the report for 1904 the embarrassment occasioned by the statutory requirement that so much of the reserve fund must be kept in coin was pointed out. ...
>
> "Practically the entire gold production of this continent is going into the vaults of the Treasury. This gold will never be wanted in the form of coin. It will be held as the basis of our monetary system but the habits of our people are fixed, and it is certain that they will always prefer paper money for actual use. The only important demands upon the Treasury for gold have always been for bullion for export. With $1,000,000,000 [1 billion] of coined gold in the Treasury it is perfectly safe to permit the issuance of gold certificates against bullion, allowing the Secretary of the Treasury to determine in his discretion when and how much shall be converted into coin. Such action will result in important economies in the mint service."

The low mintage explains the overall rarity of the date, especially considering the likelihood that most of those coins, like others of the period, ended up in Treasury storage where they were eventually melted. There was little or no actual circulation of 1911 double eagles, and today less than 5% of the total PCGS population grades less than AU58. Most surviving examples are in lower Mint State grades, with an average PCGS grade of just under MS62. When found, the typical piece will probably have little eye appeal. Jeff Ambio writes in his revision of the Akers Handbook that "the 1911 has below-average eye appeal. The luster is inferior, and most examples have not been well preserved. The 1911 is one of the most challenging P-Mint issues in this series to locate with aesthetically pleasing, Gem-quality surfaces." Dave Bowers describes the typical 1911 double eagle as well struck but lackluster.

The Duckor Collection Superb Gem is atypical; the fine-grained matte surfaces exhibit startling brassy greenish-gold color that yields to copper-gold around the devices on the obverse, with the colors intermingling a bit more on the reverse. Minor strike softness appears at the lower obverse on the Capitol dome and the leaves at the right. Of the few mentionable marks, the most reliable pedigree marker is a short scrape in the left obverse field. The Duckor specimen has incredible eye appeal and is clearly finer than any other example, the only MS67 that PCGS has certified with none finer (10/11).



*Ex: David Akers.*

**David Akers Comments:**

The 1911 is decidedly more rare than the 1910, especially in gem uncirculated condition. Until a substantial hoard of uncirculated examples was discovered in Europe about twenty years ago, the 1911 was thought to be scarce in MS63 condition, and MS64 quality examples were considered moderately rare at the very least. Today, though, there are many hundreds of choice and very choice mint state 1911 double eagles available to collectors. Gems remain rare, however, certainly considerably more so than equal quality examples of the 1908 With Motto and 1910. At the superb MS66 grade level, the 1911 is very rare with perhaps 15-18 known. This specimen, however, is one of only four certified in the superb MS67 grade and is the only one so graded by PCGS. It has exceptional eye appeal with respect to color and luster and is the finest I have ever seen or handled.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

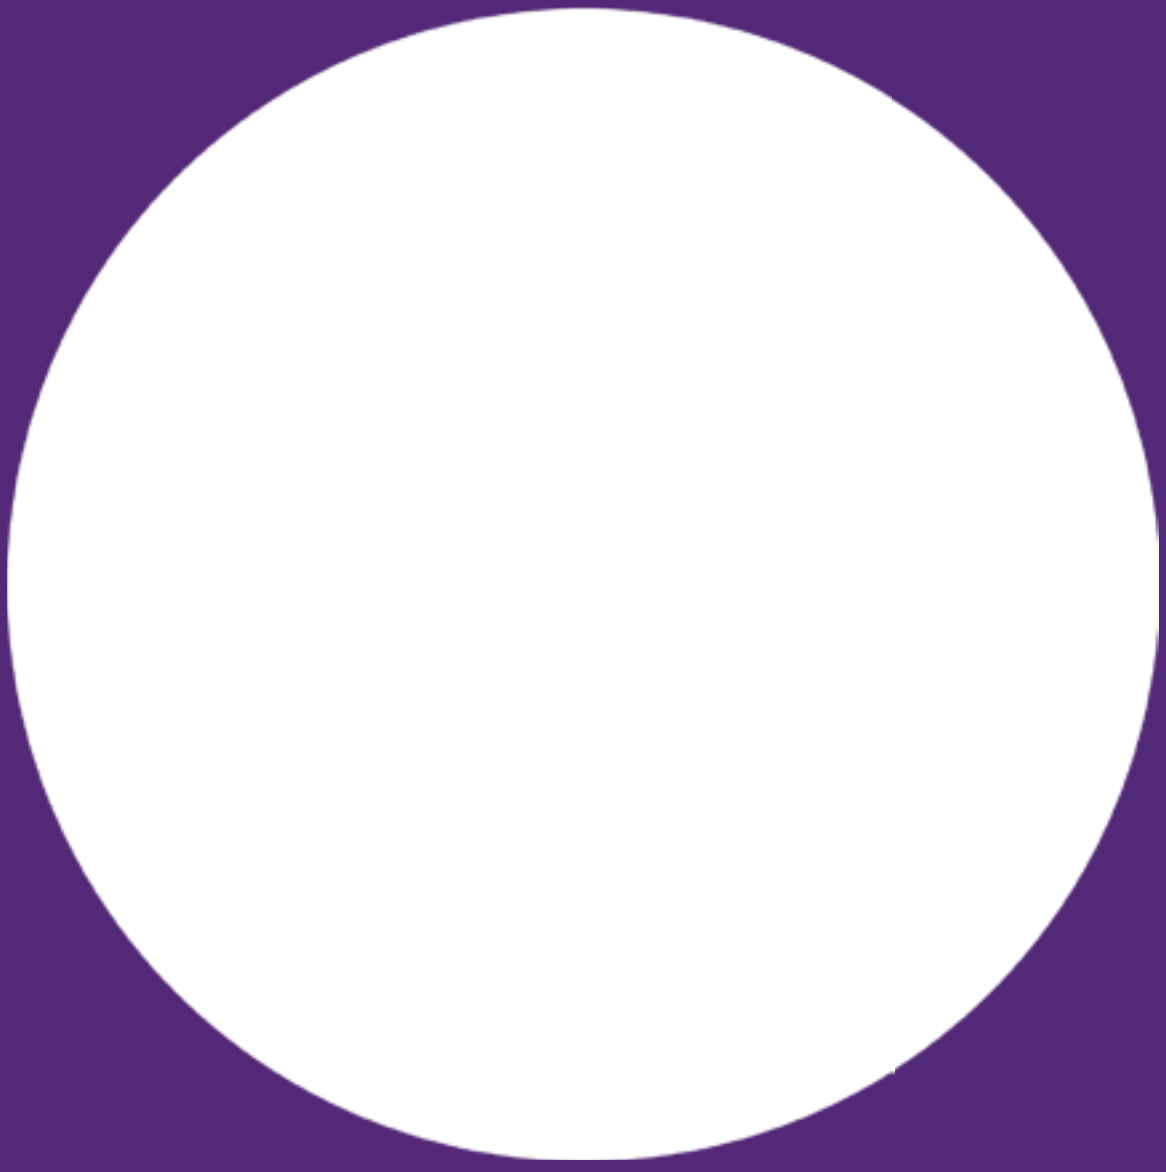
(#9157)

## The Ex: Phillip H. Morse 1911-D Twenty, MS67

**4616** **1911-D MS67 PCGS Secure. CAC.** Ex: Duckor/Morse. The year 1911 was a "prosperous" one in U.S. history and Mint coinage history, if one may use such an expression. Americans generally flourished under the one-term administration of President William Howard Taft, and the economic and political ravages of World War I were still a few years into the future. The Denver Mint had opened in 1906 and made its first Saint-Gaudens double eagles and eagles in 1908. The San Francisco Mint was going strong, although New Orleans had made its last gold coin in 1909. By 1911 Denver was making its first Lincoln cents, along with Philadelphia and San Francisco. In all, those three mints each produced not only the cents, but also the silver dime, quarter, and half dollar, and the gold Pratt half eagle and the Saint-Gaudens eagle and double eagle. Liberty nickels were made only in Philadelphia until 1912, and San Francisco would make no Indian Head quarter eagles in 1911.

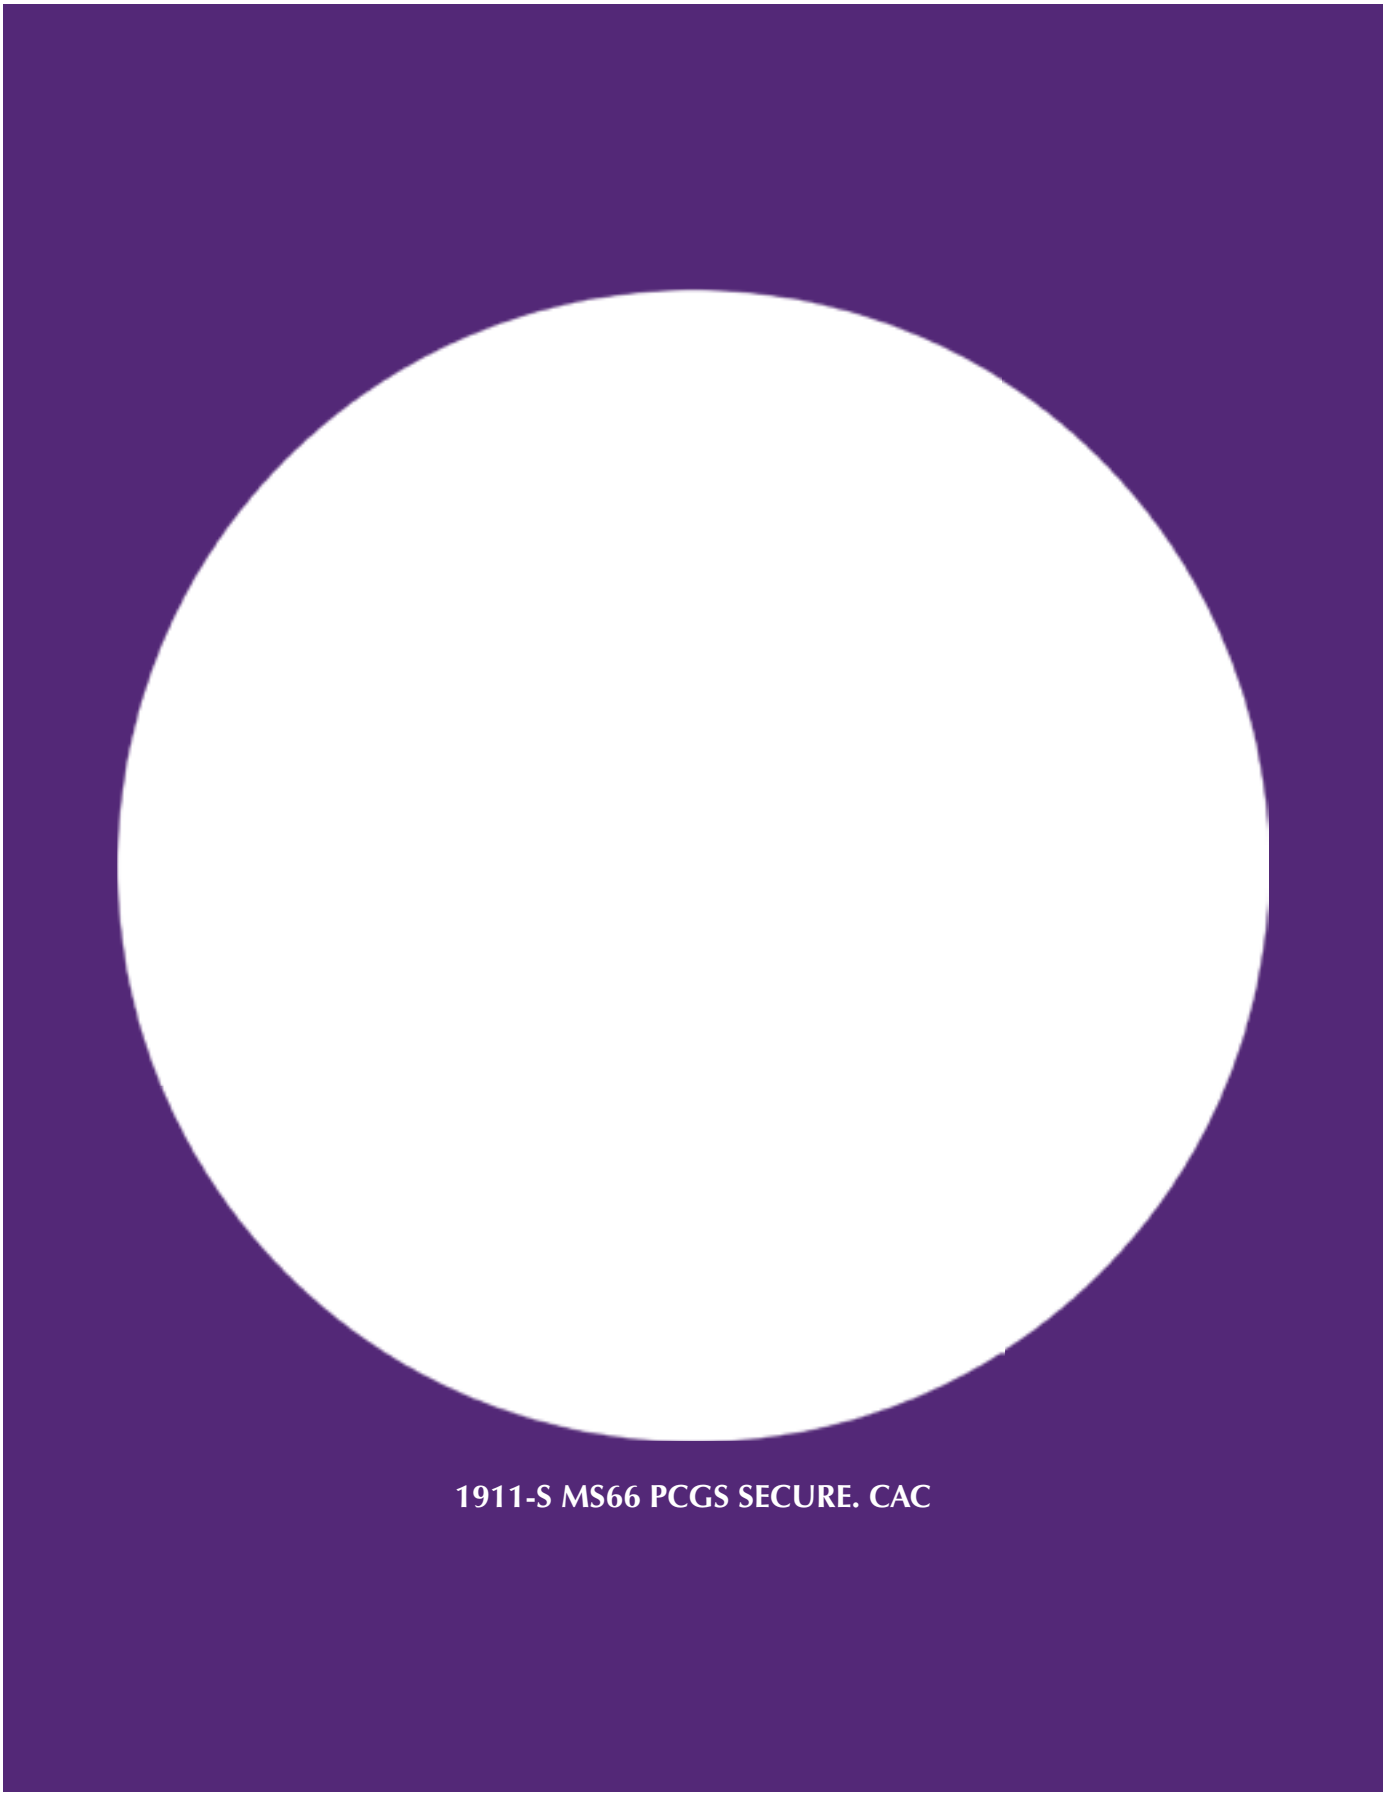
The nation's mints by this point in time were also familiar with the production requirements of the various new designs — only the Liberty nickel and silver Barber coinage denominations were "old hat" by then — and the various issues for the most part were well-made and attractive. Three mints all told produced more than 200 million coins during 1911, but about half of them were the Philadelphia Mint Lincoln cents.

The 1911-D double eagle is certainly a well-made issue for the most part, usually seen with sharp strikes and radiant luster over untroubled surfaces. While the three smaller-denomination 1911-D gold issues is each a key to its series — the sole key, in the case of the quarter eagle — the 1911-D double eagle cannot claim even semikey status. But since it is a nicely produced branch mint issue, it is a popular type coin. The mintage was not overlarge at 846,500 coins, but unlike many later series issues, the coins were apparently not subjected to mass meltings. A Gem grade is about average for a typical auction appearance.



Jeff Garrett and Ron Guth write in their gold reference that "even MS-66 coins are plentiful," but MS67 coins such as the present Superb Gem are seldom indeed seen. PCGS has seen seven submissions at the MS67 grade level, and there are none finer (10/11).

The present piece is another old friend come to revisit, the MS67 example that we first offered in the Phillip H. Morse Collection (Heritage, 11/2005), lot 6597, which realized $31,050, a strong amount for the time. (This is also the first MS67 PCGS example we have offered since that time.) The deeper orange-gold color in the interiors merges with greenish-gold accents near the rims on each side. The faceted surfaces show the characteristic light granularity of the issue and are remarkably free of mentionable abrasions. As we wrote in the Morse Collection catalog, "There is not a single ill-defined feature on either side including the Capitol, peripheral stars, and the eagle's breast feathers." Abundant, rich cartwheel luster and excellent eye appeal make this spectacular piece one that should attract the eye of many potential bidders.



*Ex: Phillip H. Morse Collection (Heritage, 11/2005), lot 6597.*

**1911-S MS66 PCGS SECURE. CAC**

**1911-S MS66 PCGS SECURE. CAC**

# 1911-S Double Eagle, MS66
# Only One Finer at PCGS

**4617** **1911-S MS66 PCGS Secure. CAC.** Ex: Duckor/Akers. The Central America hoard of Saint-Gaudens double eagles that appeared in 1983 is the source of most high-grade 1911-S twenties that are available to collectors today. Before the appearance of that hoard, Mint State pieces were available less frequently, although hardly rare. In 1982, David Akers wrote:

> "The 1911-S is more rare than the 1911-D but it is still a relatively common date that is readily available in any condition up to and including choice uncirculated. Gems are moderately scarce but are available on a fairly regular basis. I have seen many very choice examples of this date and have handled hundreds of uncs at one time."

Just six years after publication of his auction analysis of double eagles, Akers modified his comments in *A Handbook of 20th Century United States Gold Coins 1907-1933*:

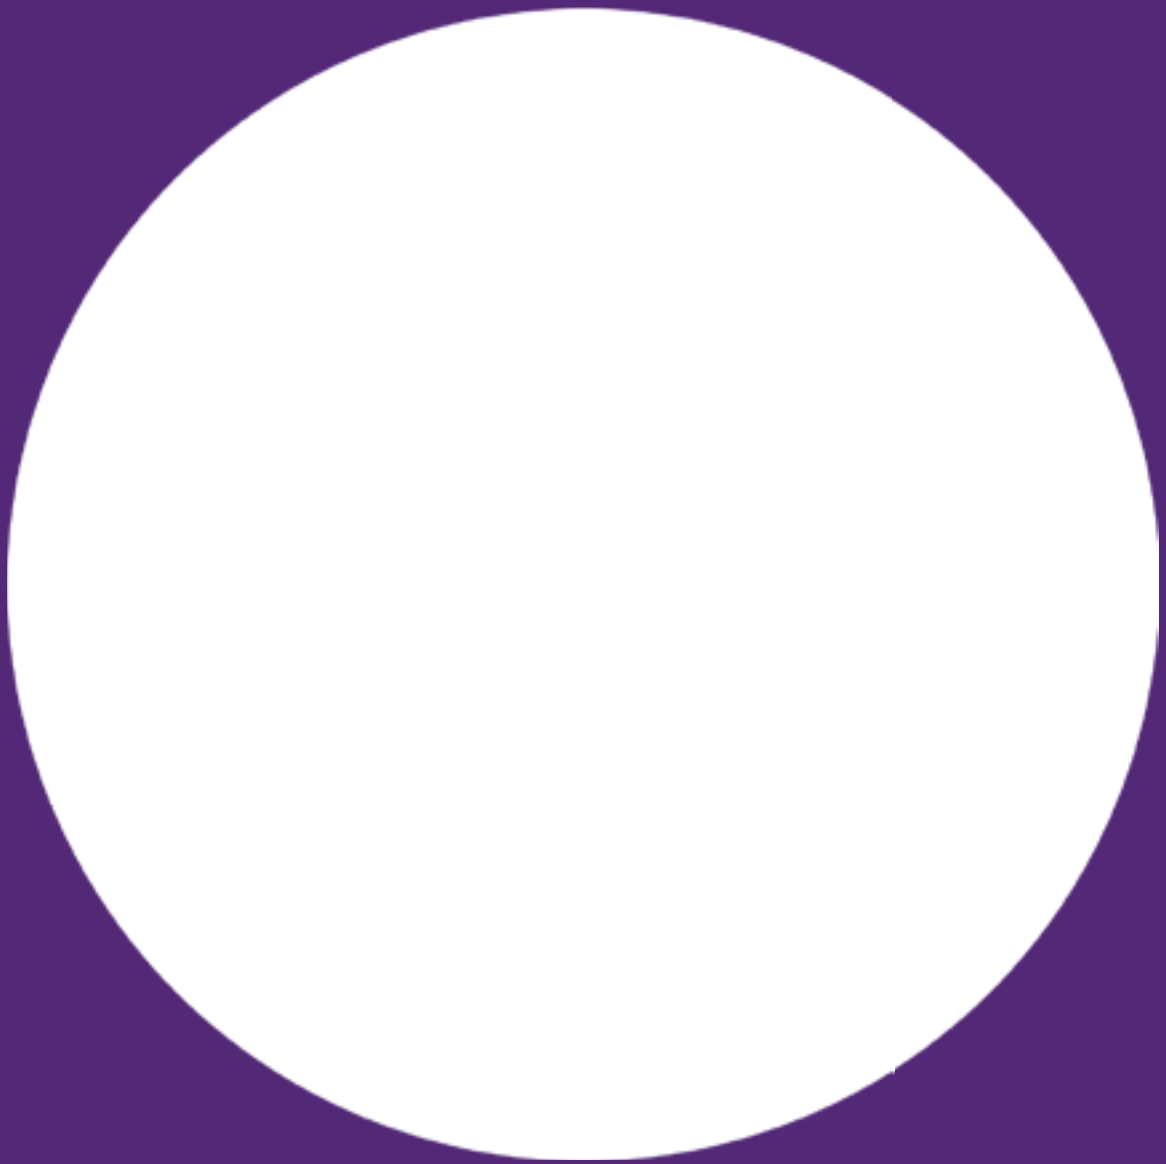
> "The 1911-S is very comparable in overall rarity and condition rarity to the 1910-S. Below the gem (MS-65) level it is a decidedly common issue, and literally thousands of Mint State examples exist. In 1983, a hoard of several thousand examples of this issue was uncovered in Central America and many were of relatively high quality. The hoard also contained a number of gems. I have seen just a few pieces better than MS-65, none of which had anything close to the 'eye appeal' of the best examples of 1908-S, 1910-S or even 1909-S."

Since 1988, additional Mint State pieces have entered the marketplace from European holdings, increasing the population of lower-grade Mint State pieces. However, in Gem grades, little has changed since 1988, and only 10% of all PCGS submissions of 1911-S double eagles grade MS65 or finer, including 26 examples in MS66 and a single finer MS67 coin (10/11) that we offered as part of the Kutasi Collection.

The present Premium Gem displays rich, consistent orange-gold color accented by glints of sage over surfaces exhibiting rolling cartwheel luster. A couple of small alloy spots on the lower obverse — one just under the first 1 in the date, a couple of others near the rim at 6 o'clock — provide pedigree identifiers. Another appears in the center of the eagle's breast, just above a tiny, dotlike indentation. A couple of minor abrasions are well-hidden in the eagle's feathers nearby. The strike is close to full.

**PCGS Set Registry Note**

As we have no shred of doubt that the Duckor Collection offering will spur intense interest on the part of many Registry Set collectors, we thought we would examine the upgrade potential of this rather available issue, the 1911-S, compared to some other S-mint issues in the series and to the existing collections visible on the PCGS website. The most commonly collected Saint-Gaudens set (75 listed) is PCGS' "Circulation Strikes, Major Varieties (1907-1932)" set, which excludes the Ultra High Relief and 1933 but includes the 1909/8 overdate. The PCGS Set Composition gives the 1911-S a weighting of four points, the same as for the 1909-S, the 1910-S, and the 1908-D No Motto. (For comparison, the 1914-S, 1915-S, 1916-S, and 1923-D are given a meager two points each. The 1908-S and 1913-S get six points each.)



So from the point grades assigned, the 1911-S is a "slightly better" date in PCGS's eyes — not as common as some issues like 1916-S or 1923-D, but certainly not in the same rarity class as many of the mintmarked issues (mostly) later in the series.

All of the top 10 PCGS Registry Sets in the category publicly display their individual components as of this writing (10/11), making it easy to see which sets the present piece would upgrade. Excluding the Duckor Collection, of the top 10 sets, the present coin would upgrade the No. 5, No. 7 (by 2 points), No. 8, and No. 9 sets. The same kind of analysis could, of course, be done throughout the Duckor Collection, with many of the pieces offering far greater upgrade potential in many more sets; such analysis does, however, reinforce the conditional rarity of even the most available issues in this remarkable assemblage.

(#9159)

**1912 MS66+ PCGS SECURE. CAC**

**1912 MS66+ PCGS SECURE. CAC**

# MS66+ 1912 Double Eagle, Ex: Jay Brahin
# The Single Finest Graded at PCGS

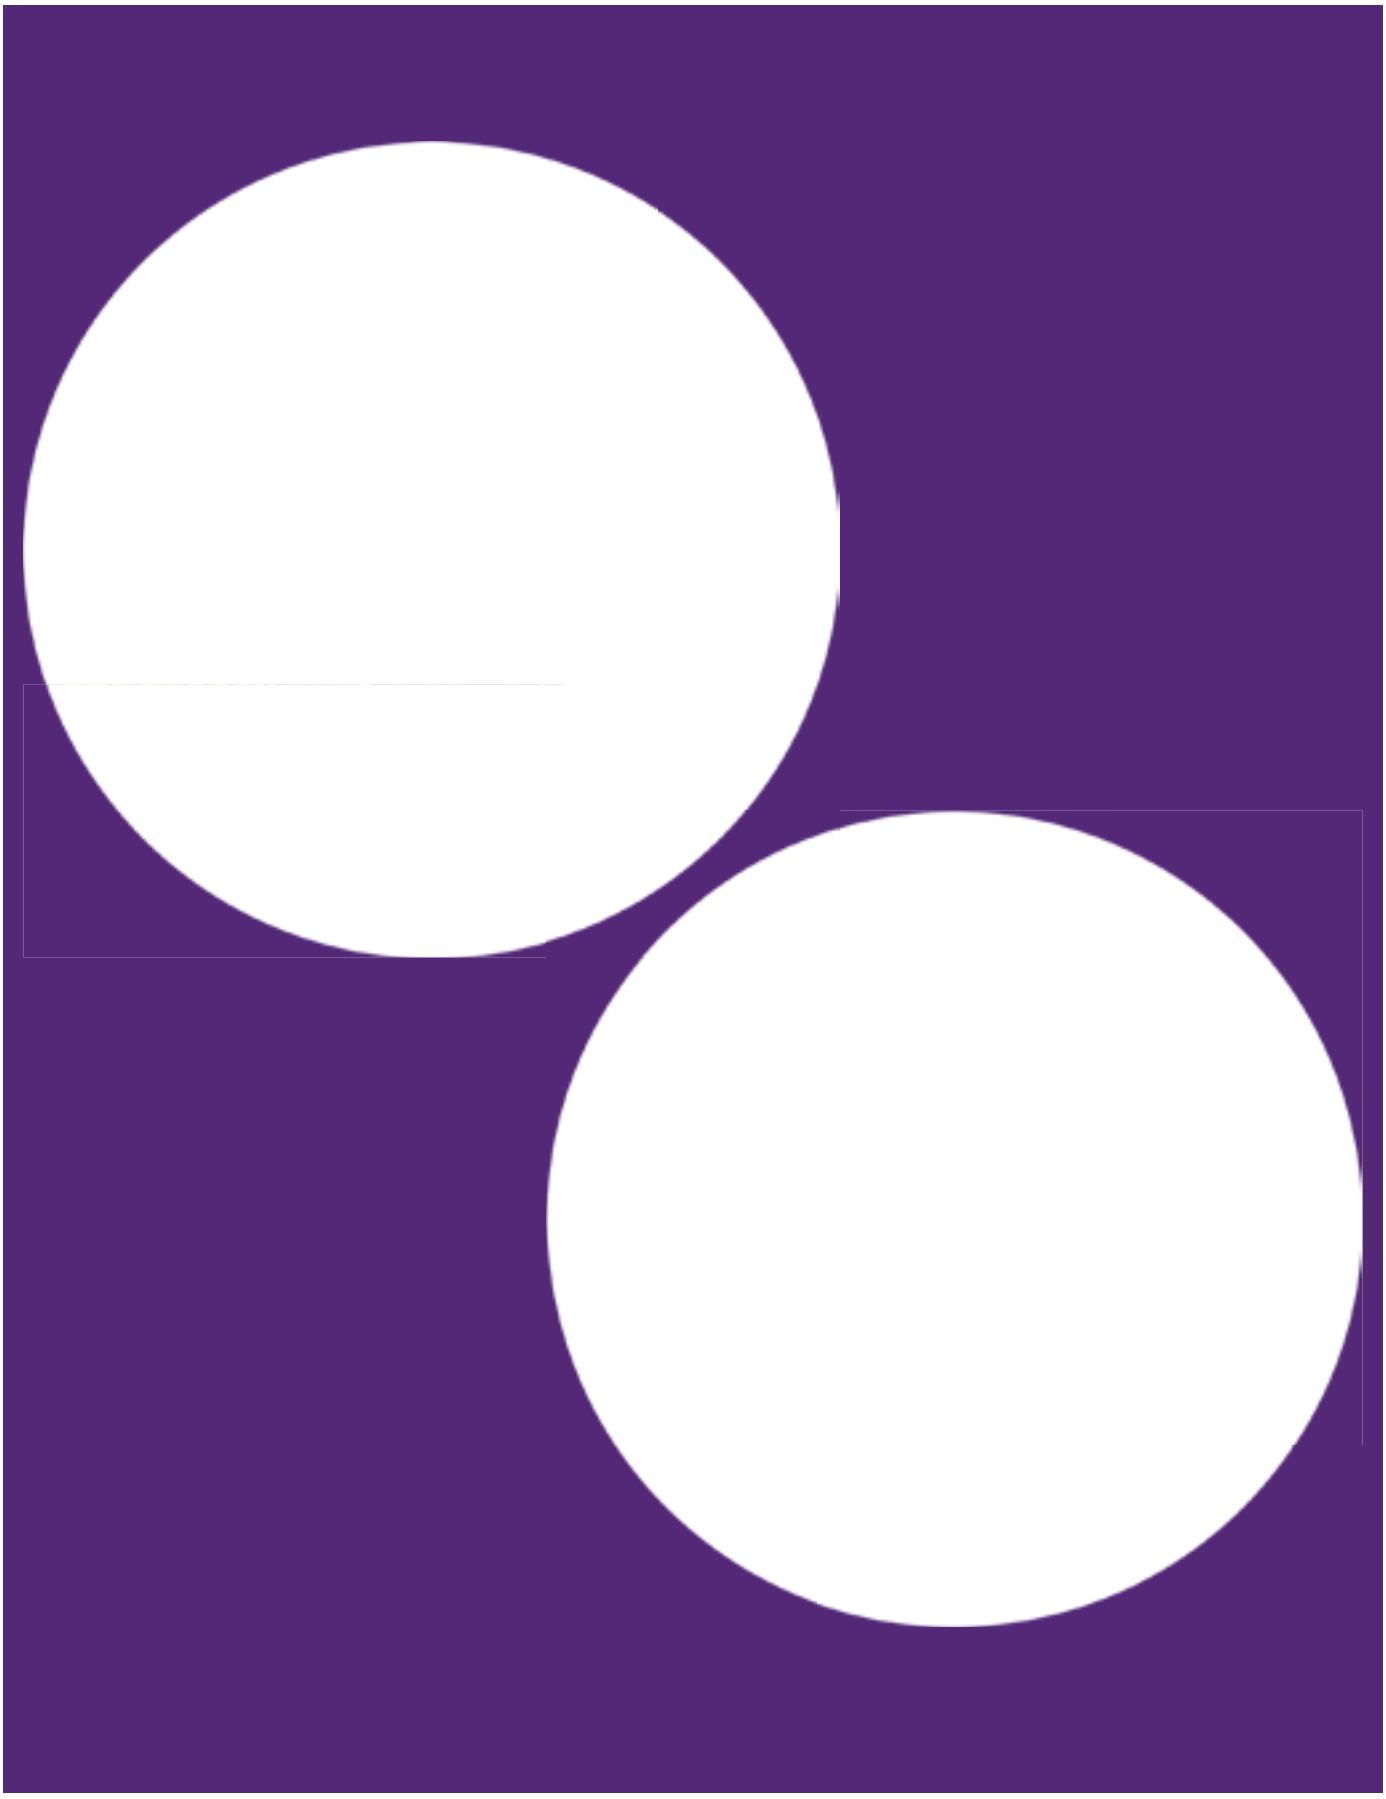
**4618** **1912 MS66+ PCGS Secure. CAC.** During the first five years of the Saint-Gaudens double eagle series from 1907-11 inclusive, three mints — Philadelphia, Denver, and San Francisco — had produced the denomination in an amount approaching 14 million pieces. Mintages of the smaller gold denominations were also on the large side. Thus it was that the year 1912 represented a radical departure from recent history, as only the Philadelphia Mint struck double eagles, in a modest quantity of 149,750 circulation strikes plus a smattering of the rare sandblast or matte proofs. Neither Denver nor San Francisco struck double eagles in 1912. One has to look as far back as 1886 to find no coinage of double eagles at the branch mints.

The 1912 and later issues bear 48 stars due to the addition of the states of New Mexico and Arizona into the Union, the last such until Alaska and Hawaii would join in 1959. Two small stars were added below the date, near the oak leaves, with the remaining 46 stars left unmoved. The 1912 technically represents a first-year subtype.

The current number of submissions to PCGS at the Gem level stands at 31, and only five have occurred at the MS66 level. The present piece, certified MS66+, stands alone as the single finest graded at PCGS (10/11). It also bears the CAC green label, which further distinguishes it from even its closest competitors. Thoroughgoing cartwheel luster on each side complements greenish-gold color intermingling with deep orange-gold. A small mark on Liberty's forehead and a few ticks on the left (facing) thigh and the nearby skirt lines are among few mentionable marks on the obverse. The reverse shows a tiny mark near the eagle's lower belly, along with a few other more minuscule signs of contact. A fully struck coin, with five toes and the heart-shaped ornament visible on Liberty's sandal and full panels and dome on the Capitol building. Note how the eagle's feathers are fully articulated, even at the rear feathers which are often weak. A die crack runs horizontally through the center of the sun.

Dr. Duckor purchased this coin from his friend and fellow collector, Jay Brahin, although it was not part of Brahin's collection. We wrote in a preview to our FUN Platinum Night 2010:

> "Jay Brahin's name is well known to both the numismatic and investment communities. Although he can trace his first interest in rare coins back to the 1960s, he became a serious numismatist after the Millennium. His rise to the upper echelon of gold collectors was rapid, but it was based on three decades of investment acumen as a personal portfolio manager. He quickly developed personal relationships with the key players and dealers in American gold, and his list of friends is a Who's Who of American numismatics. The search for quality was the natural result of old business lessons and this new expert advice, and following old traditions. Mr. Brahin also gives back to the coin community, currently serving as President of the 20th Century Gold Club. He has also become a sought after resource for books and articles on twentieth century gold coins, and his opinions can be found in the Wall Street Journal as well as CoinLink."



*Ex: Jay Brahin.*

**David Akers Comments:**

The discovery of a large, previously unknown hoard of a given date obviously changes our perception of the overall rarity of that issue. The 1912 is one of those issues and small hoards first appeared in Europe in the late 1960's and 1970's including a group of 40 choice examples purchased by Paramount from a source in Basel, Switzerland in 1973. Twenty or so years later, a much larger hoard of uncirculated 1912 double eagles was uncovered in Eastern Europe and so the 1912, formerly considered very scarce in choice mint state, is now regarded as rather common in MS63 and MS64 with hundreds known, certified and regularly available at moderate prices. The earlier hoards and the larger Eastern European one contained very few gem quality coins, however, and so the 1912 remains a rate date at that level. Above the MS65 grade level, the 1912 is extremely rare with only six to eight examples known. Of those, this Duckor specimen is the sole specimen receiving the (+) designation at PCGS and is unmatched by any other 1912 I have seen. I have used the term "underrated" rather liberally when commenting on the nine P-Mint issues from 1908 With Motto to 1915 and that term certainly applies to the 1912, because at the superb MS66 grade level it is every bit as rare, if not more so, than the famous and highly publicized 1931 and 1932.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9160)

# 1913 Double Eagle, MS65
# Tied for the Finest PCGS-Certified

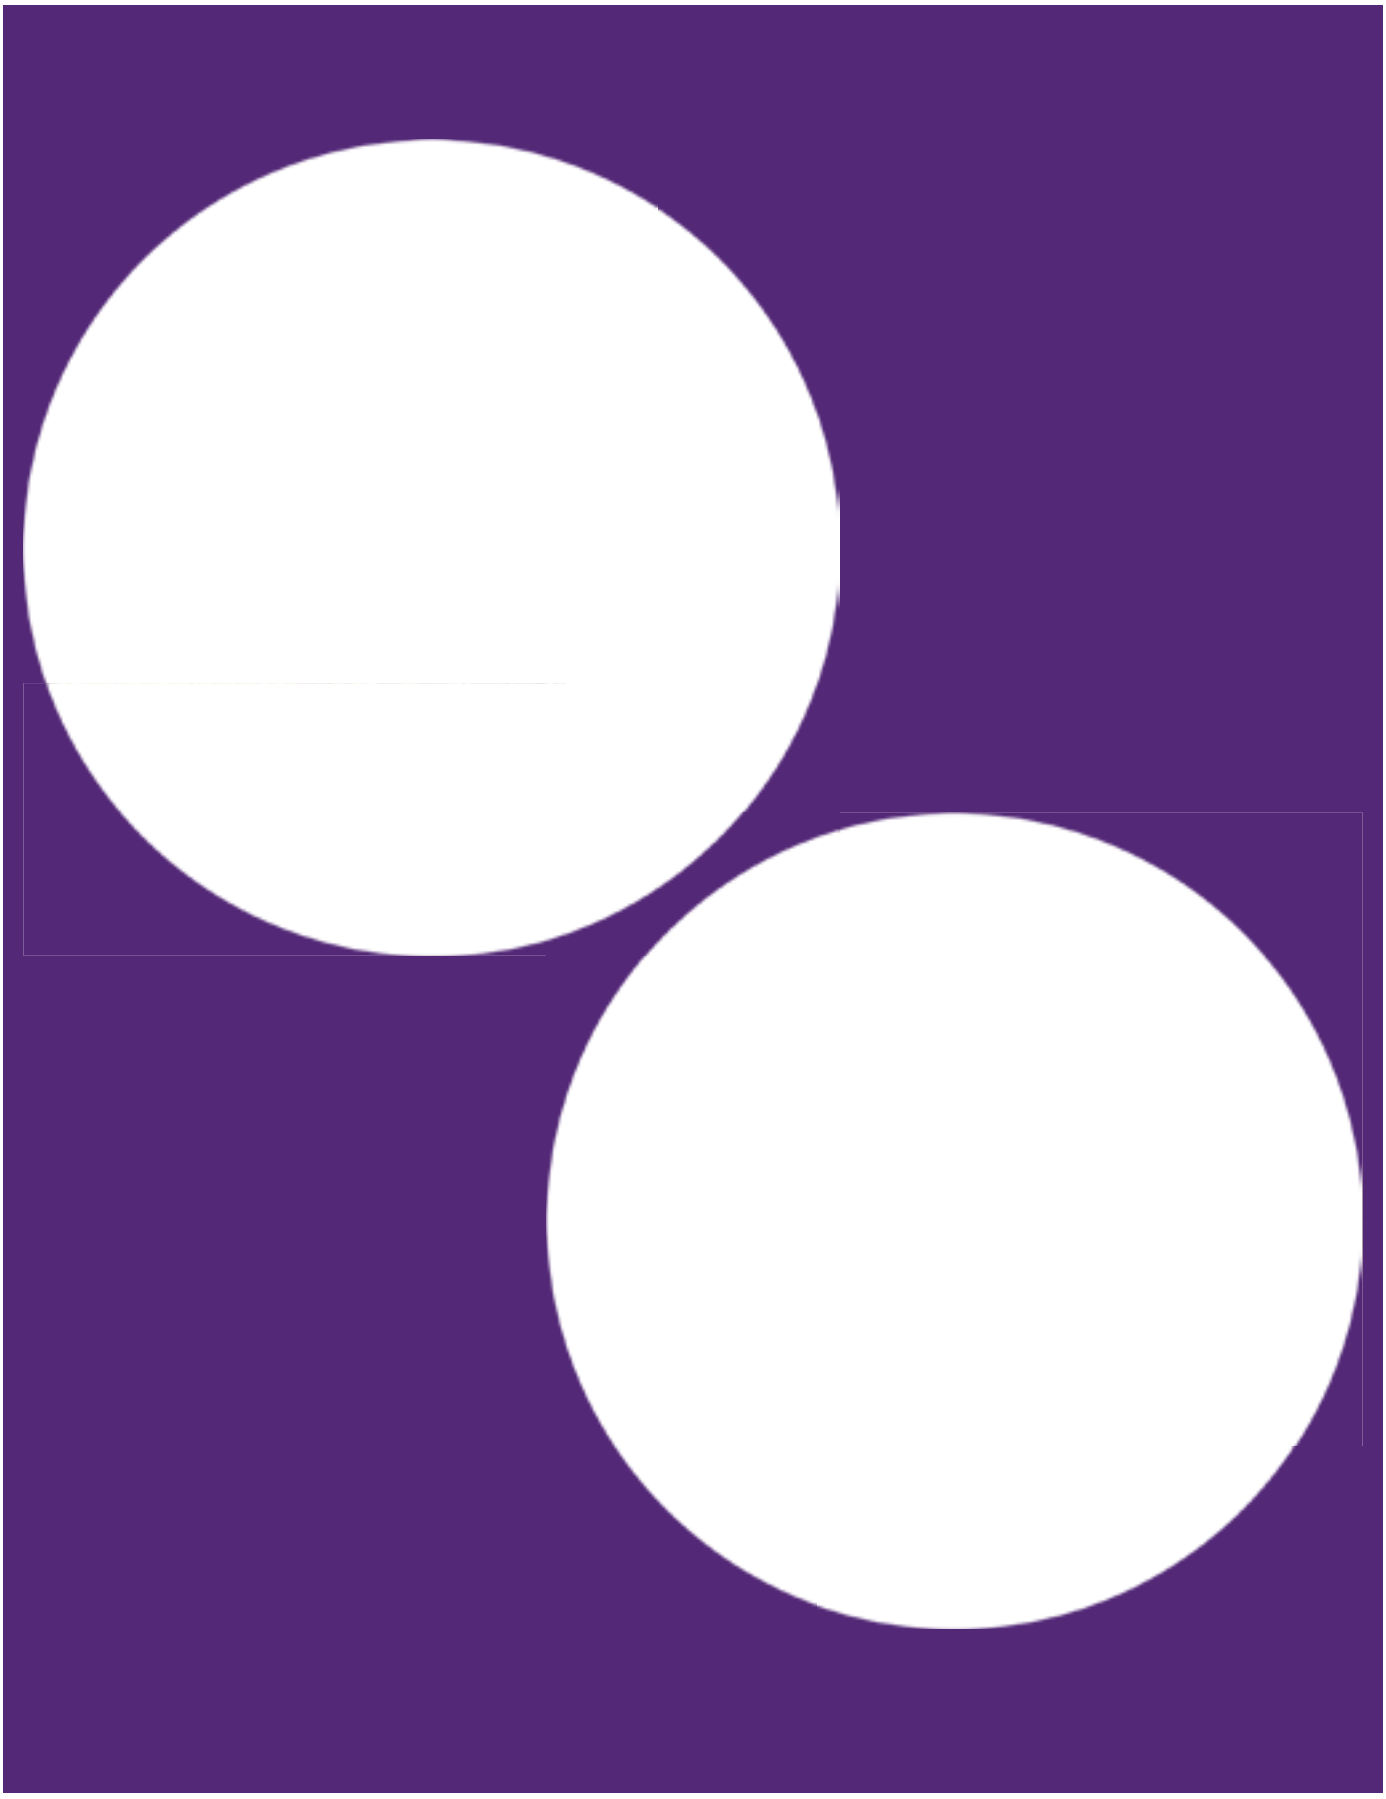
**4619** **1913 MS65 PCGS Secure. CAC.** Ex: Duckor/Akers. Low mintages of the Philadelphia Mint issues continued in 1913 with a production of 168,780 double eagles throughout the year. Like the other dates, high-grade examples of the 1913 are extremely rare, despite frequent market appearances of lower-Mint State pieces. Market appearances of Gem specimens are infrequent and include multiple appearances of fewer coins. In our Permanent Auction Archives, 11 appearances of MS65 PCGS examples represent just six different coins.

In the second edition of the *Handbook of 20th Century United States Gold Coins 1907-1933,* Jeff Ambio writes:

> "Beginning in MS-65 ... the 1913 develops into one of the leading condition rarities in the entire Saint-Gaudens Double Eagle series. In fact, it is easier to locate a high-grade 1929, 1931, or 1932 than it is to find a similarly graded 1913. There has never even been a rumor of a 1913 Double Eagle that would grade MS-67 by today's standards."

The typical poor production of 1913 double eagles will explain the lack of high-grade examples surviving today. It is entirely possible that few would have graded MS65 when they were struck. If a grading service could travel back in time to 1913 and set up a grading room in the Mint, there would likely still be only a small number of MS65 or finer coins certified. In *A Guide Book of Double Eagle Gold Coins*, Dave Bowers recommends a careful search for the best possible coin: "Somewhat similar to the 1912, the 1913 requires cherrypicking in order to reel in a sharp one." Of course, the collector who is looking for that sharp and appealing example could simplify the search by bidding on the Duckor specimen.

Frosty antique-gold surfaces show rich luster with glints of greenish-gold. A few stray marks are in keeping with the grade. A near-vertical mark on the eagle's midsection is among the few singular marks that may aid pedigree research. The reverse die is cracked horizontally through the sun. Acquisition of any attractive Mint State 1913 double eagle will pose a challenge to the collector, and opportunities to buy a Gem specimen are rarely presented. Population: 10 in 65, 0 finer (10/11).



*Ex: David Akers.*

**David Akers Comments:**

Without question, the 1913 is one of the most underrated issues in the entire Saint-Gaudens double eagle series. Of the nine early P-Mint issues from the 1908 With Motto to the 1915, the 1913 is by far the rarest of the group in gem uncirculated condition, although, like the other eight issues it is readily available in all the lower mint state grades up to and including MS64 due to the discovery of some large hoards of the date a couple of decades ago. Few, if any, gems were in these hoards, however, and so a 1913 Saint in MS65 is a definite rarity with perhaps only 14-18 examples known, making the 1913 a greater rarity in gem condition than the much more celebrated 1929, 1931 and 1932. Furthermore, I have neither seen nor heard of any 1913 that would grade superb MS66 or better although at least two or more such specimens exist of all the famous rarities of the series. There are only two other issues able to make this same claim, the 1915 and the 1920.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

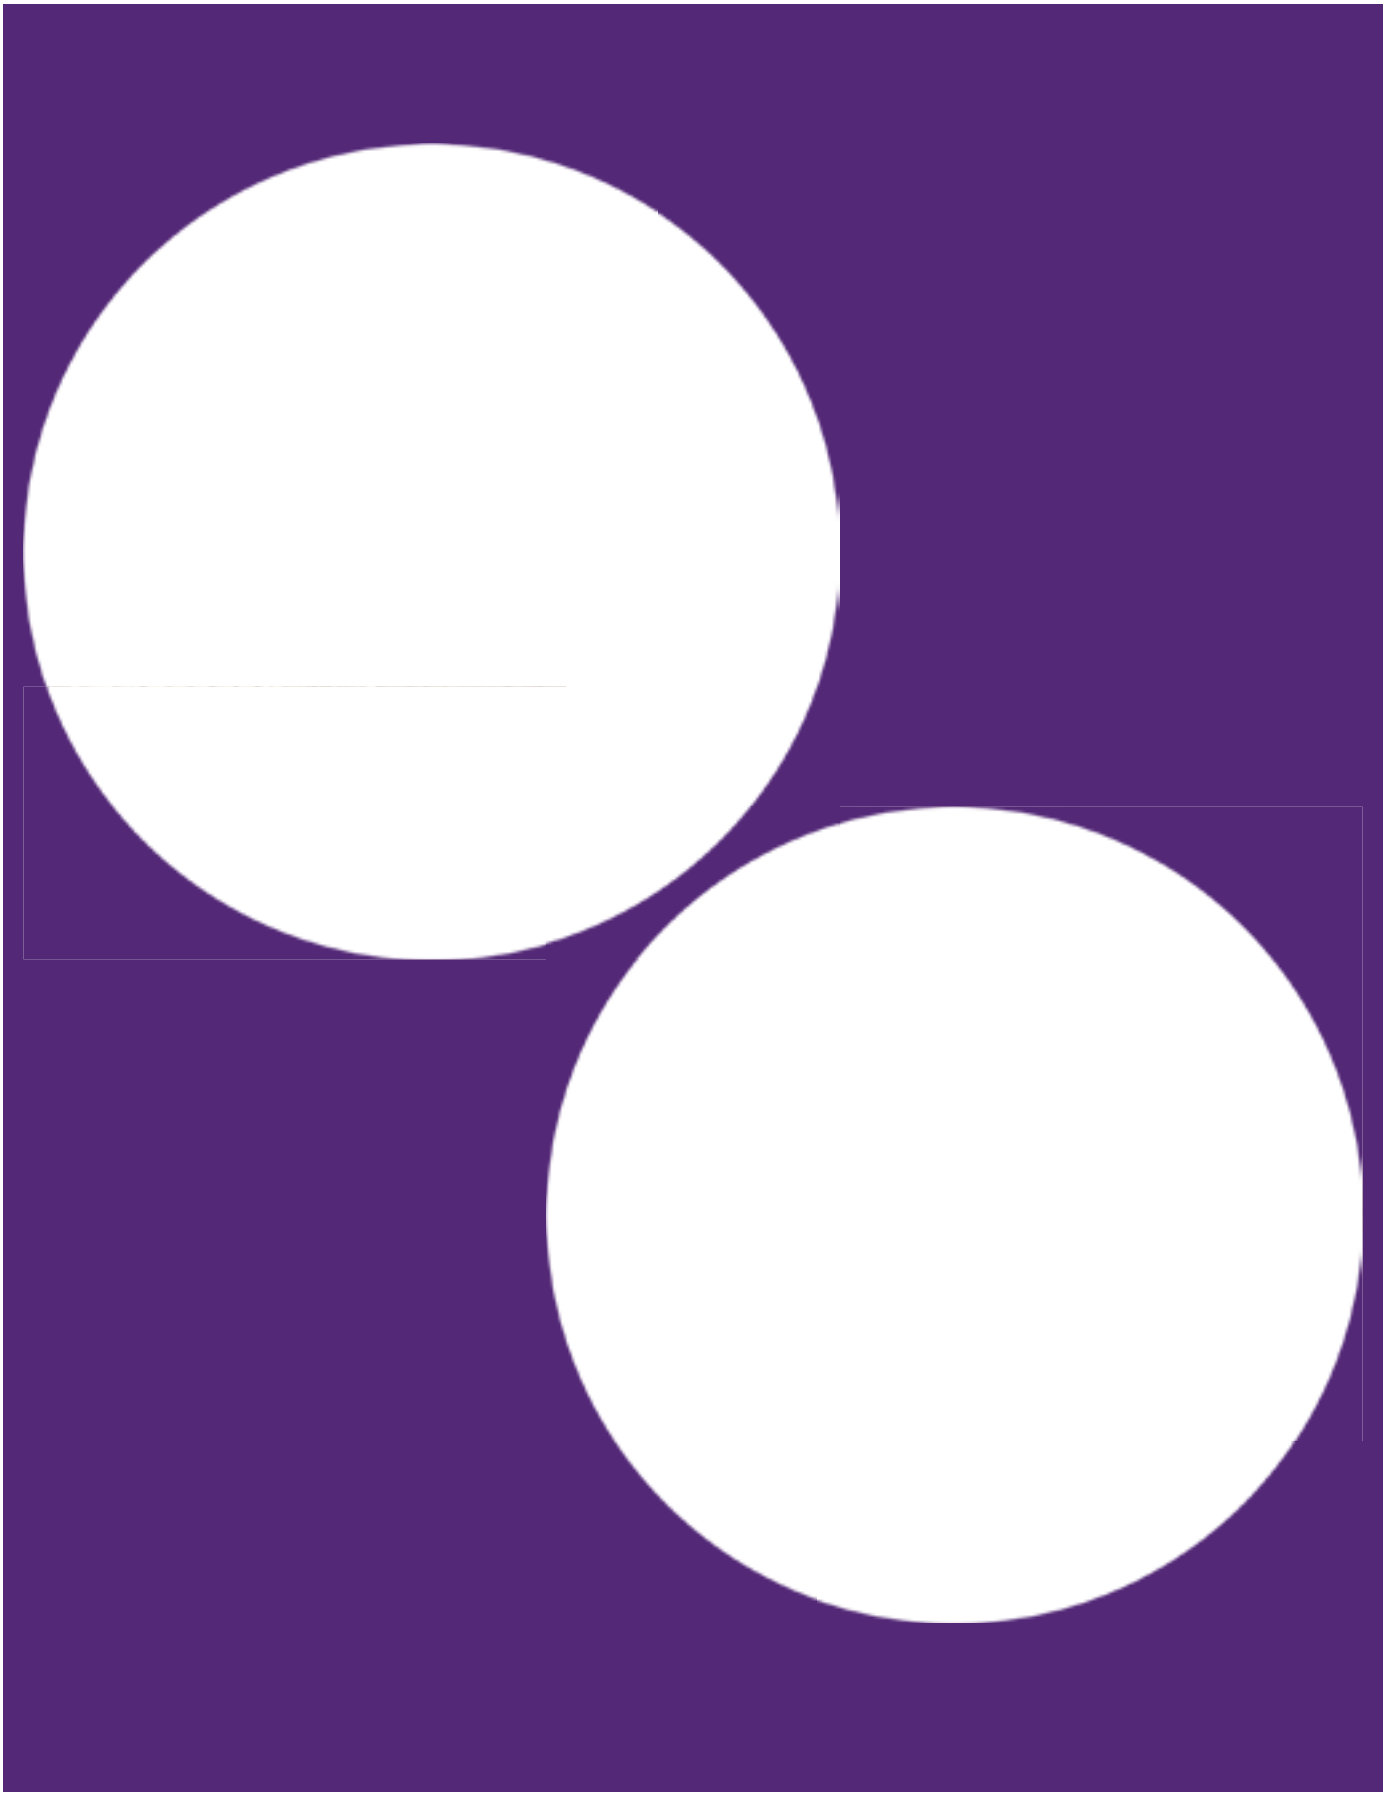
(#9161)

# Premium Gem 1913-D Twenty Dollar
# The Browning-Dallas Bank Example
# Among the Few Finest at PCGS

**4620** **1913-D MS66 PCGS Secure. CAC.** Ex: Duckor/Browning. The 1913-D twenty dollar is another well-produced issue from early in the series, one that generally shows excellent luster over sharply struck surfaces. Denver Mint coins of this era generally have those criteria in common; however, Denver and the other branch mints skipped striking double eagles in 1912, so that the 1911-D and 1910-D issues are the D-mints immediately preceding the 1913-D. Only 393,500 examples of the 1913-D were reportedly struck, yet today examples below the Gem grade are fairly obtainable. Many of the earlier Saint-Gaudens issues such as the 1913-D avoided the mass meltings that many later dates saw by being exported to Europe or Latin America, only to be repatriated over the ensuing decades.

David Akers provides these comments about the 1913-D, here quoted from the PCGS Coin Facts website:

> "Overall, the 1913-D is less rare than either the 1910-D or the 1914-D, but the difference is rather minimal. However, in gem condition, I find the 1913-D to be considerably more rare than either of those issues, perhaps two to three times as rare. Most 1913-D double eagles are heavily bagmarked although, in MS-63, this issue is still quite easy to find. In MS-64, the population drops off dramatically and gems are really very scarce, if not rare. The few superb MS-67 examples I have seen of this issue have all been the satiny variety. I consider this issue to be quite underrated, but only in top grade.
>
> "There are two distinctly different surface finishes on this issue. The most common by far is 'soft' frosty with some granularity, but there are also some that are very satiny. The latter appear to be quite a bit more rare. The typical 1913-D is very sharply struck, and the lustre is generally average or slightly above average for the series. (The satiny specimens are very lustrous.) Color is usually quite good, light to medium orange or coppery gold being standard. A few also have greenish gold highlights."



The PCGS population in MS66 currently stands at five submissions for the 1913-D, although we doubt that those five certification events all represent separate pieces (10/11). (We note that the present coin would update every one of the top 10 PCGS Registry Sets, save for the retired Duckor Collection, of course; the Simpson Collection specimen is an MS65+.) In 2005 when we were cataloging the Phillip H. Morse Collection, there were only two MS66 pieces known, the Morse specimen (Heritage, 11/2005, lot 6614, which brought $37,375) and the present Duckor-Browning coin. With none finer certified at PCGS and none in the MS66+ grade, there is great motivation to be the first collector to achieve — or at least attempt — an MS66+ or MS67 grade.

This Premium Gem displays medium yellow-gold surfaces complementing small glints of copper-gold in the recesses. The strike is sharp even though not quite complete, with a bit of bluntness on Liberty's nose. Scattered shallow abrasions on the lower obverse are in keeping with the grade but undistracting. The reverse is all but abrasion-free, save for a single dig on the eagle's midsection.

*Ex: Jeff Browning; Dallas Bank Collection (Sotheby's/Stack's, 10/2001), lot 172; later, David Hall. The Dallas Bank Collection, assembled by Texas oilman Jeff Browning, featured an amazing run of Liberty Head and Saint-Gaudens double eagles, notably including a complete run of Type One Liberty Heads, an AU55 1854-O, the low-mintage 1879-O and 1881 twenties, an 1861-S Paquet, the proof-only 1883, and an MCMVII Ultra High Relief.*

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9162)

## 1913-S Saint, MS65
## Only One Finer PCGS-Certified Example

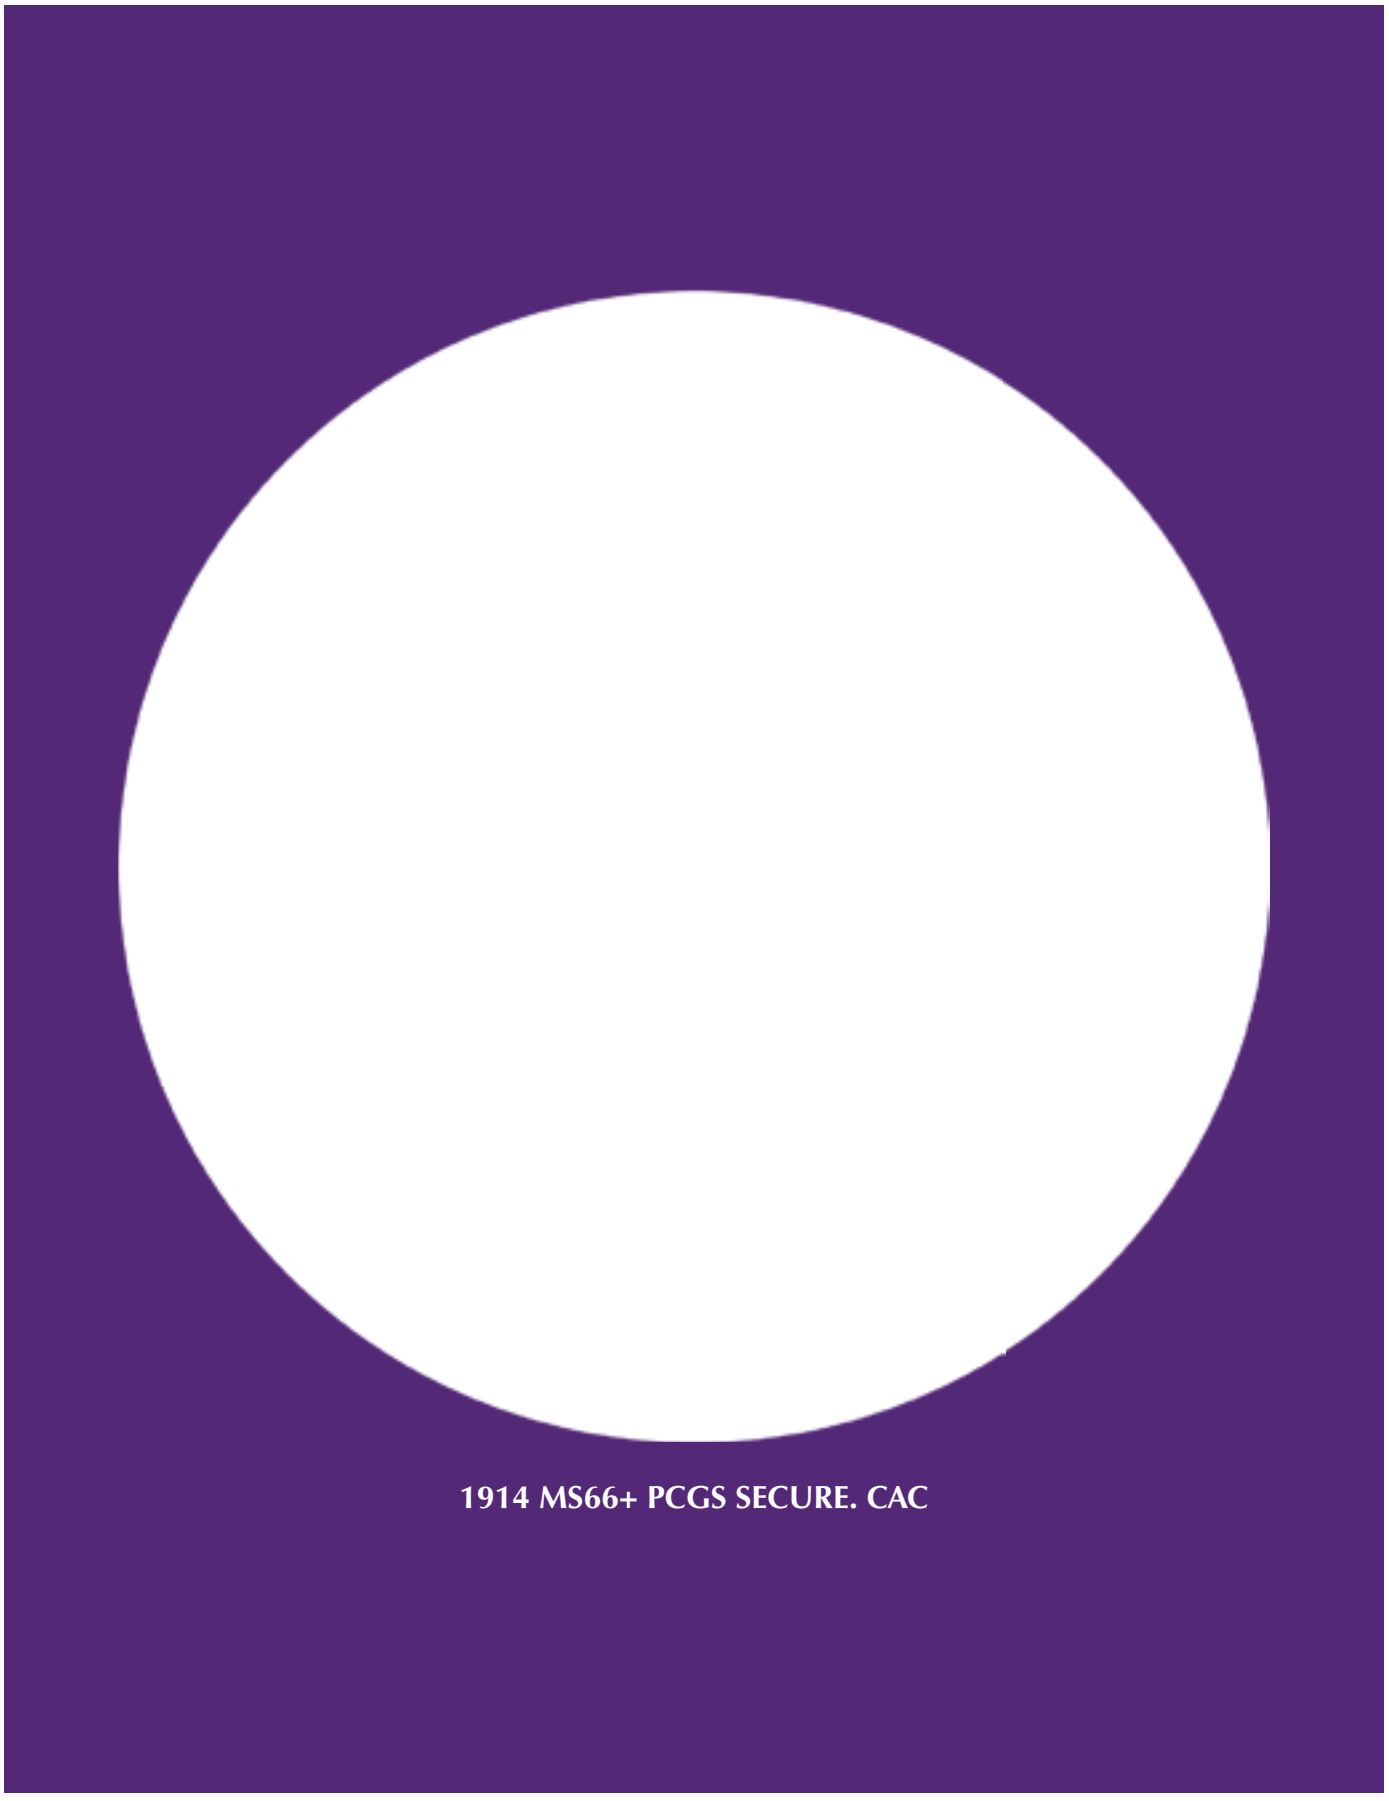
**4621** **1913-S MS65 PCGS Secure. CAC.** The 1913-S double eagle had a mintage of just 34,000 coins, the third-lowest mintage of any double eagle behind the 1907 High Relief and the 1908-S. The only other San Francisco issue with a five-figure mintage was the 1930-S. Although certain other issues, such as the 1909, 1914, and 1915 are rarer, the mintage alone suggests an important, conditionally rare Saint-Gaudens double eagle.

The survival rate of the 1913-S was higher than for most other issues. In his *Complete Encyclopedia,* Walter Breen reported that many 1913-S double eagles were imported from French banks in the mid-1950s, usually showing extensive bagmarks. The quantity of exports was considerable, with most remaining pieces stored in Treasury vaults until they were melted in the 1930s. A few well-heeled collectors ordered coins from the San Francisco Mint at the time of issue, and those pieces are probably the source of the few surviving Gems, such as the Duckor specimen.

PCGS and NGC have certified a total of 2,890 examples of the 1913-S Saint-Gaudens double eagle in all grades from VF30 to MS66 (10/11). The average certified grade is 61.9. However, less than 100 of those coins grade below AU58, suggesting that the 1913-S was seldom found in circulation. In our own Permanent Auction Archives, 480 examples of the 1913-S double eagle have appeared since January 1993, having an average market grade of 62.4. Nearly 85% of all certified 1913-S twenties grade between MS61 and MS64, the expected grades for coins that were exported overseas and later returned to the United States for collectors. Examples are usually available in the marketplace on a regular basis, so long as the collector is satisfied with a lower-Mint State grade.

In addition to exports and imports, and the lower-Mint State grades typical of such pieces, another factor that explains the lower grade of surviving specimens is poor workmanship at the San Francisco Mint in 1913. Jeff Garrett and Ron Guth explain in their *Encyclopedia of U.S. Gold Coins*: "

> "Quality control slipped a bit for this San Francisco issue, with many coins showing copper spots from improperly mixed alloys. The strikes also tend to be a challenge. With time and care, fully struck MS64 coins can be obtained, but in Gem MS65 grades, this date is very rare indeed."



In addition to the remarkable MS66 Phillip Morse finest-known specimen, we have handled just 21 MS65 examples in our past sales, including multiple offerings of some specimens. The MS65 coins include 18 PCGS-certified pieces and three NGC coins.

Deep reddish-gold at the lower obverse complements lighter lilac-gold in the upper portions. A few stray marks on the obverse are consistent with the Gem grade, and tiny abrasions are well-distributed among the eagle feathers. The strike is not quite full but close, with softness on Liberty's nose, the sandal, and the Capitol dome. A long lateral die crack traverses the sun at the lower reverse. Population: 21 in 65, 1 finer (10/11).

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9163)

**1914 MS66+ PCGS SECURE. CAC**

**1914 MS66+ PCGS SECURE. CAC**

# 1914 Twenty Dollar, MS66+
# The Finest PCGS Coin

**4622** **1914 MS66+ PCGS Secure. CAC.** On June 28, 1914, Archduke Franz Ferdinand, the heir to the Austro-Hungarian throne, was assassinated, sparking the Great War, known today as World War I. The Serbian government was implicated in that event, and one month later, July 28, 1914, Austria-Hungary declared war on Serbia. Russia backed Serbia, and Germany backed Austria-Hungary. Soon, France and Great Britain were involved in the war, which was still centered in Europe. Japan soon also declared war on Germany and a year later, Italy joined the fracas. The United States remained neutral until forced to enter the conflict in 1917 after German submarine warfare threatened American commercial shipping.

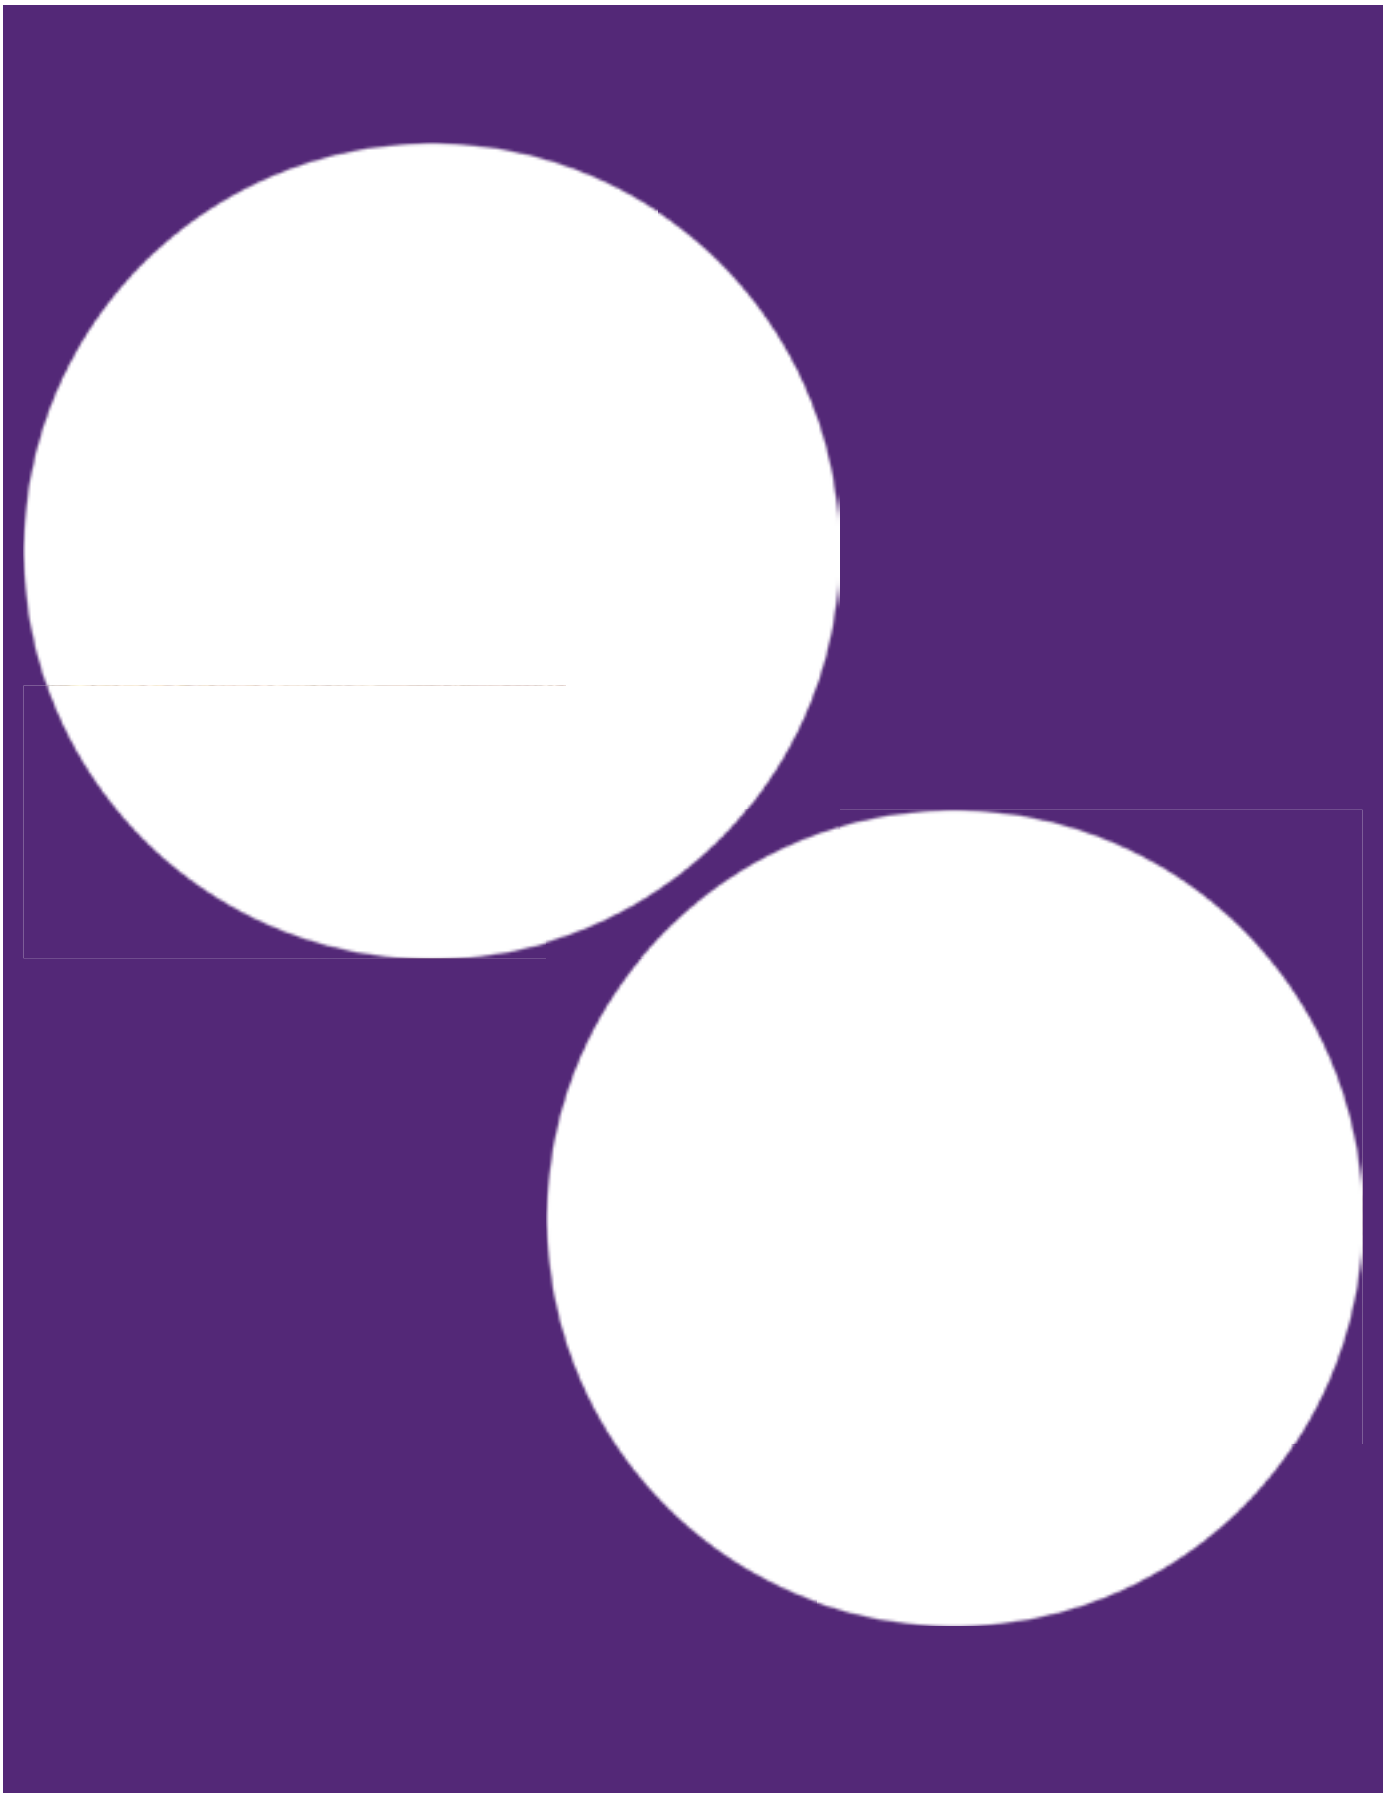
Despite the U.S. position of neutrality, the economy slowed and the need for gold coinage dwindled as world economies shifted and available gold remained in bank vaults. Just 2 million double eagles were coined at all three mints in 1914, including only 95,250 at Philadelphia, the lowest annual production of any Saint-Gaudens double eagle at that mint. PCGS has certified more than 2,000 1914 double eagles, but only 46 of those submissions grade less than AU58, indicating with virtual certainty that this issue never circulated at the time of production.

The Heritage Permanent Auction Archives, begun in January 1993, list just 136 offerings of the 1914 Saint-Gaudens double eagle, exclusively in grades from AU58 to MS65. Those offerings include 119 appearances in grades from MS62 to MS64, and only one example less than MS60. The PCGS data and Heritage auction data indicate that most of the mintage was exported to Europe or the Southern Hemisphere. Enough survive that it is unlikely many remained in Treasury vaults to be melted in the 1930s.

Surviving examples in Gem or finer grades are rarities, with only 36 MS65 PCGS-certified examples and only three pieces graded MS66, including only one MS66+, the Duckor specimen (10/11). In *A Handbook of 20th-Century United States Gold Coins 1907-1933,* published in 1988, David Akers wrote:

> "In all respects, both total population-wise and condition-wise, the 1914 is very similar in rarity to the 1911 and 1915. In MS-60 to 62 condition, the 1914 can be obtained with only a little difficulty. However, even at the MS-63 level, this issue is rather rare, and better than that it is extremely difficult to find. A small number of gems are known, however, and I have seen two and perhaps a third that were distinctly better than MS-65, possibly even grading a full MS-67."

The current PCGS population data closely mirrors Akers' comments written 23 years ago. The finest-known Duckor specimen exhibits deep reddish-gold color with faint lilac accents on the obverse and is close to a full strike. Minor obverse marks are evident, the largest of which is a small diagonal nick on Liberty's outstretched arm near the elbow. The reverse has similar coloration and an equal paucity of singular contact.



*Ex: Heritage Auctions.*

**David Akers Comments:**

Among the 54 issues of the Saint-Gaudens double eagle series, the 1914 had the sixth lowest mintage after the High Relief, 1908-S, 1913-S, 1909-D and 1930-S in that order. These six issues are, in fact, the only ones in the series with mintages lower than 100,000 pieces. Since only the 1930-S in this low mintage group is considered one of the major Saint-Gaudens double eagle rarities today, this only shows how unreliable mintage figures are in determining rarity, especially so in this series where few dates circulated after World War I and were largely stored by the government and later melted in the mid- to late 1930's. Among the nine early P-Mint issues from the 1908 With Motto to the 1915, the 1914 is in the middle of the pack rarity-wise. It is easily obtainable in any mint state grade short of the gem levels and even gem MS65 specimens, though certainly rare, do come on the market from time to time. At the gem level, the 1914 is more or less on a par with the 1911, 1912 and 1915, less rare than the 1909, 1909/8 and 1913, and more rare than the 1908 With Motto and 1910. Superb examples grading MS66 are extremely rare with only 3-5 specimens known with this Duckor specimen the highest graded at MS66+ and quite likely the finest known. It is the only one graded with a (+) designation. Like the 1912, which is a little less rare in superb condition than the 1914, the 1914 is more rare in MS66 than the 1929, 1931 and 1932 and is even on a par with the 1930-S and 1931-D at this grade level.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

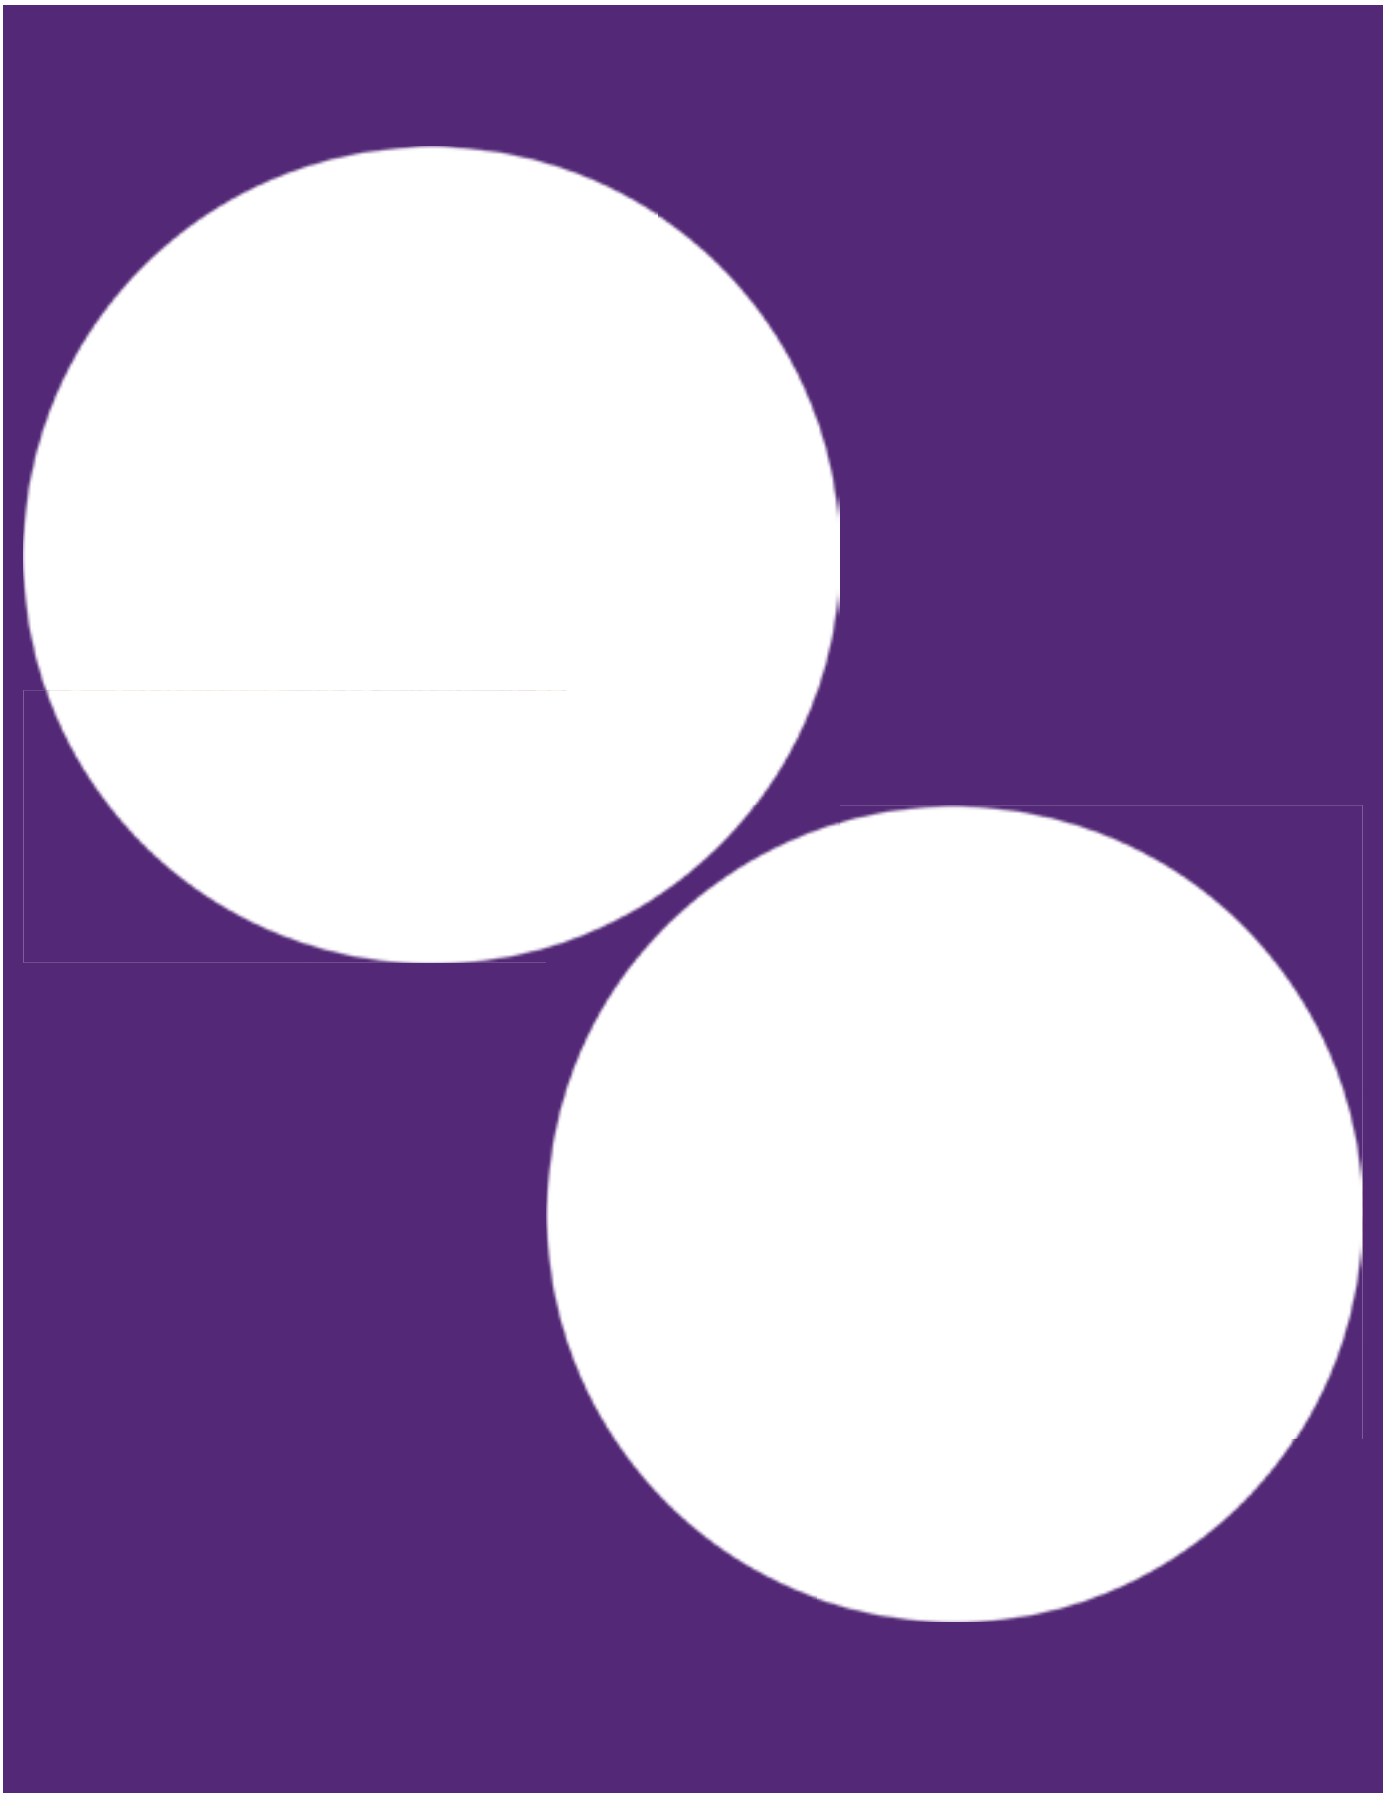
(#9164)

## Fantastically Toned 1914-D Twenty, MS66 Among the Most Deeply Patinated Coins in the Duckor Collection

**4623** **1914-D MS66 PCGS Secure.** Ex: Duckor/Akers. One does not normally think of gold coins when the term "color coin" or "fantastically toned" or similar expressions surface in a numismatic discussion, but this coin nonetheless combines the best of those two worlds, as a high-grade Saint-Gaudens twenty with incredibly colorful patina and intense eye appeal. The flaming orange-red obverse color verges on cherry and violet close to the figure of Liberty on this stunning coin, among the most deeply patinated pieces in the Duckor Collection save for the 1908-S. The reverse has a more consistent orange-gold color, complementing glints of jade near the rims. Dr. Duckor points to the 1925-D as a comparable fabulous color coin.

The bold strike has brought out all of the small details in the Capitol building, and all other details around both the peripheries and in the centers are well-impressed. The surfaces are somewhat granular and mattelike, with frosty luster radiating from each side. The grade is accounted for by a small luster graze in the right obverse field near Liberty's head and a couple of horizontal marks on her exposed right (facing) leg. The reverse is all but free of abrasions, and the few marks present will require a loupe to locate.

The 1914-D and 1914-S have well-earned reputations as nice middle-of-the-road mintmarked Saint-Gaudens issues, much like the 1915-S and 1916-S in that they can be obtained for a price up to the Gem level. Those issues are mostly well-struck and attractive, although the S-mint issues can suffer from bagmarks.



A closer look at the population reports, however, will show that the 1914-D is clearly underrated in MS65 compared to those other issues, with far fewer available. Even Bowers' *Guide Book of Double Eagle Gold Coins,* published in 2004, makes a statement with which we cannot completely agree: "The 1914-D is easy to find in choice and gem Mint State, providing an affordable opportunity to add this date and mint to your collection." Well ... not really so much in Gem condition, where PCGS has seen only 58 submissions (not separate coins) at the MS65 level. And despite the 1914-D's mintage of 453,000 pieces, certified survivors largely top out at the MS66 level. Only a single specimen at PCGS exceeds the grade of the present Premium Gem: The Phillip H. Morse Collection example was an MS67 PCGS piece (Heritage, 11/2005, lot 6623) that realized $43,125 and today it resides in the Simpson Collection, where it remains alone as sole finest atop the leader board at PCGS.

While this is certainly not the rarest nor yet the highest-graded nor most valuable twenty in the Duckor Collection, it may well represent an excellent *tradeoff* between rarity and value, as a somewhat underrated, high-grade example of an issue that is usually considered a type coin — and a spectacular specimen for the grade, with immense eye appeal. It completely eludes us as to why this coin failed to achieve the CAC green label, but that detracts nothing from its innate attractiveness. Population: 59 in 66, 1 finer (10/11).

*Ex: David Akers.*

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9165)

## 1914-S Saint, MS66
## None Finer at PCGS

**4624** **1914-S MS66 PCGS Secure. CAC.** Ex: Duckor/Akers. Following a complete absence of double eagle production in 1912 and a low mintage of 34,000 pieces in 1913, the San Francisco Mint coined 1,498,000 double eagles in 1914. That total was more than the combined total of the next two years, with an intermission until 1920. Many thousands of examples of the 1914-S survive today, ranking it among the most common twenties in the entire Saint-Gaudens series. In 1988, David Akers discussed its availability in various grades:

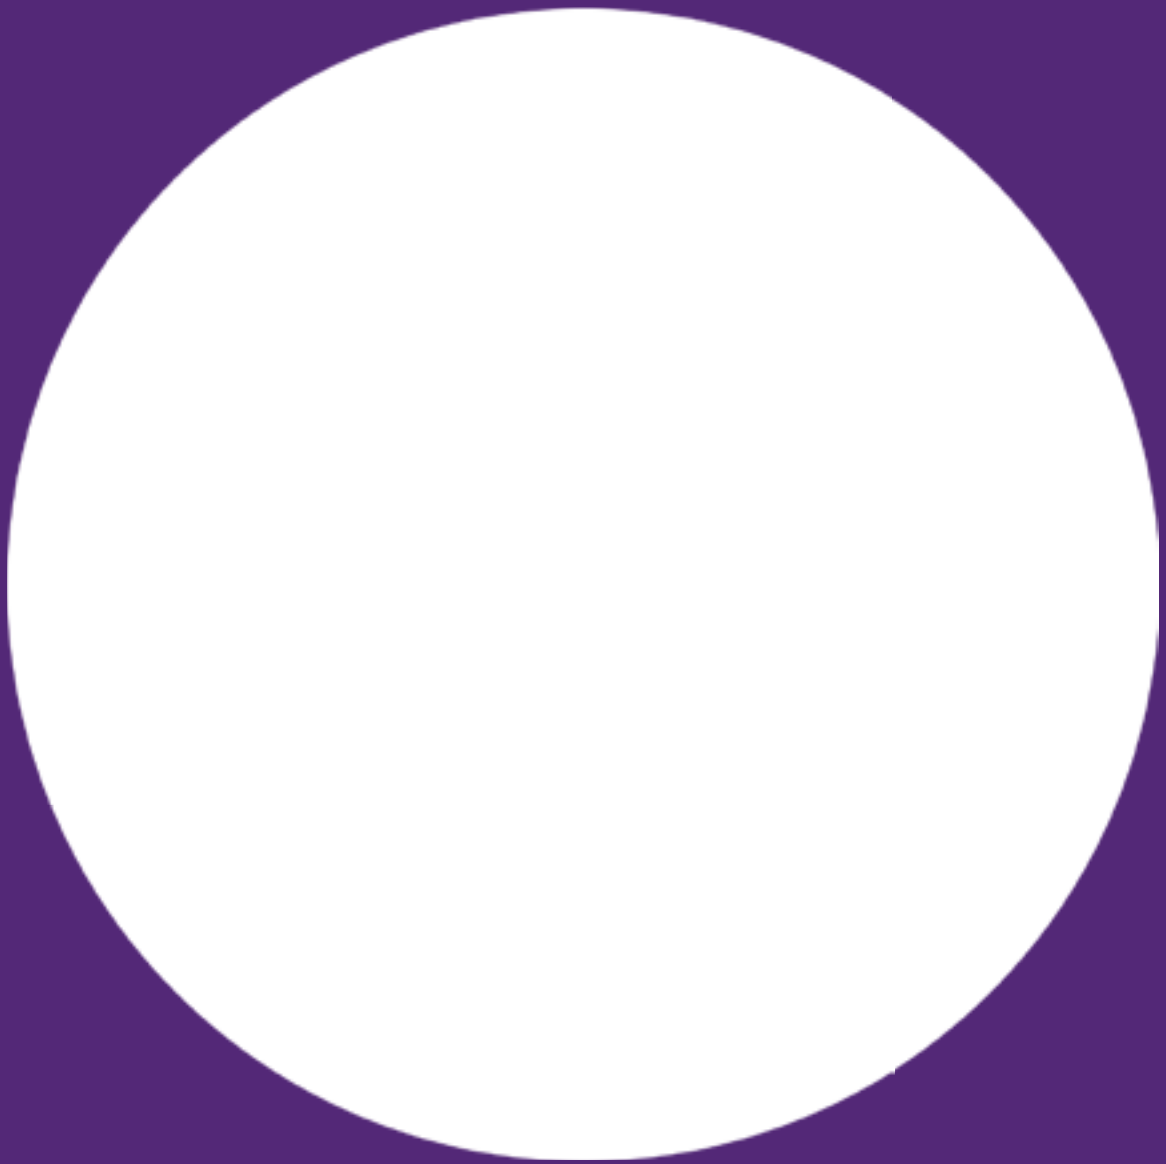
> "The 1914-S is one of the most common of the early issues in Mint State, and literally thousands of examples are known. In grades up to and including MS-64, this issue is very easy to locate. Even gems can be found with some regularity, and I have seen many such pieces. There are also some superb quality, in fact, nearly perfect examples of the 1914-S known. Several hoards of more than a thousand pieces each have been dispersed in the last 15 years."

When David Akers wrote his comments in A Handbook of 20th-Century United States Gold Coins 1907-1933, PCGS had been in operation for less than two years and NGC for about a year. Today, the grading service population reports give anyone an instant snapshot of conditional availability. Akers had no such luxury and relied on his own observations.

In his 2004 *A Guide Book of Double Eagle Gold Coins*, David Bowers agreed with Akers' earlier comments:

> "In Mint State the 1914-S double eagle is very common, and even at the MS-65 level well over 1,000 coins have been certified, such pieces typically representing only a fraction of the coins in existence, as relatively few bulk quantities have passed through the grading services."

Today, after 25 years of coin certification, PCGS has certified 17,933 examples of the 1914-S with an average grade of exactly MS63. More than 90% of the total PCGS population grades between MS62 and MS65, including nearly 2,000 at the top of that range, verifying the comments of Akers and Bowers. Even MS66 examples are occasionally available, with exactly 100 PCGS-certified pieces at that grade (10/11). However, PCGS has yet to grade a single piece finer than MS66, not even an MS66+. (It would be an interesting exercise if one were able to take all 100 of those coins and resubmit them for an MS66+ or an MS67.)



It is the very commonness of the 1914-S in Mint State, however, that provides the issue significant appeal as a type coin. Jeff Garrett and Ron Guth note that most examples seen are "satiny and bold," while pointing out that bagmarks can be a factor; excluding those highest-graded pieces, which were more likely saved at the time of issue, all that exportation and repatriation can come at a cost in terms of aesthetic appeal.

The Duckor specimen is well-struck, despite minor weakness at the lower obverse, typical of nearly all such coins. The surfaces have thick cartwheel luster over orange- and green-gold surfaces. A few scattered, light abrasions are mostly confined to the obverse, preventing an even higher grade.

**1915 MS65+ PCGS SECURE. CAC**

**1915 MS65+ PCGS SECURE. CAC**

# 1915 Double Eagle, MS65+
# The Finest PCGS Example

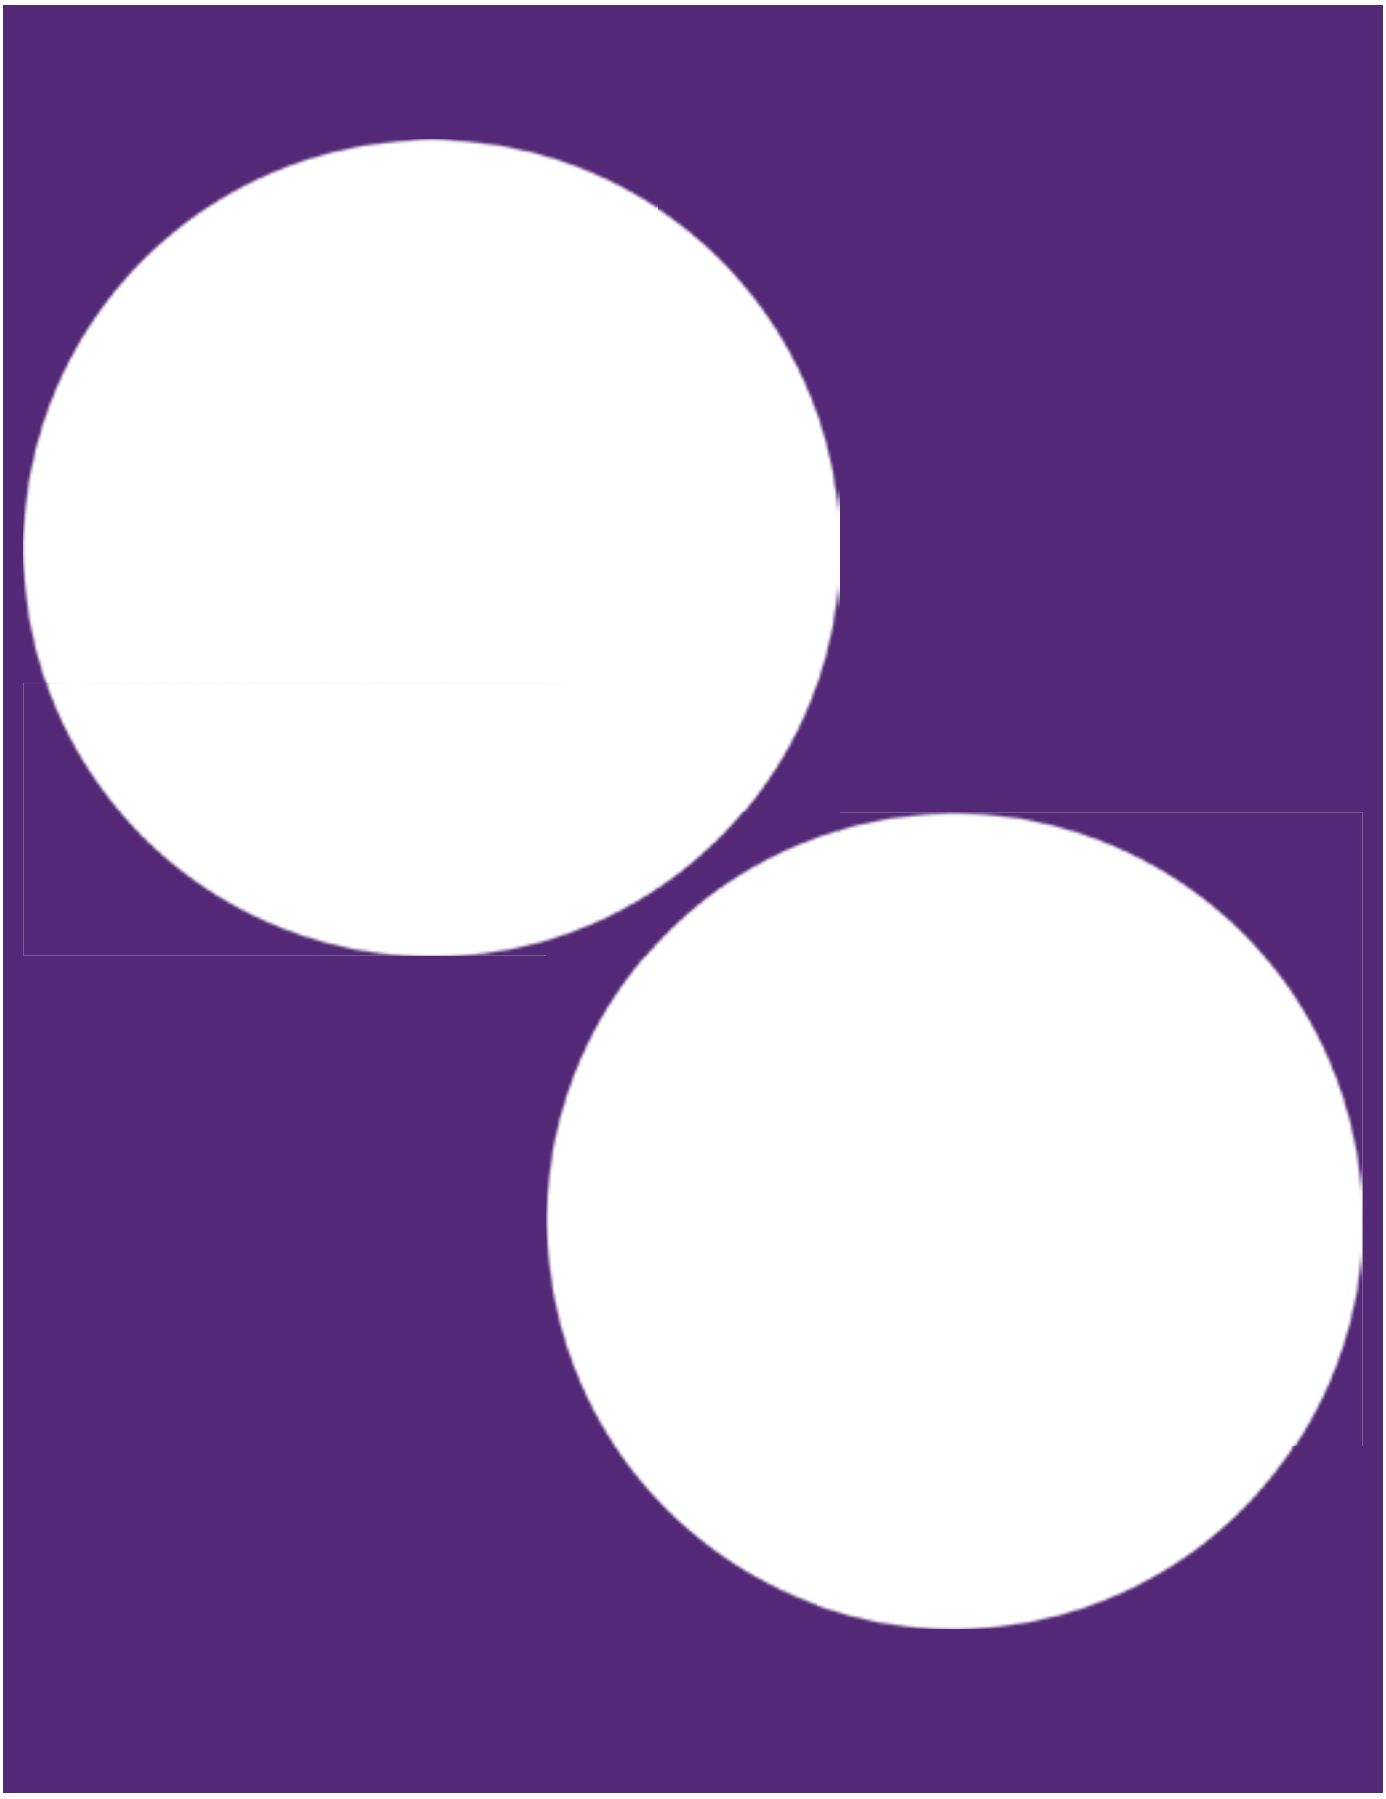
**4625** **1915 MS65+ PCGS Secure. CAC.** Ex: Duckor/Akers. The Philadelphia Mint coined 152,000 double eagles in 1915, following the pattern of low mintages from the previous several years. Afterward, no more pieces were coined for the remainder of the decade.

The typical 1915 is in a low-Mint State grade, averaging MS61.7. Like many earlier and later issues, more than 95% of those submissions grade AU58 or better, indicating little or no circulation at the time of manufacture. Although no hoards are specifically associated with the issue, the surviving population of low-Mint State grades is consistent with other issues that are known from European and South and Central American bank hoards. Dave Bowers suggested the possibility of hoards in *A Guide Book of Double Eagle Gold Coins,* although offering no specific identification of such groups of coins:

> "As is true for several double eagles in this date range, the Philadelphia Mint issue is more elusive than are those from the branch mints. The 1915 can be rated as quite scarce in the milieu of modern-day hoards and imports. Most are in lower Mint State ranges."

The collector who seeks a lower-level Mint State example of the 1915 double eagle will have no problem finding an acceptable representative with only a little searching. However, the collector who seeks a Choice MS64 example will need patience, and the seeker of a Gem MS65 will require considerable perseverance. Of nearly 2,000 PCGS-certified 1915 double eagles graded between VF30 and MS65, only 37 examples have received the coveted MS65 grade, and the Duckor example, purchased in 1985 prior to the advent of third-party grading, is the only one of those coins that has also earned the Plus designation (10/11).

*In A Handbook of 20th-Century United States Gold Coins 1907-1933*, David Akers Comments: "From an overall 'eye appeal' standpoint, the 1915 is an easy winner over the other Philadelphia Mint issues from 1908 With Motto to 1915; only the 1912 even comes close." The Duckor coin is one of those appealing pieces with mostly greenish-gold on the obverse and glints of reddish-gold around a few of the sun's rays. Similar coloration and similarly stunning eye appeal are on display on the reverse, with a few tiny abrasions limited mostly to the sun at the bottom. The strike is close to full, despite minor softness on the sandal and a few of the oak leaves. The surfaces are virtually unmarked, but a tiny dark spot in the left (facing) gown, about even with the knee, provides a pedigree identifier.



*Ex: David Akers (1985).*

**David Akers Comments:**

The 1915 is another prime example of an issue that is "condition rare" but not necessarily "population rare." There are at least several thousand mint state 1915 double eagles in existence but the vast majority of them are in the lower uncirculated grades from MS60-64. At the gem level, however, meaning MS65 as I use the term here in my comments, the 1915 is definitely rare, similar overall to the 1911, 1912 and 1914 but not nearly as difficult to find as the 1913, the rarest of the early P-Mints in gem condition. It is also not as rare in MS65 as either of the two 1909 issues. However, the 1915 has a distinction that only two other issues in the entire series also have, namely that not a single example of the date has ever been graded above MS65 by PCGS. The 1913 and 1920 are the only other issues with this distinction and yet none of the three is typically thought of as one of the great rarities in the series but, of course, that is exactly what it means to be a condition rarity. At least for the 1915, there is one specimen that has been singled out among the other MS65 examples by PCGS as being premium quality for the grade and worthy of a (+) designation. That is the specimen graded MS65+ here in the Duckor Collection. When assisting Dr. Price and Dr. Duckor in assembling their double eagle sets I had an extremely difficult time finding a gem for either collection that would meet their standards. Several coins I came across technically qualified as gems but were not as attractive as a gem 1915 should be and usually is. With time, however, I located beautiful examples for both of them with this coin the one I have always considered to be the finest one I have seen. As I mentioned, the 1915 in gem condition should be lustrous and have good color since it is typically the best looking of all the early P-Mints. This coin goes way beyond the standard, however, and has exceptional overall eye appeal.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9167)

# 1915-S Double Eagle, MS66+
# Sole Finest at PCGS

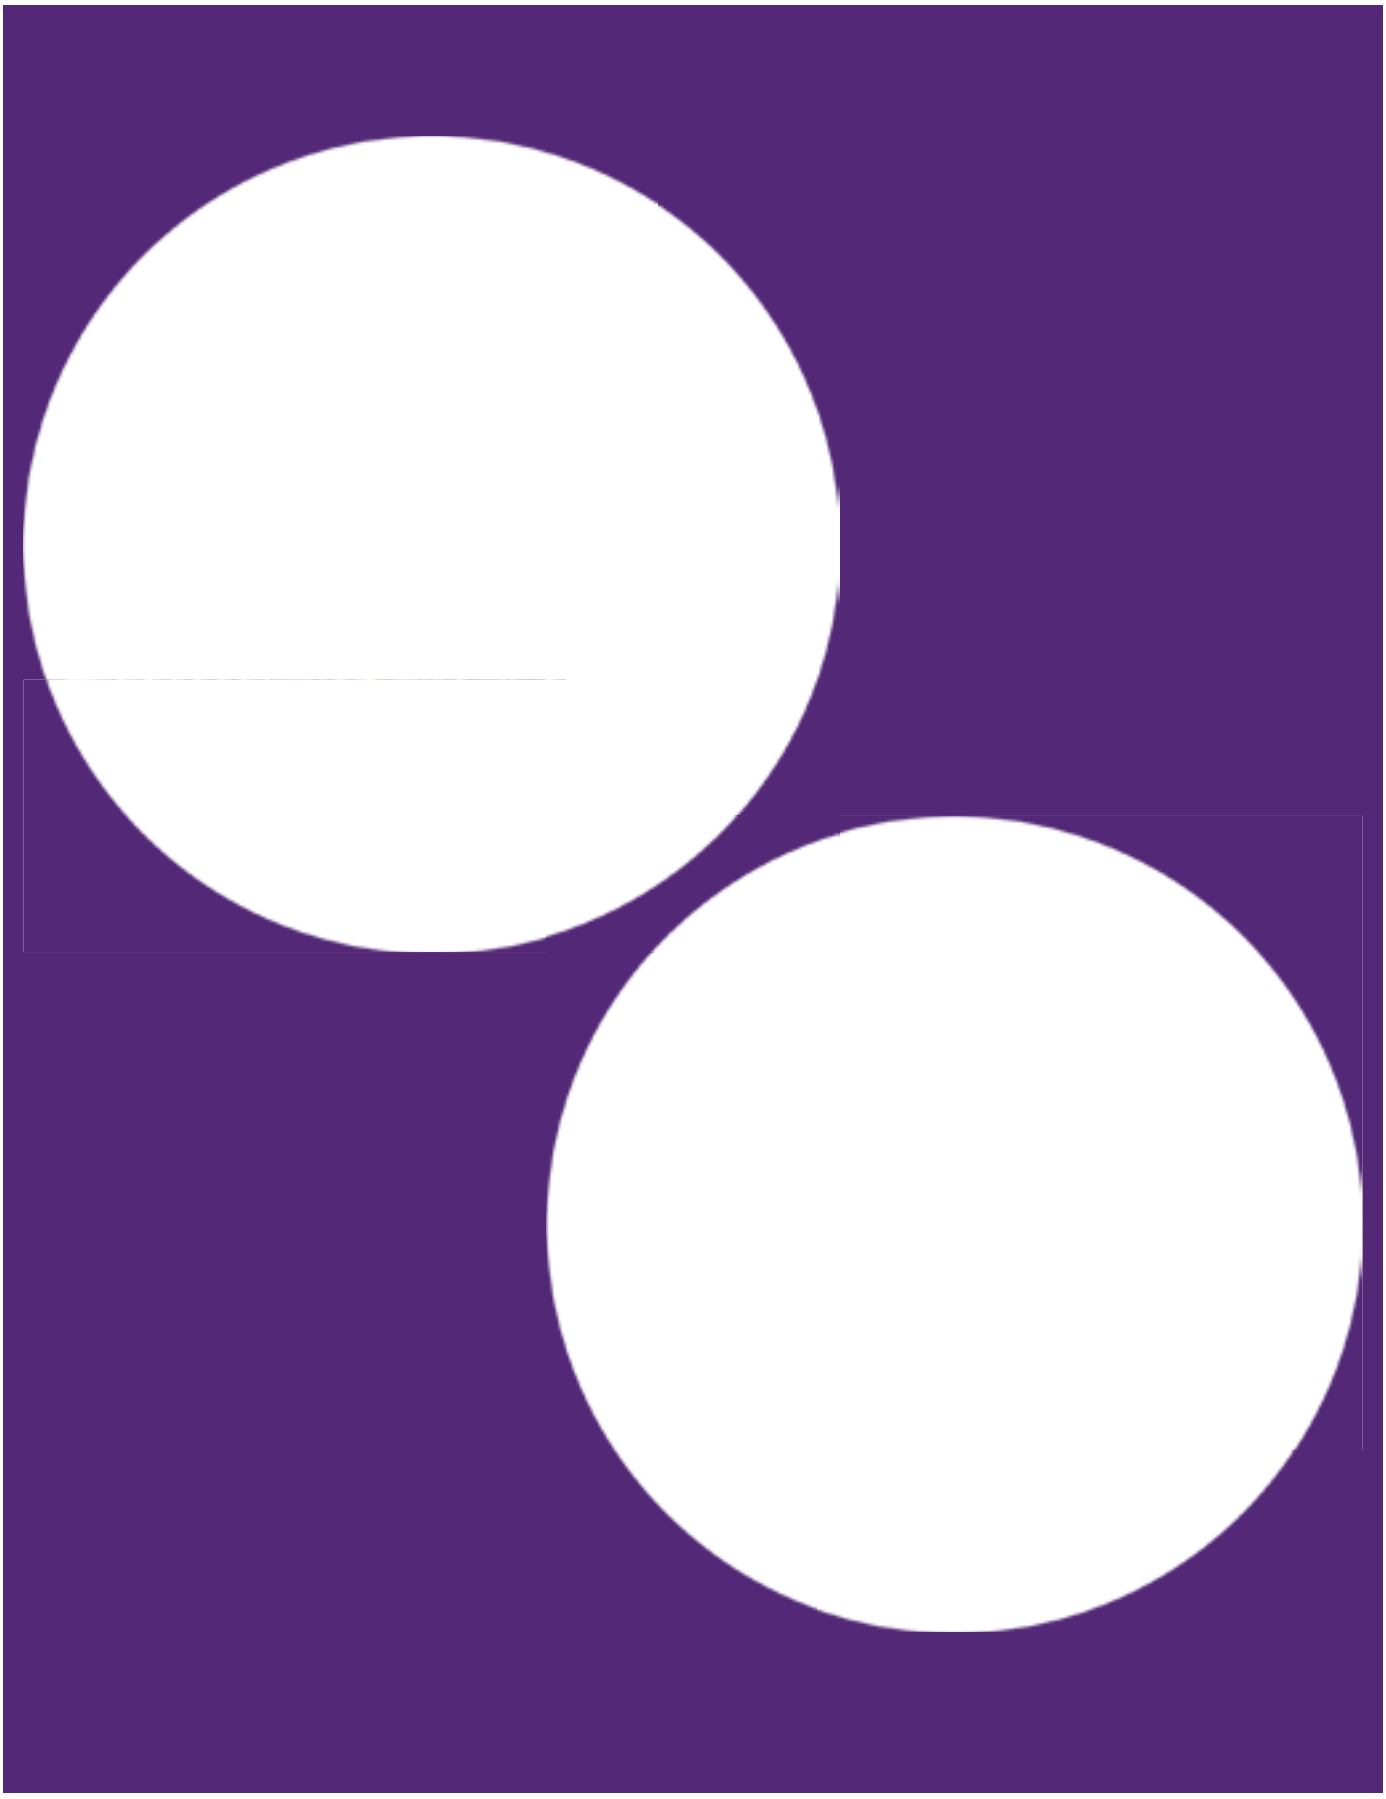
**4626** **1915-S MS66+ PCGS Secure. CAC.** Ex: Duckor/Akers. There was a time, not so long ago, when the 1915-S was a true archetype of the series for collectors desiring a mintmarked Saint-Gaudens issues from the teens. Examples of the 1915-S (and for that matter, the 1916-S, which has a similar rarity profile although a touch rarer grade for grade in Mint State) could be obtained for a few hundred dollars each in Mint State — usually the lower reaches of Mint State, as bagmarks can be a problem for the issue.

The 1915-S twenty dollar issue had a nominal mintage for the time and mint of 567,500 pieces, one that, like many of its S-mint brethren from the same time period, actually circulated to some degree in the nation's far West. Although double eagles were scarcely seen in the East, the hard-money West saw the gold coins circulate up until World War I, when hoarding and a Mint hiatus in striking the coins both conspired to remove them from the channels of commerce.

Examining the *PCGS Population Report* reveals that the 1909-S through 1916-S Saint-Gaudens issues each show considerable survival in the circulated grades, to the extent of several hundred pieces at each service for each issue, with the 1910-S, 1914-S, and 1915-S most often seen. Only five years ago, writing in the winter/spring 2005 *Numismatic Sun* magazine, Q. David Bowers said this about the 1907-1916 Saint-Gaudens issues:

> "Remarkably, nearly all [except for the MCMVII High Relief] of the other issues from 1907 through 1916 can be collected in Mint State for less than $1,000 each. Choice and gem Mint State can be another situation entirely, and several different varieties, readily enough available in, say, MS-63, become very elusive in MS-65 or MS-66. ..."

How times have changed. The intrinsic or melt value of any Saint-Gaudens double eagle, even in circulated condition, is north of $1,500.



The Mint State populations of the 1915-S, as with some other series issues, have also been augmented by the discoveries of several large hoards during the last few decades, coins that largely fall into the MS60-MS64 grade range. Most of those Uncirculated coins likely saw long-term bag storage that has created the characteristic tiny bagmarks that average survivors are noted for — contact marks that keep the coins from higher Mint State grades, regardless of how excellent the strike and luster may be.

Nonetheless, all of the foregoing only serves to put circulated and lower-Mint State examples of the 1915-S into some historical context — but this is far from an average survivor of this generous issue. Unlike the vast majority of examples, the present MS66+ example is virtually abrasion-free, immediately setting it far apart from even most Mint State survivors. The surfaces are fully struck throughout. Deep reddish-orange obverse color and rich, rolling cartwheel luster overall contribute to stunning eye appeal, yielding to even deeper color on the reverse. This piece, like numerous other examples in the Duckor Collection, is a "pop 1/0" coin, the single finest certified by PCGS with none finer (10/11) — a coin with enormous potential and sure to attract serious attention from multiple bidders.

*Ex: David Akers.*

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9168)

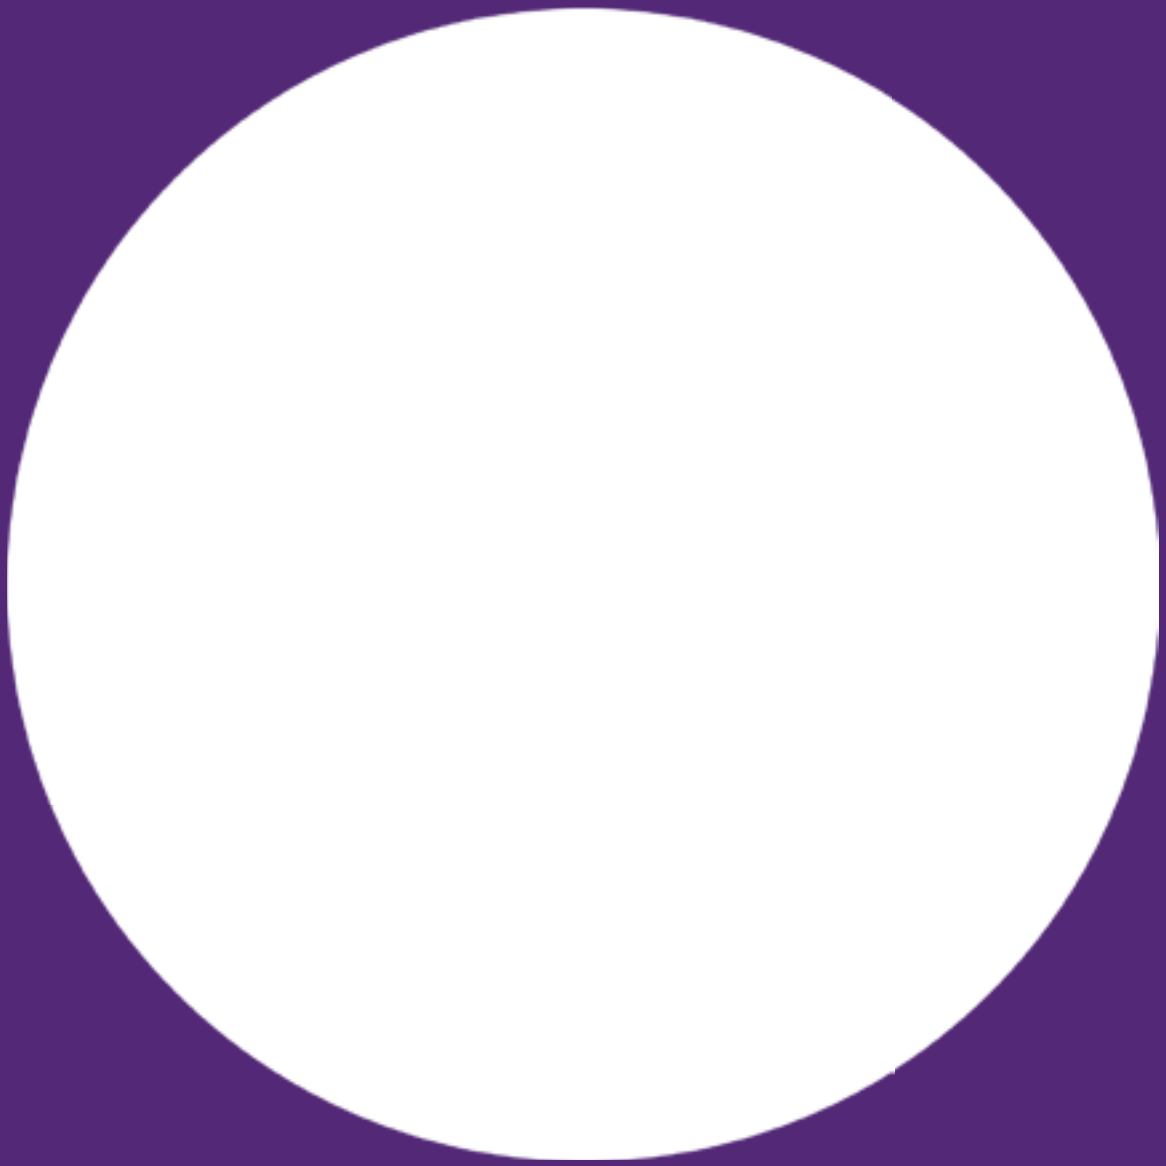
# 1916-S Double Eagle, MS66
# Tied for Finest at PCGS
# Final Issue of the Teens

**4627** **1916-S MS66 PCGS Secure. CAC.** The 796,000 double eagles struck at San Francisco in 1916 were the only twenties struck that year, and the last of that denomination coined during the decade of the teens. (The next examples of the type would come in 1920, at Philadelphia and San Francisco.) At one time, the 1916-S was considered the second most plentiful mintmarked issue of the early series of Saint-Gaudens double eagles. However, the issue ranks in the middle of 15 issues today. Seven early mintmarked issues have higher total PCGS populations than the 1916-S, and seven others have lower total populations.

PCGS has certified 4,527 examples (10/11) of the 1916-S in all grades, from a low of VF30 to a high of MS66. Like many other early issues, nearly all certified pieces grade no lower than AU58, with only 53 coins graded below that level. As is the case with many other early issues in the series, the data tells us that the 1916-S never entered circulation. Most examples available to collectors today came from several large hoards. Those hoards included coins originally exported to Central America that were returned to the United States in the early 1980s.

David Akers explained in 1988 in *A Handbook of 20th-Century United States Gold Coins 1907-1933:*

> "Several hoards totaling thousands of Mint State pieces have been dispersed over the past two decades. In 1983, a group of over 4,000 Mint State examples was discovered in Central America, and many of the pieces graded in the MS-63 to MS-65 range. As a result, the 1916-S is now a relatively common issue in any Mint State grade up to and including MS-65."



Like the 1912, the 1916-S is a single-mint issue, having no counterparts from the other operating mints of its day (Philadelphia and Denver). For that reason, the 1916-S experiences greater demand than the other Saint-Gaudens double eagles of the decade of 1910-20. That demand comes from date collectors who seek one example per year, as well as the traditional collectors seeking complete sets.

The present Premium Gem Duckor specimen is tied for the numerically finest that PCGS has certified. (Although PCGS has certified more than 120 submissions at the MS66 grade level, no 1916-S has ever achieved even MS66+, much less MS67.) The surfaces feature deep orange- and lilac-gold in the centers that is deepest at the bottom obverse, with jade-green nearer to the rims on each side, creating a stunning two-toned effect. The strike is boldly impressed while stopping short of full, displaying minor weakness at the lower obverse on the oak leaves and Capitol. A few minor marks are scattered across Liberty's midsection. The reverse shows fewer tiny abrasions along with equally bold coloration. This is an incredible coin that should forever dispel some collectors' belief that original gold coins do not tone.

(#9169)

**1920 MS65 PCGS SECURE**

**1920 MS65 PCGS SECURE**

# Gem 1920 Twenty Dollar, Single Finest at PCGS
# An Underrated, Condition-Dependent Gold Rarity
# Ex: Eliasberg Collection

**4628** **1920 MS65 PCGS Secure.** Ex: Eliasberg/Duckor. The 1920 Saint-Gaudens double eagle is the first issue in the series produced since the singleton 1916-S, after which the series would go on hiatus. The 1920 issue accordingly serves as a natural dividing line in the series, ushering in the decade of the Roaring Twenties. The mintage of the 1920 Philadelphia twenties was a rather low 228,250 circulation strikes, and the last matte or sandblast proofs of the series had been struck five years earlier, in 1915.

The 1929 and 1930-S issues offer a similar line of demarcation, one particularly stark within the series, as the 1928 is extremely common, the 1929 is extremely scarce (yet still a key date, but more are known today than in decades past), and the 1930-S is among the rarest of the late-series issues through the 1932.

Although the 1920 Philadelphia issue is the introductory date in a new decade, it must not be confused with the later common entries in the series, such as the 1922 and most especially the 1924 and 1928 Philadelphia pieces, which are by far the most prevalent P-mints of the decade in the highest Mint State grades such as MS66 and MS67, and even the occasional MS68. (The legendary Wells Fargo Hoard accounts for the enormous number, well into the many thousands, of 1908 No Motto Saints in MS66, MS67, and higher.)

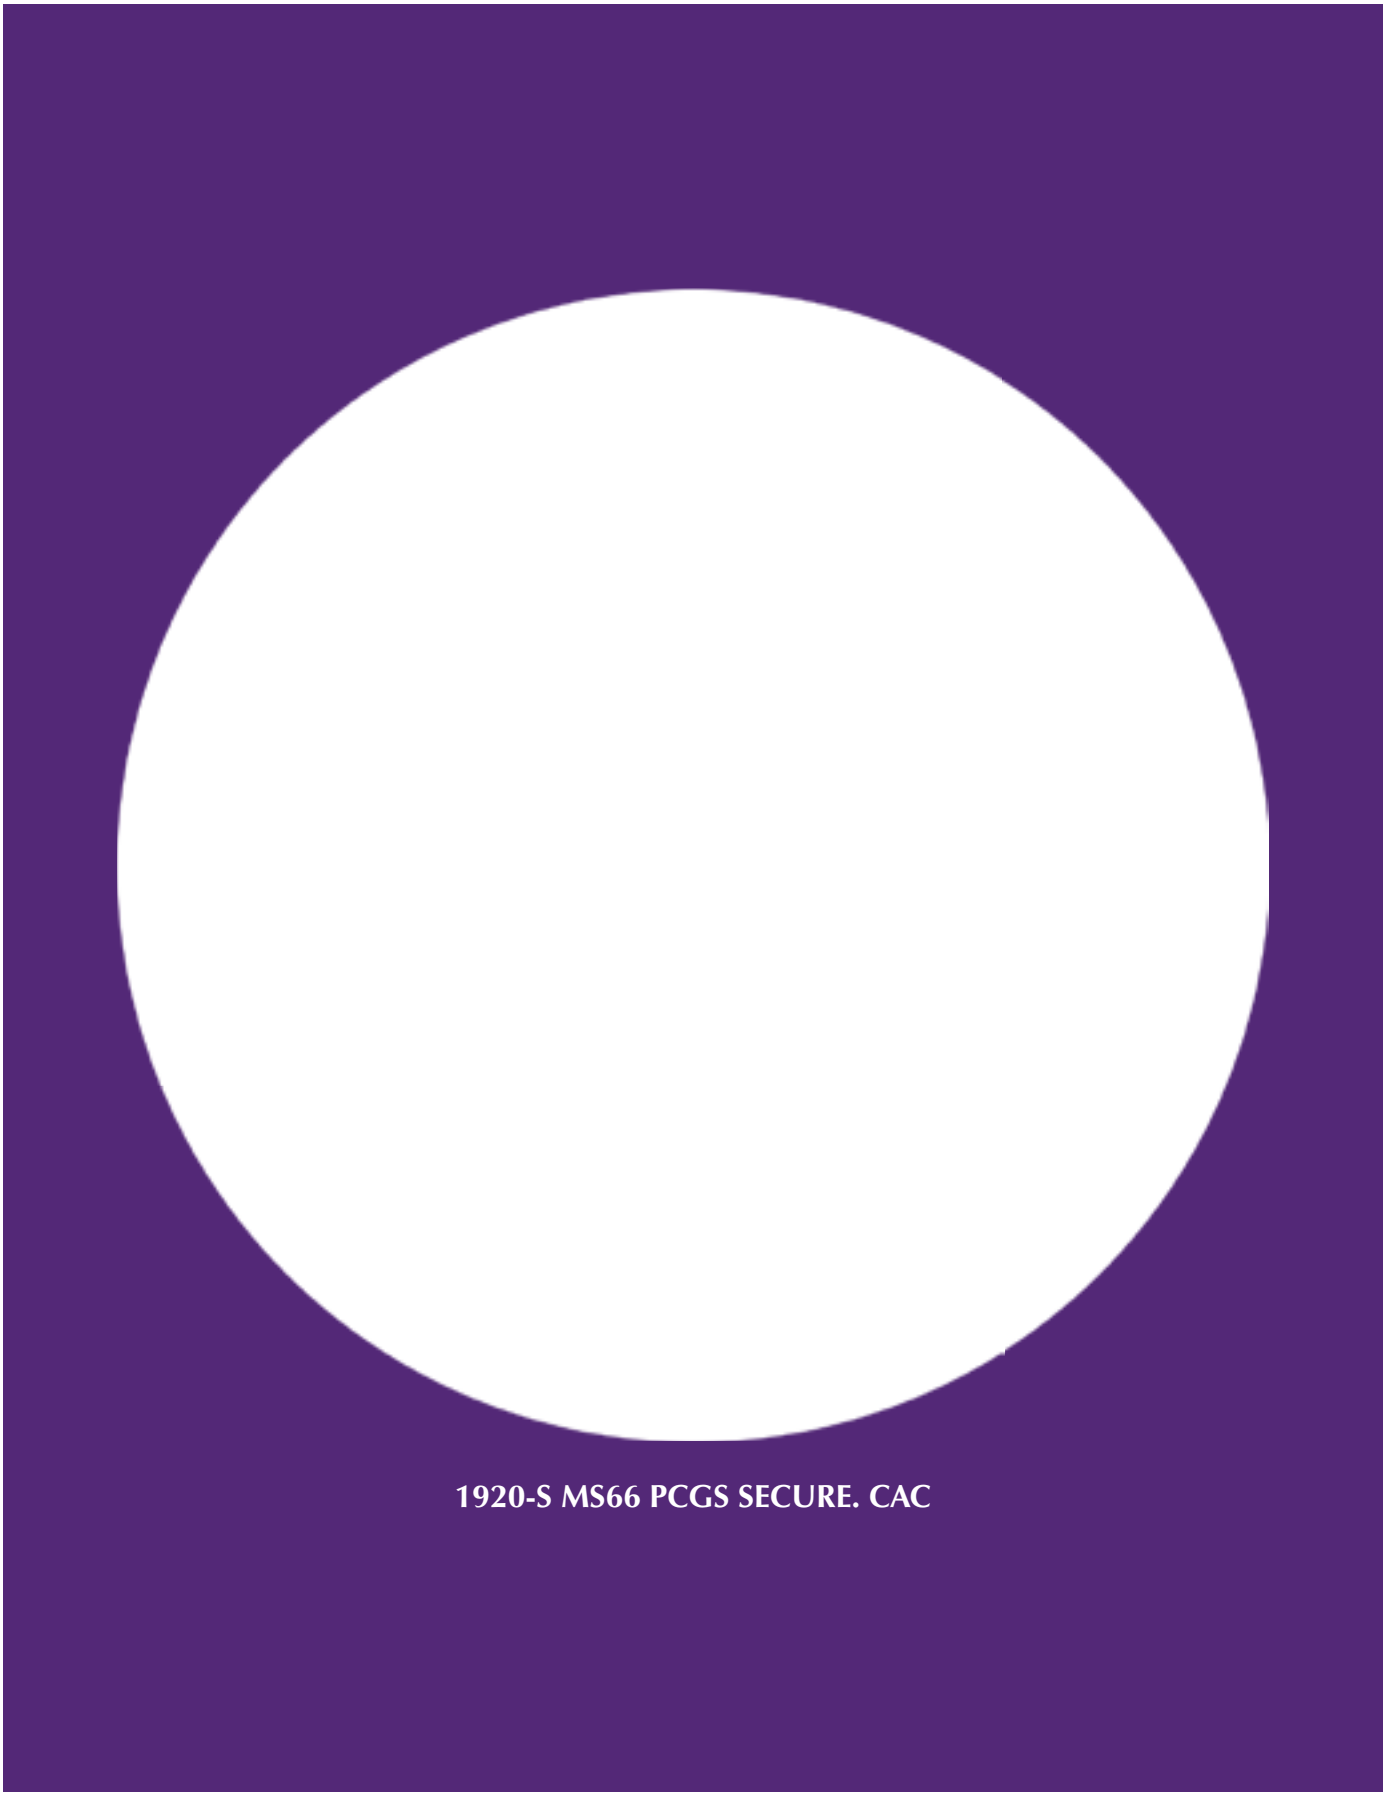
In point of fact, the 1920 is a much scarcer coin that its P-mint siblings from later in the 1920s. Research by Roger Burdette has shown that, despite the 1920 date, the 1920 Philadelphia double eagles were not released until March 20, 1926 — a fascinating tidbit given that the Mint had made no double eagles previously since the 1916-S issue. PCGS has certified many thousands of examples of the 1924 and 1928 issues in MS66, and several dozen each in MS67, in marked contrast to the 1920.

In cataloging the Dr. Thaine B. Price Collection (5/1998), David Akers wrote of lot 99, a Choice Uncirculated 1920:

> "This is one of the most intensely condition dependent issues of the series, very common in Choice Uncirculated or lower grade, but rather rare at the Very Choice Uncirculated level, and all but unobtainable in Gem condition with no more than a few such specimens in existence. As such, a strong case could be made that the 1920 Double Eagle is one of the most, perhaps even the most, underrated condition rarities of the four U.S. Twentieth Century gold series."

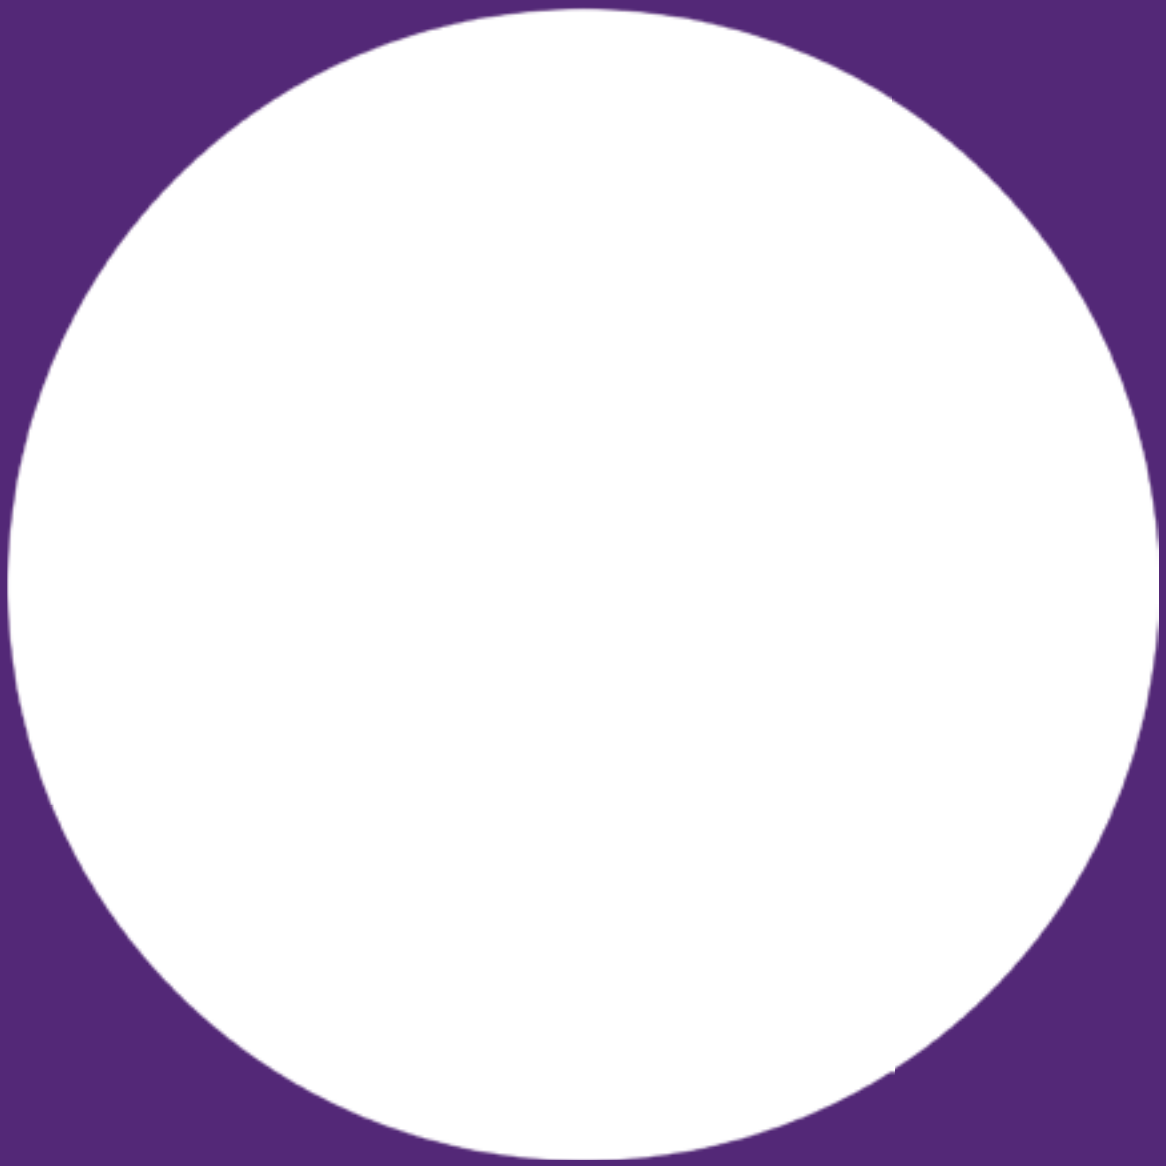
The situation today, 13 years after the Thaine Price auction, is little different. Despite the low mintage, the 1920 Saints are available in the lower Mint State grades through MS64, before suddenly becoming quite rare at the Gem level of the present piece. The present MS65 PCGS piece is another "pop 1/0" in the Duckor Collection, the sole finest certified with none graded higher at PCGS (9/11).

Greenish-gold and orange-gold compete for space on each side of this fantastically beautiful Saint-Gaudens, pedigreed to the Eliasberg Collection. The strike is close to full despite minor weakness on the sandal and the rock just below, one of the more strike-challenged areas of Saint-Gaudens' brilliant design. A few linear marks on Liberty's left (facing) leg and the sun's rays nearby are in keeping with the Gem grade but scarcely dampen the incredible appeal. The reverse shows similar coloration and equal eye appeal.



*Ex: Louis E. Eliasberg, Sr.; Eliasberg Estate (Bowers and Ruddy, 10/1982), lot 1050; David Hall.*

**David Akers Comments:**



The 1920 is the ultimate standard by which we judge a coin to be a "condition rarity," at least among the issues of the Saint-Gaudens double eagle series. As a date, the 1920 is not even remotely close to being rare. Thousands exist, nearly all of them in AU or uncirculated condition. Even choice and very choice uncirculated examples exist in rather large quantities and can easily be obtained at almost any time. Above the MS64 grade level, however, there is virtually nothing, perhaps only this single specimen. At least it is the one and only 1920 Saint ever graded MS65 by PCGS and although NGC has graded a couple of others in gem as well, many numismatists have long felt that this coin here in the Duckor collection is the only 1920 Saint that a consensus of experts in the series, including myself, would agree is a real gem. Nothing has been graded higher or ever been rumored to exist. The 1920 is perhaps the most underrated of all Saint-Gaudens double eagles in gem condition.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9170)

**1920-S MS66 PCGS SECURE. CAC**

**1920-S MS66 PCGS SECURE. CAC**

## Premium Gem 1920-S Saint-Gaudens Twenty
## Extraordinary Rarity and Quality
## Tied for Finest Certified

**4629** **1920-S MS66 PCGS Secure. CAC.** Coins that appear on the numismatic scene unexpectedly have a special cachet and mystery, much like buried treasure. Numismatists prize these "fresh" examples far above the run-of-the-mill pieces that are offered at one auction after another in quick succession. Like many coins in Dr. Duckor's collection, this delightful Premium Gem has no recent auction appearances, and present-day collectors will be amazed at its technical quality and spectacular eye appeal. This piece was discovered in an old-time collection around 2006 and sold to Dr. Duckor in a private treaty transaction. We have been unable to trace its last public offering, and series enthusiasts will be excited to see it offered for the first time in many years.

The present coin is a magnificent Premium Gem, with vivid orange-gold surfaces that display a few highlights of lilac and green. The mint luster is vibrant and frosty, creating extraordinary visual appeal. The design elements are sharply detailed throughout, with just a touch of flatness on the stars below the Capitol. The surfaces are free of significant distractions, but a shiny mint-made depression can be observed between two of the obverse rays, and a small luster graze on the sun could serve as a pedigree marker. This coin is tied with one other MS66 example at PCGS for the title of "Finest Certified" (10/11). Altogether, this piece is one of the most attractive and important coins in the remarkable Duckor collection.

The 1920-S is the first date in the series to owe its rarity to the great Gold Recall of 1933. The recorded mintage of 558,000 pieces should have ensured future generations of collectors an ample supply of high-grade coins to choose from, but such was not the case. The 1920-S is the fifth rarest issue of the 53-coin series in terms of number of specimens known, and it occupies the third spot in terms of high-grade rarity. The great majority of the coins were stored in Treasury vaults as backing for gold certificates, and few examples escaped the mass meltings of the mid-1930s.

A small number of coins were undoubtedly released into circulation, as the 1920-S is one of the few double eagles from the era that is seen nearly as often in circulated grades as it is in Mint State. The June 1920 edition of *The Numismatist* records that 15,000 double eagles were struck in April 1920, the first double eagles struck at any mint since 1916. It would be logical to assume this small emission was in response to a need for coins in the local economy, while the larger deliveries later in the year would have served as currency reserves, but that is uncertain. Unfortunately, *The Numismatist* does not specify if these coins were from Philadelphia or San Francisco. New research by Roger W. Burdette reveals that no Philadelphia 1920 double eagles were released into circulation until March 26, 1926, so if the April delivery was intended for circulation, it must represent San Francisco coins. The remnants of this small delivery would then represent the circulated examples of the 1920-S we know about today. Further research is needed to confirm the theory.

Some resourceful numismatists succeeded in acquiring specimens of the 1920-S directly from the Mint at the time of issue. Others relied on inside connections with Mint officials or Treasury Department personnel. Two collectors who followed this practice were Connecticut State Senator William Henry Hall and his friend George Seymour Godard, the Connecticut State Librarian. Godard and Hall often obtained their coins through Dr. Thomas Louis Comparette, the curator of the Mint Cabinet, and many of those pieces were acquired for the collection of the Connecticut State Library, where they can be seen today. It would not surprise us to learn that the present coin, with its unparalleled quality and appearance, was originally obtained through connections at the Mint or the Treasury Department.

Unlike some dates of the series, only a few specimens of the 1920-S have turned up in European holdings over the years. Appearances have been few and widely scattered, with no significant number of pieces recovered from foreign sources at any time. The supply of high-grade specimens remains small today, with different experts estimating the surviving Mint State population in the range of 40-75 pieces. In higher Mint State grades, the 1920-S is even rarer. PCGS has certified only two coins in MS66, with another four in MS65, one in MS64+, and 11 examples in MS64 (10/11). We have compiled a roster of all specimens graded MS64 and above that we are aware of from a search of auction records over the last 15 years. We can account for only 16 pieces that grade MS64 or finer, and two of them are in institutional collections. Clearly, the chance to acquire a specimen of this quality will only occur rarely, and we doubt that any other example of this rare date could bestow the pride of ownership this specimen will provide some determined collector.

**1920-S Double Eagle Roster, MS64 and Finer Specimens.**

**13. MS64+ PCGS Secure. CAC.** Simpson Collection; ANA Signature (Heritage, 8/2010), lot 3622, realized $161,000.

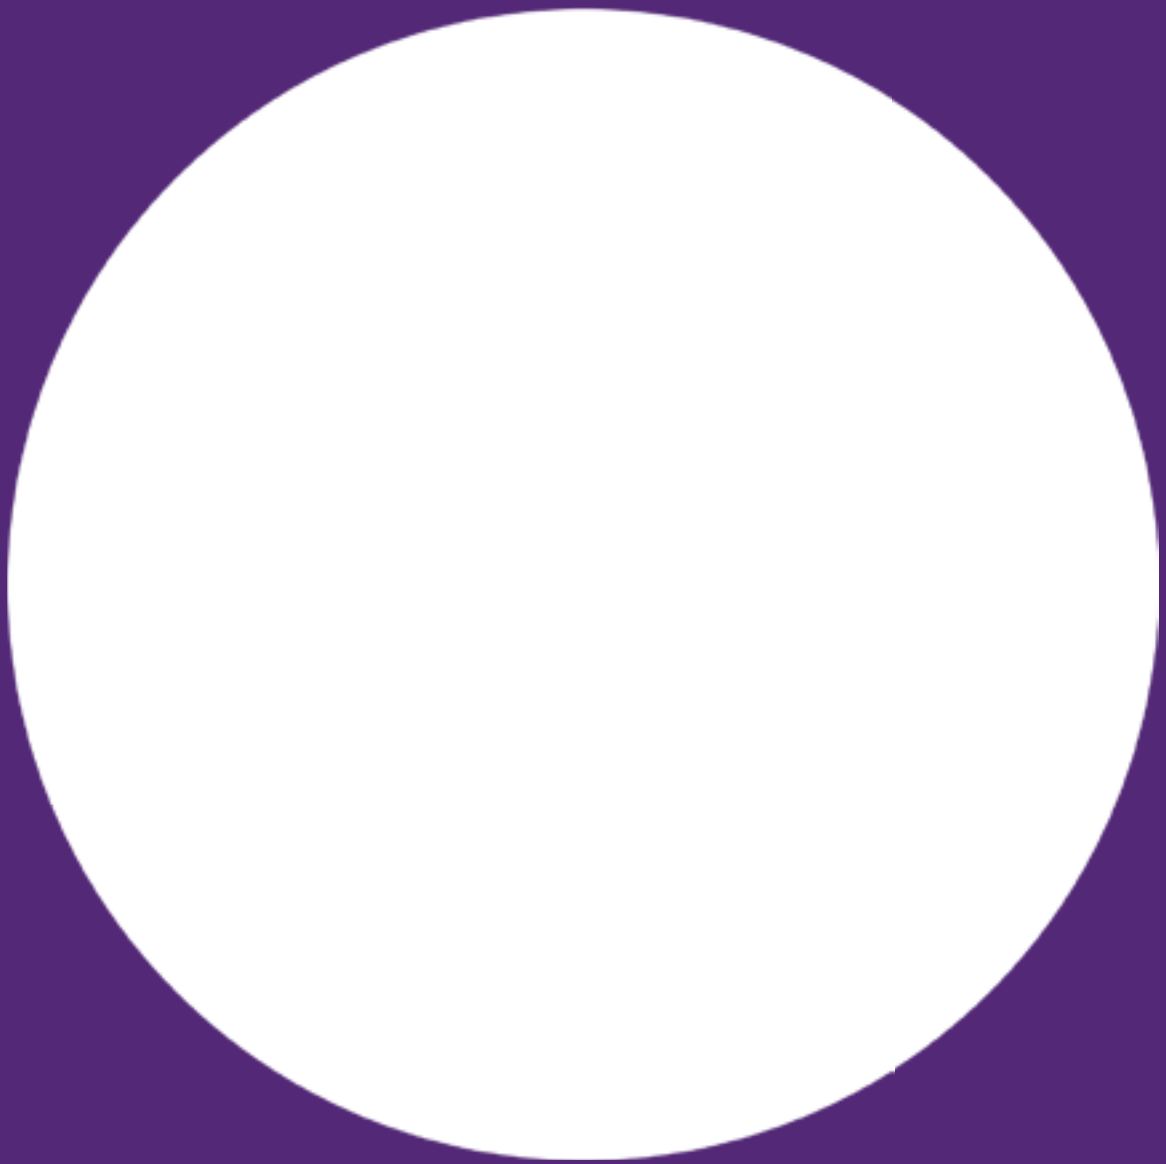
**14. MS64 Secure PCGS.** Chicago Signature (Heritage, 8/2011), lot 7699.

**15. MS64 Uncertified.** The example in the National Numismatic Collection at the Smithsonian Institution.

**16.** A specimen in the ANS Collection, reported to be a "superb gem" by Jeff Garrett and Ron Guth.

**David Akers Comments:**

This is the third most valuable collectible regular issue of the series in all grades, exceeded by only the 1927-D and 1921. Not surprisingly then, it is one of the most important coins by which the quality of any set of Saint-Gaudens double eagles is ultimately judged. The 1920-S is not the third rarest issue in the series in terms of total population rarity, however, since there are many more examples of this issue in existence than there are of the 1930-S and 1932 although most of them are EF, AU and the lowest uncirculated grades below MS63. While the half million plus mintage of the 1920-S is less than that of most of the other rarities of the 1920's, like the others this issue was not really intended for general circulation. However, the number of circulated examples around shows that at least some small quantities were released into public hands, and other modest quantities were also sent to Europe between 1926 and 1933, probably in mixed date, mostly circulated bags (same for the 1921). I doubt if any single date bags of uncirculated 1920-S double eagles were ever sent overseas since no large quantity or even small groups of uncirculated 1920-S Saints were ever returned to the U.S., just the occasional circulated or minimal uncirculated specimen. Paul Wittlin, the European buyer for James Kelly and later Paramount, searched more than 20 years for rare and scarce date U.S. gold coins in Paris and Swiss banks and acquired some amazing things yet managed to find only the occasional single AU or uncirculated 1920-S double eagle, never any quantities of uncirculated pieces and not a single one that was really nice, like MS63 or better. So it is my opinion that the known population of the 1920-S has not materially changed in decades and nearly all of the specimens in the hands of collectors and dealers today, and certainly all of the better grade ones, were most likely the ones known in the 1940's. That is probably why the 1920-S was considered only rare at that time but not really one of the major rarities of the day. Since then the 1920-S has risen to the top of the rarity pyramid of Saint-Gaudens double eagles, not because it has been found to be more rare than originally thought but rather because all of the others ahead of it at that time (except the 1921) were subsequently found in sufficient quantities to prove them less rare.



It is in the grades of choice uncirculated and above that the 1920-S really makes its case as a major rarity today. Relatively few grade as high as MS63 and MS64, perhaps only 25-35 pieces between the two grades combined and, in gem MS65 condition, no more than 6-8 are known, if that many when strict grading is applied, including the Jeff Browning (Dallas Bank Collection) specimen as perhaps the finest of that grade group. Only two MS66 examples have been graded and both have been owned by Dr. Steven Duckor. He and I attended the Eliasberg sale together in 1982 when he bought the first of the two coins. The Eliasberg coin was very conservatively graded MS63 but it was obviously a gem with great color, luster and eye appeal. It subsequently was graded MS66 by PCGS. Almost 20 years later, Dr. Duckor decided to sell the coin because he received an offer for it that was simply too good to turn down. He didn't expect to ever own another 1920-S again, but fortunately, some years later, he had the opportunity to purchase the 1920-S now offered here with his collection, also graded MS66 by PCGS. In my opinion, his current MS66 coin is clearly finer than the Eliasberg specimen he previously owned even though they are both in holders with the same technical grade. I believe that this coin is actually deserving of a (+) designation at the very least and that it is every bit as superb as any of the other MS66+ coins in his set, if not finer.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

**1921 MS66 PCGS SECURE**

**1921 MS66 PCGS SECURE**

# 1921 Double Eagle Rarity, MS66
# Probably the Finest Known Specimen
# Ex: Duckor/Godard

**4630** **1921 MS66 PCGS Secure.** Ex: Duckor/Godard. Extensive production of Morgan dollars in 1921, the first coins of that issue minted since 1904, and the eventual introduction of Peace dollars later in the year, meant that there was little time for the three operating mints to produce other coinage. In the midst of an economic recession, the balance of coinage production concentrated on smaller-denomination coins, especially cents and nickels. Philadelphia coined all of the minor and silver denominations from cents to dollars, totaling just under 100 million coins. Denver produced dimes, half dollars, and Morgan dollars with a total production of less than 22 million coins, and San Francisco coined cents, nickels, half dollars, and Morgan dollars, striking just under 40 million coins. The Philadelphia Mint double eagles, with a mintage of 528,500 pieces, were the only U.S. gold coins struck in 1921.

Among the coins of the U.S. federal series, only the rarest and most valuable can claim to have realized more than $1 million at auction. The 1921 Saint-Gaudens double eagle joined that elite fraternity on November 3, 2005, when Heritage sold the Morse specimen for $1,092,500. That coin was a spectacular MS66 PCGS example that most numismatists consider the finest known 1921 double eagle. On two later occasions, in August 2006 and September 2007, other examples of the date surpassed the million-dollar barrier, but the status of the Morse coin as "Finest Known" has never been seriously challenged, until now.

The present specimen was uncertified at the time of the Morse sale, having no auction appearances since 1984, so most collectors were unaware of its high quality. Dr. and Mrs. Steven L. Duckor include this magnificent piece in their current PCGS Registry Set. Dr. Duckor is both a connoisseur and an astute student of the Saint-Gaudens series, and he spent more than 33 years building his two sets. Needless to say, only the finest specimens found a home in his collection. When this coin was recently certified, PCGS awarded a grade of MS66, tied with the Morse coin for finest certified at either leading grading service. This coin is sharply detailed in most areas, showing just a touch of softness on the eagle's feathers. Close inspection reveals no mentionable contact marks with a few small dark color spots on the reverse, probably from grease strike-throughs. A few spidery die cracks can be seen among the obverse rays and the tops of the letters in LIBERTY. This coin possesses vibrant mint luster, vivid color, and tremendous eye appeal. It also lacks the large red alloy spots seen on the obverse of the Morse coin. This majestic specimen will bring great credit to any fine collection or Registry Set.

The present coin claims a provenance unmatched by any other 1921 double eagle and traces its history back to the day it was made. The 1921 has always been a challenging date, even at its time of issue. Coinage of double eagles was not a priority for the Mint in 1921, and no coins were struck until 90,000 pieces were delivered in November. Another delivery of 438,500 pieces was made in December, so the total mintage was quite respectable, but for most of the year collectors were unable to obtain specimens from any source. It seems the Treasury Department had these coins specifically struck to serve as currency reserves, and only a few specimens ever escaped from the Treasury vaults. That was a problem for George Seymour Godard, the Connecticut State Librarian, as one of his duties was to update the magnificent collection of coins donated to the state by Joseph C. Mitchelson in 1911. Godard ordered coins from all the U.S. mints every year to update the collection, but this proved impossible in the case of the 1921 double eagle.

Fortunately, Godard had a good relationship with Dr. Thomas Louis Comparette, curator of the Mint Cabinet, who had unusual access to coins from the Mint, including assay coins. Some of the dealings between Comparette and Godard would be viewed as highly irregular today. Their relationship was only recently discovered when Roger W. Burdette uncovered records of their correspondence in the archives of the Connecticut State Library.

Knowing of Godard's desire to obtain a 1921 double eagle, Comparette wrote on December 15, 1921:

> "Some [1921] double eagles are being struck here at the mint. Do you wish one? Also some Two Colono gold pieces have been struck here for Costa Rica. They are about the size of a gold dollar. Have you secured specimens?"

Godard replied the next day:

> "We [Senator Hall and Godard] both, too, desire to have specimens of the double eagles and of the two Colono gold pieces now being struck for Costa Rica."

Comparette experienced considerable difficulty obtaining the double eagles, as he related on December 22:

> "...up til now I have not been able to secure the Double eagles. I confidently expect to succeed, however, though it may not be until the last days of the year."

And finally on January 3, 1922:

"By express I am sending you two Double Eagles, two Dos Colones gold pieces, and four Peace dollars."

The foregoing suggests that Godard acquired two specimens of this rare-date directly from the Mint in early 1922, but this must have been a private transaction, as the 1921 never found its way into the library's collection. David Corrigan, the present-day curator of the Connecticut State Library, was kind enough to check the records of the library's collection and found no record of a 1921 double eagle ever being included there, the only date of the 1920s not represented in their remarkable collection. Perhaps Godard had to close out the appropriations account for 1921 before the coins became available, since they were minted so late in the year. In any case, Godard purchased the coin from Comparette for his own account, and not for the library. William Henry Hall, for whom Comparette customarily sent duplicate coins, was president pro tempore of the Connecticut State Senate at the time of his death in February 1922, and a good friend of Godard. His widow tried to maintain and update his collection for a short time after his death, and the second 1921 double eagle was presumably in her possession. When Mrs. Hall lost interest in the collection, Godard persuaded her to sell it to him for little more than face value. These events were unknown to the Stack's catalogers who cataloged the "Godard Collection" in Auction '82. Most of the coins in that offering were originally from Senator Hall's collection. Thanks to Roger W. Burdette for generously sharing his findings on this matter.

Godard controlled both specimens purchased from Comparette after he secured Senator Hall's collection, and one of them, the present coin, appeared in Stack's session of Auction '82. A second Premium Gem, the finest of the Morse coins, surfaced in a Stack's sale in March the same year. It is tempting to speculate that the specimen in that sale is the other piece obtained through Comparette, but direct evidence is unavailable at this time.

As can be seen from the roster below, the 1921 double eagle is extremely rare in high grade. A few coins must have been released into circulation, as this date is seen more often in circulated grades than Mint State, unusual for a Saint-Gaudens double eagle. The great majority of the mintage was undoubtedly melted after the Gold Recall of 1933, and no significant number of specimens have been recovered from European holdings. Experts estimate a surviving population of only 40-60 examples in all Uncirculated grades, with most in the MS60-MS63 range. Population data on high-grade specimens coincides well with our roster below. PCGS has certified only two coins in MS66, one example in MS65+, and three pieces in MS64; NGC has graded only a single specimen in MS64, with none finer (10/11).

The following roster contains all examples of the 1921 double eagle graded MS64 and above known to us. There are nine confirmed specimens, of which seven are in collectors' hands. Clearly, this offering is incredibly important to series specialists, as a comparable example may not become available for many years.

**1921 Double Eagle Roster, MS64 and Finer Specimens.**

1. MS66 PCGS. Dr. Thomas Louis Comparette; George Seymour Godard; possibly Senator Hall's widow, before Godard purchased his collection; Godard Collection; Auction '82 (Stack's, 8/1982), lot 447, realized $32,000; Premier Sale (Superior, 1/1984), lot 1875, realized $57,500. **The present coin.**

2. MS66 PCGS. Public Auction Sale (Stack's, 3/1982), lot 1471, realized $41,000; Crawford Collection; Phillip H. Morse Collection (Heritage, 11/2005), lot 6644, realized $1,092,500.

3. MS65 PCGS. Louis E. Eliasberg, Sr.; United States Gold Coin Collection (Bowers and Ruddy, 10/1982), lot 1052, realized $28,600; Dr. Steven L. Duckor; Jay Parrino (1990); Phillip H. Morse Collection (Heritage, 11/2005), lot 6645, realized $805,000, Simpson Collection.

4. MS65 PCGS. Belden Roach Collection (B. Max Mehl, 2/1944), lot 179; October Long Beach Sale (Heritage, 10/1994), lot 7207; Dr. Hesselgesser Collection (Ira and Larry Goldberg, 9/2007), lot 3524, realized $1,012,000; Pre-Long Beach Auction (Goldberg, 1/2010), lot 2629. Note: This coin is a match for the plates in the following offerings, but it is possible that Mehl used stock photos in these catalogs, a common practice in the 1940s and '50s: Dr. Charles W. Green Collection (B. Max Mehl, 4/1949), lot 791; Jerome Kern Collection (Mehl, 5/1950), lot 639

5. MS64 PCGS. ANA Signature (Heritage, 8/1997), lot 7883, realized $126,500; Dr. Richard Ariagno Collection (Goldberg, 5/1999), lot 896; Bradley Bloch Collection (Goldberg, 9/1999), lot 1940; Dr. Jon Kardatzke Collection (Goldberg, 2/2000), lot 1978.

6. MS64 PCGS. FUN Signature (Heritage, 1/1998), lot 8078; Public Auction Sale (Superior, 2/1999), lot 3564; Phillip H. Morse Collection (Heritage, 11/2005), lot 6646, realized $402,500; Kutasi Collection (Heritage, 1/2007), lot 3288, realized $373,750; Long Beach Signature (Heritage, 5/2007), lot 2772, realized $402,500; Baltimore ANA Signature (Heritage, 7/2008), lot 2106, realized $474,375; Chicago Signature (Heritage, 8/2011), lot 7701.

7. MS64 PCGS. FUN Signature (Heritage, 1/2010), lot 2315.

8. A specimen in the ANS Collection, purchased from the Mint in 1921. Reported to be a "superb gem" by Jeff Garrett and Ron Guth.

9. A specimen in the National Numismatic Collection at the Smithsonian, obtained from the Mint in 1921. Reported as MS66 by Garrett and Guth.

A. A second specimen purchased from Dr. Comparette by George Seymour Godard, the Connecticut State Librarian, for Senator Hall's collection, possibly the Morse coin in number 2 above. Since the two coins purchased by Godard came directly from the Mint, it would make sense if they represent the two finest pieces known today, but it is impossible to prove this theory without more documentation.

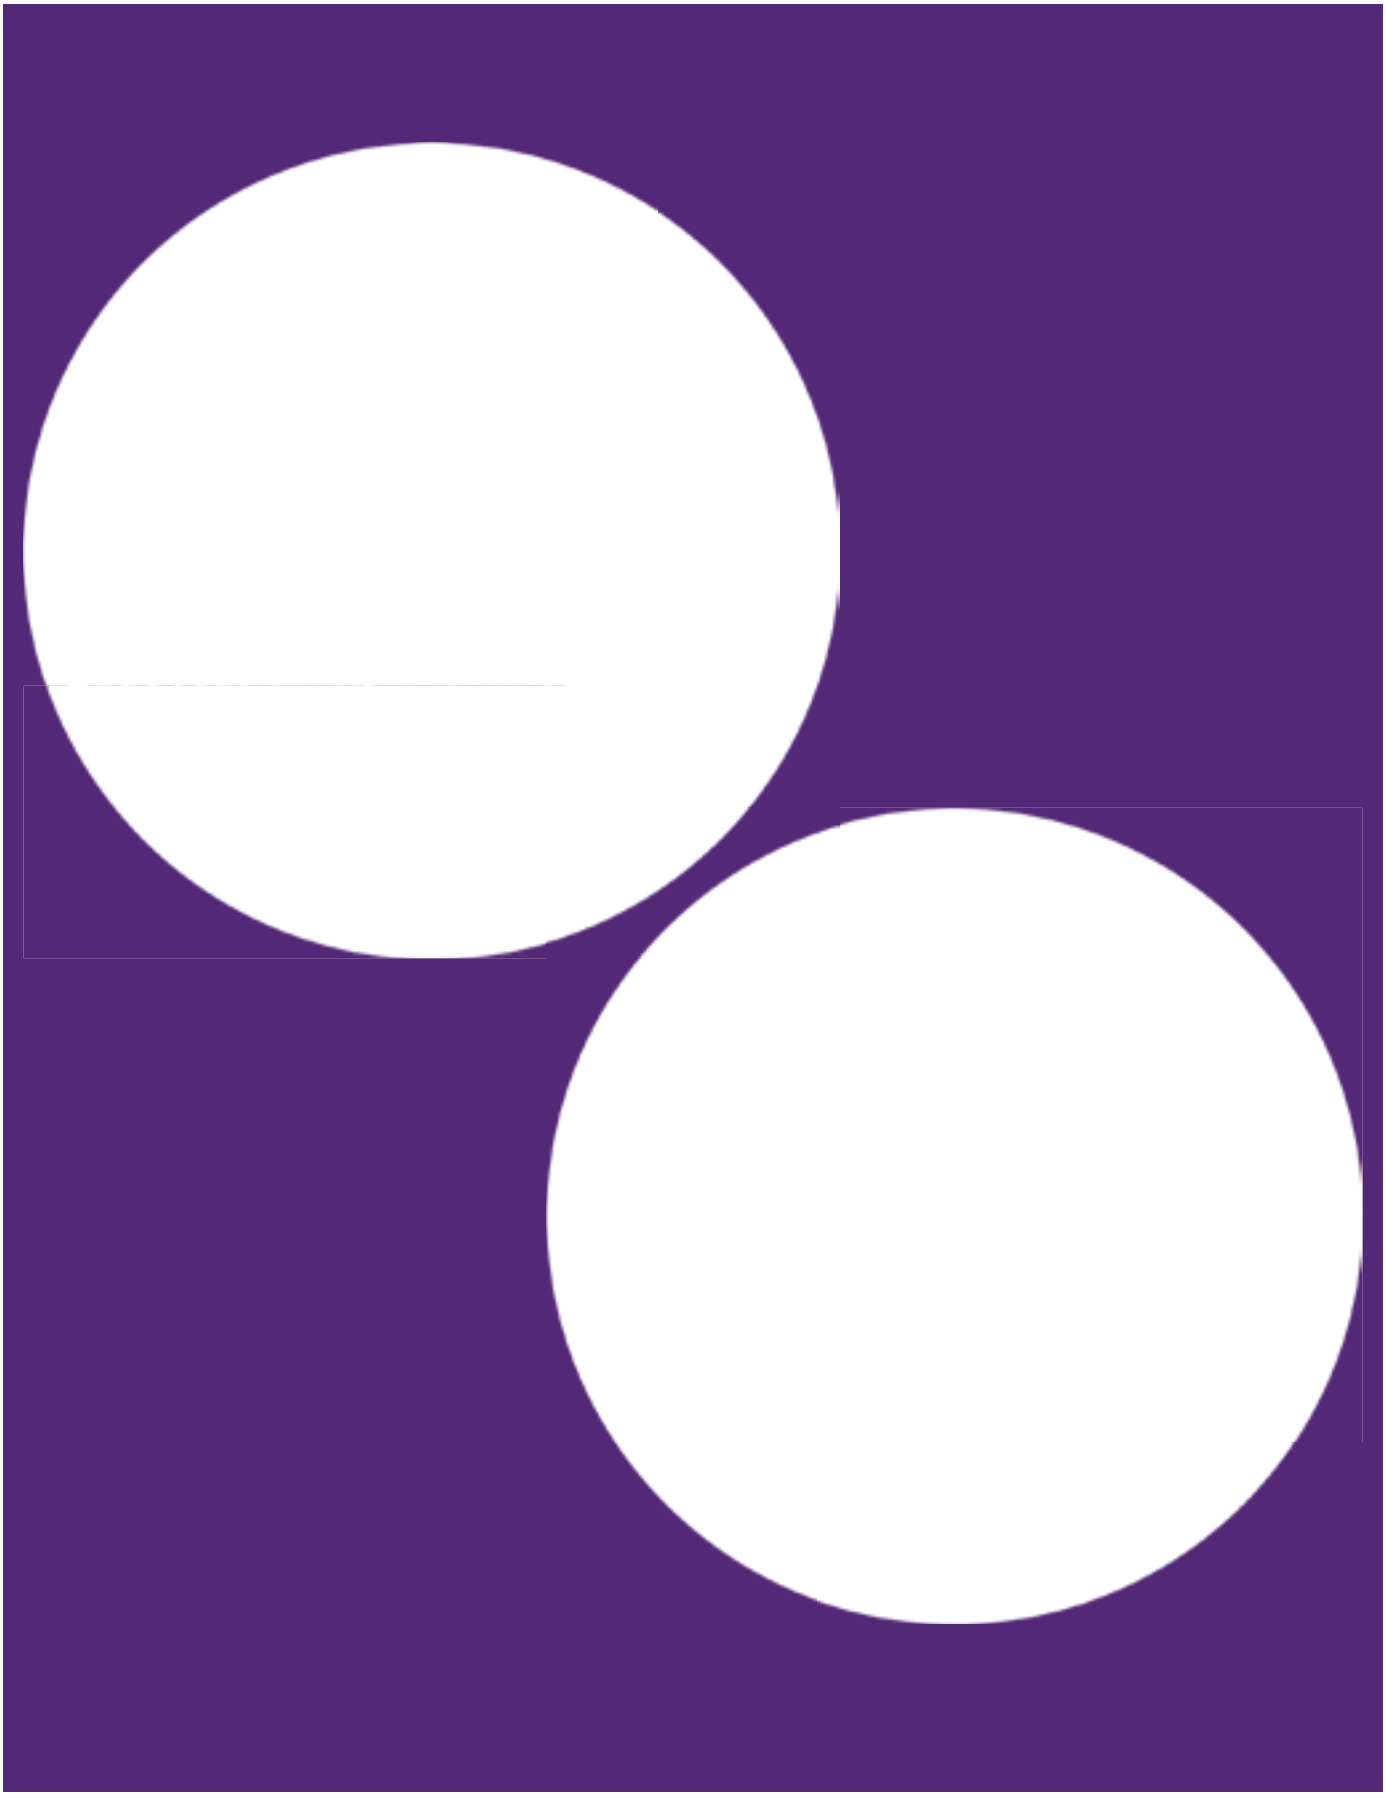
Proofs: The 1921 Saint-Gaudens double eagle is one of the few series issues known in proof format. While proofs are usually considered in a separate category from business strikes, we include these appearances in the roster for the sake of completeness, and because of the extraordinary interest in these pieces.

1. A specimen in the possession of Mint Director Raymond T. Baker, struck to commemorate the birth of his nephew, Joseph Baker, in 1921. Described as a "Proof Roman Finish Presentation Striking" by Sotheby's in their catalog of 6/2000. The coin realized $203,500.

2. SP64 NGC. Another presentation example in the possession of Brian Hendelson, Classic Coin Company, exhibited at the 2010 ANA World's Fair of Money in Boston. Since the NGC Census shows only one presentation example, and none have been certified at PCGS, this piece may be another appearance of the coin listed above, but this example is described as "not known to exist until 2006."

**David Akers Comments:**

The standing of the 1921 in the overall hierarchy of Saint-Gaudens double eagle rarities has changed less over the last seven decades than any other regular issue in the series. During that time, some issues have dropped precipitously from their place at the top (1924-S and 1926-S for example) and others have risen substantially (1920-S, 1930-S and especially 1927-D) but the 1921 has always been recognized as being among the top four rarities of the series, both 70 years ago and today, at least with respect to value. The only thing that has changed is the other three coins with it at the top. The 1921 is now considered to be the second most valuable regular issue Saint-Gaudens double eagle, surpassed only by the 1927-D whose extreme rarity was not recognized fully until the 1950s, at least in comparison to other issues in the series. Judged solely on its population rarity, meaning the total number of specimens known in all grades, the 1921 is certainly rare, but not exceptionally so, comparable overall to the 1920-S, but actually less rare than the 1930-S and 1932. However, as a condition rarity it is the unrivaled "Queen" of the Saint-Gaudens series because the condition at which it becomes extremely rare and valuable is lower than for any other issue. Of course, every Saint is a condition rarity at a certain level. For example, any issue is (or would be if one existed) a great rarity in MS68 or 69. For some issues MS67 is the rarity point, for others it is MS65 or MS66. But no issue, not even the 1927-D, is as difficult to locate in MS64 or higher grades as the 1921. Only four or possibly five specimens are known in the MS65 and MS66 grades combined with nothing finer. Even in the MS63 and 64 grades, the 1921 is a major rarity with no more than 12-15 examples known of those two grades combined.



The three best examples of this issue and probably the fourth one as well were always in collector hands in the U.S. in the 1940s and I would venture to say that all of the known MS63 and MS64 examples probably were as well. There are quite a few slightly circulated examples ("sliders") known as well as some heavily bagmarked, minimal uncirculated pieces, some of which have returned to the U.S. from European banks over the years. However, I am of the opinion that these were originally sent to Europe only in mixed date bags of circulated and uncirculated double eagles (same scenario for the 1920-S) between 1926 and 1933, and that no bags of uncirculated 1921 Saints were ever included in the European shipments. Paul Wittlin scoured European banks for more than 20 years and he had the best contacts in the Paris and Swiss banks of anyone. He uncovered numerous groups of rare dates over the years as well as some amazing individual rarities which were then shipped back to the U.S. to dealer James Kelly and later Max Humbert at Paramount. Shipments were still coming in regularly when I first started at Paramount in 1972. Undoubtedly Wittlin's greatest discovery was the second known example of the 1861 Philadelphia Paquet double eagle; he purchased it in Paris for $7,500 in the late 1960s. Although he did find the occasional 1921 and even a couple of small groups consisting of several pieces, he never found a single specimen that was as nice as choice uncirculated. They were all what Max Humbert, the co-founder of Paramount with James Kelly, called "lustrous EF," generally today's AU50-58 grades, or "lustrous AU" which were typically MS60-62 coins by current grading standards. I remember one shipment from Wittlin with four 1921 double eagles, all only "lustrous EF" to Max Humbert, as was the 1861 Paquet by the way! He only graded a gold coin "uncirculated" if it was very lustrous and minimally bagmarked as well as having no obvious friction or really severe marks. Who wouldn't like to buy from him today with that grading standard?

As mentioned earlier there are only four 1921 double eagles that grade MS65 or MS66 combined. A fifth may exist if it isn't actually the fourth as I conjecture. The best two are the George Seymour Godard specimens which were probably obtained by Godard directly from the mint in the year of issue. Both came on the market in 1982, an extremely depressed coin market at the time, and were sold by Stack's in separate sales. The first, sold in March 1982, was purchased by a dealer and ended up a couple of years later in the William Crawford collection when he purchased it from a Superior sale in 1984; it is now owned by a prominent East Coast Saint-Gaudens specialist. The second Godard piece was sold in Auction '82 as Lot 447 where it was described by Norman Stack as "A twin to, or marginally better than the example we sold in our March sale." (It is important to note here that to every cataloger, including Norman Stack and myself, if you are describing two equal coins in separate catalogs, the second specimen you are describing is always "marginally better" than the one you just sold; it's our nature.) In my opinion, the two Godard pieces are so close in both overall quality and general appearance that it would be difficult, if not impossible, to choose one over the other as "the best". Both are absolutely fabulous coins. This second example is the one now offered here as part of the Dr. Steven Duckor Collection. The third notable 1921 is the Eliasberg specimen, sold with his incomparable collection in late 1982. (Obviously, 1982 was the greatest year ever for buying a gem 1921 Saint!) I purchased the Eliasberg specimen at the sale and subsequently sold it to Dr. Duckor, who later sold it in 1993. It is now in the Simpson Collection graded MS-65+. Many coins, especially the Saints, were ultra conservatively graded in the Eliasberg sale, but the 1921 takes first place in that regard by a comfortable margin. It was graded "AU55 obverse, MS60 reverse" and realized $28,600. The fourth great 1921 known to me is the only one graded MS65 by PCGS and I feel it could easily have been given the same (+) designation that the Eliasberg specimen received or even graded MS66. I had never seen this coin prior to its appearance in the Goldberg's Dr. Hesselgesser sale in 2007, but the million dollar price it realized confirms its high quality. Could this specimen be the Belden Roach (Feb. 1944)-J.F. Bell (Dec. 1944)-F.C.C. Boyd (WGC 1946) coin? That coin was described in succession by the three most prominent auction houses of the era, B. Max Mehl, Stack's and Numismatic Gallery, as: a) "Brilliant Uncirculated. Perfect in every way.", b) "Brilliant Uncirculated, absolutely flawless."; and c) "A brilliant uncirculated gem". This was the only 1921 Saint ever so described and since it is obviously not one of the Godard coins or the Eliasberg specimen, it may be the coin sold by the Goldberg's in 2007 or it could be a fifth gem quality specimen.

After selling the Eliasberg coin in 1993 when he received an offer for it that was just too much to refuse, Dr. Duckor never really planned on ever purchasing another 1921. However, when he recently had a chance to buy one of the two MS66 Godard specimens, he couldn't resist and now he has actually managed to replace and upgrade both the 1920-S and 1921 from the Eliasberg Collection with the even finer specimens now offered here in his collection.

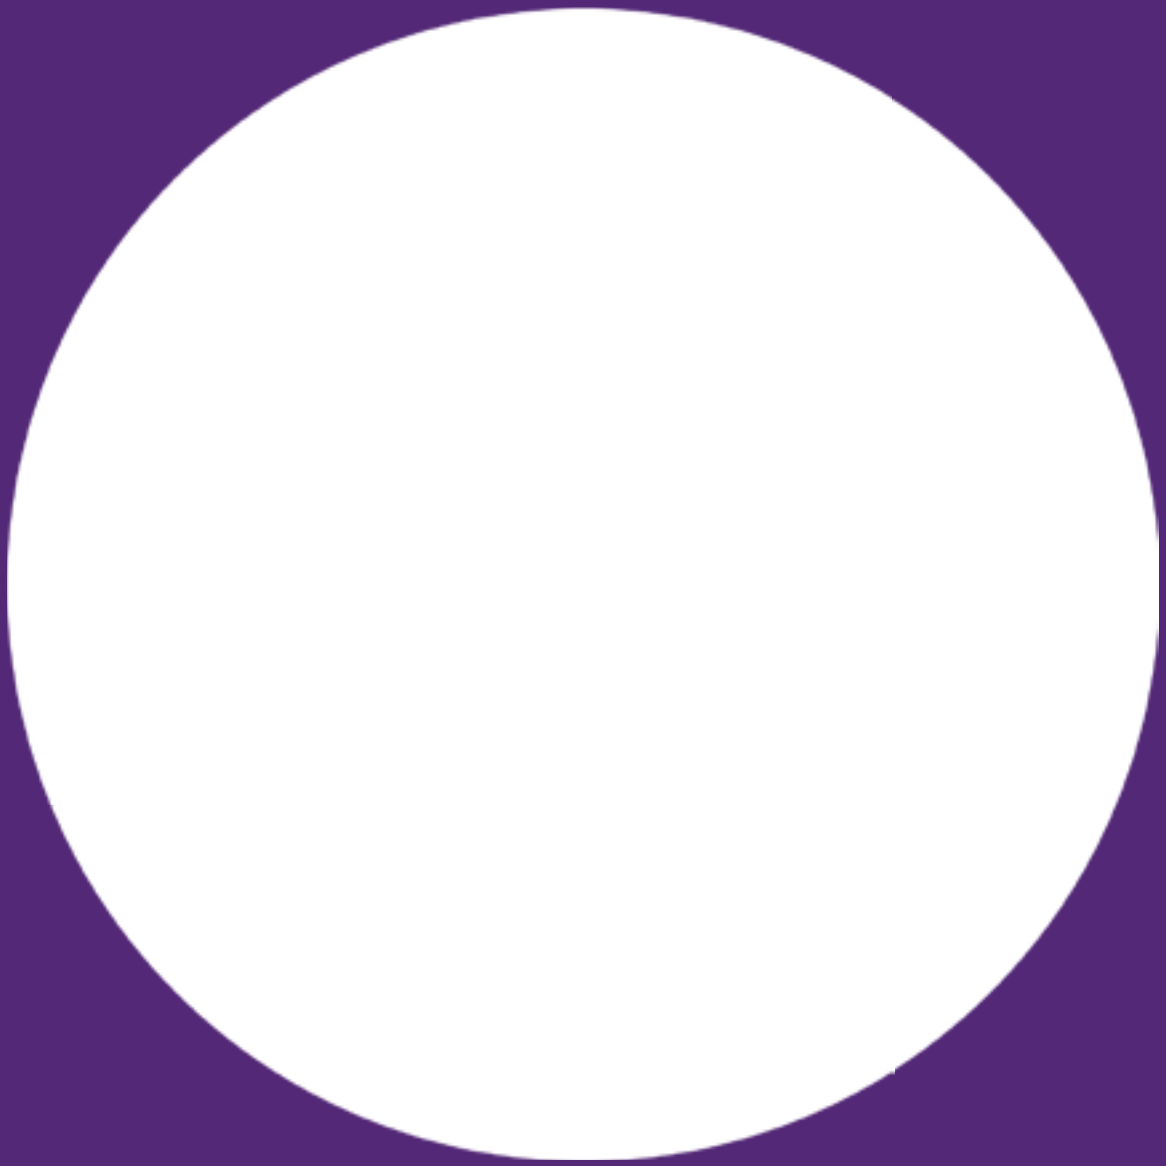
*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9172)

# 1922 Twenty Dollar, MS66
# An Incredible Condition Rarity

**4631** **1922 MS66 PCGS Secure. CAC.** The 1922 double eagle suffered a different fate from the earlier 1921 double eagles, most of the 1921s being melted in the following decade. Vast quantities of 1922 double eagles were exported following a mintage of 1,375,500 pieces at Philadelphia. Many of the exports, since returned to the United States, provide most of the available specimens for collectors today. Those coins, exported to Europe, South America, and Central America, are typically in lower grades, likely MS60 to MS64. The plethora of certified pieces in that grade range, over 30,000 at PCGS alone, supports that hypothesis. Even at the MS65 grade, a substantial population has been certified, 1,200 at PCGS. Some small number of 1922 double eagles were preserved by collectors at the time of issue, and those may be some of the finest that survive today.

The 21st century collector who seeks a 1922 double eagle without concern for grade will have no trouble finding a lower-Mint State coin. Examples are available at any coin show or on the internet nearly every day of the week. Collectors who seek a Gem MS65 example will also have little difficulty finding one, but some amount of patience will be necessary to find just the right one. Cherrypicking for quality is advised at the MS65 level, looking for a coin with a sharp strike, attractive surfaces, and original color. Many near-Gem and Gem examples have been dipped and now have bright yellow color with little eye appeal. Finding an example above MS65 will be a formidable task.



Above the Gem level, 1922 double eagles are extremely rare, with only seven MS66 PCGS coins certified in 25 years and none finer (10/11). Our Permanent Auction Archives include just six MS66 PCGS offerings since 1993, representing just four different coins. Those four include the present Duckor specimen, the earlier piece in Dr. Duckor's first collection that was previously in the Amon Carter Family Collection, the Simpson Collection coin, and one that appeared in our 2008 Central States sale. After the present coin is sold, it may be years before a comparable specimen becomes available.

The Duckor specimen is one of the seven MS66 PCGS coins. The nearly full strike is typical for the issue. This piece features deep copper-orange and lilac shades around the figure of Liberty, merging into yellow-gold nearer the rim on the obverse. Moving downward to the lower obverse devices, the coloration becomes an incredible, almost purplish shade. The reverse offers similar copper-gold in the eagle, surrounded by greenish-gold in the peripheral areas. A couple of bold die cracks appear on the obverse, one through the torch from the I to BE, a second crack through ERTY to the olive branch, and a third crack, continuing through the branch, an apparent diagram of how these dies might begin to fail near the peripheries.

(#9173)

**1922-S MS65 PCGS SECURE. CAC**

**1922-S MS65 PCGS SECURE. CAC**

# Gem 1922-S Double Eagle
# Prized Condition Rarity

**4632** **1922-S MS65 PCGS Secure. CAC.** Ex: Akers/Duckor. Six decades ago the 1922-S was one of the prime rarities of the Saint-Gaudens double eagle series, but the issue has surfaced in several hoards over the years, increasing the availability considerably for present-day collectors. Still, the 1922-S is a scarce issue in absolute terms, and specimens in Gem condition remain formidable rarities. The coin offered here is one of the finest examples, tied for the third spot in the PCGS Coin Facts Condition Census.

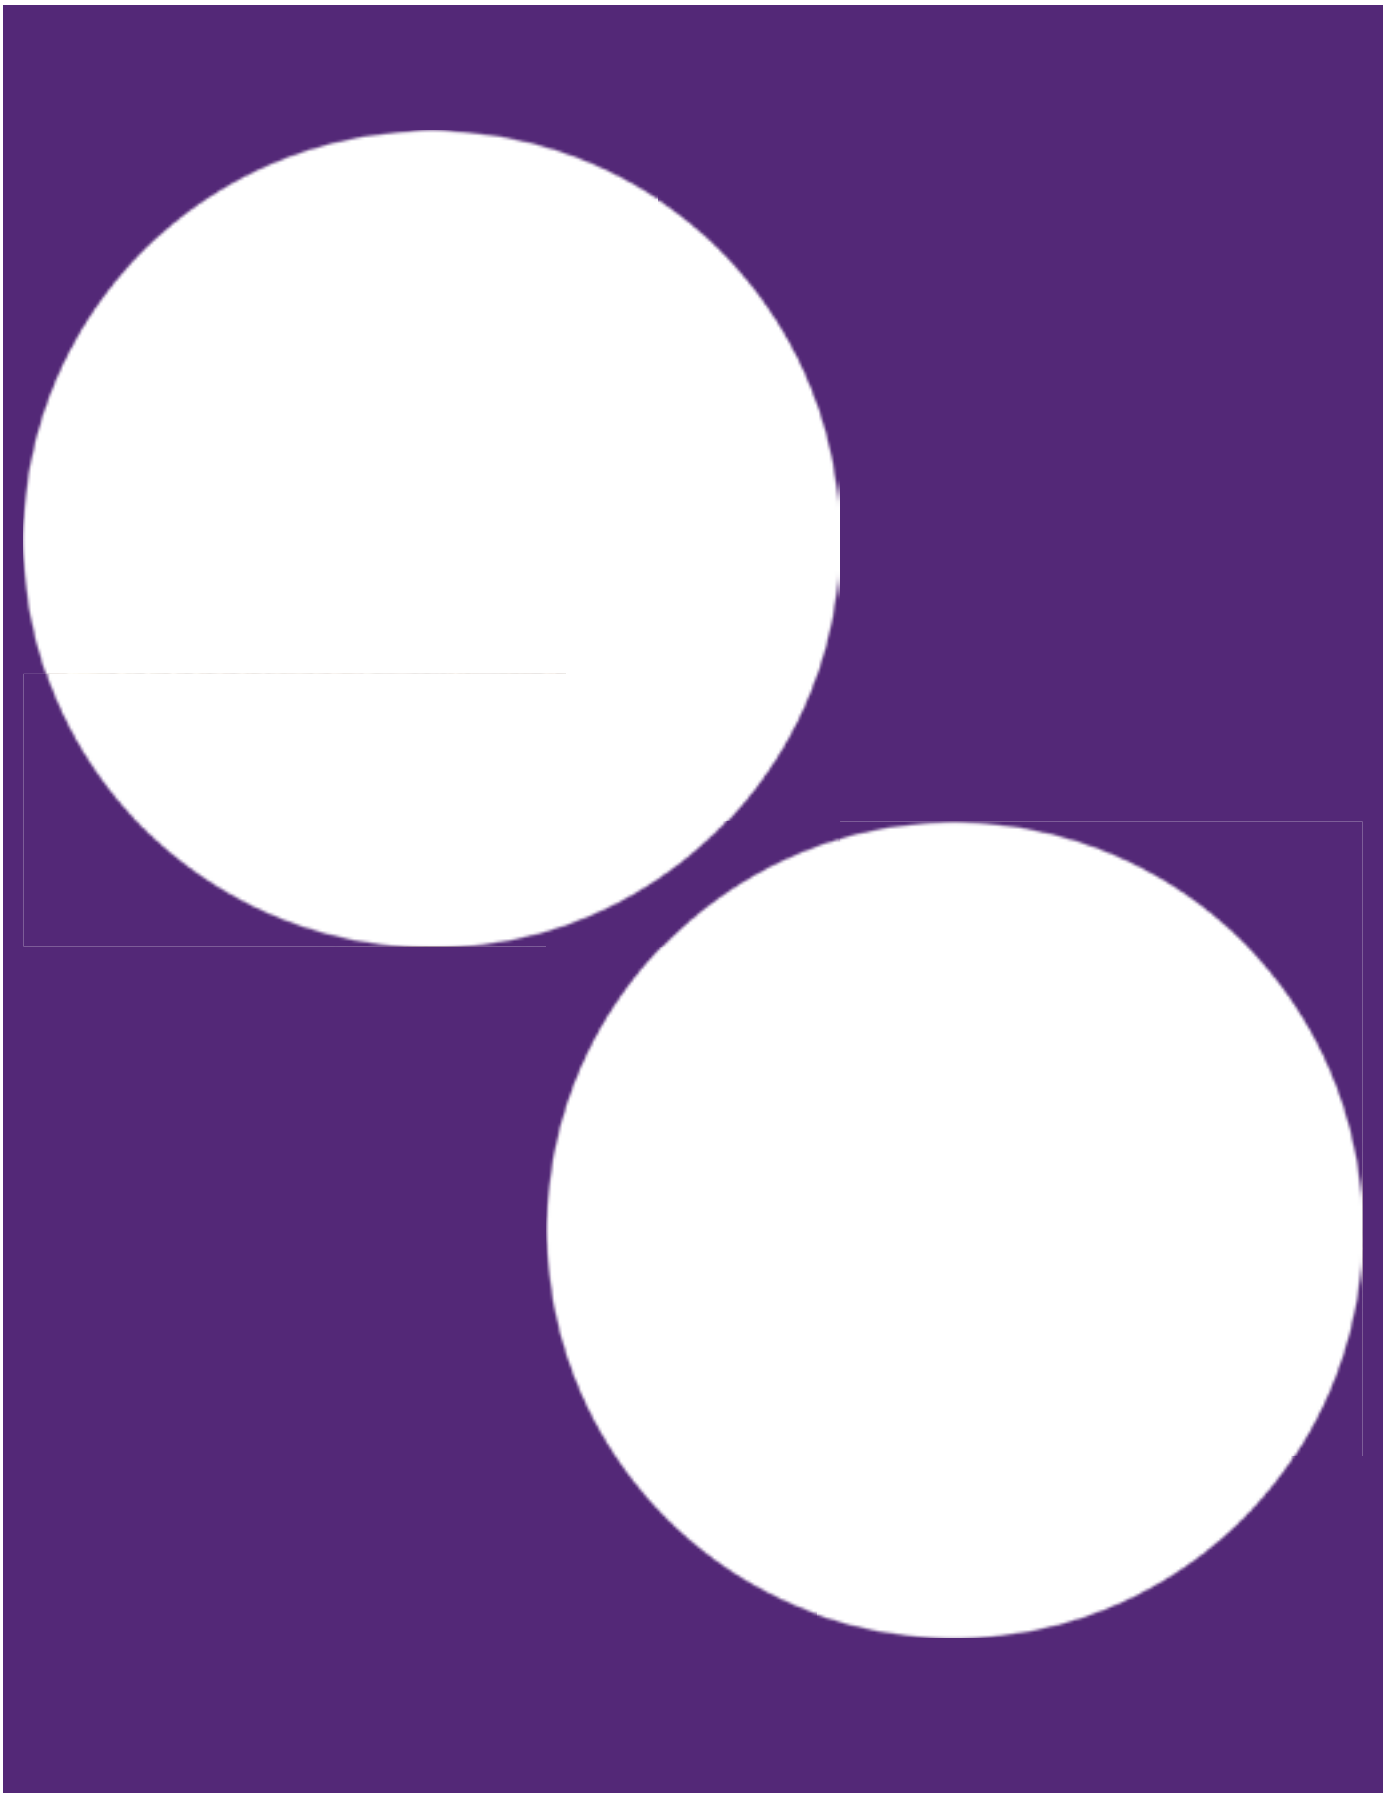
The auction history of the 1922-S is a long one, as an example was featured at least as early as the New York Collection Part II (Morgenthau, 5/1939), where lot 549 was described as, "1922 S Uncirculated and very scarce." The lot realized $69, about on par with the 1927-S at $67, the 1931 at $61, and the 1932 at $76. The status of the 1922-S as a series-rarity increased throughout the following decade, but a subtle change could be observed by 1949. B. Max Mehl , who always had a finger on the pulse of the numismatic market, reported the following in lot 878 of the catalog of the Dr. Charles W. Green Collection in April 1949:

> "1922 S. Uncirculated with frosty mint surface. The coin, however, does show just the slightest touch of cabinet friction. I consider this coin as extremely rare. Probably not more than a dozen specimens known to exist. This specimen also comes from the Bell Sale in 1944 at $340.00. At that time this coin cataloged for only $100.00. Another specimen offered in the 'World's Greatest Collection' in 1946 brought $420.00. Since then a specimen sold for less, but I still think this coin is one of the rarest of all Branch Mint Double Eagles."

Despite Mehl's estimate of only 12 specimens known, his note about the falling price of a recent offering proved prophetic, as the lot only realized $275. The 1922-S began to appear in quantity in European banks in the following decades, and the date was well represented in a famous Central American hoard that surfaced in 1983. Today, the 1922-S can be found in lower Mint State grades with little difficulty; high-grade examples remain quite rare.

Consulting the current PCGS Population Report, we find that only 11 examples of the 1922-S have been certified in MS65, with just two MS66 pieces finer. The totals may contain a few resubmissions and crossovers. Probably no more than 18 to 25 coins survive in MS65 or finer grades.

The present coin is a delightful Gem with remarkable visual appeal. The reverse exhibits the curious inner rim caused by die buckling often seen on specimens of this date. There are a few obverse copper spots that are almost expected with this issue. The design elements are well-detailed, displaying just a touch of softness on the Capitol dome. The incredible color overshadows all other aesthetic considerations. Lemon-yellow, copper-gold, and greenish-gold combine to amazing effect on this example; a couple of small areas verge on purple. Rich, rolling cartwheel luster adds to the amazing eye appeal. A few scattered abrasions are more minor and widespread than the grade might imply. A comparable specimen of this historic issue may not be offered for some time, and the discerning collector should bid accordingly.



*Ex: David Akers.*

**David Akers Comments:**

In the 1940s and early 1950s, the 1922-S was considered to be one of the most important and rarest issues in the Saint-Gaudens double eagle series. In his Dr. Charles W. Green and Jerome Kern sales of 1949 and 1950, B. Max Mehl estimated that only a dozen or so examples were known. Of course, Mehl was the consummate numismatic salesman and "hypester" of coins in his mail-bid only catalogs, very prone to overstating rarity, but his comments on the rarity of the 1922-S were in keeping with the prevailing sentiment among numismatists of the era. At that time, it was more revered as a rarity than the 1920-S for instance, as evidenced by the estimated value of an uncirculated example in the so-called "World's Greatest Collection" sale of 1946 being double the estimate for a comparable 1920-S. The estimate was based on what the exact two coins had actually realized in the 1944 J.F. Bell sale. In the early 1950's, however, several substantial quantities of the 1922-S were found in Paris and Swiss banks with many more to follow in the next two decades. Few, if any, of these coins were particularly high quality, however, mostly unattractive, heavily bagmarked uncirculated pieces. So prior to the 1980's, even choice uncirculated specimens were seldom seen and gem quality examples were basically unknown and unobtainable, and so, at least as a condition rarity, the rarity status of the 1922-S remained intact. The greatest collection of Saints formed prior to 1983 (cf. Eliasberg and Norweb among others) always failed to have a gem 1922-S or even one that might grade MS64 by today's standards. Then, with the discovery of the Central American hoard in 1983, for the first time ever, a substantial number of beautiful, original, choice, very choice, and even gem uncirculated examples became available to collectors. The hoard, sold by MTB of New York, contained hundreds of uncirculated examples of this issue. They were notable not only for their quality, but also for their generally excellent color, luster and copper toning. Gerald Bauman, the Chief Numismatist of MTB at the time, gave me the opportunity to buy as many of them as I wanted for a single fixed price per coin as long as we could agree on a premium price and a minimum quantity. After seeing the coins it did not take long to negotiate a deal satisfactory to both of us and we also arrived at a similar arrangement for the best specimens in the hoard of the 1908-D No Motto, 1908-D Motto, and 1909-D. I handled dozens and dozens of very choice and gem uncirculated examples of all four of these issues from the hoard not to mention many hundreds of similar quality examples of the 1909-S, 1910-S, 1911-S, 1914-S, 1915-S and 1916-S. I don't think it would be hyperbole to state that just about every one of the gem or superb 1922-S double eagles that appear in the population reports and today's finest sets are from this incredible hoard. The MS66 Simpson coin and this specimen are both from the Central American hoard and so was the Dr. Thaine Price coin which sold with his collection in 1998.

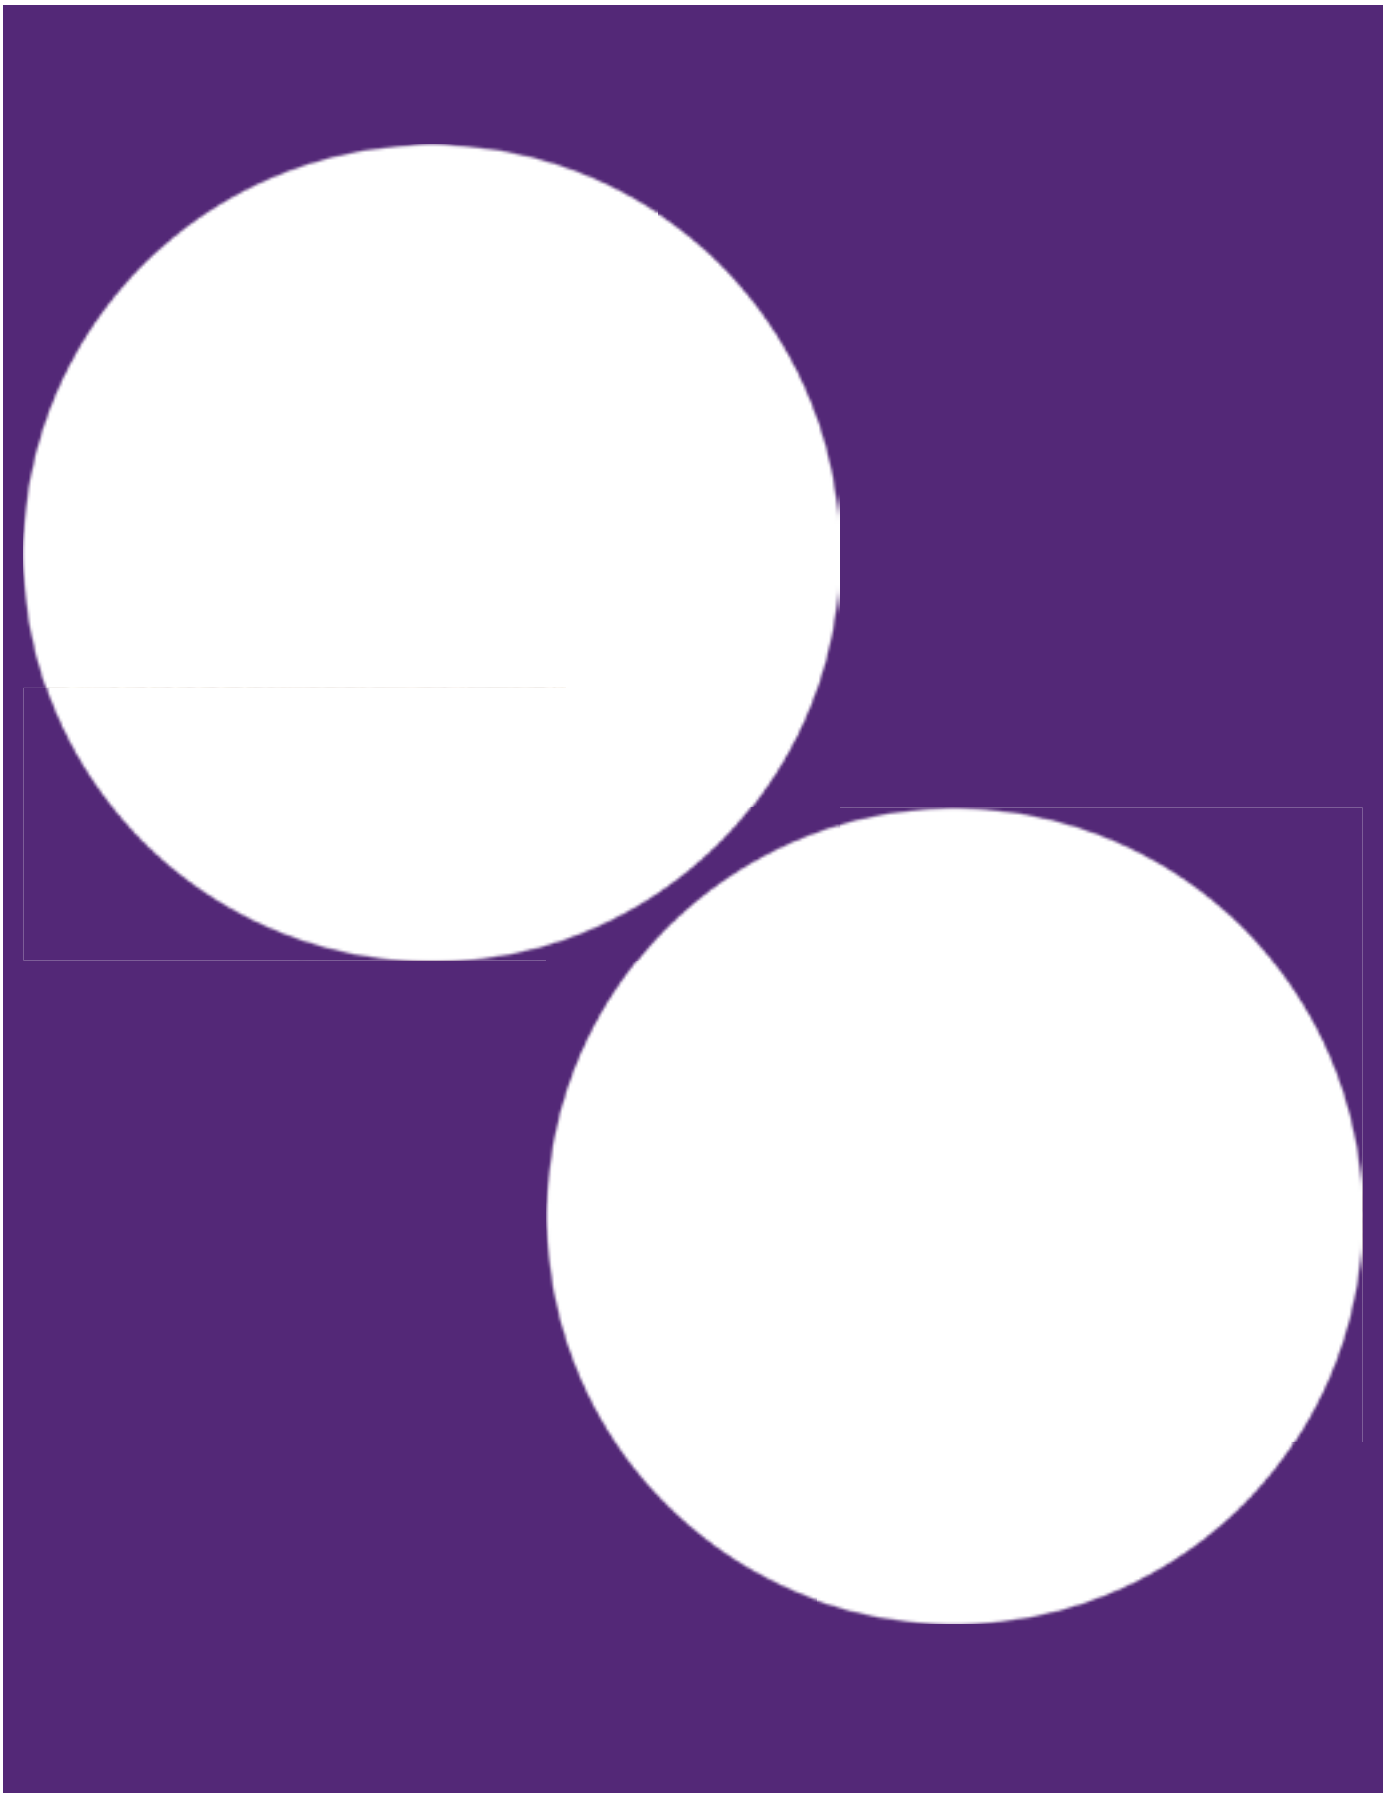
# 1923 Double Eagle, MS66
# Ex: Auction '84
# A Classic High-Grade Rarity

**4633** **1923 MS66 PCGS Secure.** Many collectors consider all of the Philadelphia Mint double eagles coined from 1922 through 1928 to be common dates. However, there are different levels of commonness. The most common issues are the 1924 and 1927, each with six-figure PCGS populations. The next level is for 1925 and 1928, each with total populations between 40,000 and 50,000 submissions. Following close behind is the 1922, with more than 30,000 certified at PCGS, and far below those dates are 1923 and 1926, each with total PCGS populations of about 20,000 coins. Even the latter figure may seem like a substantial number until one considers the many thousands of collectors of these large gold coins, and the large additional base of investors and hoarders who purchase double eagles as a hedge against inflation.

More important than the overall population is the high-grade population; in the case of the 1923, the total is extremely small. Exactly three coins have been assigned the MS66 PCGS grade, with none finer (10/11). The three coins are the present Duckor coin, a second coin owned by Dr. Duckor a few years ago, and the Kutasi-Stokely coin that we sold in 2007 and again in 2008. The current Duckor coin, which David Akers graded MS65+ back in 1984, is one of the three MS66 PCGS specimens. In the catalog for Auction '84, Akers wrote:

> "This is one of the finest 1923 Double Eagles that we have ever encountered. It is completely 'original' and has never been cleaned or even dipped. The color is the coin's strongest point; it is a very rich orange gold with a few copper highlights. The 1923 is very underrated in this grade; in MS-60 or MS-63 it is nothing special but in true gem condition it is really quite rare."

The Duckor specimen exhibits bands of orange- and greenish-gold diagonally across the coin, with marked bands of pale blue crossing the obverse from northwest to southeast. A few marks near Liberty's right (facing) arm and on the breast are grade-limiting, and the strike, although well-executed, falls just short of full. Rich luster encompasses both sides, and the reverse is free of all but tiny abrasions.



Ex: Auction '84 (Paramount, 7/1984), lot 994; David Akers; Dr. Steven L. Duckor; Phillip H. Morse (Heritage, 11/2005), lot 6653; later, repurchased by Dr. Duckor in 2007.

**David Akers Comments:**

Although it is an even more common issue than the 1920, the 1923 does share with it one important characteristic. It is also a classic example of a condition rarity although the grade at which a 1923 becomes a major rarity is not MS65 like the 1920, but rather MS66. So whereas there may be only one 1920 in MS65 (and possibly one or two others according to some), the 1923 is still fairly common at that grade level. For the 1923, its major rarity status begins at MS66 and there are no more than a handful of such specimens known with none verified or even rumored to exist finer. I first saw the coin offered here as the Duckor specimen when it was consigned to Paramount's session of Auction '84. In the intervening 28 years I have yet to come across another that was its equal.

(#9175)

## MS67 1923-D Saint
## 'The Most Consistently Attractive Series Issue'

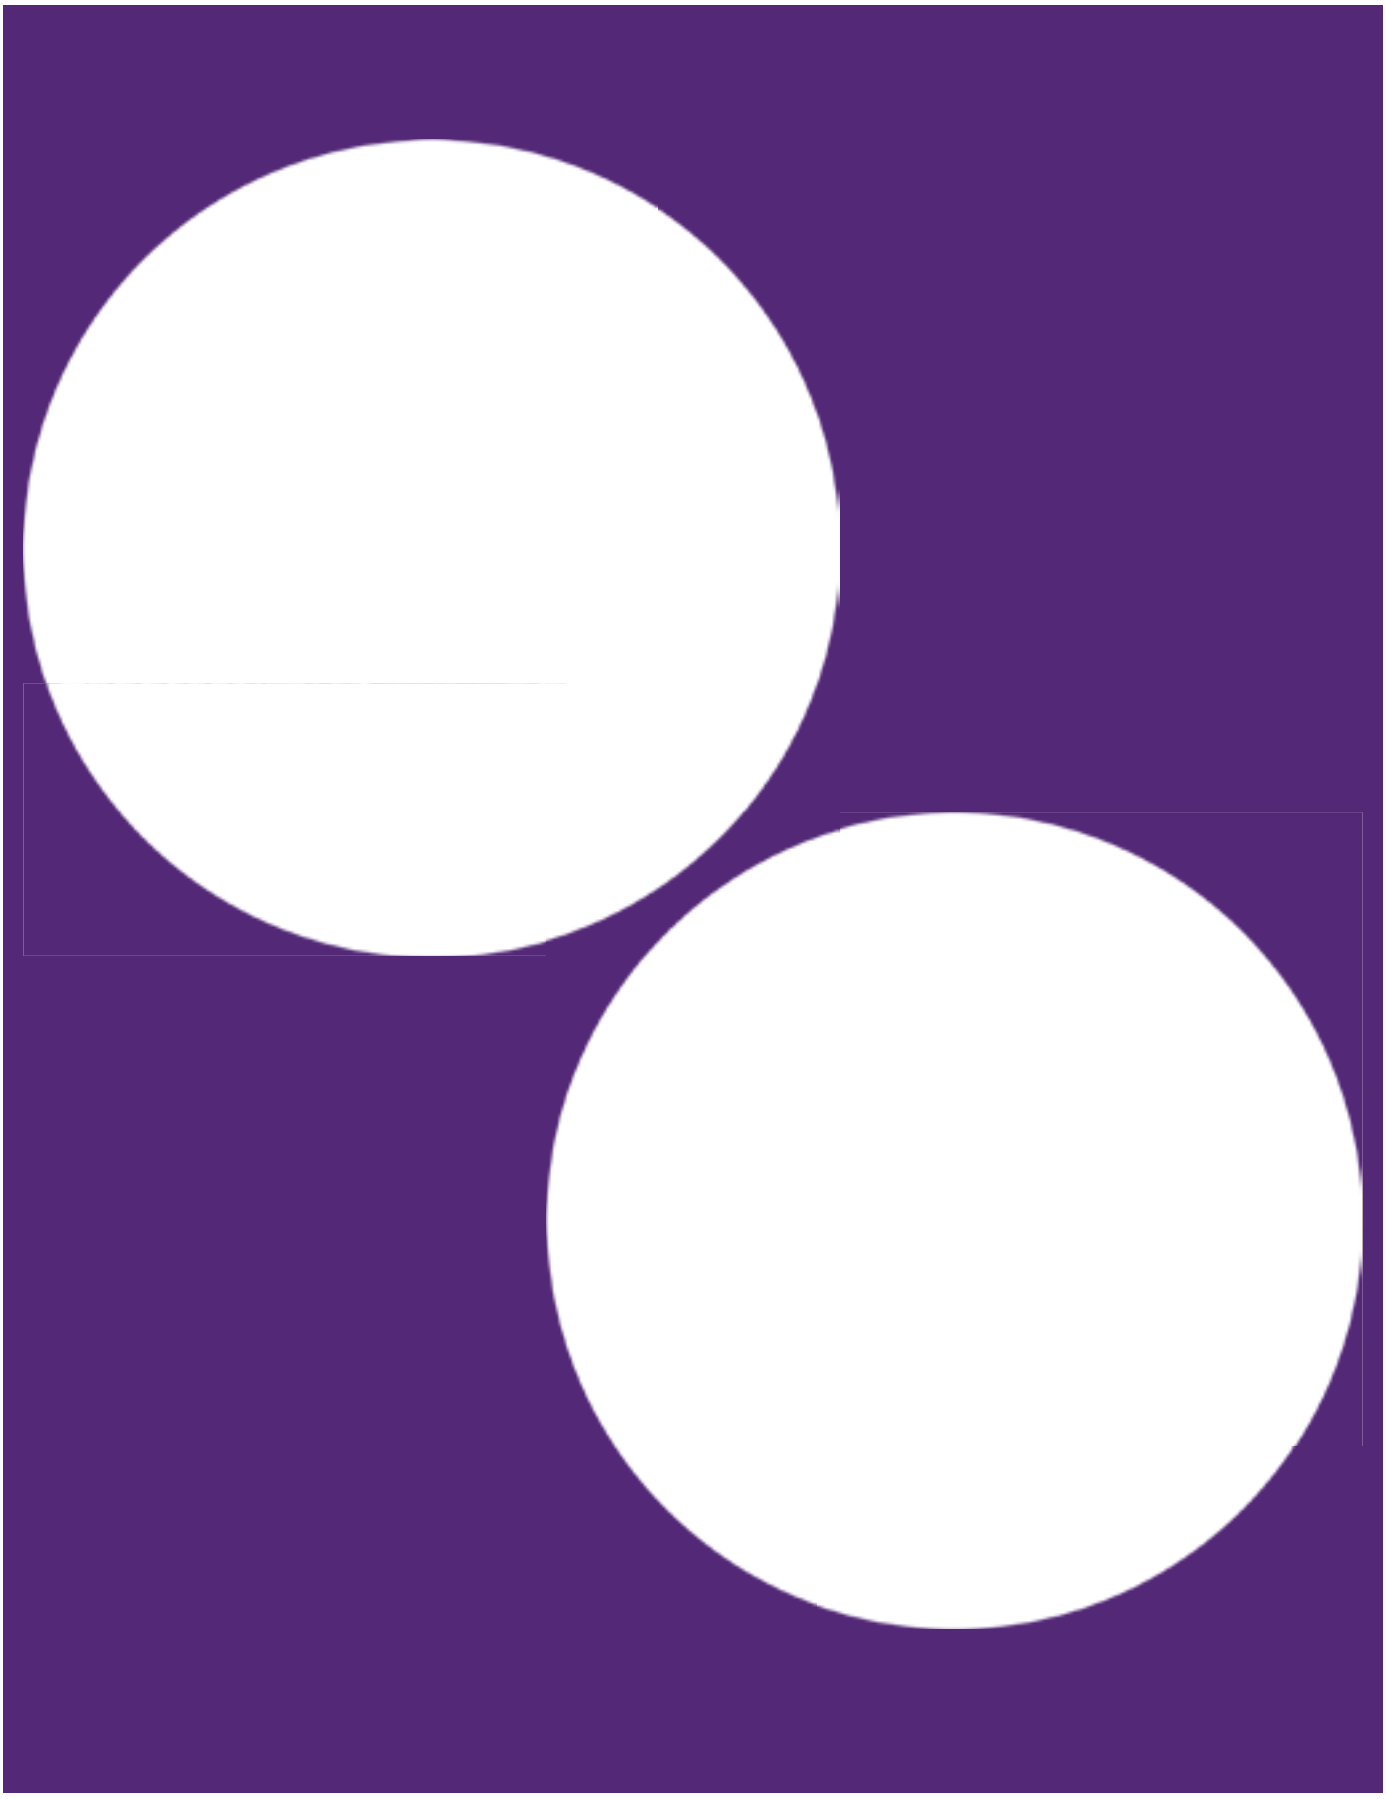
**4634** **1923-D MS67 PCGS Secure. CAC.** Although the 1924, 1925, 1927, and 1928 Philadelphia Saint-Gaudens issues are probably the most commonly purchased series issues for type purposes overall — many thousands of each are certified in MS65 and MS66 at PCGS and NGC — the 1923-D Saint-Gaudens is the one collectors usually turn to when they seek a *mintmarked* example in the finest grade obtainable. The September 2011 PCGS *Population Report* shows 2,324 submissions of the 1923-D in MS65 and MS65+; 1,477 in MS66 and MS66+; and 61 grading events in MS67, with no Plus coins at that level.

It is no accident that so many examples of the 1923-D survive in the higher Mint State grades today. The issue is noted both for its bold strike and superlative luster, making it an obvious choice for type set purposes.

When we were writing *The Coinage of Augustus Saint-Gaudens as Illustrated by the Phillip H. Morse Collection,* we noted in part for the 1923-D:

> "In researching information provided by noted numismatic authors, as well as our own research, the 1923-D is accepted as being the most consistently attractive Saint-Gaudens twenty. Most of the known population remains in Uncirculated condition, as few actually saw circulation. In terms of strike, luster, and color, this date is frequently chosen by collectors for a type coin representative for the series. Thousands have been certified by both PCGS and NGC up, and including Superb grades. In 1981-82, Manfra, Tordella, & Brooks purchased a hoard containing over 1,000 pieces including many from the Brand estate. Most of these were Uncirculated."

It is, nonetheless, somewhat of a surprise that the Denver Mint struck these coins in 1923. Gold coinage was a skimpy commodity in 1923. Clearly, the chief coinage concerns of the nation's mints in the year were striking a healthy number of minor coins from cent through half dollar, along with a prodigious issue of Peace dollars from all three mints. The latter was an aftereffect of the Pittman Act of 1918, under which the United States melted 270 million Morgan dollars, sold the silver to Great Britain, then had to recoin the used-up silver by new domestic purchases and recoinage of an equal amount of silver dollars.



For gold coinage, the narrative was quite different. The smallest circulating gold denomination, the quarter eagle, had not been struck since 1915, and then only in Philadelphia. The half eagle went on leave the following year, 1916 (when it was struck only in San Francisco), and it would not resume until the puzzling 1929 coinage. Similarly, the eagle would see the 1916-S mintage, then skip to 1920 before ceasing until 1926. Despite this, both Philadelphia and Denver struck double eagles in 1923, and a complete "date set" of Saint-Gaudens double eagles would jump from 1916 to 1920 and then comprise every year through 1933 inclusive.

On the present Superb Gem 1923-D, radiant cartwheel luster occupies surfaces that are essentially fully struck, save for trivial softness on a curl of Liberty's hair atop the head. Interesting raised die polishing lines appear just to the right, in the crook of the neck and the right (facing) shoulder, and again on the reverse in the field above the eagle. The rich orange-gold centers cede to greenish-gold hues near the rims. Interesting obverse die cracks appear: One runs from the I in LIBERTY through the torch to the B; a second runs from between the B through ERT; a third from between the R and T to TY and an olive leaf; and a fourth lower crack runs between TY to the lower part of Y to the middle olive and the branch hand. Population: 61 in 67, 0 finer (10/11).

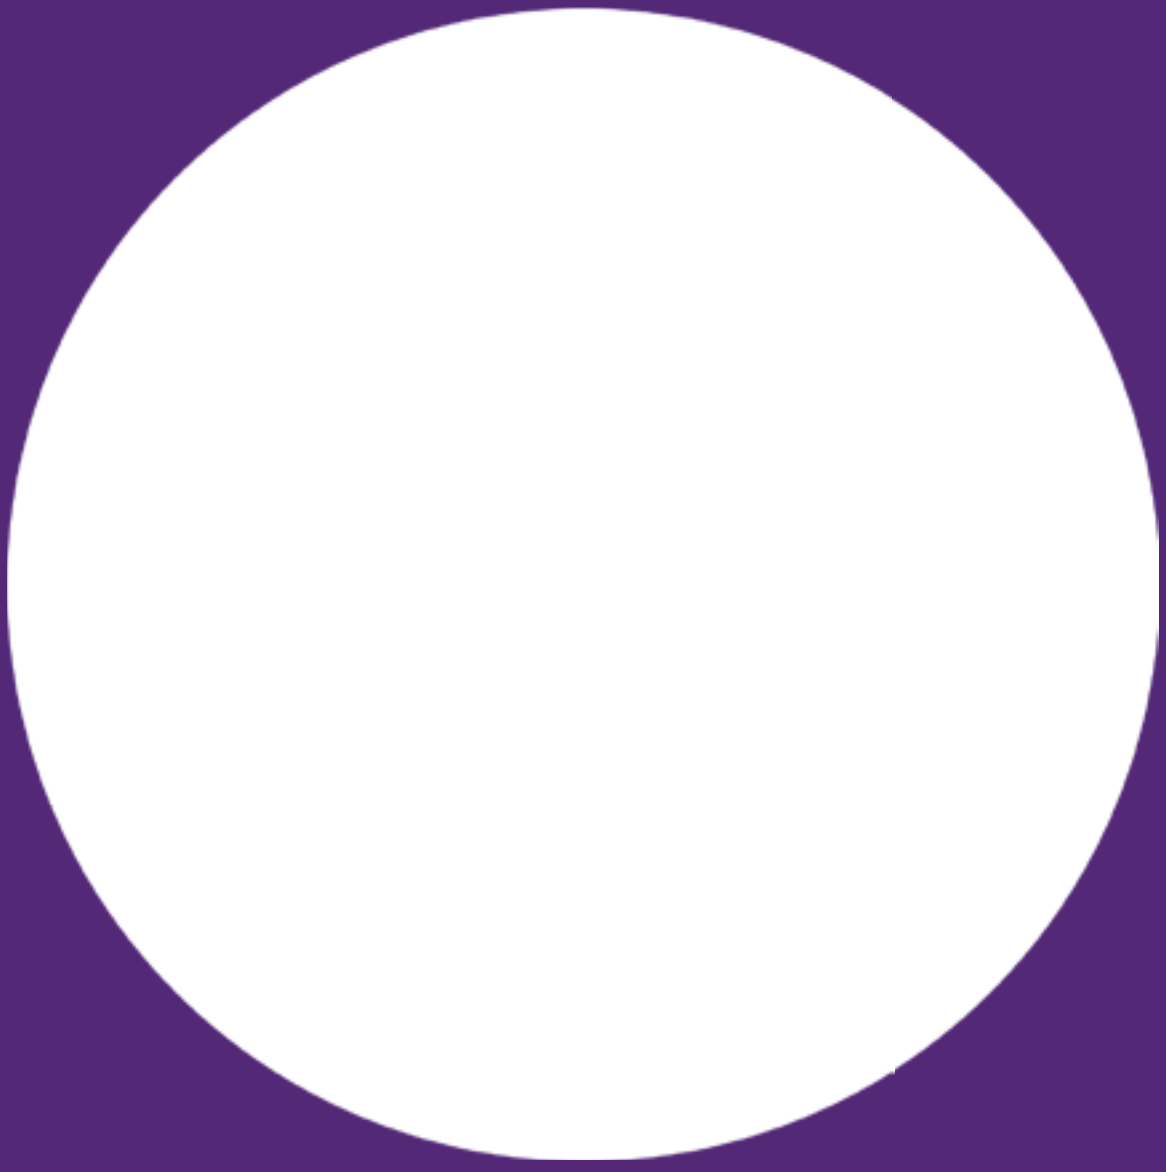
(#9176)

## Superb Gem 1924 Twenty
## Quintessential Type Issue

**4635** **1924 MS67 PCGS Secure. CAC.** The 1924 Philadelphia double eagle was made almost exclusively for international consumption. World War I had halted production of all U.S. gold coins by 1917, something that did not occur in previous U.S. military conflicts such as the Civil War or the Spanish-American War. Use of federal paper money ("greenbacks") was an innovation of the Civil War and not widely adopted immediately, but by 1917, the use of Gold Certificates, Demand Notes, and the then-novel Federal Reserve Notes was accepted more widely. When European commercial shipments were disrupted by the naval blockades of World War I — exemplified, though by no means restricted to, the U-boat campaign of Germany that sank the *Lusitania* and many other ships — the international trade that was U.S. gold coinage's reason for existence dried up. The only circulating gold coinage of 1916 was struck at the San Francisco Mint on the West Coast, and the first post-World War production of regular denominations consisted of eagles struck at San Francisco and double eagles struck there and Philadelphia.

From 1921 through 1924, the double eagle was the only noncommemorative gold denomination issued by the United States, an indicator of both the relatively low domestic demand for gold circulating coinage and the preference of larger denominations in trade. By 1924, with the U.S. economy in a boom period and a rebuilding Europe ravenous for hard currency, the double eagle was being produced in record-setting numbers: more than 4.3 million for the Philadelphia issue (the highest Saint-Gaudens double eagle mintage up to that date), over 3 million for the 1924-D, and in excess of 2.9 million for the 1924-S. The various issues' outcomes were not the same, however; while the Philadelphia issue's tens of millions in face value largely went overseas for international transactions, the Denver and San Francisco coins were kept stateside for the most part. As a result, when the gold recall and mass meltings of the 1930s wiped out all but a few hundred of the 1924-D and 1924-S twenties, hundreds of thousands of Philadelphia 1924 twenties remained in European vault storage and out of the reach of the American government.



Today, the Denver and San Francisco issues rate as melt rarities of the series, while the 1924 Philadelphia is indisputably the most available Saint-Gaudens twenty in terms of sheer numbers. Between them, NGC and PCGS have certified well over half a million 1924 twenties, and perhaps as many coins remain uncertified. There are 78 pieces graded MS67 in the PCGS *Population Report,* but only one coin labeled MS67+ and a single MS68 finer (10/11); with more than a quarter-million examples certified by PCGS alone, the present piece is better than 99.9% of known survivors in the most literal sense.

Orange-gold luster is prominent through broad centers and as an arc along the upper obverse, with slight yellowing elsewhere. Cartwheel luster is smooth and gorgeous with a touch of satin, and the grade is due to graze-patches on the left edge of Liberty's drapery and the eagle's near wing rather than marks of any real depth. An incredibly rewarding coin.

(#9177)

**1924-D MS66 PCGS SECURE**

**1924-D MS66 PCGS SECURE**

# Condition Rarity 1924-D Double Eagle, MS66
# Only Three Examples at PCGS

**4636** **1924-D MS66 PCGS Secure.** Ex: Carter/Duckor. Novice collectors might think that the 1924-D, with a mintage of just over 3 million coins, is a common date. In fact, the '24-D is anything but common, and it is the first in a run of high-mintage rarities that continued through the end of the Saint-Gaudens series, with the final branch mint issue struck in Denver in 1931. There was a time that the 1924-D was considered a major rarity, while today it is only considered a moderate level rarity in lower Mint State grades. However, in Gem or finer grades, the 1924-D remains extremely rare. The *PCGS Population Report* shows a total of 629 pieces in all grades, with only 10 of those submissions graded MS65 or better.

Production quality, or rather, the lack of production quality, is the primary reason that so few Gem or finer coins survive today. The general policy at the Denver Mint in the 1920s was to extend die life. Doing so meant greater space between the dies when they were placed in the coining press, or perhaps a lower striking pressure, or both. Dies also remained in service long past their intended life, so many coins show extensive die wear that is uncommon on Philadelphia Mint coins. The result is a general lack of sharpness and blurry details, consistent through the various years and denominations, including the 1924-D double eagle.

The Duckor specimen, earlier from the Amon G. Carter, Jr. Family Collection, is one of just three submissions that PCGS has certified as MS66 (10/11). Another MS66 PCGS example is currently part of the Simpson Collection that is recorded on the PCGS Set Registry. The Carter-Duckor coin was earlier certified MS66 PCGS with a different serial number from that appearing on the current PCGS holder. It is unknown if this single coin accounts for one or two of the MS66 appearances in the PCGS population data. Three appearances in our Permanent Auction Archives, dating back to 1993, are all for this single coin.

When Stack's offered the Carter Collection in 1984, they spent precious little time and space in the catalog, offering the following brief, two-line description for lot 1066:

> 1924 'D' Choice Brilliant Uncirculated, unusually well struck. Some light bagmarks. An exceptionally nice specimen with delicate russet toning."

Rich, rolling cartwheel luster complements surfaces that verge on a full strike, save for minor softness on the last digit of the date. A few minor ticks are light and undistracting. Each side exhibits lovely reddish-gold with satiny surfaces and sharp definition. When we offered this specimen in our January 2008 FUN Signature, we wrote that we are confident that this specimen will become a cornerstone of a finer collection. At the time, little did we know that it would again become a cornerstone of the same cabinet, that of Dr. and Mrs. Steven L. Duckor. Now, four years later, we are again confident that it will be a highlight coin in another fine cabinet of Saint-Gaudens double eagles.

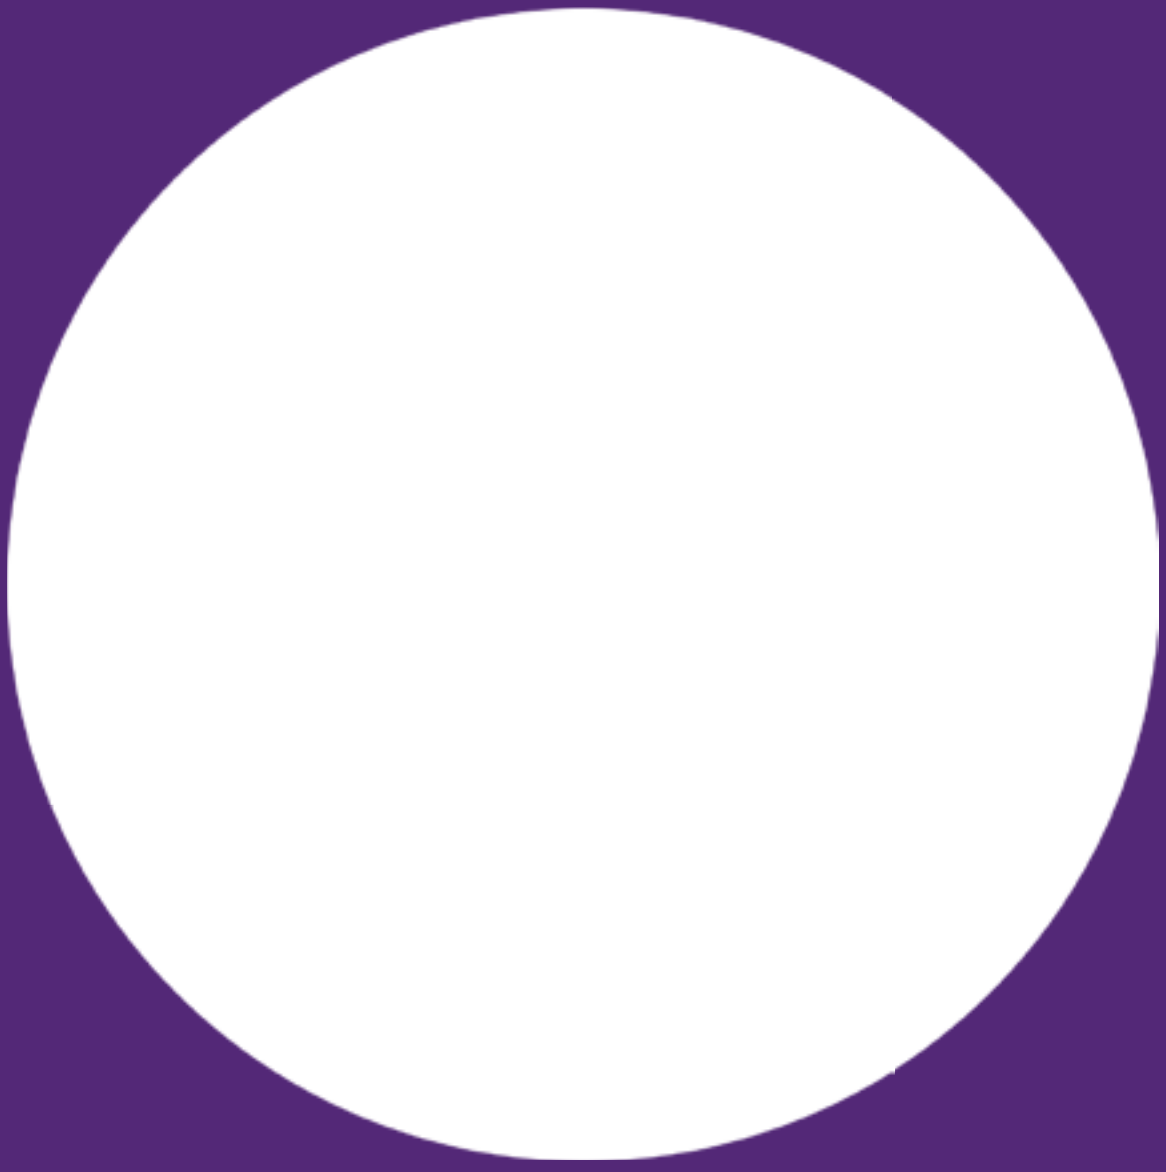
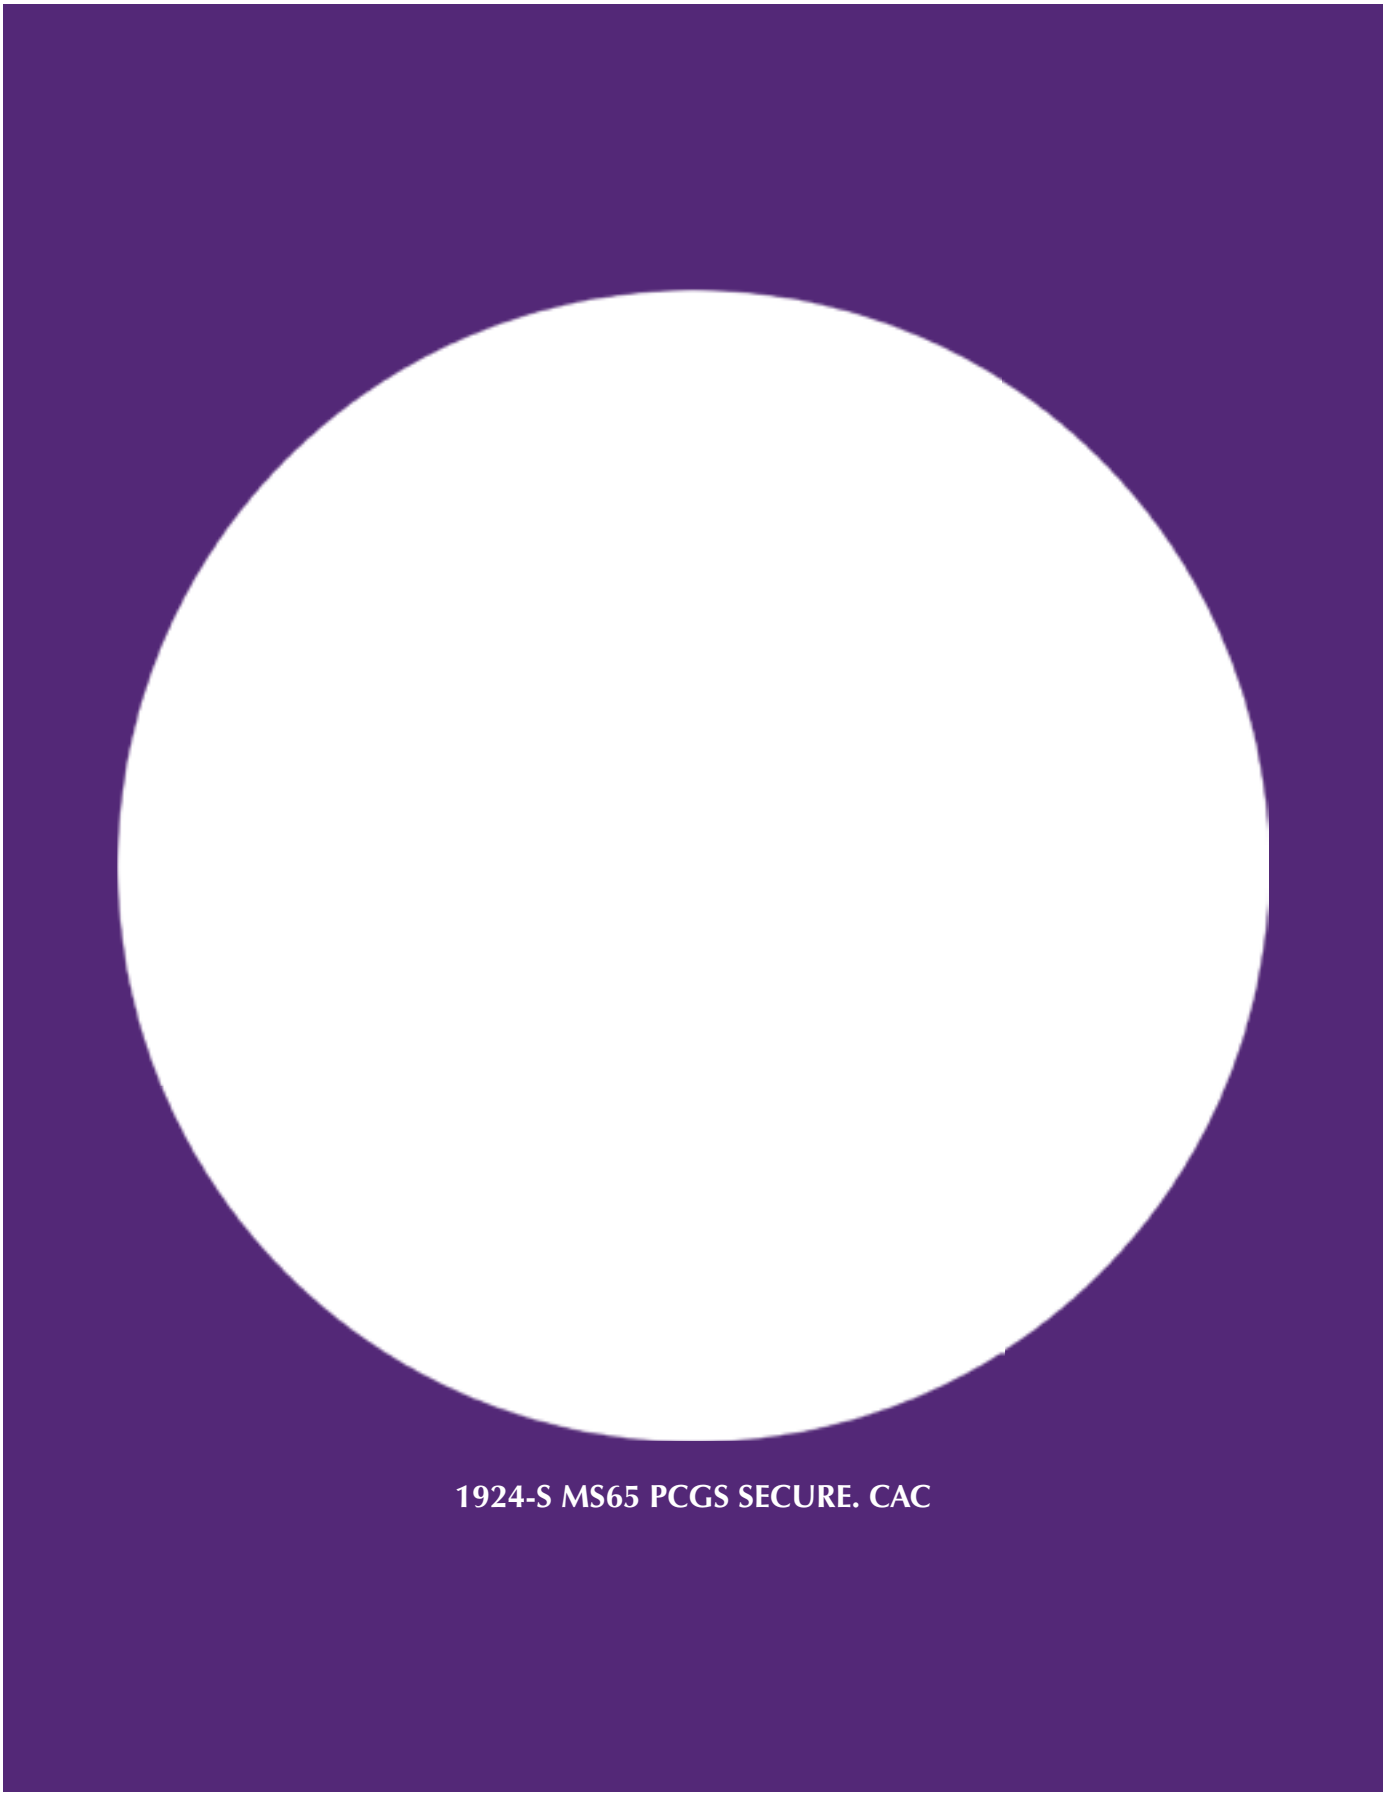
**David Akers Comments:**



During the 1940's and into the 1950's, the 1924-D was considered to be an important rarity in the Saint-Gaudens double eagle series. However, it was never really considered elite. At the top of the rarity pyramid at that time were the 1924-S (generally considered the rarest), 1926-D, and 1926-S, in that order. Just below them on the second tier were the 1921, 1927-S and 1931-D. A third rarity tier consisted of the 1925-D, 1927-D and 1930-S, and the fourth tier was comprised of the 1922-S, 1929, 1931, 1932, 1920-S, 1908-S, and 1924-D, more or less in that descending order. Of course, at that time the use of the term "rare" as applied to any coin was based only on what was perceived to be the total population of a given issue. Condition mattered to some extent in that higher quality examples almost always brought more than lower quality ones, but the difference was typically not great, measured in small percentages rather than multiples. The concept of "condition rarity" was still several decades away. It is interesting to note that every one of the above issues so highly regarded more than a half century ago is still considered rare today. The order has changed to be sure and for some the rarity is now highly condition dependent, but they are all still rare in some context and definitely key and important issues in the series.

Since a number of small hoards of the 1924-D were uncovered in Europe in the 1950s, 1960s and even the 1970s, it is now only moderately rare, and perhaps just scarce, as a population rarity with hundreds of mint state pieces known. Even in MS63 and MS64 the 1924-D is available with regularity and at fairly reasonable prices. However, this is not at all the case for gem quality MS65 examples; they are decidedly rare with an extant population in the 12-15 range, possibly fewer. In superb uncirculated condition, the 1924-D is one of the major rarities of the series, comparable to most of the other more renowned rarities of the 1920's. Only 3 or 4 such examples are known to exist.



The Dr. Duckor coin offered here is equal overall to any 1924-D Saint known to me, in fact, one of the two best I have seen. I purchased it for Dr. Duckor at the great sale of the famous Amon Carter, Jr. Collection in January 1984. It realized $6,600 at the sale, a price that seems so low now as to be nearly unbelievable. However, at the time, the price was only a little lower than I expected, but there were so many great rarities in the sale that I think the Saints in the collection were a bit overlooked. Things like that can happen even at famous sales. In addition to the excitement over the fabulous coins it contained, the Amon Carter sale was also memorable for the weather in New York City the week of the sale. There was a tremendous snowstorm and snow drifts were piled up everywhere, making transportation very difficult, both to and from New York City and throughout Manhattan as well. It was not enough to deter large numbers of bidders from showing up though and the sale was an overwhelming success and one of the landmark sales of the 1980s.

(#9178)

**1924-S MS65 PCGS SECURE. CAC**

**1924-S MS65 PCGS SECURE. CAC**

# Gem 1924-S Double Eagle
# Prized Condition Rarity
# Incredible Quality and Eye Appeal

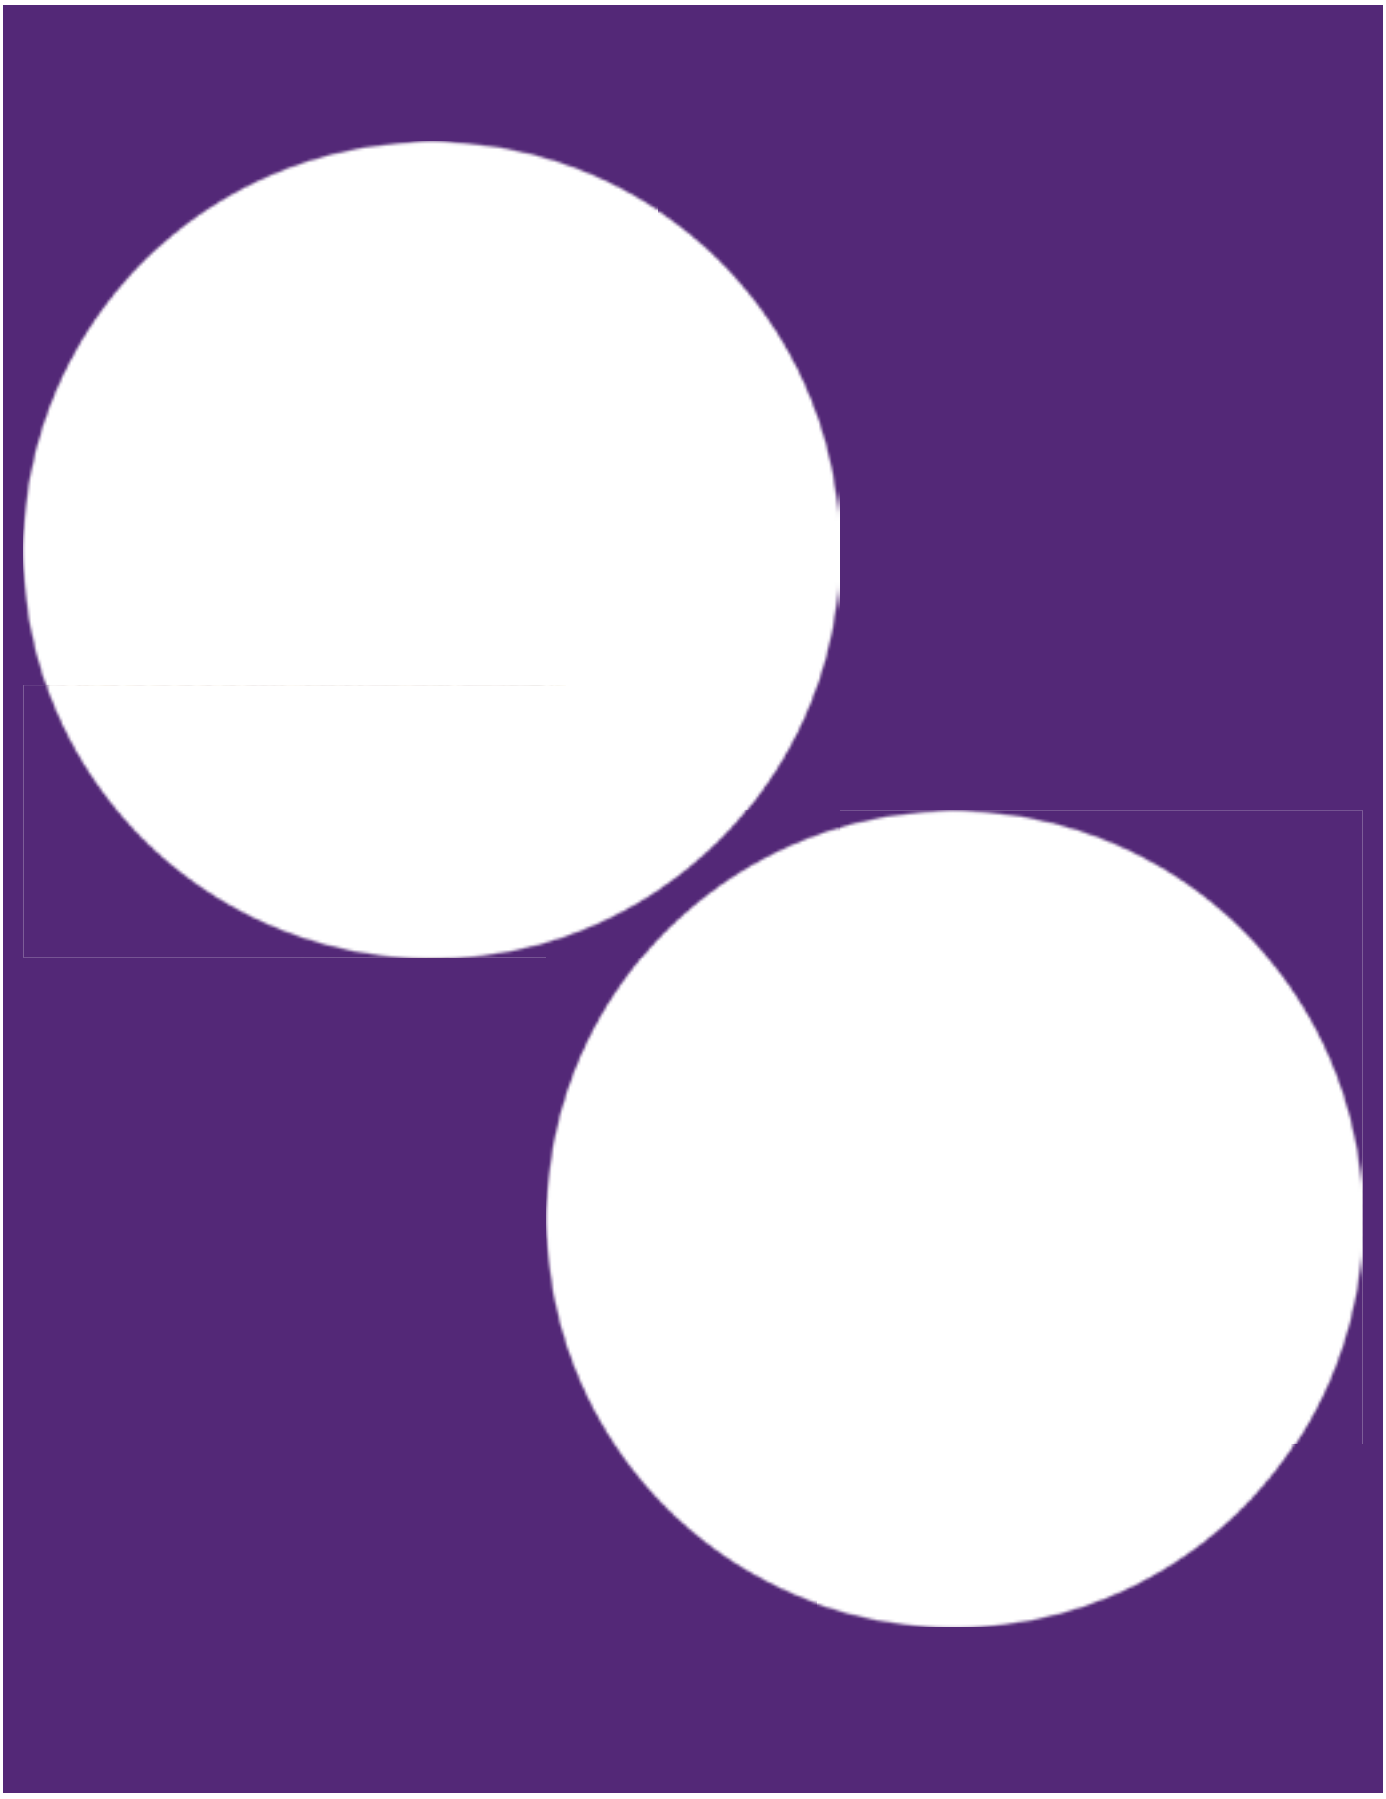
**4637** **1924-S MS65 PCGS Secure. CAC.** Ex: Duckor/Morse. To numismatists of the 1940s, the 1924-S was the rarest and most valuable date of the Saint-Gaudens double eagle series. The 1924-S Saint was more difficult to locate than such great modern rarities as the 1927-D, the Ultra High Relief, and the currently uncollectible 1933. B. Max Mehl, the leading numismatic auctioneer of that era, gave his thoughts about the rarity of this issue in lot 879 of the Charles W. Green Collection (Mehl, 4/1949):

> "1924 $20.00 Gold, San Francisco Mint. This coin has never been in circulation, but it does show slight evidence of having been handled with other coins. It has practically full mint luster, especially on reverse. Of excessive rarity. This is the first specimen to be offered at auction. Such great collections as the Bell and 'World's Greatest' did not have a specimen. This is only the second specimen that has passed through my hands. The other one was the one in the Berenstein Collection which I purchased some two years ago. I sold the 1924 S at private Sale for $1,600.00. I understand that as much as $3,000 was asked for a single specimen. To the best of my knowledge, only three specimens are known to exist."

The lot, which sounds like a lower Mint State offering, realized $1,000, a hefty price for any coin at the time. Today we know that Mehl was incorrect in his belief that the 1924-S had never been offered before, as Abe Kosoff had cataloged an example in lot 711 of the 1947 ANA Convention Auction, which he also claimed as the first appearance. Our study of early auction appearances reveals at least one other prior listing in lot 369 of Sale 397 (Morgenthau, 4/1939). The coin realized $72.50 in 1939, a far cry from the $1,600 Mehl charged for the Berenstein piece, or the incredible $2,200 the coin in Kosoff's 1947 ANA sale garnered. Max Berenstein was a New York City jeweler and sometime coin dealer who put together a remarkable collection of double eagles in the late 1930s, including an example of the 1933 that was later seized by the Secret Service.

Mehl's estimate of only three known was probably not far off the mark regarding specimens available to collectors in the U.S. coin market at the time, but the availability of the 1924-S was radically changed in the 1950s, when scattered specimens began surfacing in European banks. By the end of that decade, the 1924-S had declined in the rarity rankings from "Impossible" to just "Very Scarce." However, most of the European finds consisted of bagmarked examples that graded no better than MS60 to MS64, and the 1924-S remains a great rarity in higher grades to the present day. Population data from the leading grading services shows PCGS has graded 446 total specimens, but only two examples in MS65, and a single finer coin in MS67. It is doubtful that more than 10 to 12 specimens of the 1924-S survive in Gem condition or finer. The magnificent MS67 PCGS example in the Thaine B. Price Collection (David Akers, 5/1998) holds the prices realized record for a 1924-S at $187,000.

The present coin is one of the finest known examples and traces its history to the Phillip H. Morse Collection, perhaps the finest collection of Saint-Gaudens double eagles ever offered up to that time. This piece occupies the number two spot in the PCGS Coin Facts Condition Census, and David Akers once described the coin as "a high-end MS65 that would be graded MS66 by some." We heartily concur with Akers' assessment. Engaging cartwheel luster is complete, thick, and rich, over reddish-orange, consistently colored surfaces. The strike appears quite close to full. Even with diligent searching, we can find little obvious reason this coin grades a "mere" MS65, despite the presence of a couple of minuscule bagmarks on Liberty's left (facing) gown, as the surfaces elsewhere are virtually abrasion-free. This leads us to believe it is among the most undergraded coins in the entire Duckor Collection, another instance of Dr. Duckor's superior eye for quality and visual appeal. The discerning collector should not hesitate to bid accordingly.



*Ex: Portland ANA Signature (Heritage, 8/1998), lot 7951, realized $33,350; Phillip H. Morse Collection of Saint-Gaudens Coinage (Heritage, 11/2005), lot 6671, realized $97,750.*

**David Akers Comments:**

In the past 60 years, the 1924-S has dropped a very long way from once being considered not only the rarest issue of the Saint-Gaudens series, but also the rarest of the entire denomination, surpassing the 1856-O, 1870-CC and the famous proof-only rarities of the 1880s. It was also considered more rare than the 1907 MCMVII Extremely High Relief, the 1927-D and the 1933, all of which are multi-million dollar coins today. The prevailing opinion as late as 1950 was that only three or four specimens of this date were known and, when one sold, it invariably brought an extraordinary price. The C. David Pierce specimen in the 1947 Buffalo ANA sale, a superb gem and the finest known to this day (Simpson-Stellar-Price- "Mr. Lima, Ohio" collections), sold for a remarkable $2,200, a price realized by only a few coins during that era. (For example, John Jay Pittman bought his nearly perfect 1792 Half Disme one year later for only $100 and thought he paid too much.) A four figure price paid for a coin was anything but commonplace then. The reputation of the 1924-S as a rarity was rather short-lived, however, because beginning in the early 1950s and continuing over the next several decades, significant quantities of the 1924-S, and other formerly rare dates such as the 1922-S, 1924-D, 1925-D, 1925-S, 1926-D, 1926-S and 1929, in particular, were found overseas in French and Swiss banks. These coins were returned to the United States as they were acquired by U.S. dealers and their buyers and quickly found their way into the numismatic marketplace and eventually the hands of collectors. By 1956 uncirculated examples of the 1924-S had already dropped into the $300-$350 range and prices continued their decline further over the next 10-15 years. Not many specimens of any of these issues that were found in European hoards were particularly high quality (many great examples of the 1922-S were found later in the Central American hoard, however); generally AU55 to MS62 was typical. All of these hoard dates are still very scarce to rare today in MS64 and, most are extremely rare in gem condition, including the 1924-S. The aforementioned superb gem 1924-S originally from the 1947 ANA sale is clearly the finest known, but this Duckor specimen is also exceptional and one of the three or four finest known specimens of the issue. In particular it has fantastic satiny surfaces and blazing color and luster and its overall eye appeal is unsurpassed by any example I have seen.

(#9179)

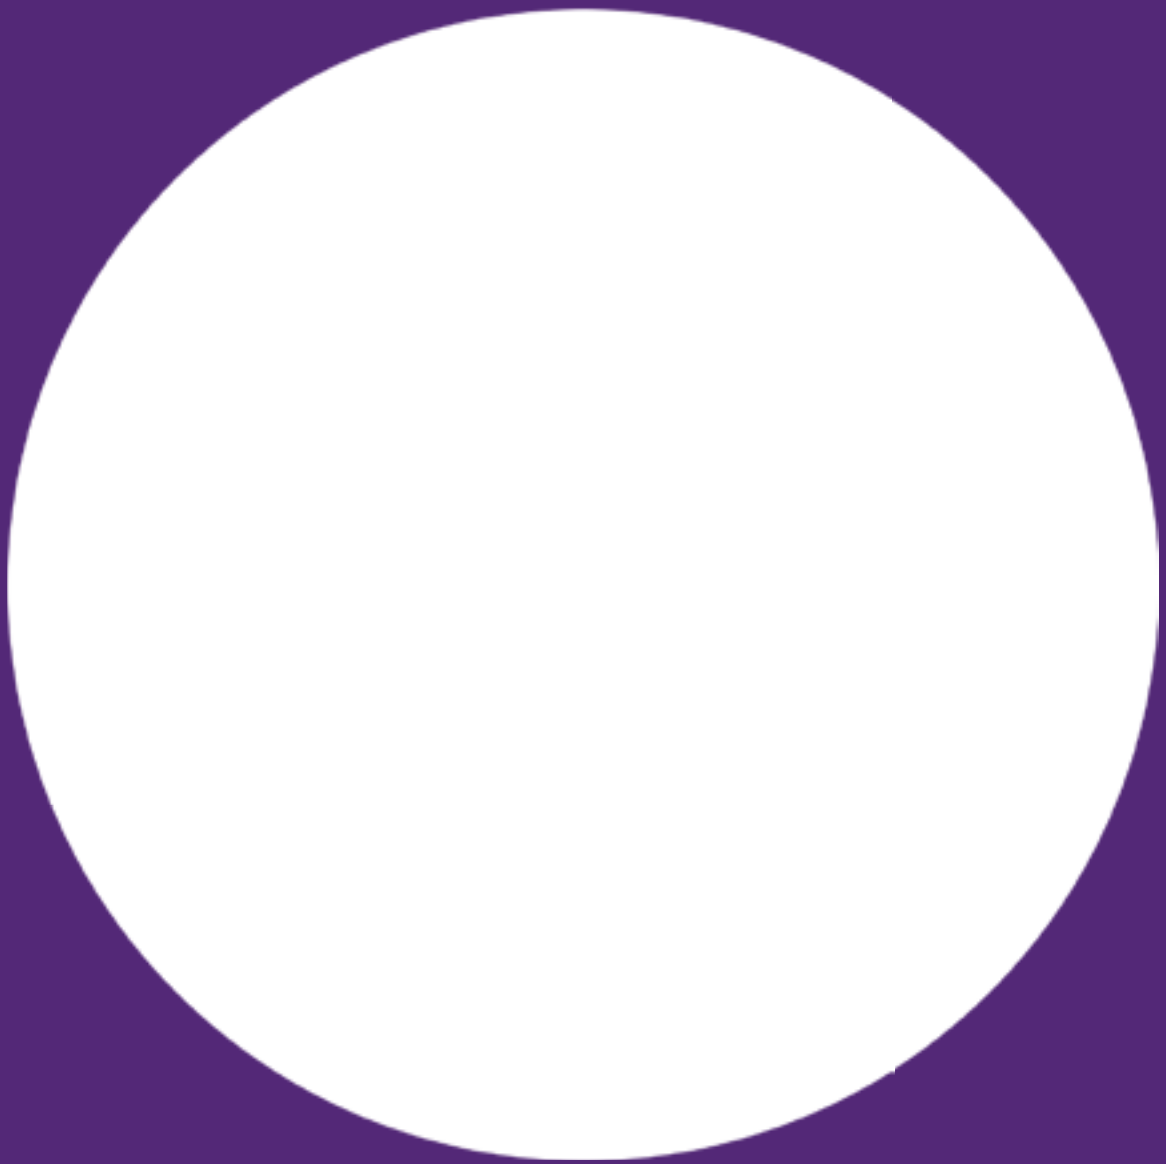
## Superb Gem 1925 Double Eagle
## Underrated P-Mint Issue, One of Five at PCGS

**4638** **1925 MS67 PCGS Secure. CAC.** The 1925 Saint-Gaudens double eagle is, by any measure, one of the most available issues in the series in the higher Mint State grades of MS65 and MS66. Among the P-mint issues of the 1920s, only the 1924, 1927, and 1928 issues are more common, and in that order. The 1926 P-mint issue overall is slightly less common than the 1925, while the 1923-D likely falls between those two issues but is slightly more available at the Superb Gem or MS67 level.

The 1925 Philadelphia double eagle had a mintage that was typical of the generous productions of many 1920s issues in the series, a quantity exceeding 2.8 million coins. As we offered in our reference on the Phillip H. Morse Collection:

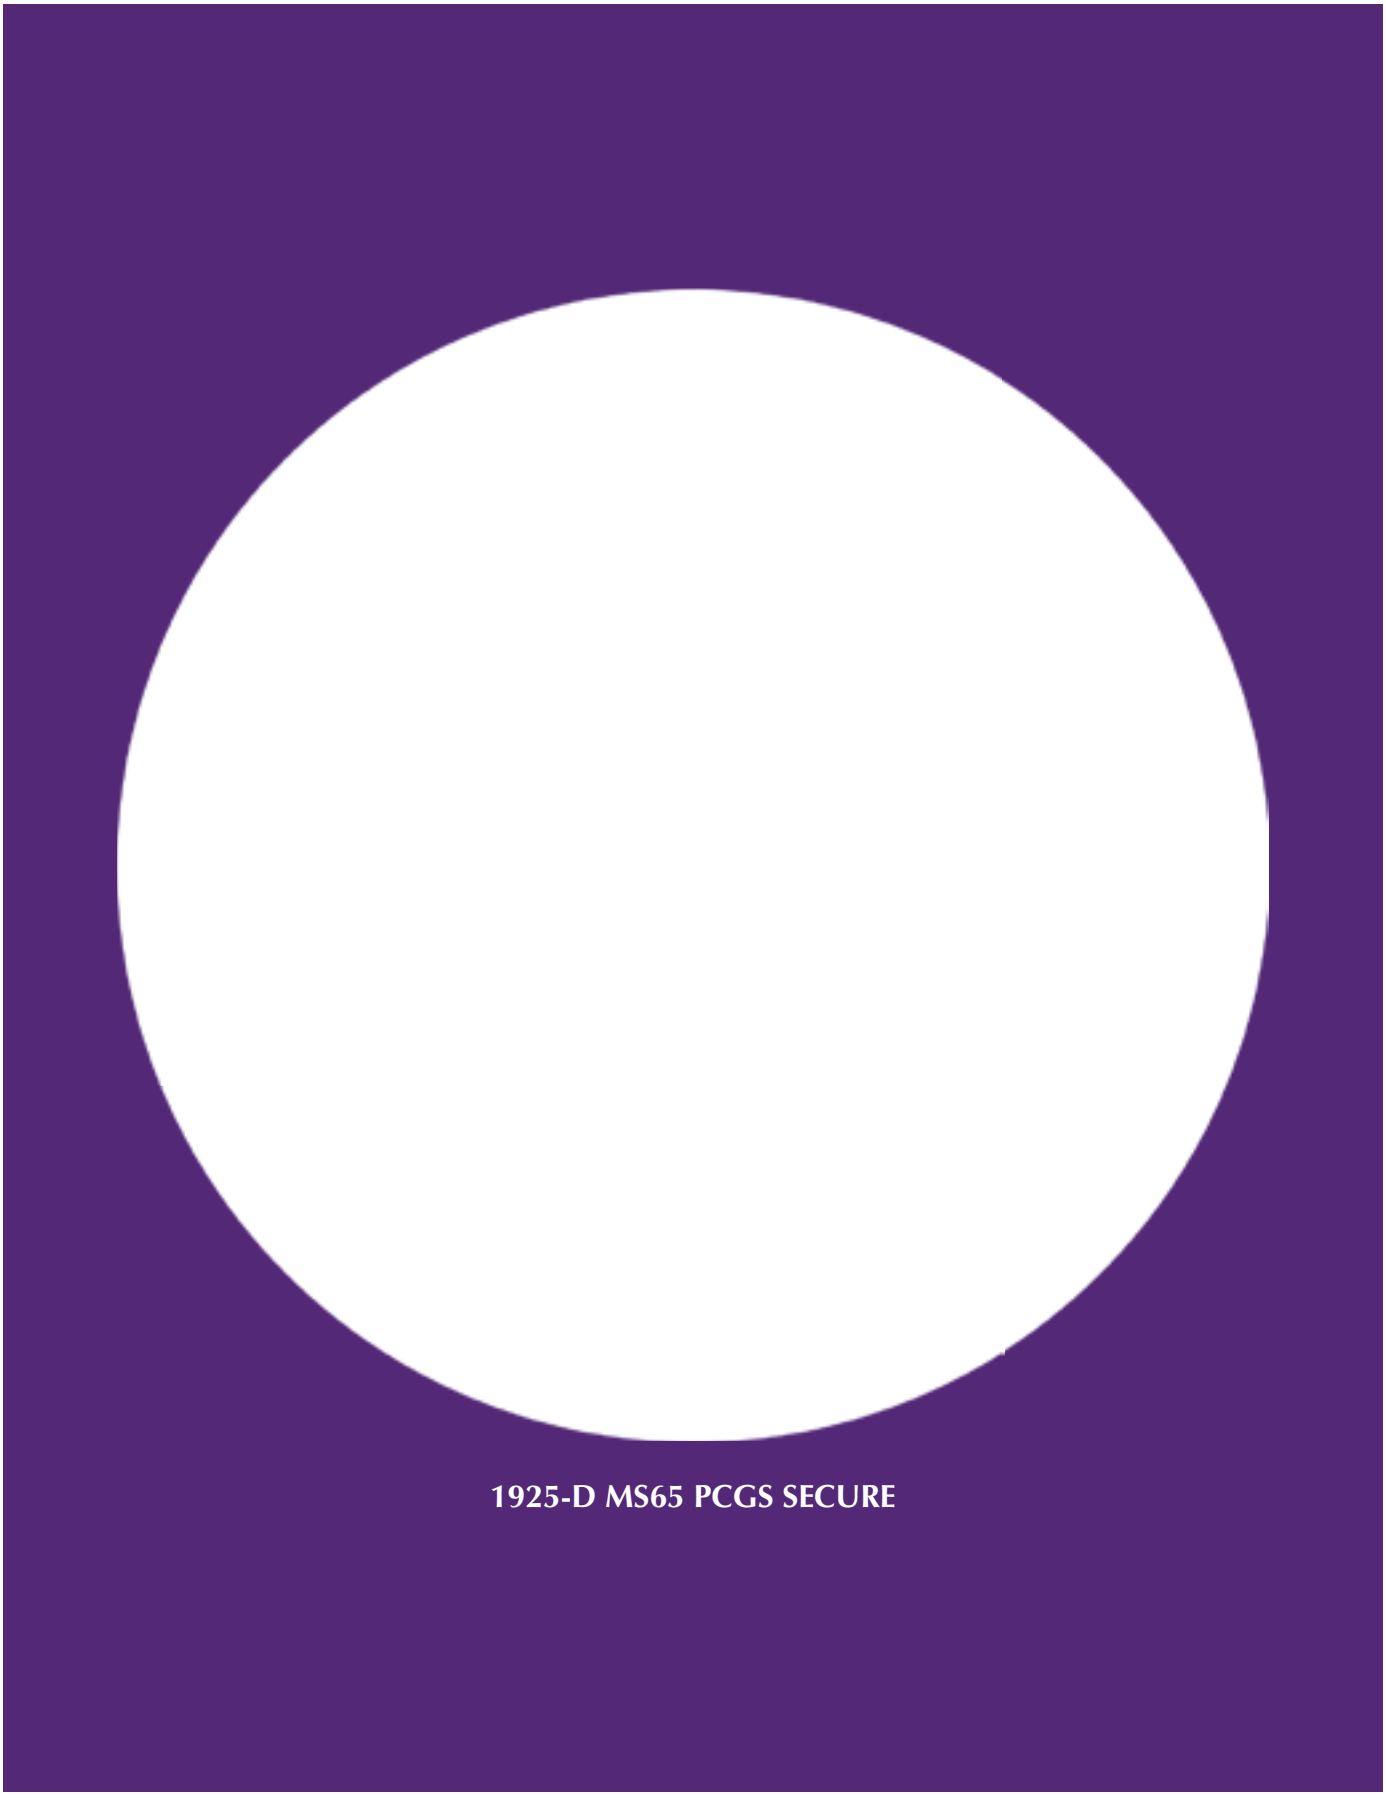
> "This is the fifth highest production figure from the Philadelphia facility, behind the 1924, 1927, 1928, and, interestingly, the 1931. The abundance of the 1925-P, like several other 1920s Philadelphia issues, is also due to their long-term residence in foreign banks during the domestic melts of the 1930s."

Despite the issue's relative abundance in Mint State through MS66, at the Superb Gem level all bets are off. This piece is one of only five submissions graded MS67 PCGS, with none finer (10/11). In comparison, in MS67 PCGS has seen 61 submissions of the 1923-D; 79 of the 1924 (with one example in MS68); only three submissions of the 1926; 13 of the 1927; and 70 of the 1928, all including the occasional Plus coin.



The PCGS data, even when one factors in the inevitable duplications, show that at MS67 the availability of the 1925 twenty dollar virtually dries up, and it suddenly becomes a remarkable condition rarity, far less available than several of its P-mint counterparts from the same decade. Serious fans of the Saint-Gaudens series know how rare the 1908-S issue is, but it may give the 1925 Philadelphia new respect to note at the MS67 level, the two coins show the same number of submissions at PCGS, as of the September 2011 Population Report.

The present Superb Gem 1925 is a marvelous coin that we have had the pleasure of offering before, in the memorable Kutasi Collection. The even yellow-gold surfaces show relatively little color variation from one side to the other, but there are remarkably few signs of contact, large or small, save for a tiny scrape on Liberty's brow and a couple of stray grazes on the high points. Liberty has a tiny black spot in her left eye. A tiny patch of abrasions on the eagle's rear feathers is the only mentionable contact on the reverse. The strike is quite bold, displaying sharp detail in the Capitol building, on Liberty's face, fingers, and toes, and throughout the eagle's plumage. It is worth mentioning that the PCGS population of five pieces or submissions has not increased in the five years since we last handled this coin, among the few finest certified of the issue.



*Ex: Kutasi Collection (Heritage, 1/2007), lot 3296, which realized $23,000.*

**1925-D MS65 PCGS SECURE**

# 1925-D Double Eagle, MS65
# Important Condition Rarity

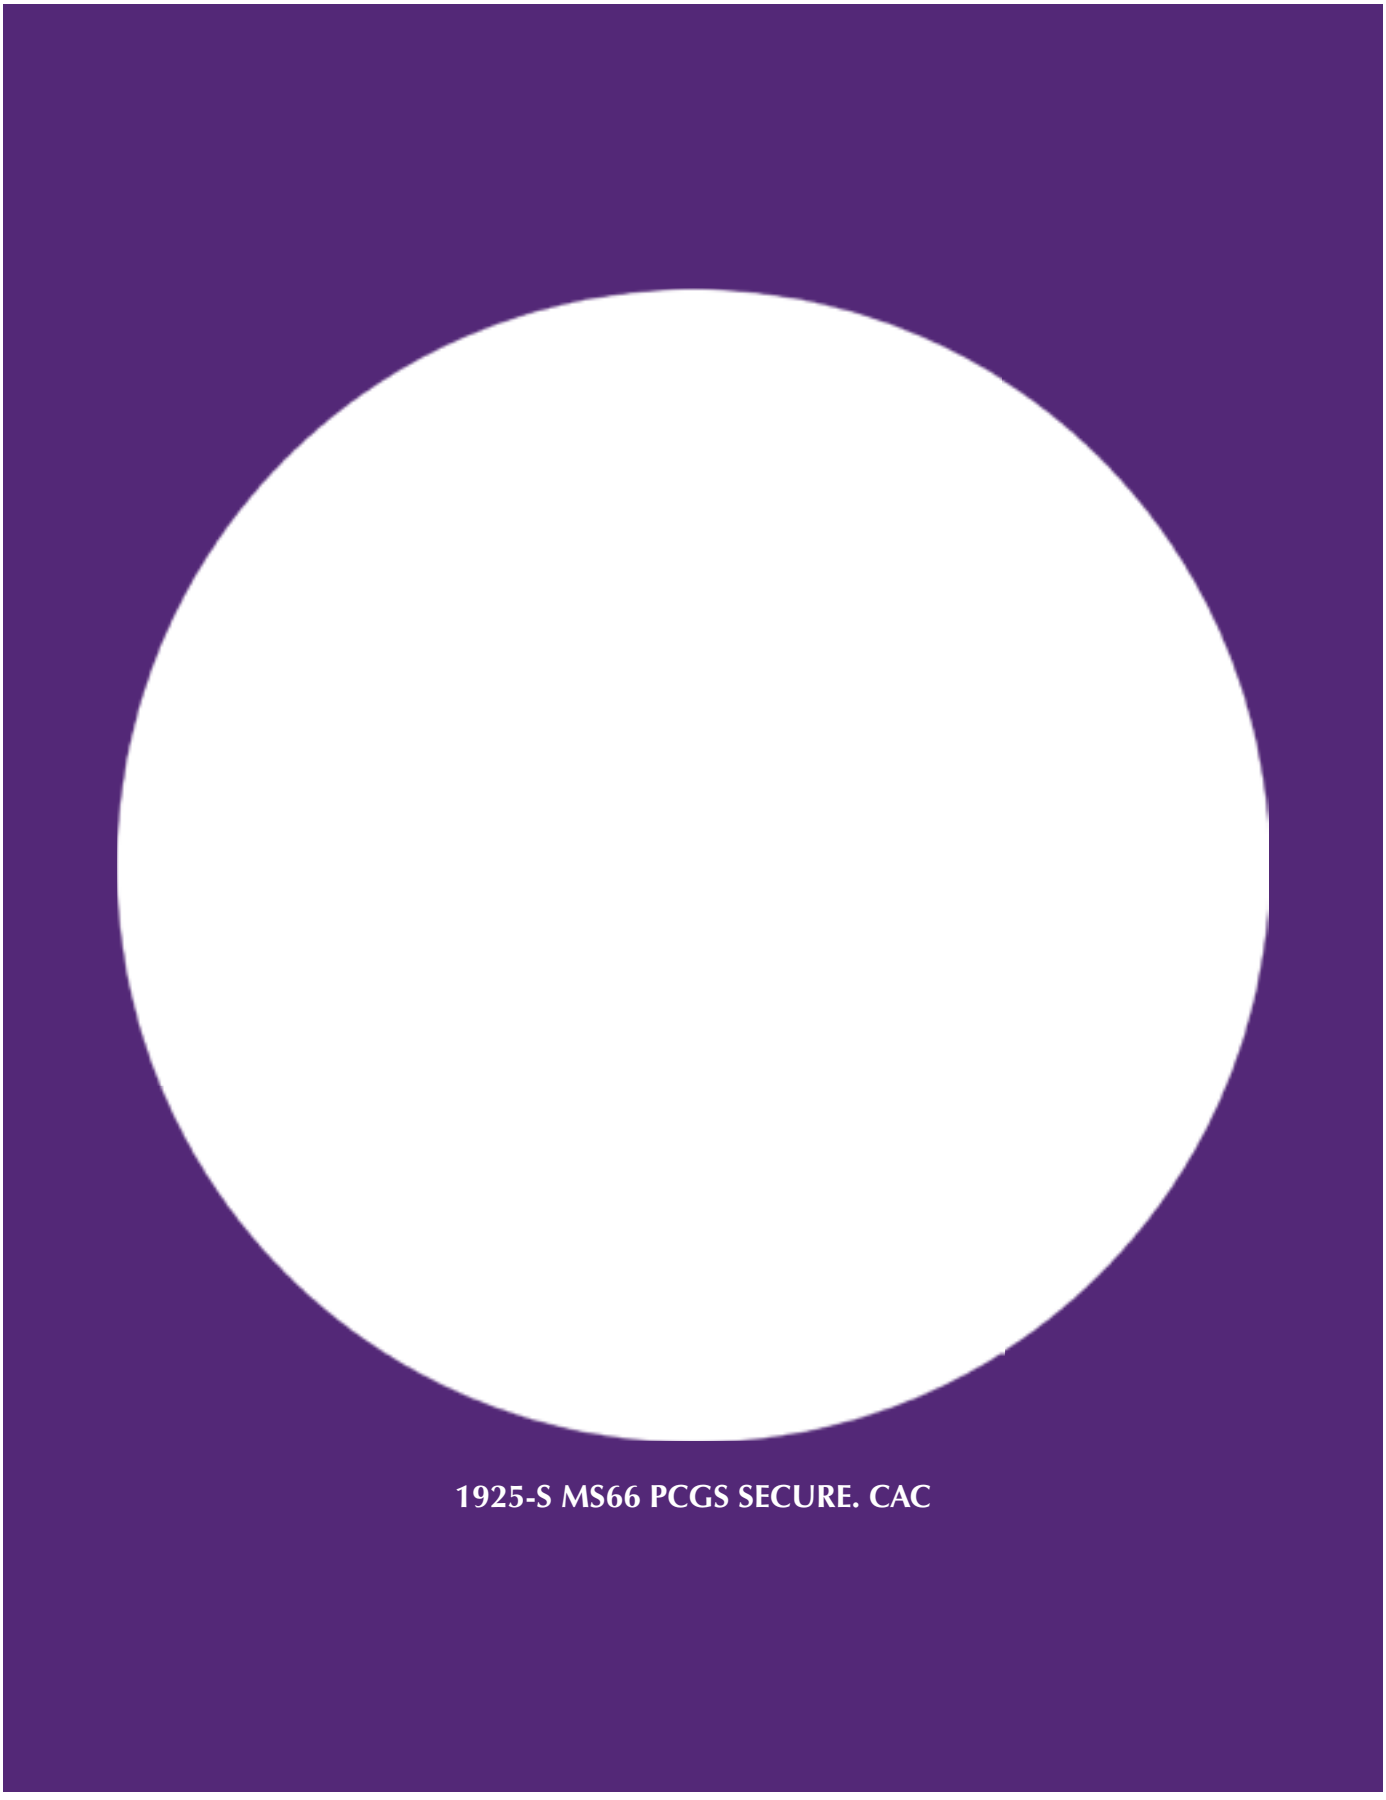
**4639** **1925-D MS65 PCGS Secure.** The typical 1925-D double eagle is in lower Mint State grades, the result of repatriation of coins exported in the late 1920s and returned to the United States in the 1950s through the 1970s. The unknown number of exported coins apparently found their way to banks in France and Switzerland. Nearly 3 million coins were minted, with an official record of 2,938,500 coins produced at Denver in 1925. However, a large number remained in Mint or Treasury storage until they were melted in the 1930s. Collectors preserved a few specimens at the time of issue, and those few coins are likely the higher-grade pieces known today. Although nine specimens are certified below AU58, it is doubtful that any 1925-D double eagles were officially placed into circulation, but it is possible that a few pieces were carried as pocket pieces or spent by collectors who could no longer afford to save the coins in the early 1930s depression.

The *PCGS Population Report* lists 379 certified examples of the 1925-D, with just five of those coins graded MS65 and two graded MS66 (10/11). The data clearly illustrates the condition rarity of this issue. The *NGC Census Report* supports the condition rarity concept, with 306 pieces certified at that service in all grades, including seven in MS65 and just one in MS66.

The Duckor specimen is one of the MS65 PCGS coins, acquired at the January 1979 Superior sale of the Madison Estate. At the time, the California firm offered a brief description:

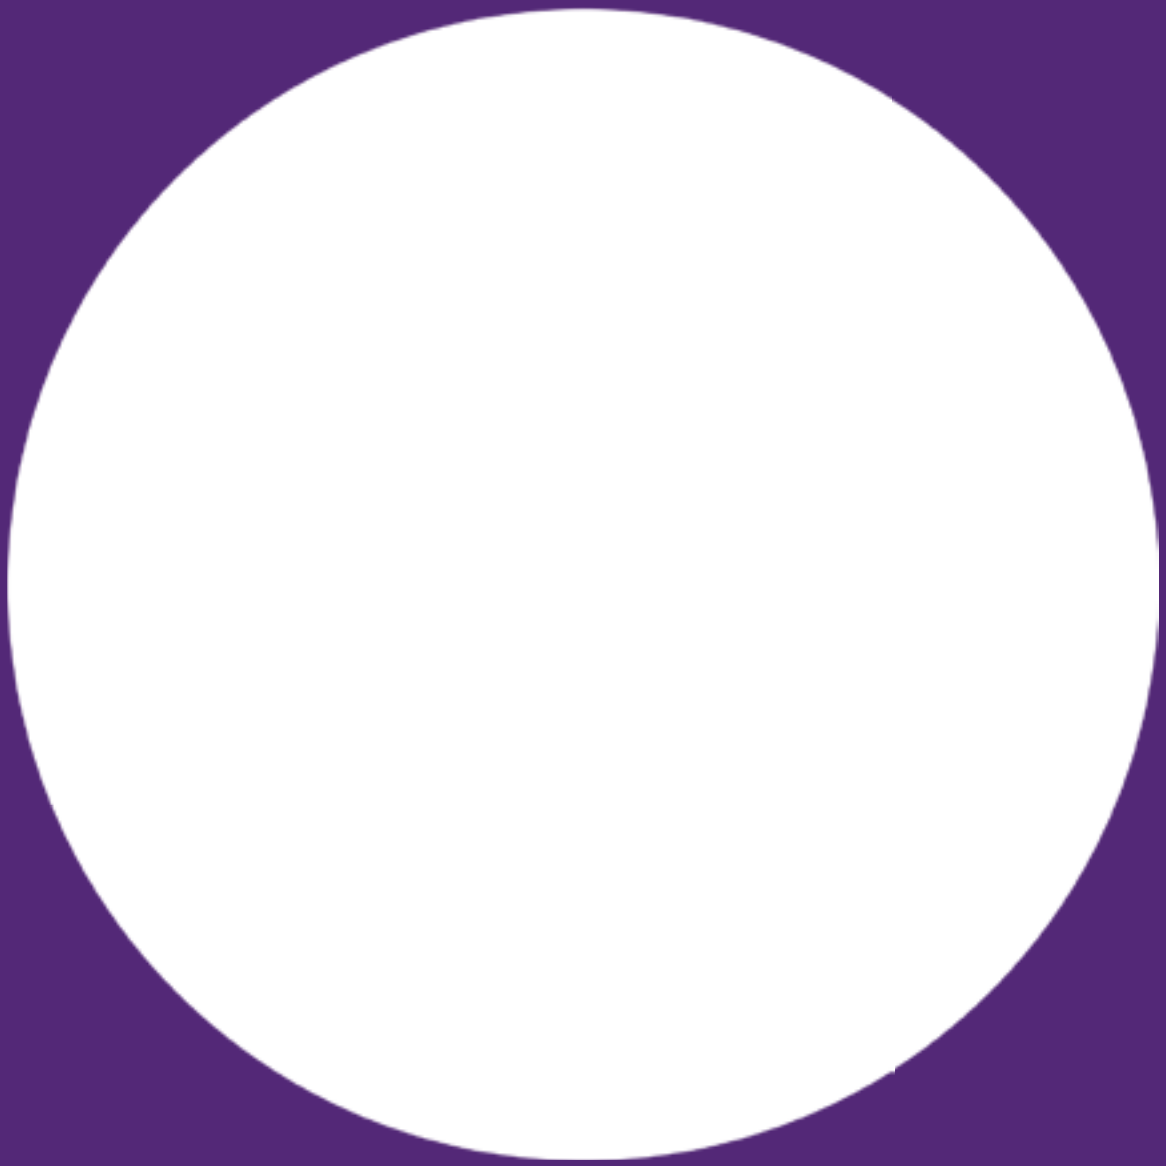
> "1925-D. Mint State 60 to 65. Well struck with gorgeous cameo-like mint luster. A very scarce date and the finest specimen we have handled. Worthy of a premium bid."

Unusual coloration on this Gem shows a patch of cloudy lilac in the center obverse surrounded by deep, mellow orange-red. The reverse offers a three-toned appearance, lilac, jade, and red-orange all competing for territory. Rich luster radiates from both sides, although the strike is a bit blunt on the lower obverse. A few scattered, mostly light abrasions are scattered throughout each side, but this coin offers amazing eye appeal through its thoroughly engaging patina, which will captivate any viewer.



*Ex: Madison Estate Sale (Superior, 1/1979), lot 1297.*

**David Akers Comments:**



The 1925-D is one of the many high mintage issues of the 1920's that was never really intended or used for general commerce. They were struck, saved in bags at the Treasury and then the mintage was almost entirely melted after 1933. Some were evidently shipped to Europe though in the period from 1926-1933 as over the years, beginning in the early 1950's, a number of small groups and individual examples were discovered in French and Swiss banks and returned to the United States through dealers to their collector clients. From its status as a major rarity in the 1940's when it was considered more rare than the 1920-S and 1925-S, as well as the three late date P-Mints (1929, 1931 and 1932), and just as rare as the 1927-D and 1930-S, the 1925-D is now known to be only moderately rare in terms of population rarity. Hundreds of examples exist, all grades considered, and specimens in the uncirculated grades from MS60 to MS63 are available on a regular basis. Even at the very choice MS64 grade level, the 1925-D can be found without a great deal of difficulty although at this level they are beginning to be rather expensive. Gems, however, are notably rare, much more so than many realize; only about six to nine exist at the MS65 level and, in superb MS66 condition, the 1925-D compares favorably to just about any other rarity in the series. Though two specimens at this level appear in the PCGS population report, they may be, in fact, the same coin. It is the Kutasi-Morse example that was earlier owned by Jeff Browning and sold with his collection as the "Dallas Bank Collection" by Stack's in 2001. The Duckor coin offered here is one of the finest of the five MS65 examples known and graded by PCGS. It is the coin in his collection that Dr. Duckor has owned the longest. He began collecting Saints in 1977 and purchased this coin from a Superior sale in 1979. The coin has great color and luster, minimal marks and a lot of eye appeal. Over the past few decades I have come to appreciate the 1925-D more and more in high grade and feel that it is one of the most underrated issues in the series. I have personally handled fewer really nice examples of the 1925-D then I have of most other issues and even with those issues of which I have handled even fewer gems than of the 1925-D, I at least have handled a superb uncirculated example or two. That, however, is not the case with the 1925-D.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9181)

**1925-S MS66 PCGS SECURE. CAC**

**1925-S MS66 PCGS SECURE. CAC**

## Premium Gem 1925-S Twenty
## Underrated Condition Rarity

**4640** **1925-S MS66 PCGS Secure. CAC.** The 1925-S Saint-Gaudens double eagle, while acknowledged as a scarce date, has always been somewhat overshadowed by some other mintmarked issues of the 1920s. In the 1940s, the 1924-S and 1926-D were perceived as the ultimate rarities of the Saint-Gaudens series, and when those dates became more available due to European finds, the previously unappreciated 1927-D was waiting to assume the mantle. However, despite the lack of fanfare, the 1925-S has always been a scarce issue in any condition, one of the most elusive of the series in high grade.

Unlike many issues, the 1925-S was released into circulation in significant quantities at the time of production. Research in Mint records conducted by Dr. Charles W. Green in the 1940s indicates that 454,700 examples were released through official channels, from a reported mintage of nearly 3.8 million pieces. As a result, the 1925-S is the only mintmarked double eagle of the decade that is seen more often in circulated grades than Mint State. The widespread circulation may account for the 1940s perception that the 1925-S was less rare than other mintmarked issues of the era, because dealers could remember seeing the coins in circulation and assumed they were plentiful or even commonplace.

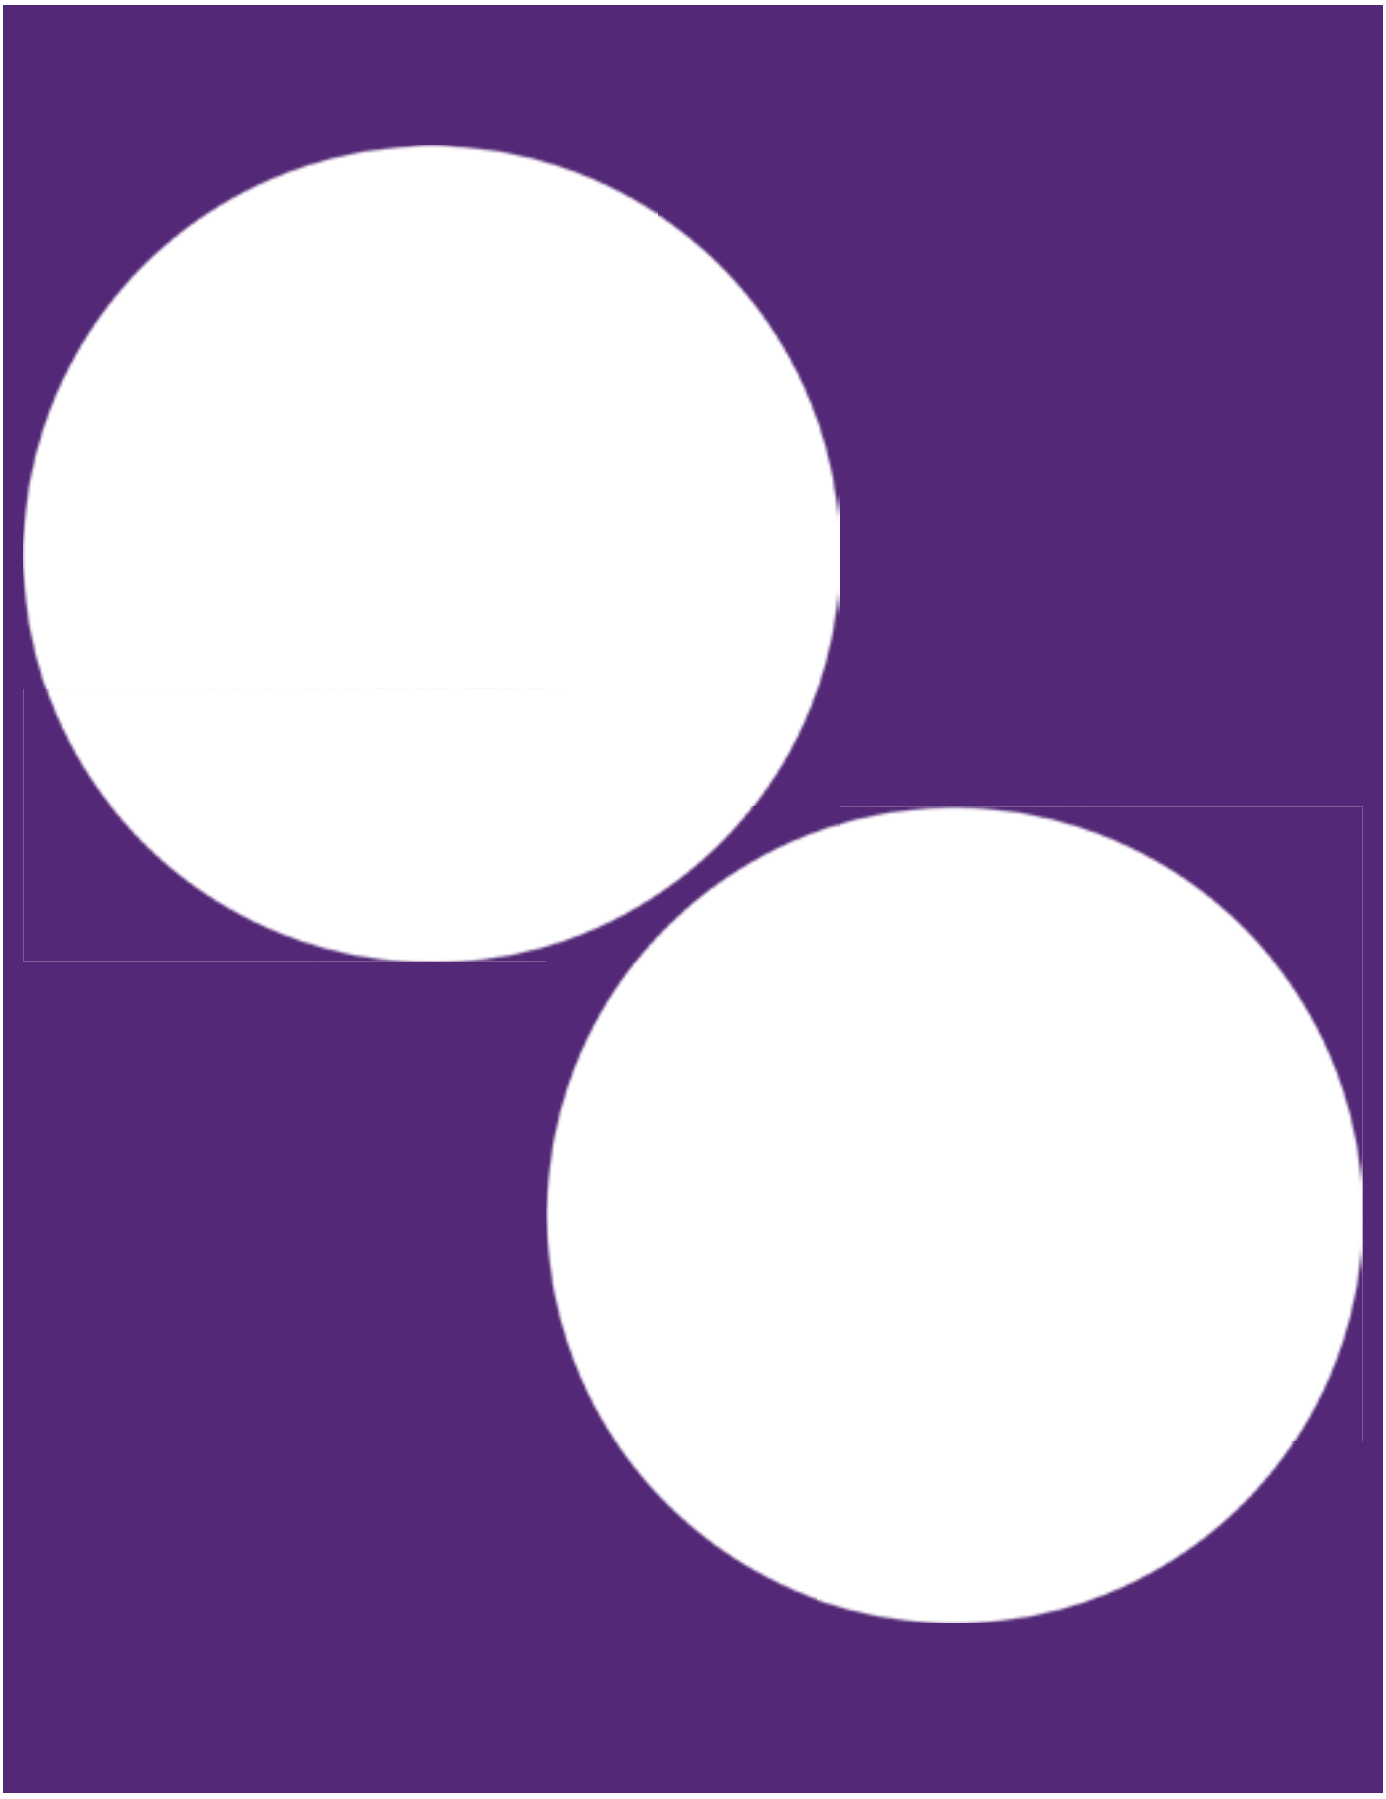
The majority of the huge mintage, the third-largest of the series, was held in domestic banks and Treasury vaults until the Gold Recall of 1933. Of the coins released into circulation, most of them must have been turned in by the public at the time of the recall, to be melted and stored at Fort Knox. Double eagles were often used in foreign trade before about 1930, and large numbers of some dates were preserved in European banks, safely out of reach of the U.S. government actions, until they could be found by numismatists in the 1950s. If the 1925-S was extensively used in foreign trade, most of the transactions must have been with English firms, as few examples have surfaced in the many finds in French, Swiss, and Central American banks. Coins that went to England tended to be melted down, to be reissued as sovereigns, rather than preserved intact as they were in Continental banks. The 1925-S has maintained its status as a scarce date and high-grade rarity throughout the last eight decades.

In lot 110 of the Dr. Thaine B. Price Collection (David Akers, 5/1998), Akers offered this assessment of the 1925-S:

> *"*... the 1925-S is one of the major rarities in the series and has long been regarded as such. Even back in the 1940's it was considered a rarity, not as much so as the 1924-S, 1926-S, and 1926-D, but more or less on par with the 1924-D, 1931 and 1932. I do not recall ever seeing or hearing of any hoards of this issue, not even from the 1950's or 1960's when quantities of many of the Saint-Gaudens issues previously thought to be rare were discovered in European banks."

Present-day numismatists recognize the 1925-S for the rare issue it has always been in high grade. PCGS has certified only this single coin in MS66, with two examples finer (10/11). The coin offered here is tied for third place in the PCGS Coin Facts Condition Census.

The present coin is a spectacular Premium Gem, with well-defined design elements and tremendous eye appeal. The surfaces are evenly colored antique-gold, with light accents of orange over surfaces that show soft but thorough luster. The pleasing surfaces are free of all but the smallest abrasions, the most obvious on the lower eagle feathers. A small die crack runs from the top of the eagle's head to the forepart of the wing. This coin represents a rare combination of high technical grade and abundant eye appeal on an issue that is rarely encountered so fine.



*Ex: Manfra, Tordella and Brooks; David W. Akers (privately, mid-1980s).*

**David Akers Comments:**

The 1925-S had an extremely high mintage, close to four million pieces, but virtually all of them were simply kept in bags, stored by the Treasury and later melted after 1933. Some coins clearly were placed into the channels of commerce through local banks though as evidenced by the existence of many circulated examples. Some were also sent to Europe between 1926 and 1933 most likely in mixed date bags of circulated and uncirculated double eagles rather than single date bags of uncirculated 1925-S coins. Beginning in the 1950s, most of these coins were repatriated to the U.S. and now, as a population rarity, the 1925-S is really more accurately described as scarce rather than rare. It is similar overall to the 1925-D although in the choice uncirculated 63 and very choice uncirculated 64 grades the 1925-S is substantially more rare than the 1925-D. Even in the 1940s, the 1925-S, although recognized as very scarce, was never thought to be one of the major rarities of the series due, no doubt, to the availability of quite a few circulated pieces. In fact, those that did appear at auction were typically circulated (cf. WGC 1946) or in the lower mint state grades. Although condition rarity was not a big factor at that time, really nice examples of very scarce or rare dates (say, MS63 or better by today's standards) were generally so noted in catalog descriptions but no 1925-S during that era was described as a gem in a major sale. Since virtually all of the specimens later found in Europe were typically in the grades from AU50 to MS62, the 1925-S is still rare today in MS63 and very rare in MS64. At the gem MS65 grade level and above the 1925-S is one of the major rarities of the entire series. Probably only four to six exist in MS65 but, remarkably, above that level an additional four examples exist that stand out from the rest of the population. The highest graded example is the MS68 specimen from the Norweb collection. I purchased it at the Norweb sale in November 1988 and later sold it to Dr. Thaine Price. Dr. Price's collection was sold in 1998 and the coin is now in the collection of an East Coast Saint-Gaudens specialist. The second highest graded is the MS67 example now in the Simpson Collection. I purchased this coin from Stack's March 1991 sale and sometime later sold it to dealer Jay Parrino. The next two specimens are also superb and have great stories to go with them. In 1986, I went to New York to visit my good friend, Gerald Bauman, at MTB as I did regularly to buy some coins, have lunch, talk sports and generally just have a great time visiting and laughing with one of my all-time favorite people. While I was there, one of the other numismatists at MTB who handled the walk-in traffic, came up to Jerry and said an elderly lady was there with a single coin to sell that Jerry needed to see. Jerry left and then returned about 20 minutes later and laid down a fabulous 1925-S double eagle on the coin tray I always carried with me. He said it had been wrapped in tissue and carried in a small bag, like a change purse. He also indicated that the woman said she had owned it most of her life (but was not a collector of any sort) and that he had offered her a very fair price for it and she had accepted. I purchased it just moments later from him for $1,000 more than he paid for it and I sold it days later to Dr. Duckor for an identical mark-up. It is now the only specimen graded MS66 by PCGS. The fourth superb example of this issue was consigned to Paramount in 1980 by a doctor from Washington, D.C. He said it had been in his family for as long as he could remember and that it was given to him by his father. It was the only gold coin in the entire consignment with the others all being U.S. commemorative half dollars that his father had purchased directly from the issuing commissions, mostly issues in the 1930s but a few earlier. He had no idea where his father acquired the double eagle but he had told me on the phone that it was just a common coin and certainly "no big deal" anyway. When I received the coin in the mail with the rest of the consignment, it was in a plain manila 2x2 envelope, not wrapped in anything else and the envelope bore only the notation "$20 gold, 1925," without any indication as to mintmark. No wonder he didn't think it was a big deal. The coin realized $20,000.00 in the Paramount sale, a record for the issue at that time. I didn't buy it from the sale but did purchase it privately two years later. I kept it in my personal collection for five years and then sold it to dealer Les Fox who included it in his "Rare and Important United States Gold Coins" sale in October 1988, which was conducted by Stack's and cataloged by myself and Norman Stack. I don't know if it has been certified yet but I graded it a superb gem, MS66 or better. Perhaps it is the lone MS66 appearing in the NGC population report.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9182)

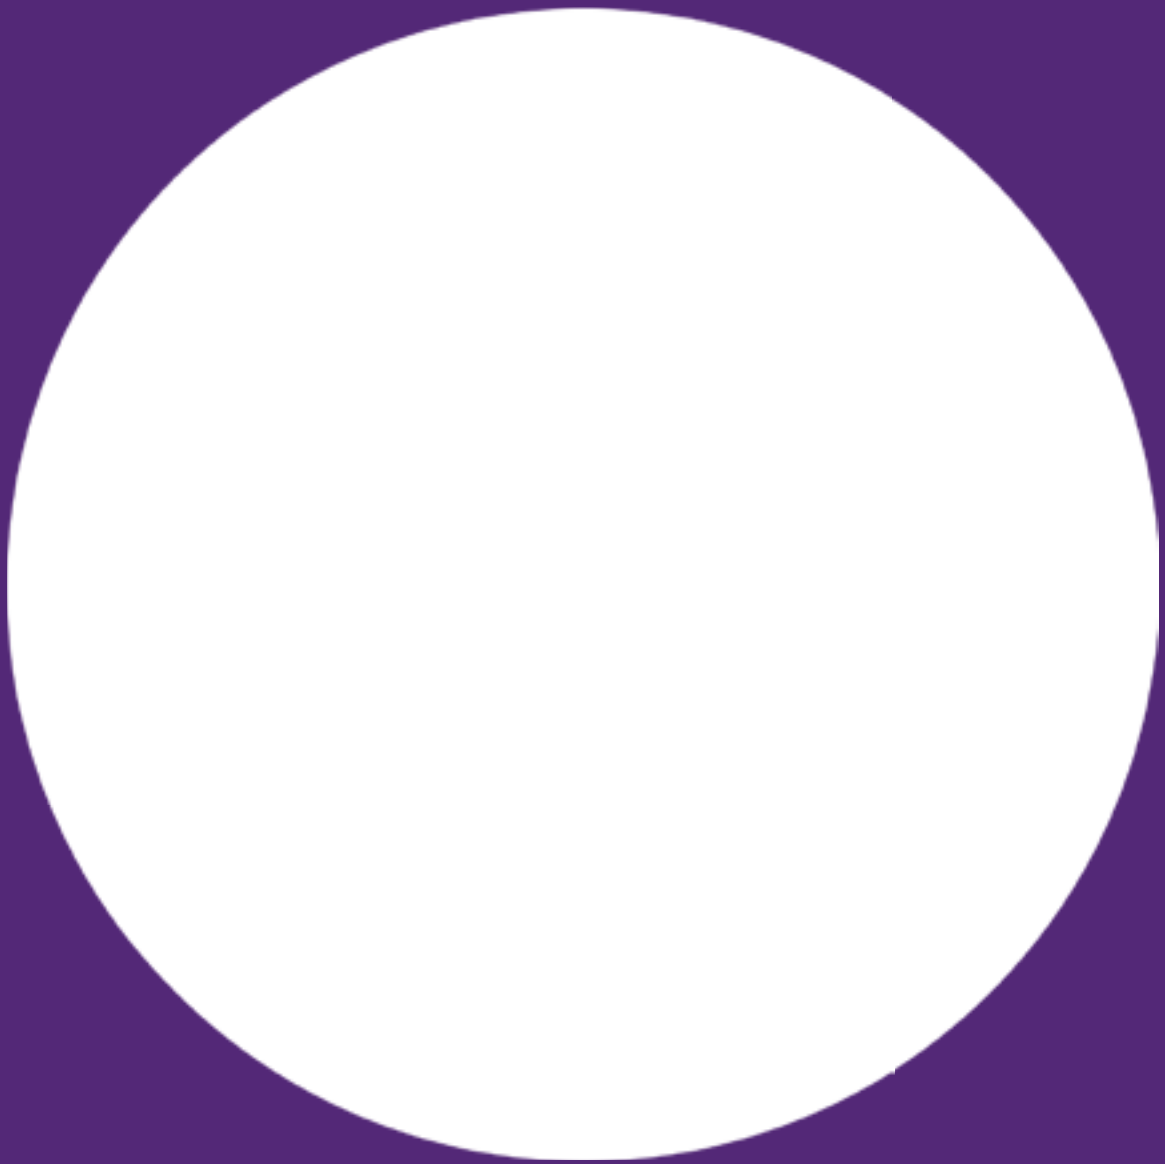
# 1926 Double Eagle, MS66
# Elusive in Top Grades

**4641** **1926 MS66 PCGS Secure. CAC.** Ex: Duckor/Akers. Gold coin experts and general numismatists alike will often state that the 1926 Saint is a common issue, plentiful in all grades, placing them in the same category with all other P-mint issues from 1924 to 1928. In *A Guide Book of Double Eagle Gold Coins,* published in 2004, Dave Bowers wrote: "Among the relatively inexpensive and highly collectible Philadelphia Mint double eagles of this era, the 1926 has long been a favorite. Gem MS-65 and even finer pieces are readily available, with great eye appeal to go along with the numerical designations." In *Encyclopedia of U.S. Gold Coins 1795-1933,* published in 2006, Jeff Garrett and Ron Guth commented that "as a date, this is one of the most common issues in the series, ranking number 48 of the 54 dates and mints."

However, series specialists will clarify that the 1926 is hardly a common issue when compared to the 1924 and 1927 P-mint issues, or even the 1925 and 1928 issues. In *A Handbook of 20th-Century United States Gold Coins 1907-1933,* published in 1988, David Akers provided more detail about the 1926 Saint-Gaudens double eagle:

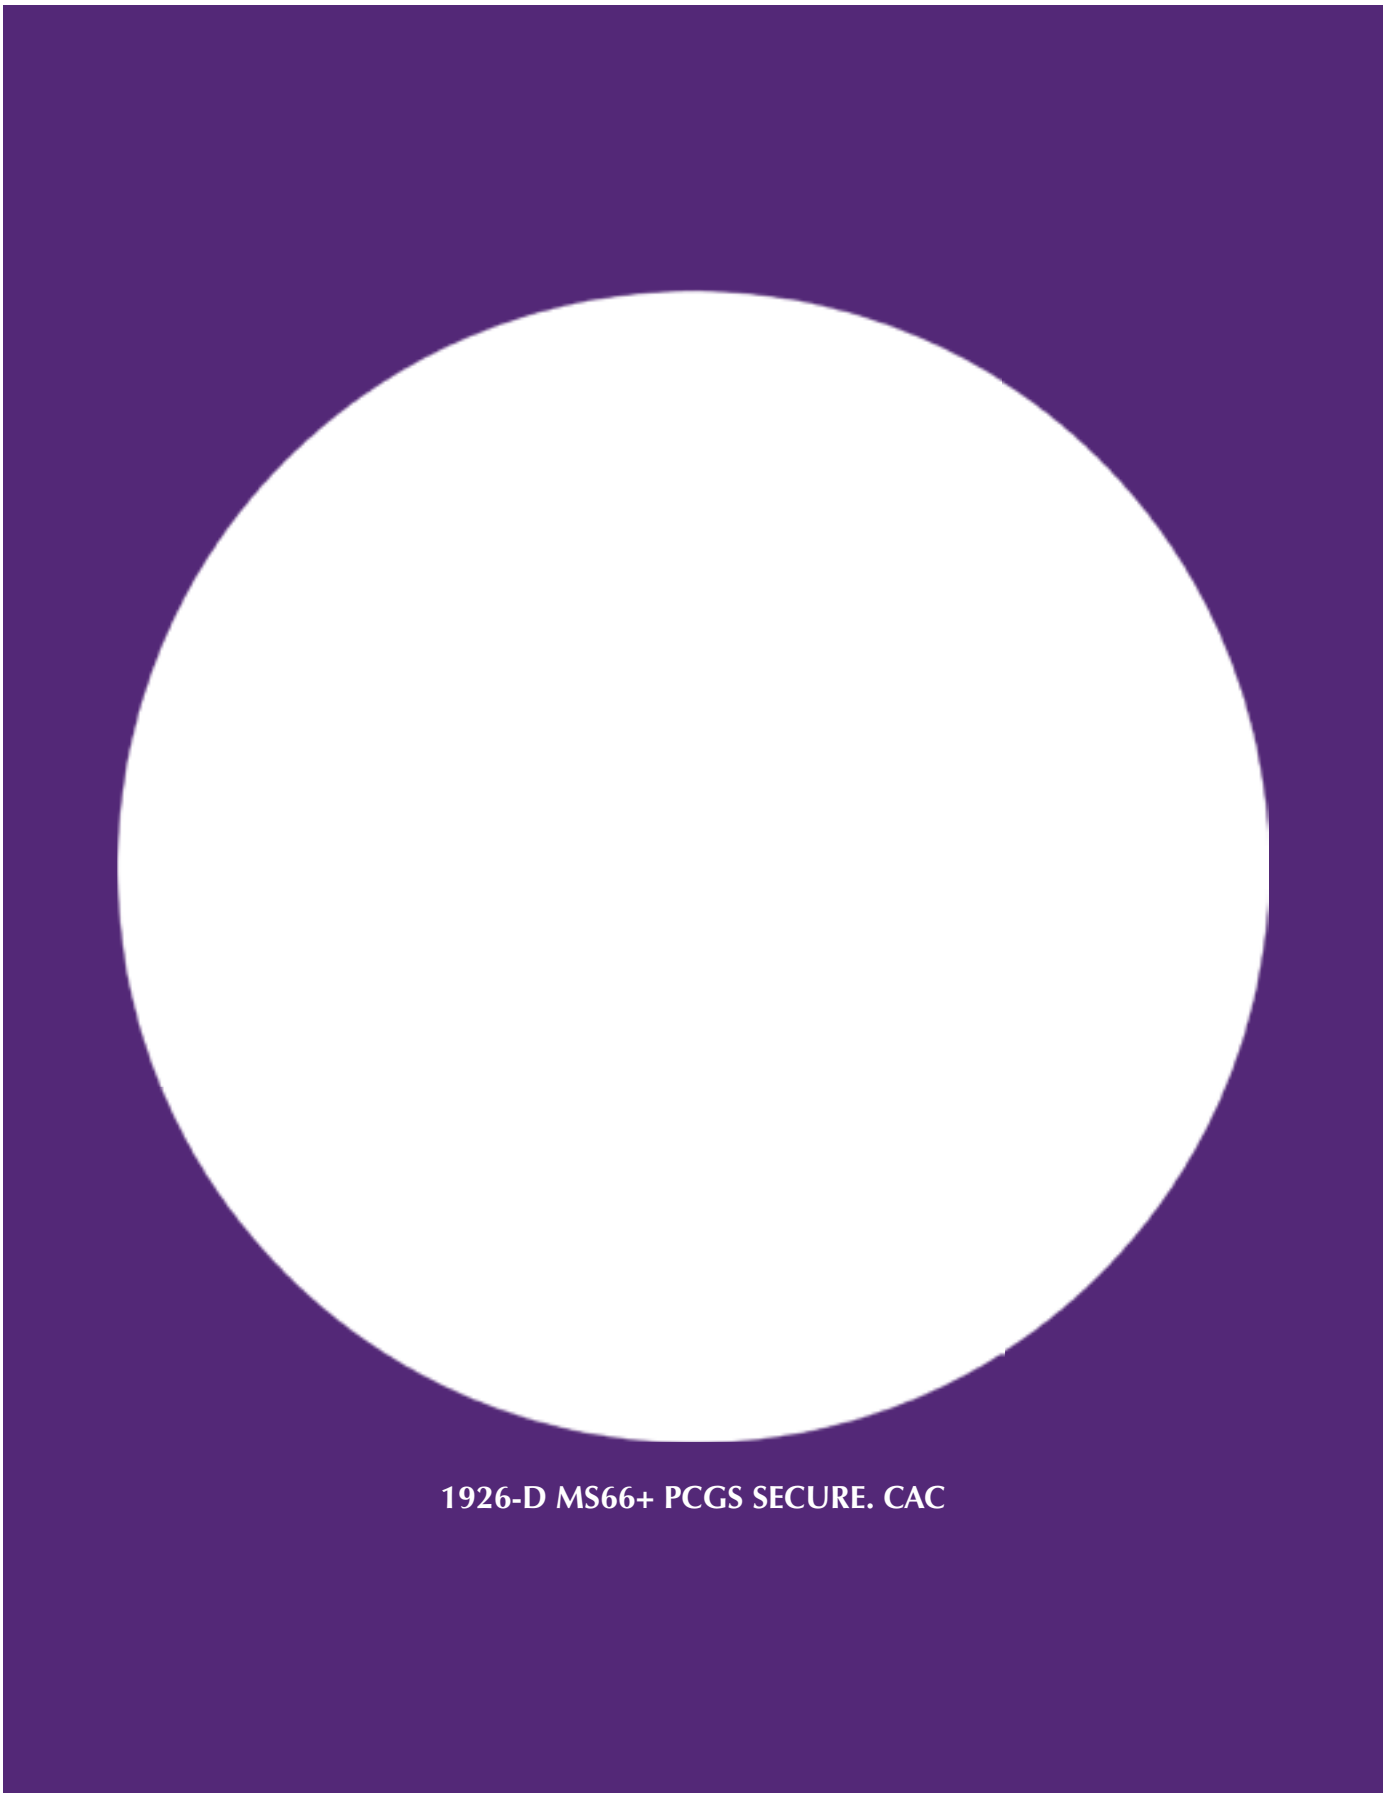
> "The 1926 is one of the most common issues of the Saint-Gaudens series, but it is still a distinct step higher in overall population rarity and condition rarity than such truly common issues as 1924, 1927, and 1928 with which it is generally, but incorrectly, associated. Contrary to what some other experts have written, the 1926 is also significantly more rare than 1925, especially in gem condition."

A study of PCGS population data will clarify the relationship of various common and so-called "common-date" double eagles from the 1920s. Among issues with the highest total populations, there are three, or perhaps even four distinctly different groups. The most common issue is 1924, with an incredible PCGS population of a quarter-million pieces. Next is 1927 with a total of 130,000 submissions. The second tier includes 1925 and 1928, each with more than 40,000 coins graded, and behind that are the 1923 and 1926 issues, with total populations of about 20,000 coins.



Most important in the context of the present offering of coins from the Duckor Collection is the availability of high-grade coins, or those that are certified finer than MS65. Once again, consultation of the PCGS Population Report provides a clear picture. The only common dates in high grade are the 1924, 1927, and 1928, with 7,900, 5,300, and 2,700 pieces certified finer than MS65, respectively. The next tier includes a date usually not associated with the common issues. The 1923-D has a high-grade population of 1,500 coins, and 1925 has a population of more than 1,000 coins. Finally, the 1926 falls far short of the others with only 725 MS66 PCGS coins certified to this time (10/11). Saint-Gaudens collectors might as well forget about a finer piece, as PCGS has only certified three MS67 examples. There are 10 different issues with a higher Superb Gem population.

PCGS-certified MS66 examples of the 1926 are infrequently encountered, and as always, a candidate for cherrypicking to find the right coin, one that is sharply struck with full luster and excellent eye appeal, a coin such as the Duckor specimen. This Premium Gem exhibits rich luster with brilliant yellow- and orange-gold surfaces and bright mint frost. The Duckor specimen is fully struck with patches of lilac on the reverse, showing tiny blemishes on the eagle's breast that provide for future identification.



*Ex: David Akers.*

(#9183)

**1926-D MS66+ PCGS SECURE. CAC**

**1926-D MS66+ PCGS SECURE. CAC**

# 1926-D Double Eagle, MS66+
# The Finest Known of the Issue

**4642** **1926-D MS66+ PCGS Secure. CAC.** Ex: Duckor/Morse. At one time, the 1926-D was considered the second rarest Saint-Gaudens double eagle except the 1933. The first auction appearance of any 1926-D twenty was in the January 1946 catalog of F.C.C. Boyd's "World's Greatest Collection," where Abe Kosoff and Abner Kreisberg wrote:

> "This double eagle, the 1926 Denver mint coin, is one of the two rarest coins in the entire series, the other being the 1924-S. We consider the 1926-D to be more rare than the 1921 Philadelphia. Our conclusion is based on contacts with some of our finest cabinets."

The Boyd Collection was missing the 1924-S; the 1926-D sold for more than any other Saint-Gaudens double eagle in the entire collection, realizing $1,300. The Boyd specimen of the 1921 double eagle realized $825 and the 1927-D brought just $650. Both of those coins have recently broken the million-dollar level in our sales. That 1946 auction included 1,046 lots, exclusively gold, with only 11 lots, including the 1926-D double eagle, that brought a four-figure price, with the 1841 Little Princess quarter eagle realizing the top price of $6,000. The average sale price was less than $84 per lot.

B. Max Mehl offered a 1926-D in his 1949 sale of the Dr. Charles W. Green Collection, calling the date "the rarest of all Double Eagles of all Mints of all dates," and further commenting that the Green Sale specimen "is the first specimen ever to be offered at auction," overlooking (or ignoring) the earlier 1946 appearance. The Green specimen realized $2,500 in 1949, the second highest price in that sale behind a proof 1858 eagle that realized $4,250.

Few have survived from a mintage of only 481,000 coins. While some other issues are considered rarer today, the 1926-D is still one of the extremely important issues in the Saint-Gaudens series, and the Duckor specimen, the only one certified MS66 PCGS with the Plus designation, is the finest known specimen (10/11). The price of the 1926-D dropped in the 1950s as a few small hoards were found. However, unlike most other issues, there were only minuscule quantities of the 1926-D discovered in overseas bank holdings.

The combined PCGS-NGC census data shows that the two services have certified less than 300 examples of the issue in all grades, and the finest that NGC has certified is just MS64. The present specimen was consigned to Auction '89 after being off the market for more than 30 years. In that catalog, David Akers wrote that it was "in our opinion, the FINEST KNOWN," and that opinion remains unchanged over the last two decades. Akers continued to suggest that the coin would "bring a very high five figure bid," and it did, realizing $93,500 with the buyer's premium. More than two decades have passed since that sale, and today we expect that this specimen will bring a strong six-figure bid.

The Duckor MS66+ PCGS coin has marvelous cartwheel luster and exceptional orange- and greenish-gold surfaces with frosty mint brilliance. Exceptional aesthetic appeal is the result of the natural toning, amazing surfaces, and bold strike. Only a few tiny marks are almost entirely hidden in the design motifs, with a dark spot on the eagle's forewing and a few other spots to identify the provenance.

*Ex: Auction '89 (David Akers, 7/1989), lot 1473; Dr. Steven L. Duckor; Phillip H. Morse Collection (Heritage, 11/2005), lot 6688.*

**David Akers Comments:**

The two top examples of this extremely rare issue are the Norweb specimen and this one offered here in the Duckor Collection. They are the only superb uncirculated examples I have seen or heard of and, amazingly, I handled them both less than one year apart. In fact, I had both of them in my office at the same time and was able to compare them closely. I purchased the first one, now graded MS66 by PCGS, at the third part of the sale of the great Norweb Collection in 1988 as lot 4126 for $39,600, a price far less than I expected I would have to pay. The coin was conservatively graded MS63 in the sale, but my notation in the catalog indicated "MS65+, gem, possibly the best. Looks like a 1923-D!" While I still had the coin in my possession, shortly before I sold it to Dr. Thaine Price, I received the coin now offered here in the Duckor Collection as a consignment to Auction '89 where I cataloged it as follows: "Gem Uncirculated 65+, possibly even MS66. A splendid coin in every respect, slightly superior to the gem Norweb specimen... and finer than any other 1926-D known." This Duckor specimen is now the single highest graded specimen at MS66+. It was consigned to Auction '89 by a marvelous gentlemen from Lima, Ohio, who was known throughout the community as "Mr. Lima" for his many good works and charitable contributions to the area. He was also an incredibly quality conscious collector, far ahead of his time in that regard. He only wanted the very best and was also one of the few who was willing to pay for it. He assembled fabulous collections of Saint-Gaudens double eagles and eagles. He had a "perfect" 1907 MCMVII Extremely High Relief which I sold privately, the finest known 1924-S (now PCGS graded MS67, which I sold to Dr. Price), this 1926-D and a duplicate, also a gem which I sold privately, one of the now MS66 graded 1927-D's, superb gem Wire Edge and Rolled Edge 1907 eagles, a literally perfect MS68 1908-S eagle, and a gem 1933 eagle among many, many others. During the late 1940's, "Mr. Lima" paid $2,200 for the 1924-S and $2,000 for the 1927-D. However, he only paid $500 for this 1926-D indicating he probably purchased it in the early 1950's after the value of a 1926-D had dropped dramatically due to the initial discovery of some small hoards of the issue in Europe. However, it is virtually certain this specimen is not one from the hoards as those were invariably much lower quality and heavily bagmarked. The same can be said for the Norweb example. These two coins never left the United States and most likely they were obtained directly from the Denver Mint in the year of issue and carefully saved.

Prior to the discovery of the small hoards in Europe, the 1926-D was considered to be one of the three greatest rarities in the series, second only to the 1924-S and slightly more rare than the 1926-S. It was also thought to be more rare than the 1920-S, 1921, and 1927-D, the three most valuable regular issues of the series today. The discovery of the hoards in Europe changed all that in terms of population rarity but definitely not condition rarity. In gem and superb uncirculated condition the 1926-D is still considered one of the top five rarities in the Saint-Gaudens double eagle series today.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9184)

**1926-S MS66+ PCGS SECURE. CAC**

**1926-S MS66+ PCGS SECURE. CAC**

## 1926-S Twenty, MS66+
## Finest Certified at PCGS
## Ex: F.C.C. Boyd, Dr. Charles Green, Amon Carter

**4643** **1926-S MS66+ PCGS Secure. CAC.** Ex: Boyd/Green/Carter/Duckor. The 1926-S was once considered the third-rarest date of the Saint-Gaudens double eagle series. When legendary Fort Worth coin dealer B. Max Mehl cataloged this specimen as lot 881 of the Dr. Charles W. Green Collection in April 1949, he recapped the then-current knowledge about the coin's rarity and revealed interesting information about the history of the coin offered here:

> "1926 $20.00, San Francisco Mint. Uncirculated. Full mint luster. Excessively rare. This identical specimen is from the 'World's Greatest Collection,' Lot No. 1029, sold in January, 1946. The catalogers at that time had this to say about this coin: "One of the rarest of United States coins. This Double Eagle should take off on a record breaking spree. It is our opinion that the selling price will exceed $1,000.00." (At that time the coin cataloged for $150.00.) The coin brought $1,100. To the best of my knowledge only three specimens are known to exist. The Berenstein Collection did not have it. As stated above, it is undoubtedly one of the very rarest of American gold coins."

The coin realized $1,525, a staggering sum for that time. The World's Greatest Collection was the magnificent U.S. coin collection assembled by F.C.C. Boyd and cataloged by Abe Kosoff in 1945-1946. Boyd was the vice president of the Union News Company, served on the board of the National Recovery Administration during the Depression. and was a board member of the Office of Price Administration during World War II. His pattern collection was sold to King Farouk and much of his Colonial material was acquired by John J. Ford, Jr.

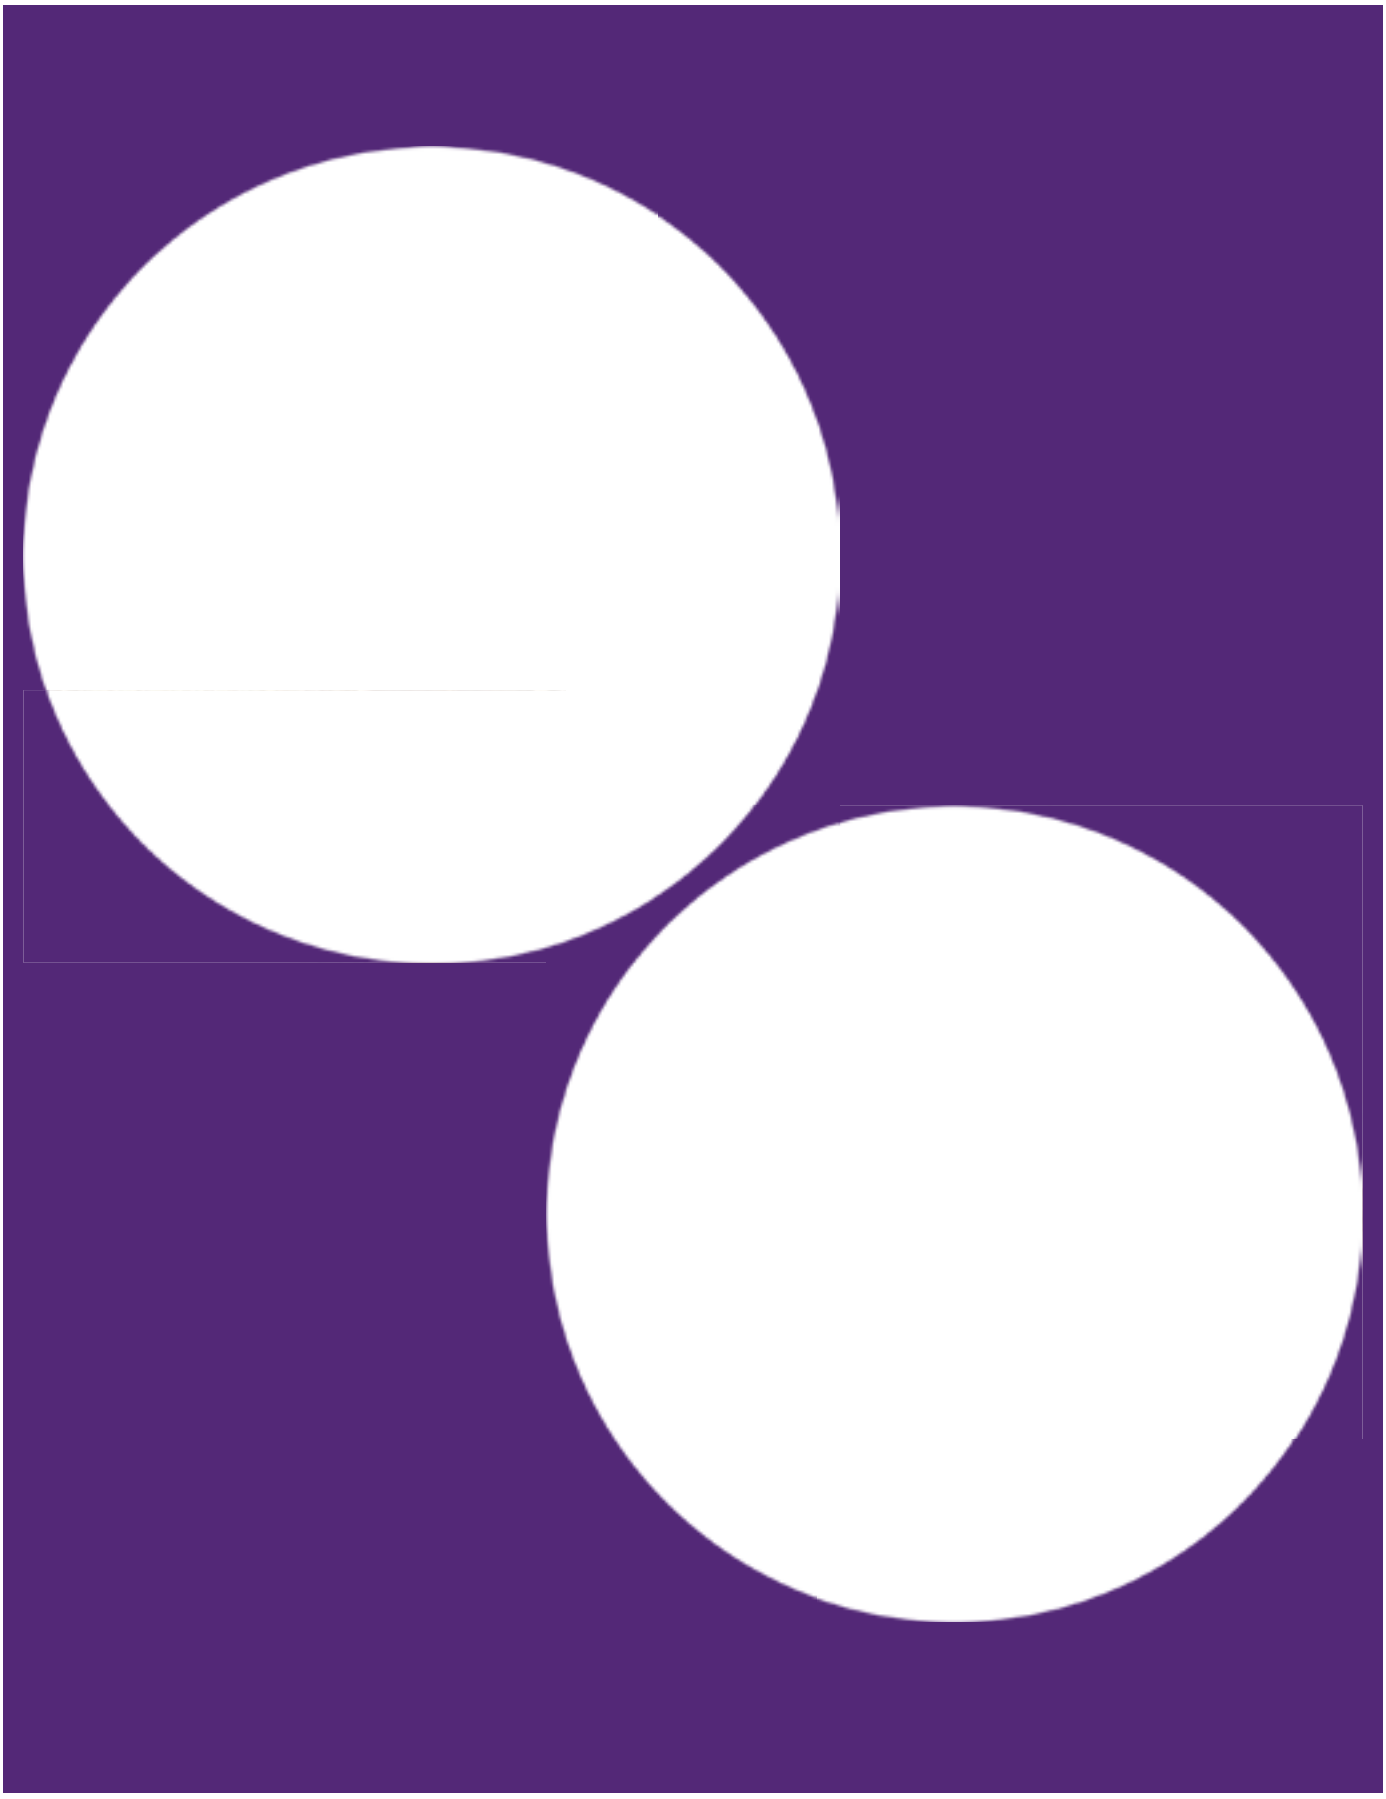
The likely buyer of the coin at Mehl's sale was Amon Carter, Sr., another prominent citizen of Fort Worth, Texas. Carter and his son, Amon Carter, Jr., put together a world-class collection, including an 1804 dollar, one of the three known specimens of the 1822 half eagle, and many rare dates from the Saint-Gaudens series. The main body of the collection, including this coin, was sold by Stack's in 1984, but the 1822 half eagle was sold earlier to Josiah K. Lilly and now resides in the Smithsonian Institution. Dr. Steven Duckor acquired this coin at the Carter sale, providing an unbroken pedigree that leads back more than 65 years and reads like a "Who's Who" of 20th century numismatists.

Like many dates from the 1920s, the 1926-S began to turn up in European holdings in the 1950s, and its rarity as a date has declined over the years. Today, the 1926-S ranks as the 18th-rarest issue of the 53-coin series, but it remains quite rare at the MS66 level. PCGS has certified only two examples in MS66, with this coin listed as their single finest specimen at MS66+. The present coin occupies the number one spot in the PCGS Coin Facts Condition Census.

When David Akers cataloged the spectacular 1926-S double eagle in lot 113 of the Thaine B. Price Collection (5/1998), he noted, "A splendid, magnificent coin that is tied for finest known with the Amon Carter specimen, lot 1073, now in the Dr. Steven Duckor Collection and also graded MS-66 by PCGS." We believe the Price coin is the single MS67 NGC example listed in the Census today, while the Carter/Duckor specimen has been upgraded to MS66+ PCGS, and is the superlative coin offered in this lot. Like Akers in 1998, we believe the two coins are virtually equal in their extraordinary quality and eye appeal, and remain the finest examples of this sought-after issue known to the numismatic community.

The Stack's catalogers in the Carter sale mentioned a bagmark on the eagle's belly, just in front of the leg. The noted bagmark on the eagle is prominent, but it is among the few mentionable abrasions on either side of this marvelous coin. This mark, and a small dark color spot near A in DOLLARS are the key pedigree markers that enabled us to trace this coin to the Green Collection. The center obverse is vivid copper-gold, yielding to sea-green tinges at the rims. The reverse offers yellow-gold, orange-gold, and greenish-gold hues all competing for space in a marvelous display. The strike is bold on each side, if not absolute, but the aesthetics are marvelous. This coin possesses unmatched historical interest, combined with the highest available technical quality and superb visual appeal.

*Ex: F.C.C. Boyd; World's Greatest Collection (Numismatic Gallery, 1/1946), lot 1029; Dr. Charles W. Green Collection (B. Max Mehl, 4/1949), lot 881; Amon G. Carter Family Collection (Stack's, 1/1984), lot 1073.*



**David Akers Comments:**

For nearly 20 years, the 1926-S was at the top of the rarity pinnacle for Saint-Gaudens double eagles behind only the 1924-S and 1926-D and then just marginally so. It was considered slightly rarer than the 1921, 1927-S, and 1931-D and much more rare than the 1920-S, 1927-D, and 1930-S. The reasons for the rarity of the 1926-S were obvious to the dealers and collectors of the period. Sure, the mintage figure was quite high, slightly over two million pieces, but it was well known that these coins were not put into the normal channels of commerce and they were never available to the general public at local banks. Dealers and collectors knew the mintage figures of the double eagles struck during the 1920s and were well aware of the fact that the coins were not really minted for circulation but rather to be held by the government as part of the gold reserves that backed the country's currency. They also knew that after 1933 virtually all of the gold coins held by the Treasury were melted into gold bars and so, when 1926-S double eagles almost never were offered for sale either privately or at public auction, it was reasonable and logical to assume that they had all been melted, with the exception of just a very few specimens that may have been acquired directly from the mint in the year of issue. What dealers and collectors did not know, however, about the 1926-S and most of the other large mintage issues of the 1920s was that large quantities of double eagles had been sent to Europe between 1926 and 1933 for various payments. Some of these shipments consisted of bags of mixed early dates containing both circulated and uncirculated coins as well as single date bags of uncirculated examples of many issues including the 1926-S. Beginning in the early 1950s many of these coins, including numerous mint state specimens of the 1926-S, were returned to the U.S.

At the end of the 1940's, the consensus among numismatists was that only three to six examples of the 1926-S had survived. B. Max Mehl, the legendary Fort Worth, Texas, dealer claimed in his mail-bid-only sale of the Dr. Charles W. Green Collection in 1949 that only three were known and the Green specimen realized $1,525, more than double the price realized by the 1927-S in that sale and triple the amount brought by the 1930-S. Only the 1926-D realized more than the 1926-S in that sale which was the finest set of Saints sold at auction at that time. The Green coin had been purchased from the F.C.C. Boyd (WGC) sale in 1946. It was apparently purchased by Amon Carter at the Green sale since it was sold with the Carter Collection in 1984. I purchased this coin from the Carter sale for Dr. Duckor and it is the coin offered here. It is the only example graded as high as MS66+ by PCGS and is equal in overall quality to the Dr. Thaine Price coin which is now in an NGC 67 holder. They are the two finest examples I have ever seen and both of them are specimens that were among the few known to the numismatic community in the 1940s when the 1926-S was considered such a premier rarity. As mentioned above, both were almost certainly obtained directly from the San Francisco Mint in the year of issue.

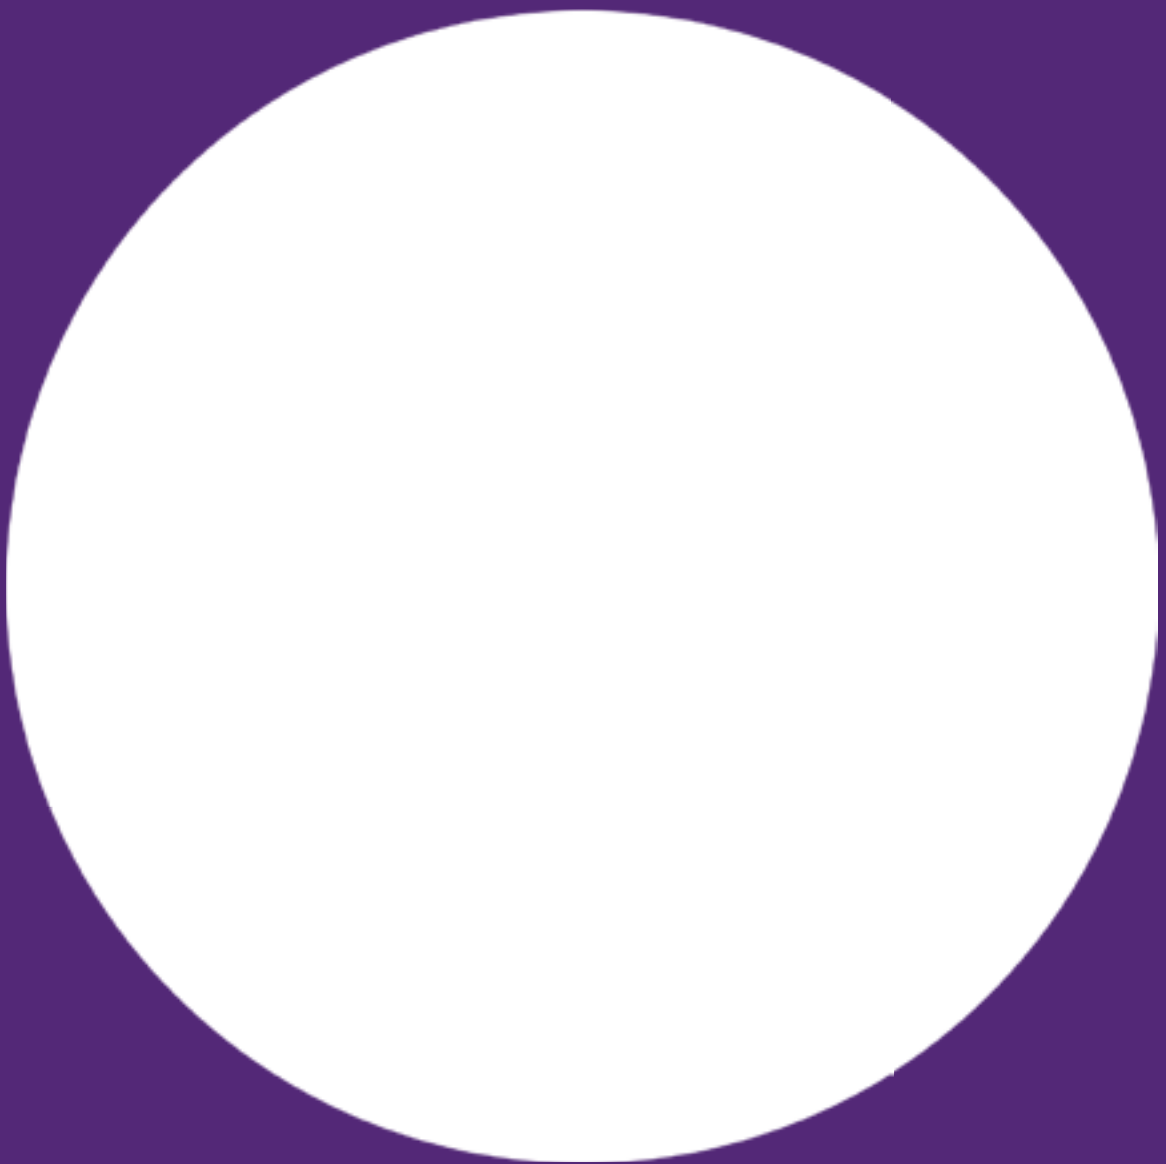
(#9185)

# 1927 Saint, MS67
# Tied for Finest Certified

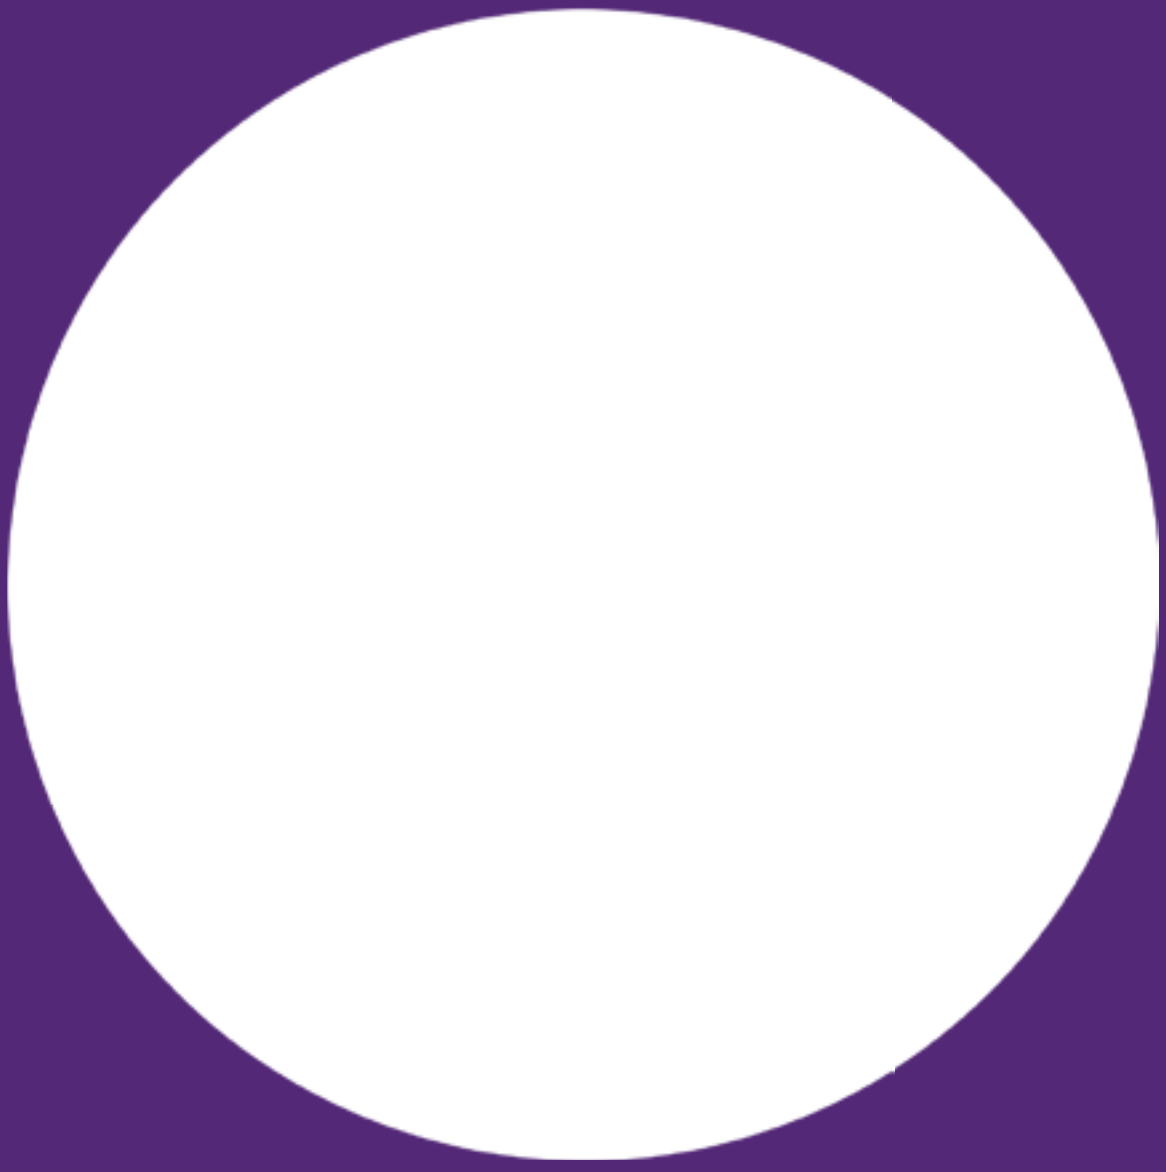
**4644** **1927 MS67 PCGS. CAC.** Ex: Duckor/Morse. There are two prime criteria of type coins, those issues that are widely collected by non-specialists as examples of their series (or "type"). The first is wide availability. A type coin should be among the most widely available issues in the series, or else it would command a premium compared to other dates. Note that the emphasis is on availability as opposed to a high mintage; the 1927-S double eagle has a higher mintage than the 1927 from Philadelphia, yet the 1927 is far more available today and is collected as a type coin, whereas the 1927-S twenty is a rarity with a five-figure price floor. The second prime criterion is attractiveness, or the production qualities of an issue as a whole. The ideal type coin has above-average striking definition as well as pleasing luster. Often a range of dates will be found ideal for a certain series; among proof Morgan dollars, for instance, the coins from 1896 to 1898 often draw high praise.

How well does the 1927 double eagle match the first criterion, that of availability? In a word, magnificently. Between NGC and PCGS, well over a *quarter-million* examples have been certified, a testament to the coin's current availability. Such was not always the case, though, as the vast majority of the known 1927 double eagles once were locked away in overseas storage, and repatriation from Europe is the greatest known source of the coins. An examination of pre-1960 auction listings is instructive; the earliest auction record in the David Akers *United States Gold Coins* reference, the 1941 Dunham Collection sold by B. Max Mehl, is listed in the catalog as "very scarce," and Stack's used an identical phrase to describe the issue in 1944 for the J.F. Bell auction catalog. The impact of 1960s repatriation is especially noticeable in the auction records compiled by Akers: The trickle of auction appearances in the 1940s and 1950s, fewer than one a year for each decade, turns into a steady stream through the 1960s and then a torrent in the 1970s.



As for the second criterion, attractiveness, the 1927 once again comes out a winner. In Heritage's offering of another great collection of Saint-Gaudens twenties, the Phillip H. Morse Collection of Saint-Gaudens Coinage, the cataloger wrote that "examples of the 1927 double eagle are invariably sharply struck, with bright mint frost or smooth satiny surfaces." The two luster qualities are prized, each in their own way, while the sharpness of strike meets more universal acclaim. Akers writes: "Only the collector searching for a 'wonder' coin, i.e. a near perfect specimen, will encounter any difficulty locating a 1927 to his or her liking."

With one glance at this magnificent MS67 coin, it is obvious that Dr. Duckor did a great deal of searching in finding just the right coin, choosing the best of five examples from the Phillip H. Morse Collection. Superb Gems are, if it can be imagined, genuine condition rarities; PCGS has certified only a baker's dozen (10/11). This gleaming coin embodies quality, from the stark cartwheel luster rolling across each side to the orange colors splashed through the centers of otherwise pale yellow surfaces. The coin has only two interior flaws worth mentioning, a tiny mark on Liberty's raised knee and another below the N of IN on the sun disk; these permit identification with the Morse coin. An ideal selection as either a bedrock type coin or, as in its last two collection appearances, an example that makes a commonplace date extraordinary.



*Ex: The Phillip H. Morse Collection of Saint-Gaudens Coinage (Heritage, 11/2005), lot 6692, which realized $18,400.*

(#9186)

**1927-S MS67 PCGS SECURE. CAC**

**1927-S MS67 PCGS SECURE. CAC**

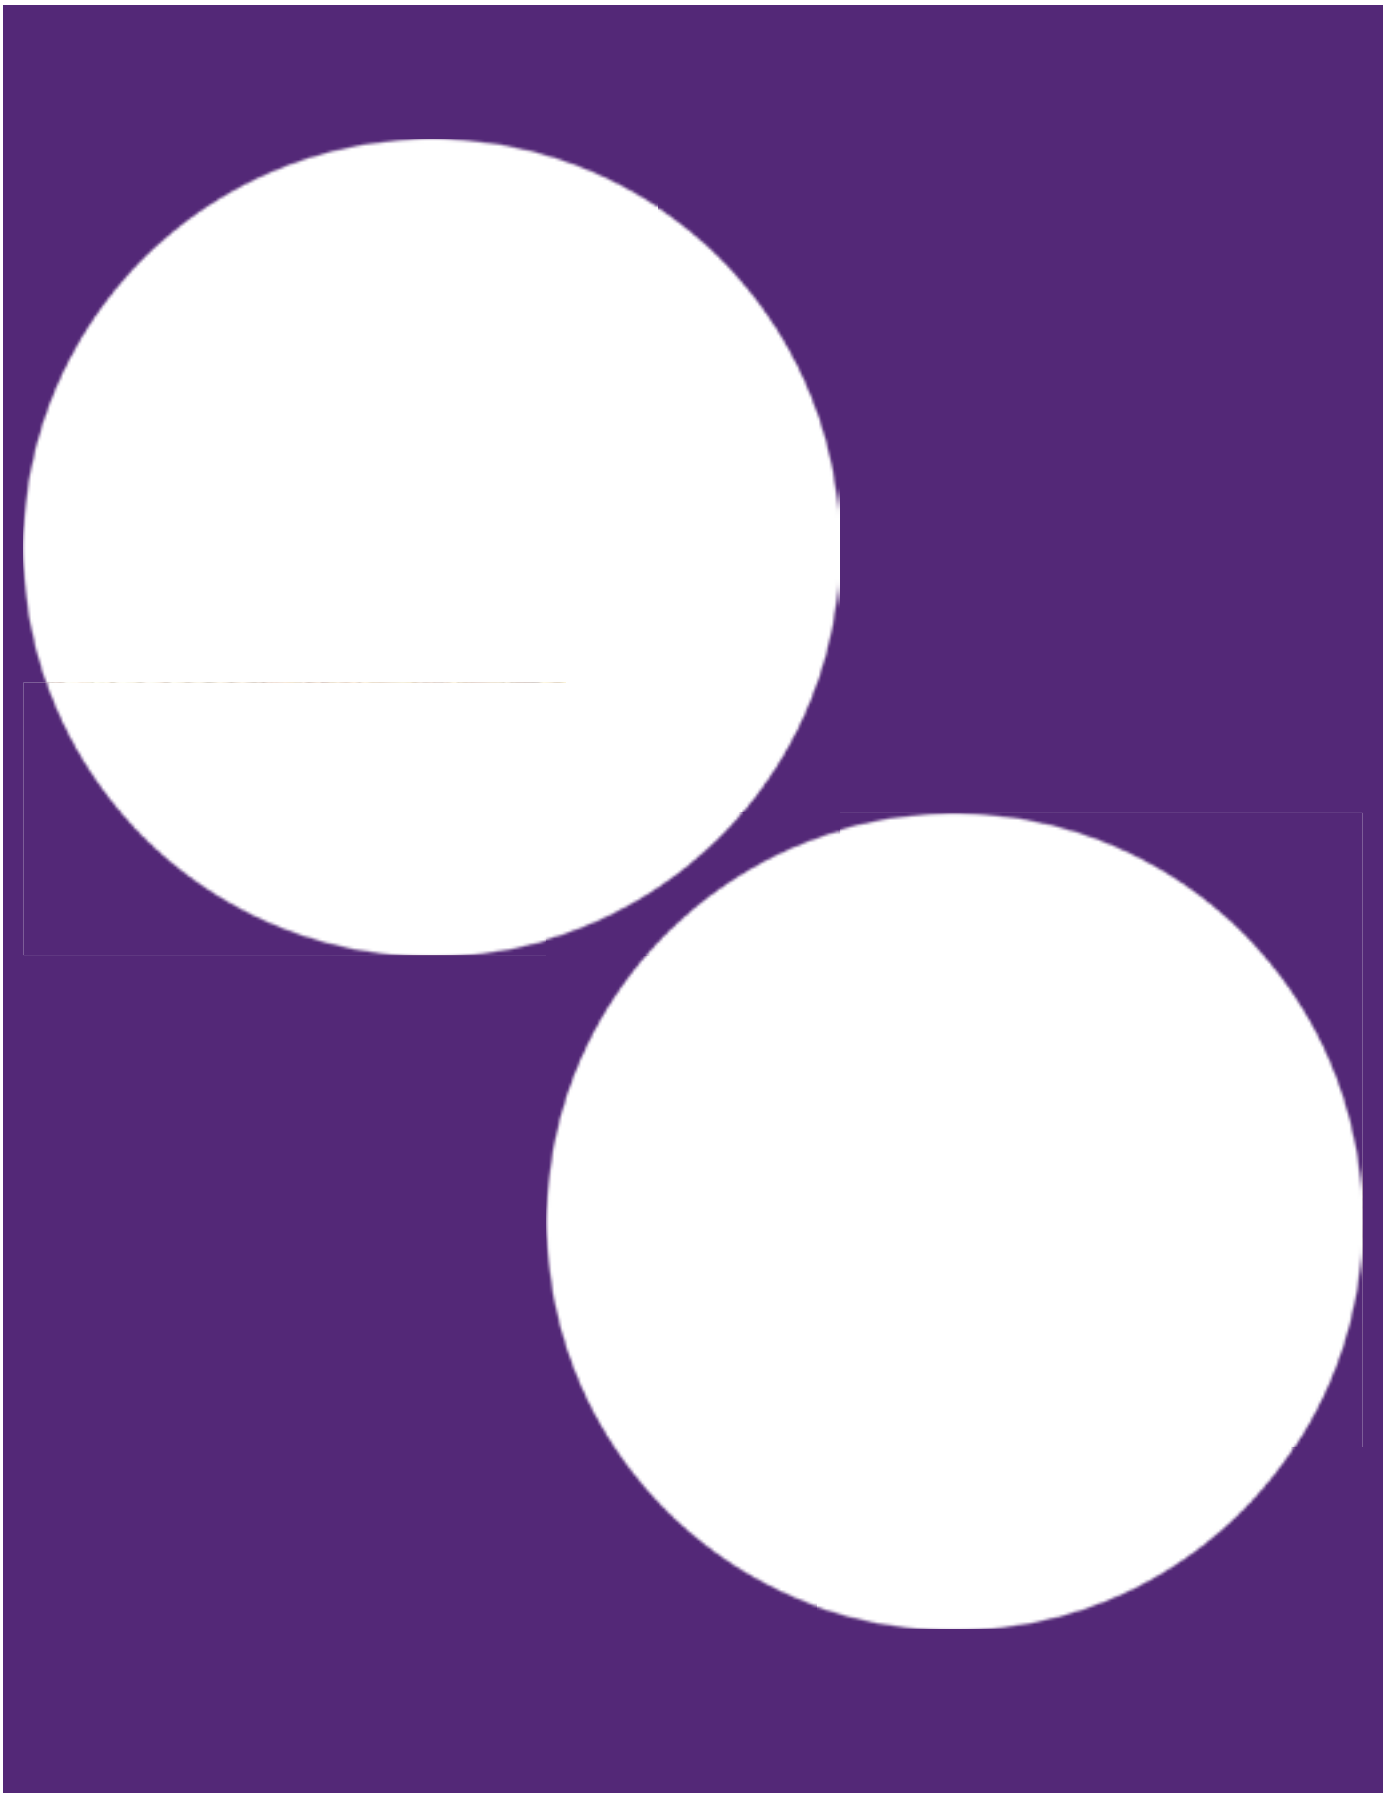
## 1927-S Twenty Dollar, MS67
## Purchased Directly From the Mint
## Ex: Museum of Connecticut History

**4645** **1927-S MS67 PCGS Secure. CAC.** Ex: Morse/Duckor. Like many other issues in the Saint-Gaudens series from the 1920s and 1930s, the 1927-S had a substantial mintage. In this case, 3.1 million pieces were produced in the San Francisco Mint in this year. However, almost the entire mintage was melted in the 1930s. In the 1940s, the 1927-S was considered the fourth-scarcest issue in the series, thought to be even more elusive than the 1927-D. From the original mintage, only 3,750 1927-S twenties were released through official channels, according to Dr. Charles W. Green. Dealers in the 1930s and 1940s appear to have had a good grasp of the numbers available of Saint-Gaudens twenties on the market at that time. What they could not know, however, were the numbers of coins that had been exported to Europe and South America.

During the 10-year period we surveyed between 1935 and 1944, the 1927-S twenty only appeared in two of the 152 auctions examined. This extreme rarity in public auctions at the time underscores B. Max Mehl's (curiously worded) assertion in 1949: "I believe there are no fewer than three or four specimens known." Like the 1931 and 1932 twenties, the lowest price for the 1927-S during those early years was in Morgenthau's New York Collection in May 1939, where an example went begging at $67. By 1944 the coin in the Bell sale brought $500 with a $125 catalog value. By the time of the Bell sale, all of the great rarities in the Saint-Gaudens series had turned up in public auction at least once. Two years later, the World's Greatest Collection 1927-S realized $925 with a catalog value of $175. Then, after World War II, coins began to surface in the bullion and numismatic holdings of European banks. When most issues began to turn up, some in large numbers, former extreme rarities were downgraded to merely scarce in a few short years. In the 1950s one or two pieces at a time of the 1927-S began to show up in European gold holdings. But, unlike the 1922-S and 1926-S, it never appeared in quantity, and its rarity status has remained constant through the years.

Of the 172 pieces seen by both major services, 75 coins are in circulated grades from XF40 to AU58 (most in the latter grade), proving the 1927-S was publicly released, at least in small numbers, at the time of issue. However, the 1927-S is best known as an absolute rarity with perhaps only 120-140 individual coins surviving in mint condition. Of the Uncirculated coins known most are lower-end examples, seldom seen above MS62. At the upper end of Uncirculated, there is a small but important group of outstanding coins, perhaps as many as 14 to 16 pieces that grade MS65 to MS67. At the MS67 level there are three pieces, but the Duckor specimen is the only PCGS-certified coin (10/11). Garrett and Guth state that the Smithsonian example would grade MS67, but of course that Superb Gem is unavailable to collectors.

As with almost all 1927-S twenties, the visual focus of the present Duckor example is its bright, thick mint frost. Some are known with a satiny texture, but those are in the minority. The luster is even, light reddish-gold with the most notable variation being a single alloy spot in the right obverse field, a common trait on 1927-S twenties. The upper reverse also displays a subtle accent of lilac patina intermixed with the otherwise even reddish-gold. The strike details are strong to full on each side, and there is little evidence of the often-seen beveling on the rims, although slight irregularity is noted on the reverse. Abrasions are almost nonexistent, but for the sake of pedigree identifiers we will repeat those that have been named in previous auction appearances. A tiny mark occurs on the eighth ray on the obverse (counting from left to right), and a slightly curved scrape (most likely of Mint origin) is noted on the sun on the lower reverse that runs parallel to the edge. The extraordinary condition of this 1927-S is undoubtedly due to its unbroken pedigree since 1927. Since it was sold from the holdings of the Museum of Connecticut History in 1995, there have only been two owners: Phillip Morse and Dr. Steven Duckor. A 1927-S twenty is always a focal point of any offering of Saint-Gaudens twenties. This is the finest coin known, one that has resided in two of the finest sets of this series ever assembled.



*Ex: Treasurer of the U.S.; George Godard; Museum of Connecticut History (Heritage, 6/1995), lot 6027; Phillip H. Morse Collection (Heritage, 11/2005), lot 6698.*

**David Akers Comments:**

The 1927-S has been considered one of the major rarities of the Saint-Gaudens double eagle series since the late 1930's. Throughout the 1940's, a decade of many great "name" sales and the appearance of the first high quality complete or nearly complete sets of Saints at auction, the appearance of a 1927-S in a sale was an important event; it was always one of the highlights of any sale in which it was offered. During this decade, which essentially heralded the emergence of the Saint-Gaudens series as one of the most interesting and important series of U.S. gold coins, the 1927-S was in the second tier of major rarities along with the 1921 and 1931-D, all three just behind the series' most famous and revered issues, the 1924-S, 1926-D, and 1926-S. For all three of these second level rarities, the typical estimate of the number of known specimens was in the 10-12 range. At that time the 1927-S was always considered to be more rare than the 1927-D, which is now regarded, of course, as the premier regular issue rarity in the series. As was the case with virtually all of the double eagles struck after World War I, the 1927-S was minted in very high numbers, more than three million pieces, but these were never readily available to the general public and were only held as part of the national gold reserves. However, the existence of a number of minimally circulated pieces would seem to indicate that some 1927-S double eagles spent time in circulation. Others were returned from Europe in the 1950s and 1960s, no large quantities mind you, just occasional single specimens or very small groups of several pieces. Almost all of them were at the lower end of the mint state scale from MS60-MS62 along with some lightly circulated examples. There were enough returned from Europe, however, to greatly alter the overall population rarity of the 1927-S. Now, instead of only 10-12 known, there are more like 150-200, meaning the 1927-S is considered moderately rare today rather than the great rarity it once was thought to be. However, gems are still correctly considered to be very rare with perhaps 10-12 MS65 specimens known along with two or three superb pieces. The Duckor coin offered here is a spectacular coin in every respect. It has exceptional color and luster and pristine surfaces, and could easily have been granted a (+) designation. Along with the 1908-S this is one of my two favorite coins in Dr. Duckor's set. In my opinion, both combine rarity and quality to an even higher degree than any other coin in the collection. There is only one other 1927-S that I know of that is comparable to Dr. Duckor's 1927-S, the example in the Dr. Thaine Price Collection. It is a coin I personally owned for nearly a decade before I decided that Dr. Price should have it in his set and offered it to him; it was the final coin he bought for his collection. It was in a PCGS MS66 holder when I owned it and at the time of his sale in 1998. I compared the two in 1995 when the Duckor specimen first appeared on the market from the Museum of Connecticut History. I thought the two were "essentially equal in quality" as I stated in my Price catalog and I also noted that the Price coin was "from the standpoint of both technical quality and overall appearance, perhaps the finest Saint-Gaudens double eagle in the Dr. Thaine B. Price Collection." Other Saints from the Price Collection eventually graded MS67 or MS68 and so it is no surprise at all that the Price 1927-S has since been upgraded to MS67 status by NGC.

(#9188)

# 1928 Saint-Gaudens Double Eagle, MS67+
# The Single Finest at PCGS

**4646** **1928 MS67+ PCGS Secure. CAC.** From 1928 on, the vast majority of double eagles were produced at Philadelphia. Only two low-production branch mint issues were struck in that time period: The 1930-S had a mintage of 74,000 pieces, and the 1931-D saw 106,500 pieces made. By contrast, the Philadelphia issues maintained million-plus mintages through 1932, a streak cut short by executive order in 1933. The highest mintage of them all came in 1928, when the Philadelphia Mint struck more than 8.8 million double eagles. It was the highest mintage for any U.S. gold coin, eclipsing the production for the famous-as-a-type-coin 1904 Liberty double eagle, and it still holds the record today.

Based on output alone, the 1928 would be the most logical With Motto Saint-Gaudens date to collect as a type issue, and the date is indeed priced-to-type. Yet the price is misleading in its own way, for the 1928 double eagle is significantly less available than a number of its peers (though still far more accessible than most issues). Its combined NGC and PCGS certified population, 93,751 pieces and counting as of (10/11), seems impressive, yet it is dwarfed by the half-million-plus certified examples of the 1924. The 1908 No Motto and 1927 double eagles both weigh in at roughly a quarter-million coins themselves. The closest comparable certified population is that of the 1925, which checks in at a couple hundred coins fewer — and the 1925 has a mintage of slightly over 2.8 million pieces, which points to the earlier date's better survival rate.

Of course, merely being a high-mintage date is not an instant ticket to widespread availability, especially where the later Saint-Gaudens twenties are concerned. The great equalizer (or perhaps great randomizer) is the pattern of international commerce that sent millions of gold coins overseas and out of the reach of the Roosevelt Administration's gold recall. The pattern was centered on the Northeast and the great commercial nexus of New York City, and double eagles from the nearby Philadelphia Mint were far more likely to survive in European storage (the greatest source of repatriation) than were coins from mountainous Denver or Pacific-facing San Francisco. Time, too, has its role: The 1927 double eagle saw widespread overseas use, but the 1928 twenty had less opportunity for a commercial jaunt before the debilitating Great Depression of 1929. The 1928 is the last issue to be available in type quantities, and any later-dated coin is a melt rarity commanding a five-figure price.

Almost all of today's 1928 double eagles had to survive at least two transatlantic crossings, and so it comes as little surprise that the population is skewed toward the lower and middle Mint State grades, especially MS63 and MS64. The PCGS *Population Report* shows MS67 coins, or Superb Gems, as borderline condition rarities; the service has certified only 69 pieces in that condition, and none in MS68 or better (10/11). It has also encapsulated a single MS67+ example, the present coin; thus, for Registry Set collecting purposes, there is no better 1928 double eagle.

Identification with the Jay Brahin Registry Set specimen is thanks to the stunning patterns of orange color on a pale wheat-gold backdrop: The obverse has orange from Liberty's shoulders down her body and out into the right field, while the eagle is "striped" with narrow windows of wheat between three broad vertical strokes of orange. The detail, if not perfectly sharp on Liberty's torch hand, is more than adequate, and the combination of careful presentation and stunning, colorful luster grants this coin inestimable eye appeal. A coin to remember.

*Ex: Jay Brahin Saints (PCGS Registry Set, retired 7/2006).*

(#9189)

# "MISSING 1928 DOUBLE EAGLES"

Edwin Dressel was in his office at the Philadelphia Mint reviewing the previous month's department reports. As Superintendent of the Philadelphia Mint, everything that happened in the massive building was his responsibility. He had to depend on a small army of clerks to record the movement of gold, silver, and other metals through the complicated minting process. They also verified that all was safely stored in the huge basement vaults.

All day, sixteen hour days, every day except Sunday, Dressel's mint struck thousands of coins for America's slowly recovering economy. Along with making coins, the mint's clerks generated daily reports and these filled the Superintendent's in-box day after day.

It was February 3, 1937. The day was cold and raw, typical of the time of year. Heating was erratic in the 35-five-year-old building. In the melting and refining department, workmen sweated in 100+ degree heat, while the women in the sewing department wore coats and gloves and complained of the cold as they made coin bags and work aprons.

Since gold had been nationalized in January 1934, large quantities of gold coins had been flowing into the mint first for safekeeping, then for melting. After the mint director issued instructions in August 1935 to melt all gold coins, the mints and New York Assay Office had been working as fast as they could to convert almost $1.6 billion in gold coins into dense bars of anonymous yellow metal. At the same time, the mints had to continue processing silver and copper for domestic coins and also produce coins for several foreign countries. The melting department was taxed to the limit.

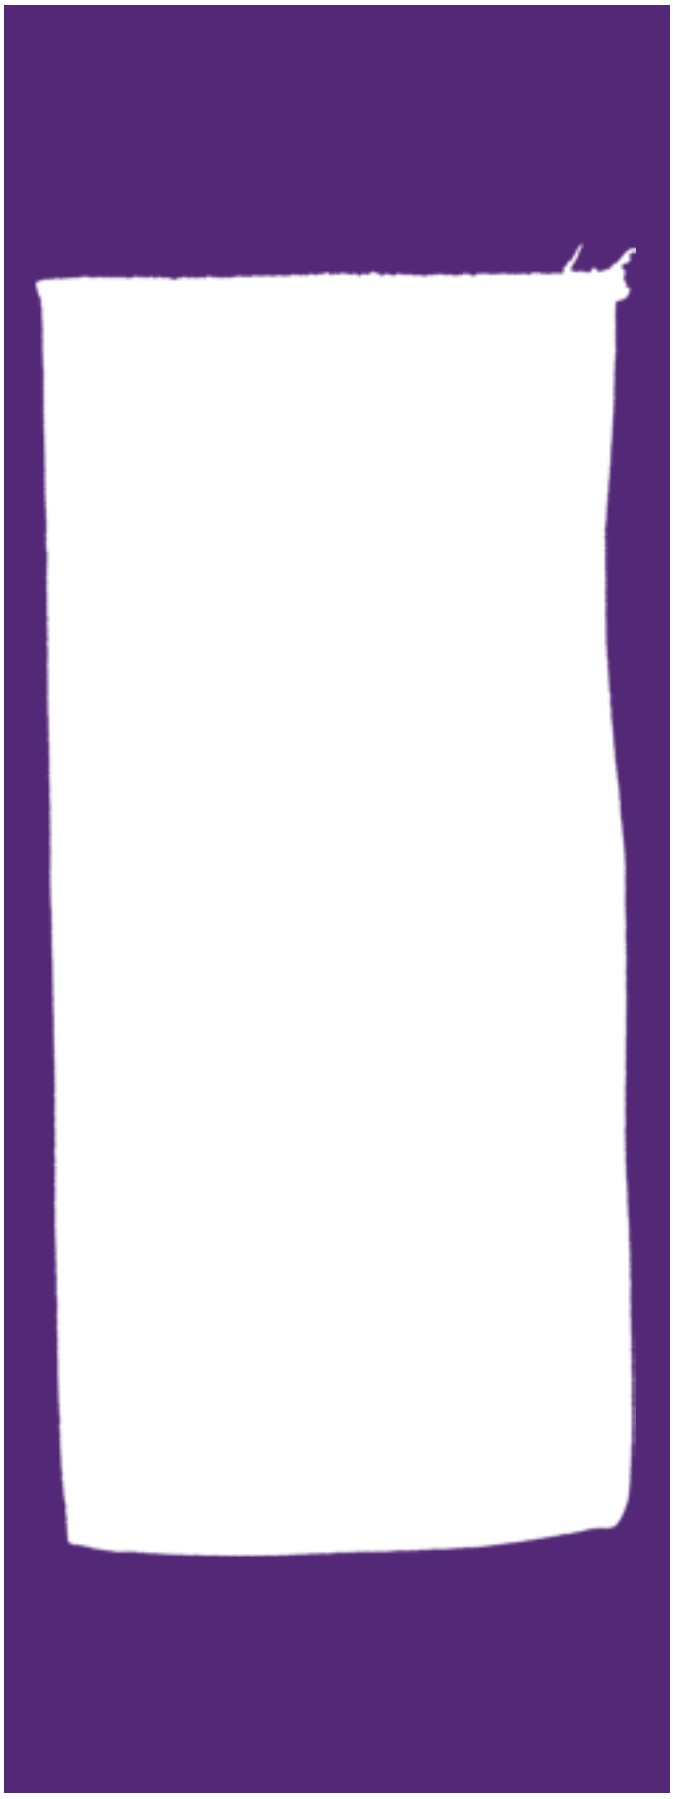
It was just before noon when Dressel's phone rang. The call was short and somber. Of all the things that could happen at a factory the size of the Philadelphia Mint, the worst was fire; but the next was missing gold. The call was not about a fire, but Dressel might have wished it were. A bag of gold double eagles, dated 1928, worth $5,000 face value, appeared to be missing. The Superintendent put down the phone and made the short walk to the basement vault where workmen awaited him.

At 11 o'clock that morning, senior employees B. Watson (Shipping Clerk) and Louis H. Frizzel (Vault Custodian) accompanied Cashier George H. McCann as he opened Vault F and broke the old seal on Cage 1 — part of the main gold vault. They were to count the bags against the totals recorded on the seal. A crew of workmen stood ready with four-wheeled hand trucks to transport bags of gold coins to the melting and refining department for casting into bars.

The old seal showed that the last time this cage had been opened was on October 20, 1936, so that an alarm system could be installed, but nothing had been removed. Before that, it had been opened in February 20, 1934, to add more gold coins, and before that it had been sealed on June 27, 1933. Each time the cage was resealed, its contents had been verified as correct. The cage was supposed to contain more than $18 million in 1928 double eagles, over $35 million 1929 pieces, another $58 million double eagles dated 1931, and additional $20, $10, $5 and $2.50 pieces, totaling $166,132,130. 1928 had been the final year of massive double eagle production. The denomination was also struck from 1929 through 1933, but never again approached the $176 million worth made in 1928. So many 1928 double eagles were struck that they clogged the mint vault cages and blocked access to other double eagles. Double eagles dated 1929 were in one of the blocked storage cages, and few of them made it out before all gold coins were melted. But that was in the past. Dressel's problem in February 1937 was to determine if a $5,000 bag was really missing, and then what to do about it. Dressel immediately assigned extra guards to the vault.

In counting the bags of gold stored in Cage 1, it was noticed that a bin containing only 1928 double eagles held 29 bags, not the usual 30. It was also noticed that dust accumulation was different in the spot where the bag should have been. More guards were brought to the vault and Dressel and the others began looking through the cage and vault for a misplaced bag. None was found. Dressel made his call to the Treasury's Secret Service at 3:30 pm, and then called mint headquarters. Within half an hour, agent Landvoight from the Philadelphia Secret Service office arrived at the mint. Vault F was locked down and sealed by the agent.

Next day a fingerprint specialist arrived at the Philadelphia Mint to meet the Superintendent, Mint Director Ross, and an additional agent. No prints could be found, but the investigation showed that the spot where the bag had been, had remained uncovered for a long time. Dust on that spot resembled dust on bags of 1933 double eagles and differed from that on all the other 1928 coin bags.



The agents explored other leads and looked for anyone who might have removed the bag. Coins were recounted and checks made of other vaults, but the bag remained missing. Annual settlement records were examined and committee members questioned, but with no resolution to the problem. The only conclusion was that a bag of 1928 double eagles was taken from Vault F, Cage 1 sometime in 1933.

The theft or misplacement must have happened before Dressel became Superintendent, but that didn't matter. He was still personally liable. He had accepted the vault seal records as accurate when he took office, and the fault was now his. Everyone from Treasury Secretary Morgenthau on down the list of Treasury officials knew that Dressel had nothing to do with the missing gold; but his oath made him responsible anyway.

The Secret Service investigation lay dormant until the early 1940s when it was revived as part of the background for a private bill in Congress to relieve Dressel of financial responsibility for the missing bag of gold. It was not until 1945 that the personal relief bill passed Congress, and Dressel could step out from under the cloud of missing 1928 double eagles.

We don't know what delivery the missing $5,000 bag came from, but just knowing more of the story behind these magnificent gold coins makes the "1928" bag from Delivery 94, offered here, a greater treasure for any numismatist.

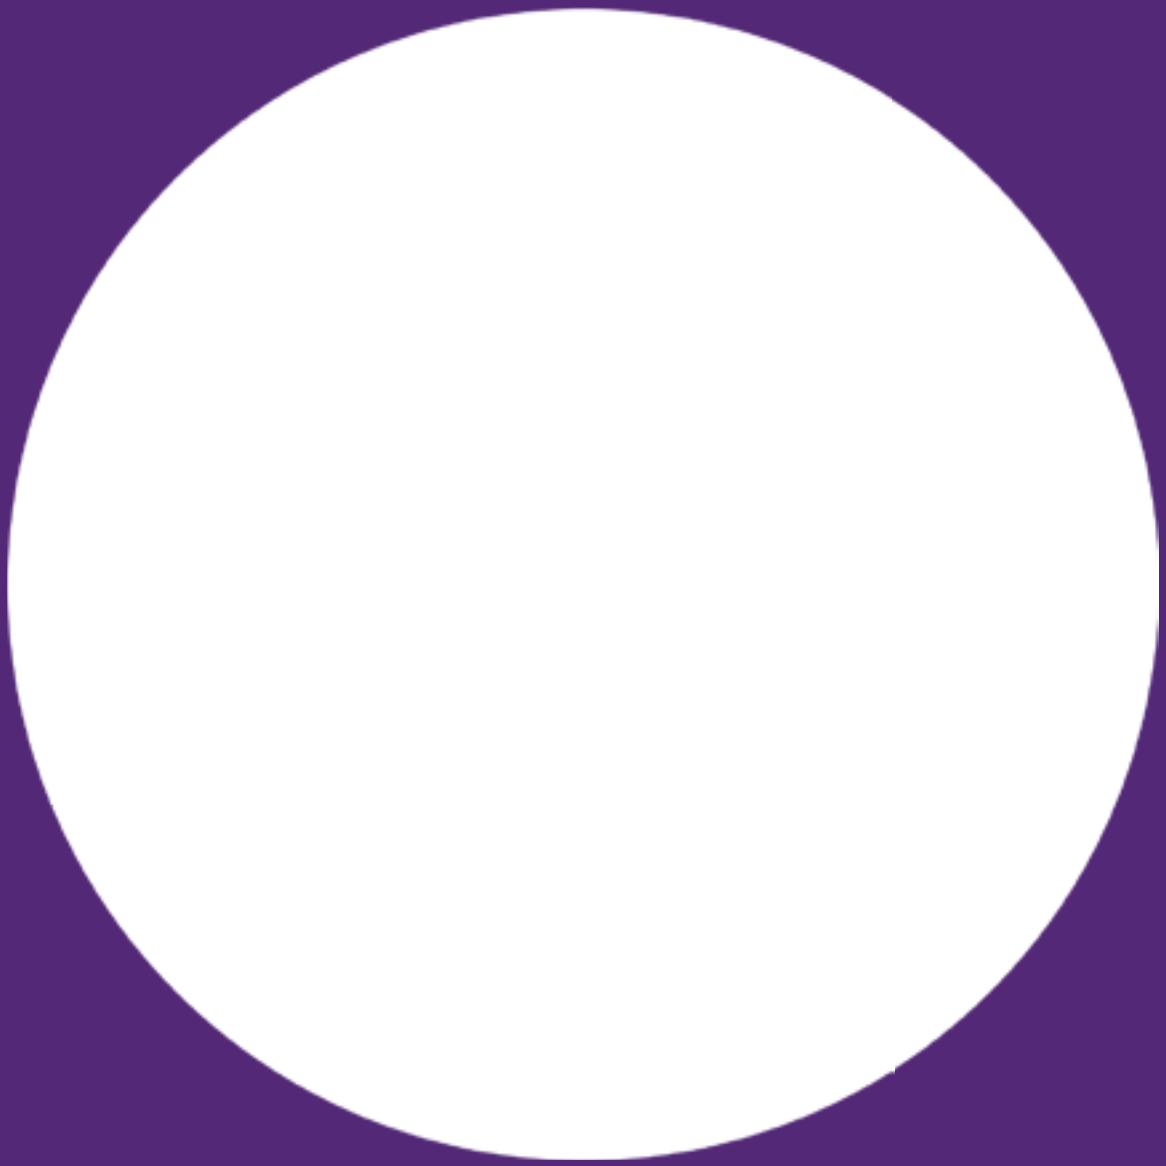
## 1928 Philadelphia Mint Bag for Double Eagles

**4647 $5,000 Mint Bag For 1928 Saint-Gaudens Double Eagles.**

Numismatic author-researcher Roger W. Burdette penned the article at left for this offering of a 1928 Mint bag for $5,000 face value in Saint-Gaudens double eagles. The lot description follows. Could this be the missing bag?

This is a rare and important opportunity for the Saint-Gaudens double eagle collector. This canvas bag has the imprint on one side: No. 94 / $5,000 / Double Eagles / U.S. MINT / PHILADELPHIA / 1928. As one would expect, the bag is slightly soiled after 80 years, and there is a small hole at the top of the front side. Measurements are approximately 6.25 x 14 inches.

Roger Burdette explains the meaning of the "No. 94" imprinted on the bag. In a September 27, 2011, communication to the cataloger, Burdette writes:



> "The number '94' on the 1928 double eagle bag is the delivery number. This was done so that if there was a problem with the Special Assay for that delivery, the coins could be easily identified and sequestered pending further tests. In this instance, delivery #94 occurred on April 24, 1928."

Readers interested in more information on the workings of the Assay Commission can consult Burdette's DVD set: Annual Assay Commission of the United States Mint 1800-1943.

While numerous canvas Mint bags and Federal Reserve bags are known for various denominations, the cataloger has seen few for double eagles. Most bags known today are for more recent issues such as those from the Statehood quarter series. Most older bags seen today are for Morgan dollars. Others, especially for gold coins such as this one, are quite rare, and impressive historical numismatic artifacts.

From our Dallas Signature Sale (10/2008), lot 2507.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

**1929 MS66 PCGS SECURE**

**1929 MS66 PCGS SECURE**

# 1929 Double Eagle, MS66, Among the Finest Known
# First of the Late-Date Rarities

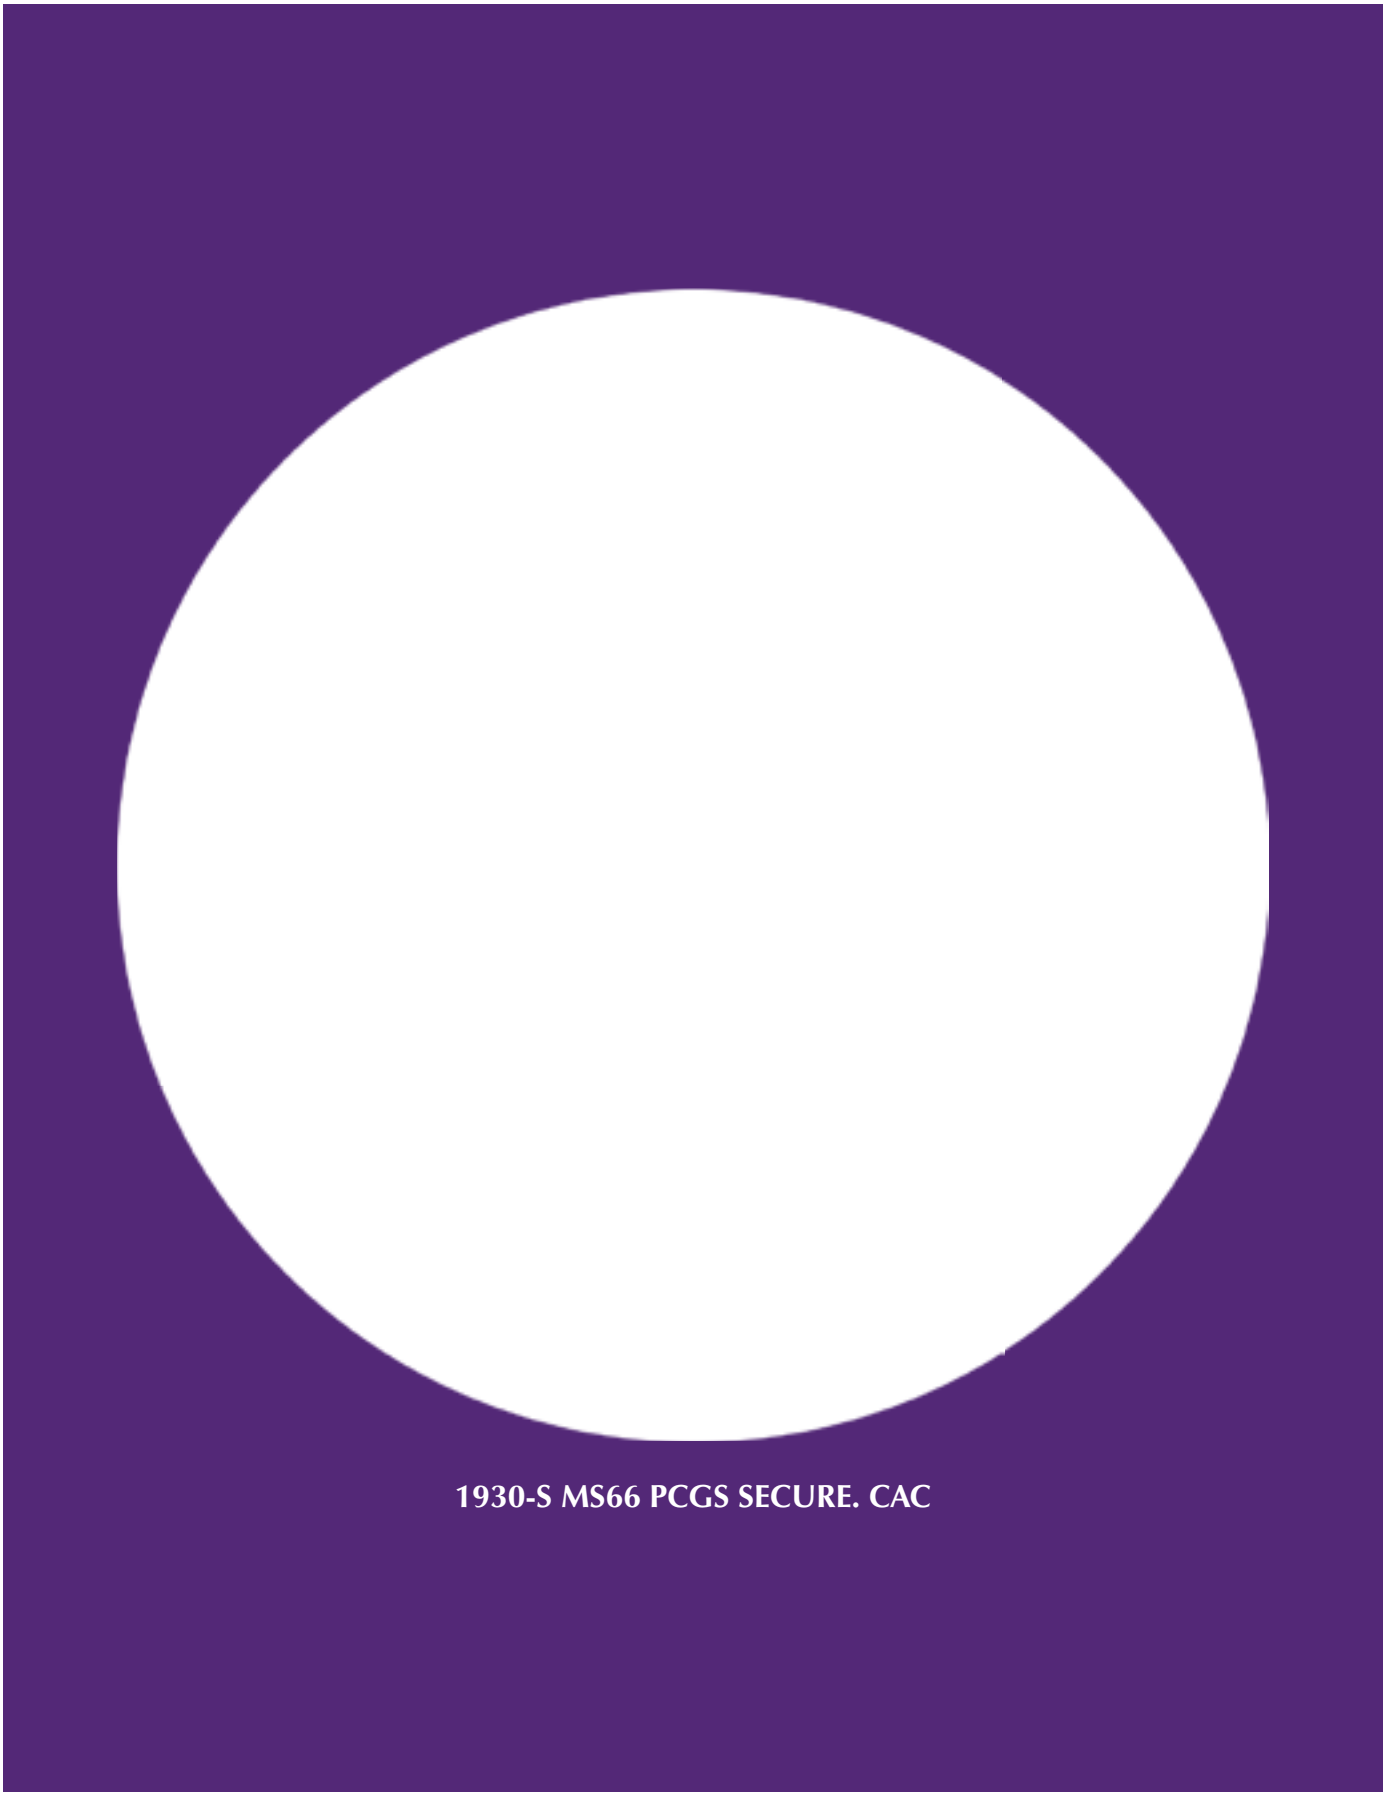
**4648** **1929 MS66 PCGS Secure.** The 1929 is notable as an absolute and conditional rarity. However, its absolute scarcity is more one of association, as it is the first of the late-date Saint-Gaudens twenties, a short series that contains several monumental rarities. The 1929 can be encountered at least twice as often as any of the other four issues from 1930 through 1932. That is not to say it is common; its current relative availability is from a small number of pieces that have dribbled out of Europe over the past 40+ years. As with many Saint-Gaudens issues, the 1929 was once regarded as an important rarity. In the 152 auctions we surveyed between 1937 and 1944, the 1929 twenty only made two appearances. The second offering of this date was in the J.F. Bell auction in 1944, where the coin was described as, "One of the most difficult dates to obtain, very rarely offered either at Private or Public Sale. Very rare." The Bell coin realized $290, more than the 1931 at $220 and only ten dollars less than the 1932.

The key-date status of the 1929 remained through the 1950s and 1960s. The price at auction for the few 1929s sold in the 1960s remained relatively stable while the other four late-date issues — 1930-S, 1931, 1931-D, and 1932 — rose dramatically. This would indicate that a few 1929 twenties began to be repatriated in the mid- or late 1960s, Since that time a few have been found in Europe, but no substantial hoards have been uncovered. Clarification of a false rumor of a hoard was first published in Stack's Eldorado Sale (5/2009). That correction bears repeating, as the story has made its way into the numismatic media on several occasions as truth.

> "One false rumor was seized upon by the numismatic press through the prolific writings of Walter Breen. Back in 1984 noted English dealer Steve Fenton sold a 1929 double eagle to Ron Gillio. Steve then played a little joke on Ron by telling him he had found a small hoard of 40 1929 double eagles and was unloading them as quickly as possible. Ron told this to Walter Breen and the English Hoard of 40 pieces was born."

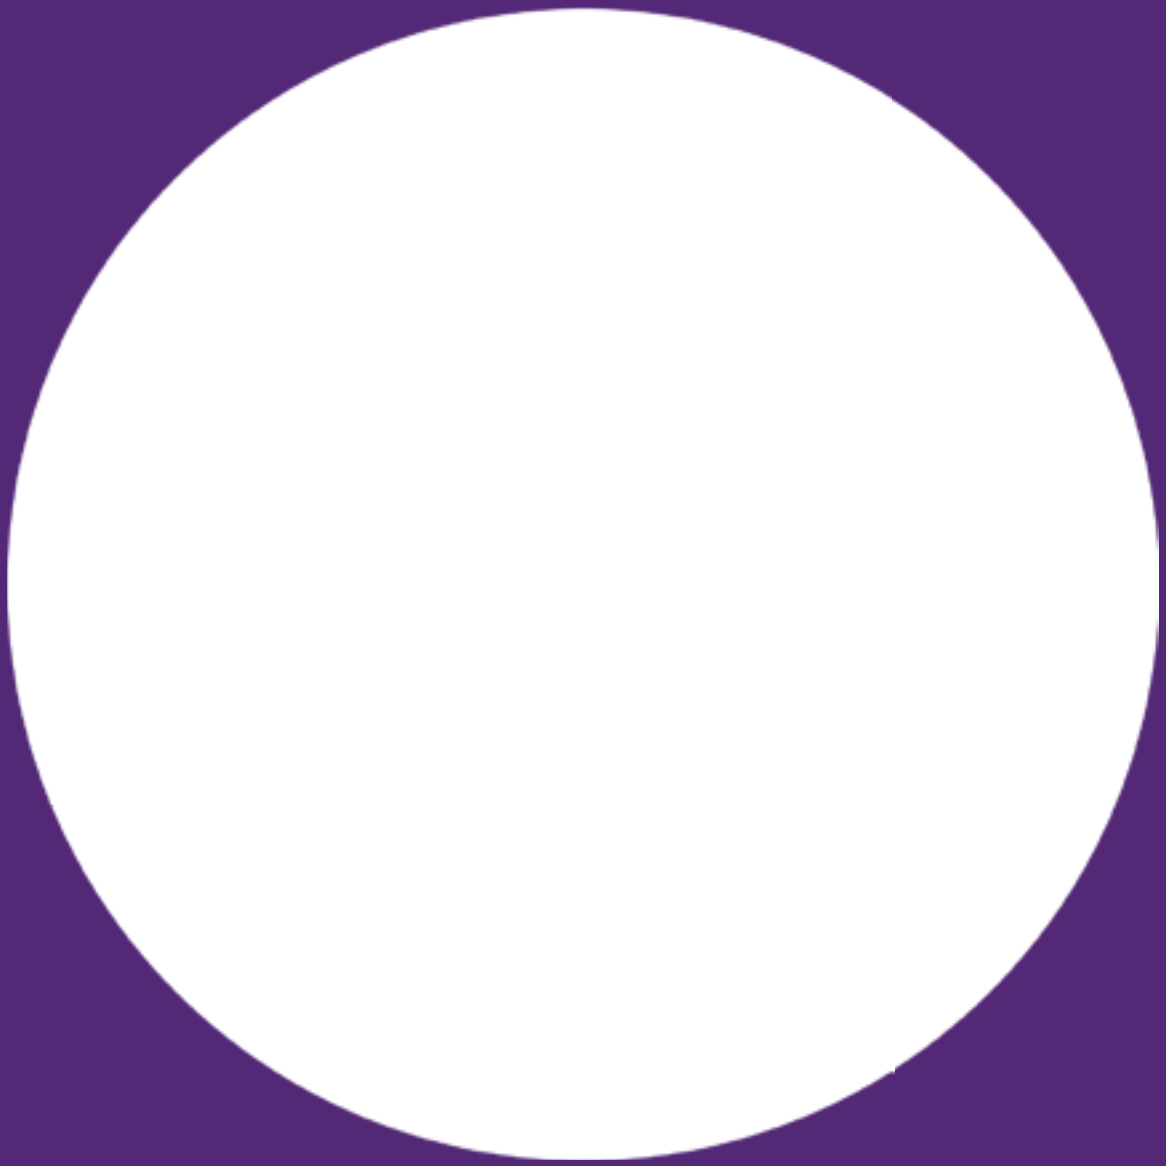
The mintage of the 1929 twenty was a generous 1.7 million pieces. However, almost the entire mintage was converted to gold bars and stored in Fort Knox in the mid-1930s. Only 300-400 coins are believed known today, almost all Uncirculated. The vast majority are in the MS62-64 range, although as many as 20 Gems are believed to survive. It is in MS66 that the 1929 becomes a significant condition rarity. Only six certification events have been recorded at that level, and none are finer (10/11).

The usually encountered 1929 is sharply struck and displays attractive color and bright mint luster. This is such a coin. There is no noticeable striking softness on either side. The mint luster rolls across the surfaces, and both sides are minimally marked for this often-heavily abraded date. The only mark of note is a shallow horizontal scratch from the tip of the eagle's fourth feather to the rim (magnification will be necessary). Both sides display light reddish-gold color with a faint outline of lime-green at the margins. The eye appeal of this coin is undeniable. It is easy to see why this is one of the finest examples known of this important late-date absolute and condition rarity.



*Ex: FUN Signature (Heritage, 1/2005), lot 30584.*

**David Akers Comments:**



After World War I, double eagles no longer circulated to any extent. For most years from 1920-1933, substantial quantities were minted of every issue but largely remained in government possession as gold reserves for our national currency. They were never really intended for circulation and were subsequently melted in the mid- to late 1930s. That is why so many of the high mintage issues of the 1920s and early 1930s are rare today and typically exist with a very high ratio of uncirculated examples to circulated ones. The 1929 is the first of the justifiably respected five late date rarities of the series although it is multiples more common than the other four when the total population of known specimens is all that is considered. This is no doubt due to the significant number of specimens returned from Europe over the years; many more examples of the 1929 were found there than of the other four later dates. However, back in the 1940s, when dealers were really just starting to get a handle on the relative rarity of the various Saint-Gaudens issues (they knew mintage figures were of no use in that regard), the 1929 was thought to be much less rare than the 1931-D and 1930-S but otherwise comparable to both the 1931 and 1932. Today, estimates vary wildly as to how many 1929 double eagles exist. PCGS estimates the population at over 900 pieces and Dave Bowers states in his double eagle book that 1,250 to 1,750 exist. Those numbers seem awfully high to me and I would place the number more in the 300-400 range. One thing about which there is little difference of opinion, however, is that the 1929 remains rare in gem uncirculated 65 condition and extremely rare above that level. In particular, the 1929 is definitely much more rare in superb MS66 condition than either the 1931 or 1932 although in gem all three are rather similar. The finest example graded so far is the Simpson-Price-Norweb example now graded MS66+ by PCGS but graded MS65 by NGC at the time of the Price sale. The specimen in Stack's March 1991 sale was also exceptional and the Duckor MS66 coin offered here is in the condition census for the date as well.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9190)

**1930-S MS66 PCGS SECURE. CAC**

**1930-S MS66 PCGS SECURE. CAC**

## Rare Premium Gem 1930-S Twenty
## Most Elusive of the 'Late-Date' Double Eagles
## Probably Finest Known

**4649** **1930-S MS66 PCGS Secure. CAC.** Among the popular issues of the Saint-Gaudens double eagle series, the famous "late dates" are held in especially high esteem by collectors and numismatic scholars. This elite group is often called the "Fab Five," consisting of the final five collectible entries in the series, the 1929, 1930-S, 1931, 1931-D, and 1932. Each of these dates is rare and avidly sought after, but the 1930-S has emerged as the most elusive of this prestigious group. As David Akers and Jeff Ambio say in a *Handbook of 20th Century United States Gold Coins:*

> "The 1930-S is by far the rarest of the 1929-1932 issues in this series and, discounting the essentially uncollectible 1933, only the 1927-D is rarer when we consider the entire Saint-Gaudens series."

As to how many examples of the 1930-S still survive, the experts are in unusually close agreement. Q. David Bowers estimates the surviving Mint State population at 40-60 specimens; David Akers favors a slightly smaller total of 40-55 pieces. The population data from the grading services reflects an equally limited census, with PCGS recording 44 total submissions and NGC 19 (10/11). The grading services have worked diligently in recent times to eliminate duplicate submissions from their totals, but it is likely that a few resubmissions and crossovers remain in those numbers. All sources agree that only a handful of pieces exist in circulated grades.

The elusive nature of the 1930-S is only partially explained by its low mintage. As with all later dates of the series, the true secret of its rarity lies in the mintage's distribution. The Mint records research Dr. Charles W. Green conducted in the 1940s indicates that of the mintage of 74,000 pieces, only 3,250 were officially released into circulation. The vast majority of the production was retained in bank and Treasury vaults, to be melted after the Gold Recall of 1933. The real mystery is not why so few specimens survived, but how any were saved at all.

The answer to this conundrum is twofold. The Treasury Department offered collectors the chance to purchase Mint State examples of various dates and denominations of gold coins for face value plus postage in the summer of 1932. Some collectors likely took advantage of this opportunity to obtain high-quality coins that were then preserved for future generations. Another likely scenario involves coins that were paid out to foreign banks, beyond reach of the government recall. Those coins were later repatriated when collecting double eagles became popular in this country, after World War II. Probably only a few coins were saved in this manner, as the surfaces of the typical 1930-S rarely show the heavy abrasions seen on coins that have been shipped over long distances in the customary canvas Mint bags. That a few specimens did make the transatlantic journey is attested by John Ford, who related to Q. David Bowers that he purchased four Uncirculated 1930-S double eagles from Paul Wittlin in 1960. Wittlin had acquired the coins from a dealer in Paris. These circumstances account for the survival of the small supply of 1930-S twenties we know about today.

The present coin is a magnificent Premium Gem that has been off the market for more than 30 years. Its quality will come as a surprise to most collectors, and its appeal can hardly be overstated. This coin has realistic claims to the title of "Finest Known," as it shares the highest grade designation awarded by either leading grading service, and its visual appeal is superior to any other specimen we know of. The design elements are sharply detailed throughout. Even the stars below the Capitol are sharply rendered. Like most examples of the 1930-S, this coin shows a long, nearly horizontal die crack extending from the obverse rim at 3 o'clock to a ray below the olive branch. Another diagnostic is a tiny raised die chip inside the 0 of the date. The surfaces are a vivid orange-gold with delightful lilac highlights. Exceptional mint luster beams from both sides. Even on close inspection, no mentionable contact marks appear. This offering, combining the highest available technical grade with unsurpassed eye appeal, represents an opportunity that will seldom be repeated. PCGS has certified five coins in MS66, one example in MS65+, and eight specimens in MS65. NGC has graded a single Premium Gem and seven pieces in MS65 (10/11).

The roster below is compiled from auction records over the last two decades and other sources. It lists all examples of the 1930-S double eagle we know of in MS65 or above, with 14 confirmed examples, a slightly smaller total than the population data reflect. Institutional collection hold two of the coins, out of collectors' reach. It is certainly possible that some coins may have escaped our notice by not being publicly traded for a long period of time, like the specimen in this offering. Still, series enthusiasts will not see a comparable offering any time soon, and we expect spirited competition when this lot is called.

**Roster of 1930-S Double Eagles in MS65 or Finer**

1. MS66 PCGS. **The present coin.** Purchased in a private treaty transaction from Ed Hipps in 1980.

2. MS66 PCGS. Pre-Long Beach Sale (Superior, 5/1999), lot 3884; Baltimore Signature (Heritage, 7/2003), lot 10918; Pittsburgh ANA Signature (Heritage, 8/2004), lot 7818, realized $161,001; Exclusively Internet Auction (Heritage, 9/2004), lot 13052; Baltimore ANA Signature (Heritage, 7/2008), lot 2129, realized $253,000; Snap Daddy Saint NGC Registry Set.

3. MS66 PCGS. Purchased by David Akers around 1989, having been off the market for 40 years; Dr. Thaine B. Price Collection (David Akers, 5/1998), lot 119, realized $126,500; Phillip H. Morse Collection, Part II (Heritage, 12/2005), lot 2080, incorrectly identified as from the Pittman Collection on the holder, and the image in the catalog is actually the other Morse coin from the 11/2005 sale, realized $253,000; FUN Signature (Heritage, 1/2007), lot 3307, realized $230,000.

4. MS66 PCGS. Phillip H. Morse Collection (Heritage, 11/2005), lot 6709, realized $207,000.

5. MS65 PCGS. The "Dallas Bank" Collection (Sotheby's, 10/2001), lot 185; Fox Collection PCGS Registry Set. Akers 1982 plate coin.

6. MS65 PCGS. Louis E. Eliasberg, Sr.; Eliasberg Estate; United States Gold Coin Collection (Bowers and Ruddy, 10/1982), lot 1071; Collector's Auction (Scotsman, 10/2008), lot 866.

7. MS65 PCGS. FUN Signature (Heritage, 1/2010), lot 2337, realized $207,000.

8. MS65 NGC. Probably purchased in 1930 by George Seymour Godard, the Connecticut State Librarian, through the Treasury Department; Museum of Connecticut History Collection (Heritage, 6/1995), lot 6031, realized $90,200.

9. MS65 PCGS. Pre-Long Beach Sale (Superior, 2/1999), lot 3595, realized $58,650.

10. MS65 PCGS. Springdale Collection (American Numismatic Rarities, 6/2006), lot 2787.

11. MS65 PCGS. Baltimore Auction (Bowers and Merena, 7/2006), lot 1734; Anaheim Collection (Goldberg, 1/2010), lot 2702; Pre-Long Beach Sale (Ira & Larry Goldberg, 5/2011), lot 1864, realized $158,125; Akers' Handbook plate coin.

12. Choice Brilliant Uncirculated Uncertified. Charlotte Collection (Stack's, 3/1991), lot 1221, realized $115,000.

13. Uncertified, estimated as MS68 by Jeff Garrett and Ron Guth. A coin in the Smithsonian's National Numismatic Collection, purchased directly from the San Francisco Mint.

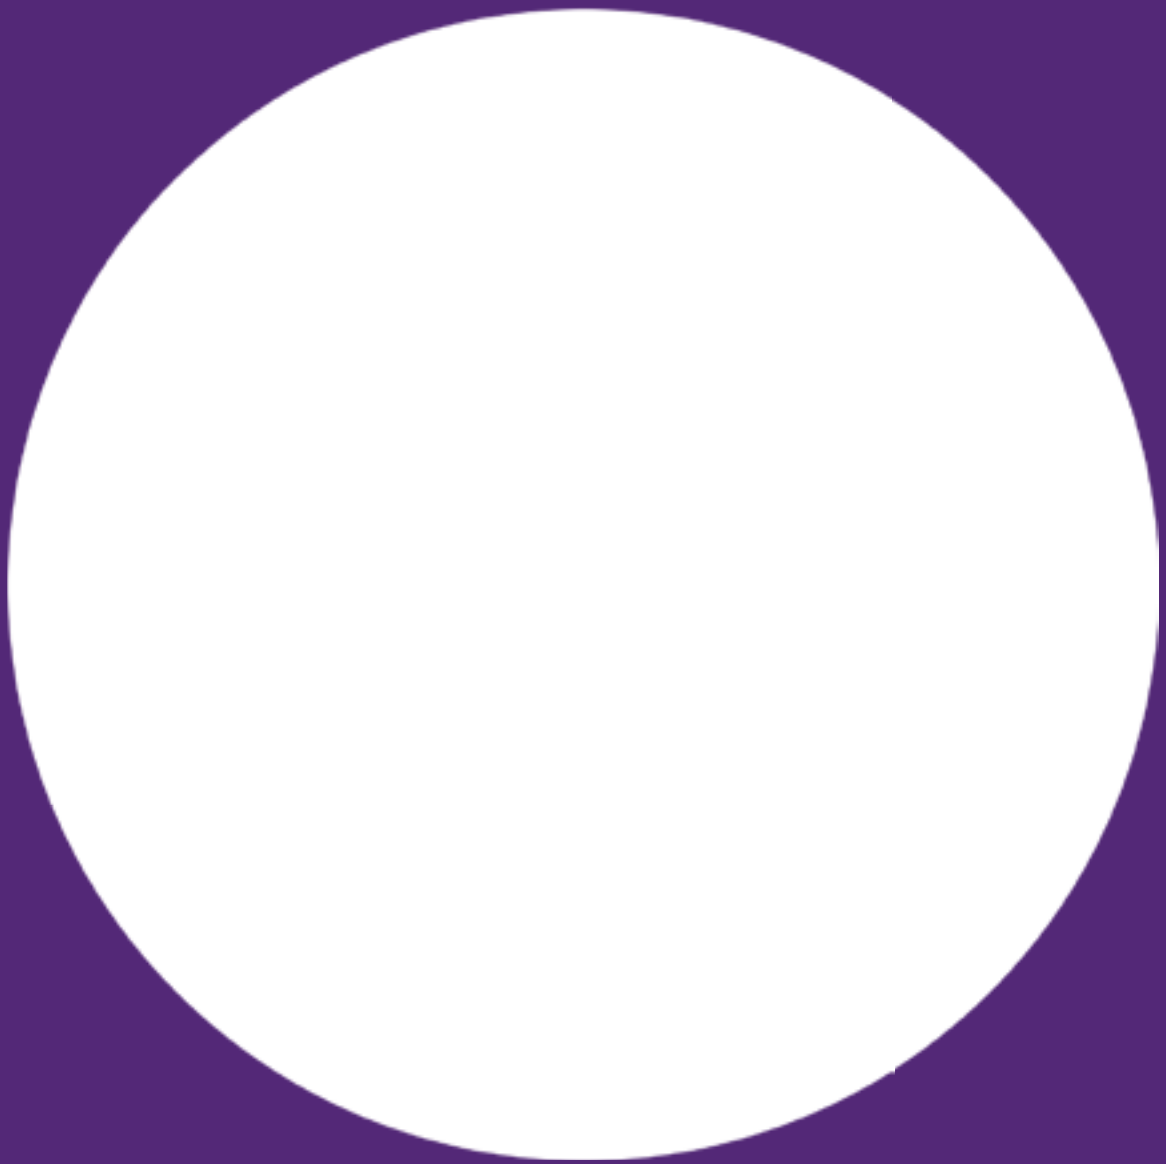
14. Uncertified, estimated as MS65 by Garrett and Guth. Another specimen in the National Numismatic Collection, possibly from the Josiah K. Lilly bequest.

**David Akers Comments:**

In terms of total population rarity, the 1930-S is the second rarest regular issue Saint after the 1927-D, meaning fewer examples exist of this issue, all grades considered, than of the 1920-S, 1921, 1927-S, and 1931-D, as well as the 1931 and 1932. Of course, this is due at least in small part to the low mintage (fifth lowest in the series), but mostly to the fact that, like all of the late dates from 1929-1932 and the high mintage mintmarked issues of the 1920s, the entire mintage remained at the Treasury and was never put into circulation. They were never sent to private banks and so the general public did not have access to them. Almost all of the 60-70 known examples must have been acquired directly from the mint in the year of issue and that is why virtually the entire known population of 1930-S double eagles exists only in mint state grades of MS63 and above. Very few ever went to European banks either and, despite Walter Breen's comments to the contrary, I have never heard of any specific, verifiable hoard or even small groups of 1930-S double eagles that were found in French or Swiss banks, the main source for most of the hoard dates of double eagles that were located in Europe beginning in the early 1950s. Paul Wittlin, for example, the buyer in Europe for James Kelly and later Paramount for over 20 years, had the best connections with the major banks of anyone, and if 1930-S double eagles were there to be found, he would have bought them. I am not absolutely certain that he didn't find one or more examples of the 1930-S but, from the records of his purchases that I saw, I don't recall even one in any of the shipments he sent back to the U.S.

By the early 1940s, when dealers were first beginning to understand which Saint-Gaudens double eagles were really rare and which were not, it was already obvious to them that the 1930-S was rare. Because of those examples that had been obtained directly from the Mint, however, and were bought and sold by dealers at auction and privately, they also knew that it wasn't one of the greatest rarities of the series. It was in the third tier of rarity with the 1925-D and 1927-D and considered much less rare than the 1924-S, 1926-D, 1926-S, 1921, 1927-S, and 1931-D.

The typical 1930-S is very attractive with a strong strike and very good color and luster. The majority of known examples grade MS63 or 64 and there are probably about 8-12 gem MS65 specimens known as well, plus five or six that have been graded MS66. No example has been graded higher. The PCGS population report of five specimens graded MS66 actually represents only four distinct examples. As is often the case, especially with rarities and high value coins, one coin may be submitted to first one grading service and then the other many times in hope of receiving a higher grade. With such a huge difference in value between even one point difference in grade (and now the (+) designation as well), this is perfectly understandable since grading is obviously not an exact science, and the same coin submitted for grading at different times can often receive different grades.



In addition to the four MS66 coins graded by PCGS there is also an additional specimen in that grade certified by NGC, and one coin that has not been graded so far is comparable to the other MS66 specimens. It was the coin in Stack's March 1991 sale which contained extraordinary examples of many of the rarest dates in the series. Dr. Duckor purchased his 1930-S from Ed Hipps in 1980 and it has been in his collection longer than any other issue except the 1925-D which he purchased a year earlier.

(#9191)

**1931 MS66 PCGS SECURE**

**1931 MS66 PCGS SECURE**

## 1931 Twenty Dollar, MS66
## Magnificent Color, Luster, and Strike
## Ex: Eliasberg

**4650** **1931 MS66 PCGS Secure.** Ex: Duckor/Eliasberg. The five late-date Saint-Gaudens twenties are among the rarest and most celebrated of all 20th century coins. The 1931 is generally regarded as second rarest, only trailing the 1930-S. In 1982 David Akers' survey of auction appearances of double eagles covered the major auctions from 1944 through 1981, with scattered coverage in the earlier years. Heritage cataloger David Stone has extended this survey back another 10 years, and he has examined 152 auction catalogs by 14 firms between 1935 and 1944. The 1931 twenty was offered 12 times in those catalogs. What is remarkable is out of those 12 offerings, the 1931 and 1932 double eagles were offered 11 times in the same auctions. This common pairing of the 1931 and 1932 suggests a common source, and in fact recent findings support such a claim.

In David Tripp's 2004 reference on the 1933 twenties, *Illegal Tender*, he explores Special Agent Lipson's inquiries of Brooklyn coin dealer Joseph Barnet and his near involvement with the sale of a 1933 double eagle to collector Charles Williams:

> "Staring through his thick lenses, Barnet added that he had almost sold one [1933 twenty]. Charles M. Williams of Cincinnati had called him and, as Barnet regularly advertised to sell 1931 and 1932 double eagles, asked if he might have a '33. Old Joe got in touch with [James] Macallister, who offered him one at $800. Barnet, however, advised Williams not to buy it as he suspected 'that more of these coins would appear on the market' and drive the price down. In the middle of 1936, for example, 1931 and 1932 double eagles, once exceptionally rare, had started showing up in quantity (also from Israel Switt), and had become increasingly less expensive. Barnet had first advertised them in 1938 for $150 and $175 respectively, but within four years they had become a drug on the market, and Barnet was having a hard time moving them, even as he dropped the price. By 1942 they were being offered for as little as $80 and $85 each, with few takers."

The low point in price for the 1931 and 1932 was in Morgenthau's May 1939 auction of the New York Collection, Part II. The 1931 brought $61, and the 1932 realized only $76. Switt's coins were slowly absorbed into the market, and by 1944 the price of a 1931 double eagle jumped to $220 in the J.F. Bell auction and $300 for the 1932. No hoards were ever found in Europe, and the price of the 1931 has climbed steadily since the late 1930s. Louis Eliasberg had acquired both his 1931 and 1932 twenties by the time he purchased the Clapp Collection in 1942. After he bought the Clapp holdings, he used Charles E. Green's Mint Record and Type Table, United States to formulate a want list of the coins he still needed to acquire in order to achieve a complete set of U.S. coins (the only such set ever assembled). The 1931 twenty was not on Eliasberg's want list. Dr. Charles W. Green, an avid collector and student of the series, but not the same gentleman who compiled the aforementioned Mint Record, wrote Louis Eliasberg of his findings about the release of various Philadelphia and San Francisco double eagle issues. He stated that only 45 examples of the 1931 twenty were officially "put out." His figure understates the availability of the 1931 a bit, as probably 20-40 additional coins were available through East Coast dealers who managed to purchase the coins from the Mint, or from other entrepreneurs like "Izzy" Switt, and resell them to collectors.

David Akers estimates the surviving population of Mint State 1931s at 100 to 125 pieces, and the issue is almost always found in Mint State. The 1931 follows the usual bell curve of availability with one AU58 coin, one MS61, six pieces in MS62, and 15 in MS63. This narrow end of the curve is followed by the largest number of coins in the MS64-65 grades with 42 coins certified by both services in MS64 and 33 pieces in MS65. The trailing end of the bell curve is composed of a mere 14 coins in MS66 with the finest being the Morse MS67 (10/11).

In recent decades the 1931 has always been treated as a featured attraction in its infrequent auction appearances, and record prices often attend those offerings. When a magnificent Superb Gem was offered as lot 6710 of the Phillip H. Morse Collection (Heritage, 11/2005), it realized $254,500, a record price at the time. The same coin was recently offered as lot 3650 of the ANA Signature (Heritage, 8/2010), where it realized a new record of $322,000. The high-water mark for an MS66 1931 twenty was in a 2007 Goldberg's auction, where that coin brought $143,750.

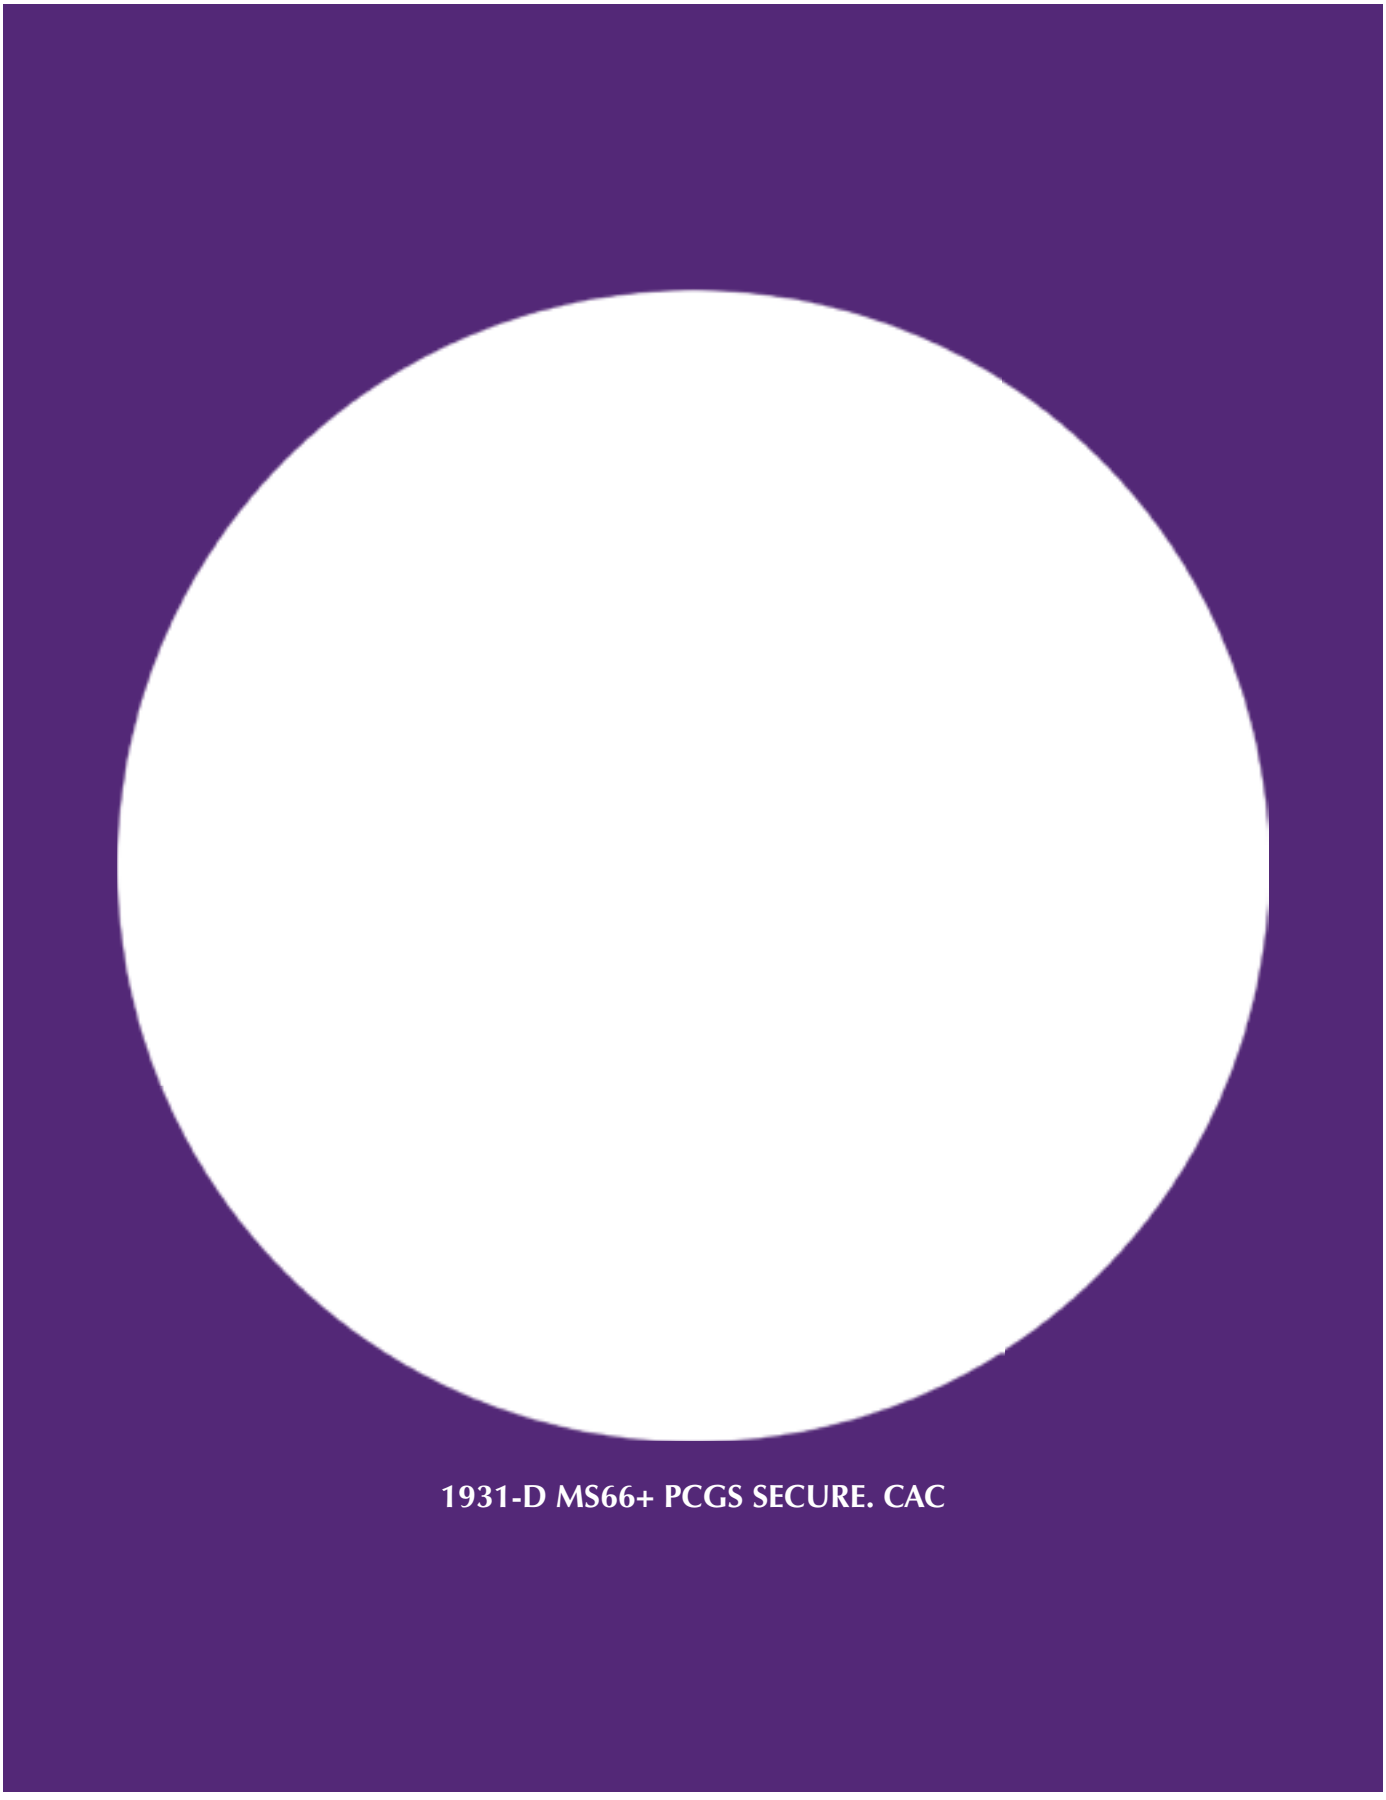
This is the Eliasberg specimen, a coin that has been off the market since it was last offered for sale in 1982. The remarkably high grade of this piece is attested to not only by its overall high state of preservation as seen by the vivid mint luster, but it is also evident in the uncommonly strong strike details. When encountered, the 1931 is often seen with weak stars below the Capitol building. This piece is sharply defined in that area, and the Capitol also exhibits complete detailing on the columns. The figure of Liberty has an overlay of light lilac patina with the remainder of that side showing bright reddish-gold. The eagle also shows intermittent streaks of the same lilac with the same bright reddish patina elsewhere. Neither side has any of the often-seen alloy stains. The surfaces are remarkably free from abrasions with only the tiniest marks on the lower reverse and on the rim.

This magnificent 1931 is one of the finest examples known. The fact that it was in Louis Eliasberg's complete collection of U.S. coins and is also the piece Dr. Duckor selected for his set speaks volumes about the state of preservation, originality, and eye appeal of this exceptional coin.

*Ex: Louis E. Eliasberg, Sr.; Eliasberg Estate; The United States Gold Coin Collection (Bowers and Ruddy, 10/1982), lot 1072, purchased by David Akers for $17,600; Dr. and Mrs. Steven L. Duckor Number One PCGS Registry Set.*

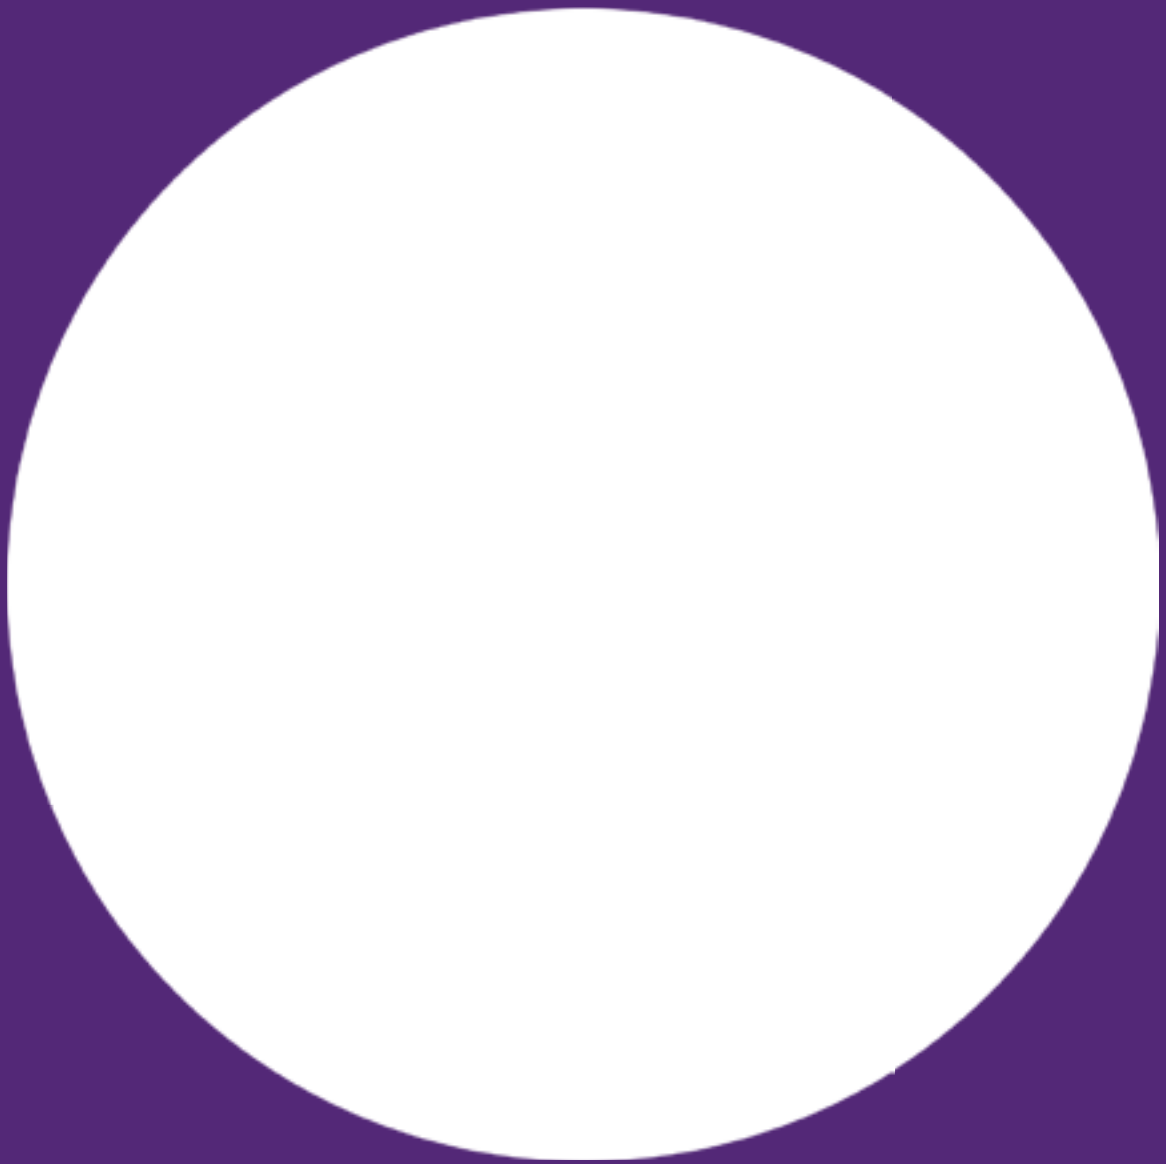
**David Akers Comments:**

Nearly all known 1931 double eagles are uncirculated with a preponderance of them grading MS63 or better. It is much more rare in terms of overall population rarity than the 1929, numerous hoards of which have been uncovered in Europe since the 1950s while very few examples, if any, of the 1931 were ever found from similar sources. The mintage of this issue was extremely high, nearly three million pieces and, based on the number known today (maybe 100-125 total), it is obvious that essentially the entire mintage was struck, stored by the government as part of the nation's gold reserves for just a few years and then melted into gold bars. Those specimens that have survived were undoubtedly acquired directly from the mint in the year of issue.



In gem MS65 condition, the 1931 is similar in rarity to the 1929 and 1932 but not as rare as either the 1930-S or 1931-D among the famous late dates of the series. At the superb MS66 grade level, the 1931 is again similar in rarity to the 1932, but less rare than the 1929, 1930-S, and 1931-D. Perhaps 10-12 examples of the 1931 are known in this grade. This issue is also the only one of the late dates with an example graded MS67.

From an appearance standpoint, the best 1931 double eagles are very attractive, usually sharply struck and with very good color and luster. They do, however, lack the wow factor of the best 1932's which are among the most attractive of any of the rare dates in the series.



I was with Dr. Duckor at the Eliasberg sale in 1982 when he purchased this fabulous coin for his collection. The Eliasberg sale was one of the greatest and most memorable numismatic auction events of all time and Dr. Duckor purchased some unbelievable Saints from the collection, including this 1931, and the 1908-D With Motto, 1909-D, 1920-S, and 1921. Of these, he eventually sold all but the 1931 although he later managed to replace them with other superb examples and, in the case of the all-important 1920-S and 1921, with even higher quality ones. He also purchased the only PCGS certified gem MS65 1920 from this sale years later. The Eliasberg gold coin collection, the only complete collection of U.S. gold coins ever formed, realized a total of $12.4 million when the collection was sold in 1982. Today, that collection would bring well over $100 million and two of the coins, the 1870-S $3 and 1822 half eagle, would combine to easily realize more than the entire sale brought nearly 30 years ago.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9192)

**1931-D MS66+ PCGS SECURE. CAC**

**1931-D MS66+ PCGS SECURE. CAC**

## 1931-D Double Eagle, MS66+
## The Finest Example Certified
## Ex: Amon Carter

**4651** **1931-D MS66+ PCGS Secure. CAC.** Ex: Duckor/Carter. The 1931-D twenty has a remarkably low mintage for a later-date double eagle with only 106,500 pieces struck. Undoubtedly the Great Depression influenced the output of coinage that year in Denver. The double eagle was the only large-denomination coin minted. The only other coins produced that year were the cent, nickel, and dime, all denominations needed for small commercial transactions. The Philadelphia Mint struck 2.9 million double eagles in 1931, apparently in anticipation of overseas demand that never materialized. Undoubtedly the cost of transporting these large-denomination coins from Denver to the East Coast was a limiting factor, making the Philadelphia coins sufficient for this possible demand. Both the Philadelphia and Denver twenties of 1931 suffered the same near-extinction. In spite of the disparity in their mintages, only 95-110 examples of the 1931-D are estimated to have survived the meltings of the mid-1930s, compared to the 65-85 coins believed known of the 1931 Philadelphia issue.

Until recently the 1931-D was considered rarer than the 1931 and 1932. Then a small hoard appeared in Zurich, making it more available than previously thought. The story (as far as it is known) was told in last year's FUN Signature, which we repeat here:

> "In 1982, Akers reported the 1931-D was the fourth-rarest date in the series, with perhaps 35-40 examples known, considerably more elusive than its Philadelphia counterparts from 1931 and 1932. This situation changed in 1984, when a small hoard of 15-20 1931-Ds surfaced in the numismatic market. The discovery of those new coins brought the population of the 1931-D into close alignment with the 1931 and 1932.
>
> "Heritage Co-Chairman Jim Halperin states, 'When the hoard appeared I quickly adjusted my thinking regarding their market value as a result of the sudden spurt in availability ... I think they were mostly 63-64 quality with maybe a few Gems.' The hoard was reported as a Midwestern find by Walter Breen, but Marc Emory, the Director of European Operations for Heritage, remembers handling a few of the last, not from the Midwest. Breen may have confused the 1931-D group with a hoard of 1928 double eagles (25 pieces in an original bank bag) that surfaced in 1985 in Elyria, Ohio."

In our recent survey of 152 auctions from 1937 to 1944, there were only three appearances of the 1931-D. The first was in Morgenthau's New York Collection, Part II in 1939, where that coin brought $130. This is the same sale where the 1927-S only realized $67, the 1931 brought $61, and the 1932 was hammered down at $76. The second 1931-D sold during those early years was in Ira Reed's Public Auction Sale 34 in 1944. That coin was purchased by the astute collector and researcher Dr. Charles W. Green for $920. The third appearance was in the famous J.F. Bell Collection in 1944. That piece brought an amazing $1,100. The catalog description in the Bell sale reveals much about then-current thinking about the 1931-D: "We doubt if more than 6 pieces are known. We class this as rare as the 1921. ... Excessively Rare."

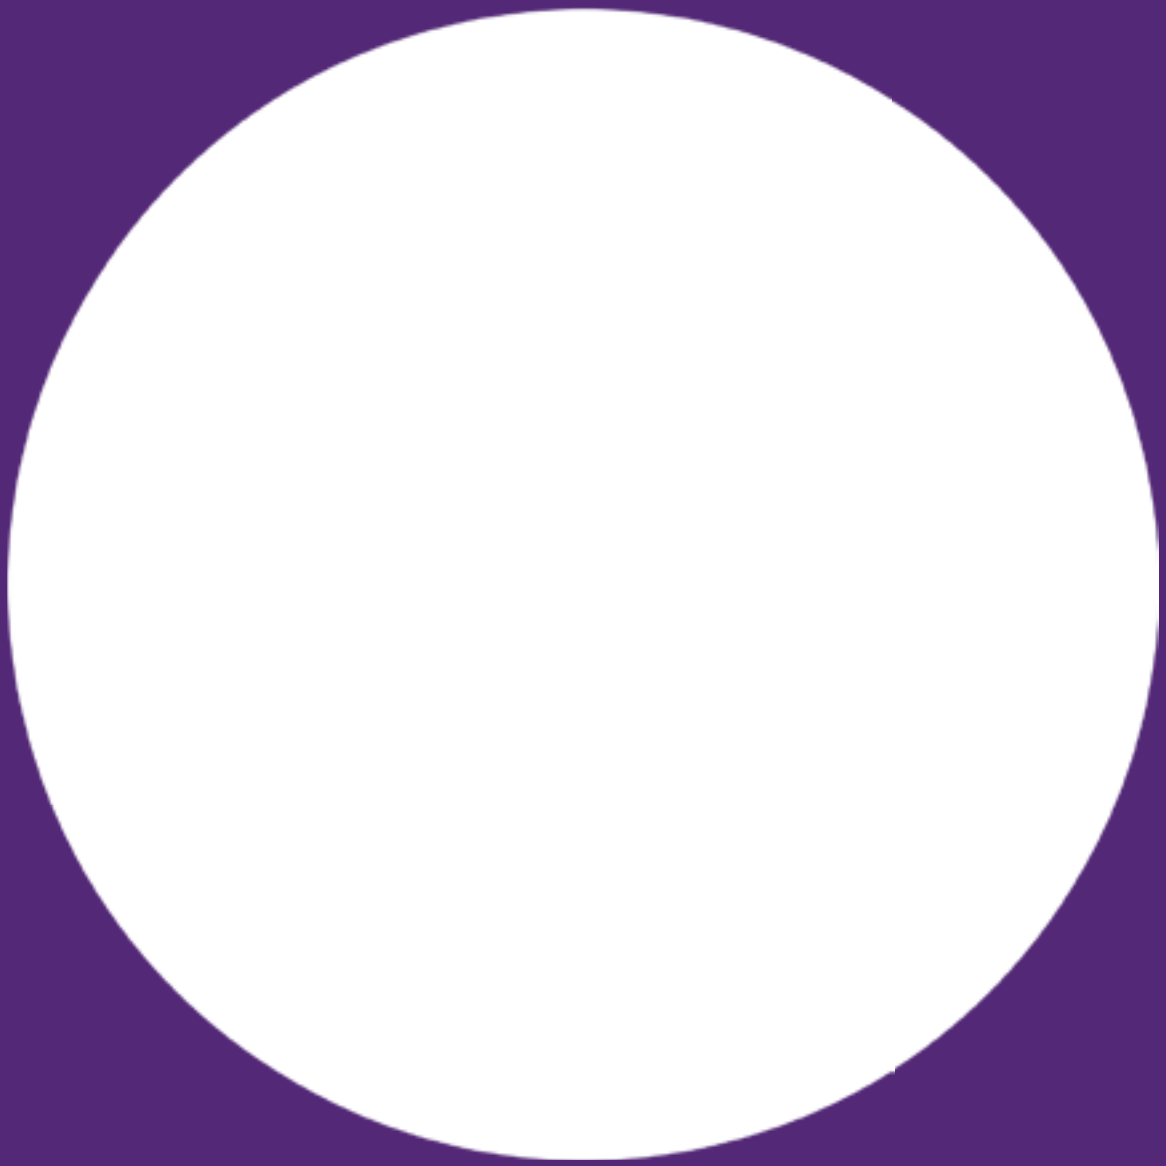
As mentioned in the descriptions of other twenties, Dr. Charles W. Green wrote a now-famous letter to Louis Eliasberg in February 1947 that enumerated the number of coins released by the mints of various rare issues. In the case of the 1931-D his comments tell much about recordkeeping in the Denver Mint:

> "As to the Denver mint, the records apparently were in bad shape as far as answering my query was concerned. It was stated that it would take a year to provide the information whereupon Mrs. Ross, the Director, because of the rush of work there, told the Denver Mint to forego the matter."

Absent official numbers directly from the Denver Mint, it seems reasonable to assume that no more than 125-150 coins were actually released to the public, and the remainder melted.

The 1931-D was a well-produced issue. Strike is never really a problem, and this example shows strong definition throughout, even on the pillars of the Capitol building. The mint luster is exceptional with a bright, satiny finish. Evidence of the coin's originality can be seen in the light, variegated pale reddish-gold and lilac patina interspersed over each side. The only marks we see that can be used as pedigree identifiers are two vertical obverse abrasions, one over ray 5 and the other between rays 8 and 9, and on the lower reverse two shallow marks can be seen on the sun at 6 and 7 o'clock. Otherwise, the surfaces are pristine. This is the finest of the five MS66 1931-D twenties certified, of which four are PCGS coins (10/11).

*Ex: Amon Carter Collection (Stack's, 1/1984), lot 1081.*



**David Akers Comments:**

Among the five famous late date Saint-Gaudens issues, the 1931-D is the fourth rarest overall, more rare than only the 1929 in terms of the total number of pieces known. This is due to the discovery of a number of MS62 to MS64 examples that were found in small hoards over the past 30 years. Gerald Bauman, former Chief Numismatist of MTB, also once assured me that he knew of the existence of a hoard consisting of approximately 40-50 examples of the 1931-D of similar quality to the earlier hoards but I do not know whether or not that group has been sold since that time. Although only fourth in terms of population rarity among the late dates, the 1931-D is exceeded in rarity only by the 1930-S in gem MS65 condition while in superb MS66 condition the 1931-D is perhaps the rarest. The Dr. Thaine Price example, which I purchased in 1989 from Ed Milas of Rarcoa, and this Duckor specimen from the Amon Carter Collection are the two finest I have ever seen. Both can be traced back to the 1940s so they were not part of any of the small hoards discovered after the early 1950s. Two other notable examples are the coin in Stack's March 1991 sale and the Museum of Connecticut History specimen and the latter is possibly one of the three superb gems graded MS66 by PCGS. These two examples are also not hoard coins and were among the known specimens in the 1940s. The Price coin is also graded MS66 and this Duckor-Carter coin is the only superb gem uncirculated example graded with the (+) designation, that is, MS66+, making it the single highest graded specimen.

I purchased this coin for Dr. Duckor at the Amon Carter Jr. Collection sale in January 1984 along with the 1924-D and 1926-S which are also offered here in this sale. My notes in the catalog described the coin as follows: "65+, extraordinary color, the prettiest I have ever seen by far," together with the additional notation "B," meaning I intended to buy it no matter what it went for. To be honest, most of the Saints, even the rare and gem dates, were not all that hotly contested in the sale and the final price, including the buyer's fee, was only $28,600. The Carter sale, like the Eliasberg sale two years before it and the Norweb sale four years later, was one of the greatest sales during my time as a numismatic professional. The sale contained many fabulous rarities that hadn't been seen for many years but it was also memorable for the terrible weather in New York City at the time. There was a major snowstorm that week and the weather was absolutely miserable. Transportation to and from New York was nearly impossible and even getting around the city was very difficult. Snowdrifts everywhere, slick streets and sidewalks, and no cabs to be found when you most needed one. But despite all that, every major bidder one could think of was present at the sale or at least represented by someone, as Dr. Duckor was by me. I wouldn't have missed that sale for anything and was fortunate to be able to buy some great coins for Dr. Duckor and many other customers of mine as well.

*From The Dr. and Mrs. Steven L. Duckor Collection.*

(#9193)

**1932 MS66+ PCGS SECURE**

**1932 MS66+ PCGS SECURE**

# 1932 Saint-Gaudens Twenty Dollar, MS66+
# Finest PCGS-Certified of This Major Rarity

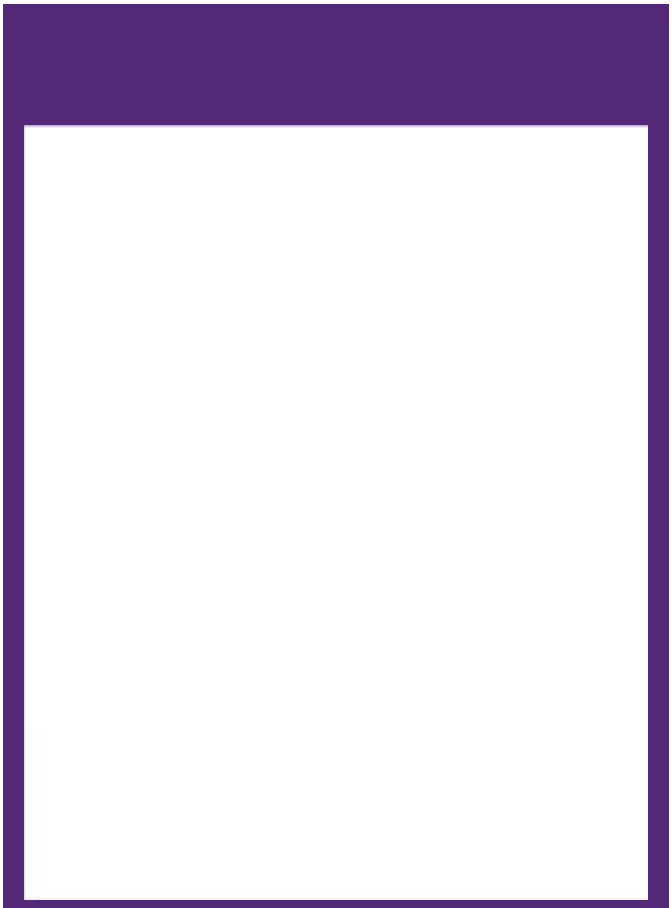
**4652** **1932 MS66+ PCGS Secure.** Ex: Duckor/Akers. The 1932 double eagle has always garnered collector interest as the last collectible date in the Saint-Gaudens series. It is a notable rarity among the late-date twenties, but its perception has changed slightly over the years. In David Akers' auction survey of the denomination published in 1982 he stated, "the 1932 is definitely not as rare as the 1930-S or 1931-D and it is really no more rare than the 1931." Twenty-six years later, assessment of the 1932 had changed to "rarer than the 1929 and 1931-D from an overall standpoint." The change in rarity of the 1932 relative to the 1931-D stems from the appearance in 1984 of a small hoard of the 1931-D, rather than an increase in the availability of the 1932. Confusion about the relative rarity of the five late-date Saints is undoubtedly due to the infrequency with which they are offered, in addition to the misleading mintages — almost all of which were melted.

The 1931 and 1932 twenties were the first of the major rarities from the Saint-Gaudens series to appear in public auction. They were almost always offered together in the late 1930s and early 1940s (as discussed in the write-up for the 1931), and the 1932 consistently realized more than the 1931. The first time these pieces were offered at public auction was in Thomas Elder's Needham, Herrick and Other Collections (9/1937), where Elder said of the 1932: "Of greatest rarity. None struck for circulation. Value $350." The quote "None struck for circulation" is somewhat misleading to today's collectors, but it was clarified by the always-quotable B. Max Mehl in the Belden Roach auction held in 1944: "As rare as the 1931, none of which were placed in general circulation and only a limited number in the hands of collectors."

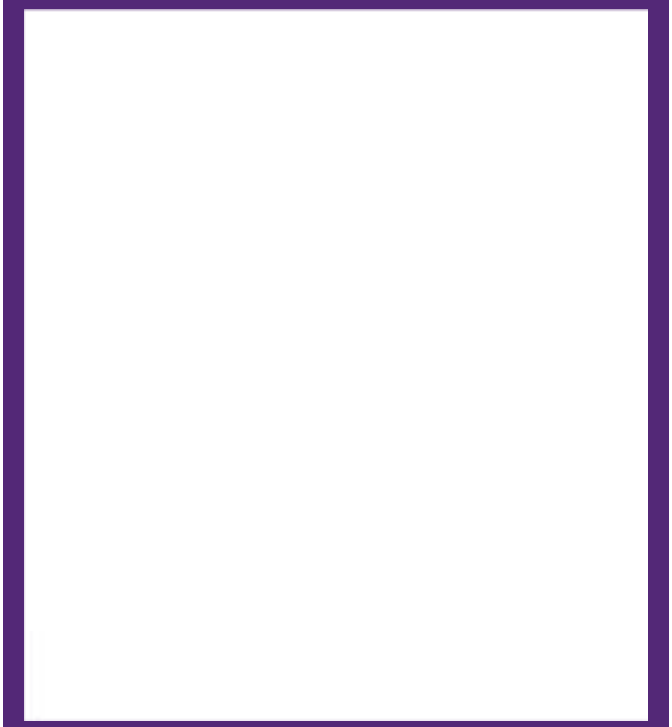
The high prices these dates brought at auction, especially the 1932, was not because the actual number of coins released was known — that information was unavailable until 1947. The stronger price for the 1932 was undoubtedly based on its mintage, which was less than half the 1931 (1.1 million vs. 2.9 million). Today we know how many coins were released by the Mint, in addition to the somewhat inexact, but suggestive number of coins certified by the major services. Dr. Charles W. Green's letter to Louis Eliasberg in February 1947 related, "But the 1931 and 1932 double eagles have good reason for their scarcity for of the 1931 Philadelphia only 45 were put out, and of the 1932 Philadelphia only 110 were issued." With a total of 140 certification events for the 1932 by both of the major services, it would appear that few additional coins were sold by the Mint as Green's number of 110 issued is close to the estimate of 75-95 coins in all grades, as Akers estimated.

In the case of high-grade rarity (MS65 and finer), the 1932 has a definite edge over the 1931. According to Garrett and Guth, the example in the Smithsonian would probably grade MS67, qualifying it as the finest known. The Duckor example is the finest PCGS-certified coin and the only MS66+ (10/11). Among the finest 1932 twenties sold in recent years, several have achieved impressive prices realized. The MS66 Morse coin, sold in Heritage's November, 2005 Signature, brought an astounding $161,000 and remains the recordholder for this rare late-date Saint. The Richmond/Kutasi MS66 coin, sold in our 2010 FUN Signature, was hammered down at $138,000.

The 1932 is known as a well-produced date in the series. Most examples are frosted, and a few have a satiny finish. Strike and abrasions are seldom a problem when this issue is found. The surfaces on the present Duckor MS66+ example display thick mint frost, and each side has subtle accents of reddish-gold and lilac. There are no distracting marks on either side, as one would expect from a coin in such a superior state of preservation.



*Ex: David Akers (Paramount) private treaty sale, $27,000.*



**David Akers Comments:**

Although there is one 1933 that is now considered "collectible," the Farouk specimen which sold in 2002 for $7.59 million, the highest price ever realized by any coin at public auction, the other 12 known examples are in the (permanent?) possession of the U.S. government. So, for all practical purposes, the 1932 is the final available issue of the Saint-Gaudens series. The mintage was over a million pieces but virtually the entire number minted was melted within a few years of being struck. No U.S. gold coins at this time (and for years previously) were being struck to be used for circulation or general public commerce and virtually the entire mintage of the 1932 was simply stored in government vaults and then melted shortly thereafter. However, some were obtained at the mint in the year of issue and changed hands among dealers and collectors often enough in the late 1930s and throughout the 1940s that dealers did not see the 1932 as a top tier rarity in the series when they began to really think seriously about such things for the first time in the mid- to late 1940s. It was considered to be about the same rarity as the 1929 and 1931 and also the 1920-S, 1922-S, 1924-D, and 1925-S. Most of the major auction sales of that era had a 1932 and the issue was consistently valued only in the $200-$250 range. As the years went by, many of the issues that were previously thought to be rare were discovered in hoards in Europe and later Central America, but not the 1932 and so the perceived rarity of the 1932 in comparison to other issues went up considerably. Now, it is the third rarest regular issue date in the entire series after the 1927-D and 1930-S when only the total known population is considered. In terms of only the five late dates, it is considered the second most rare after the 1930-S but perhaps the most "common" of the five in gem MS65 and superb MS66 condition although the 1931 is similarly rare at both those grade levels. There are probably 30-40 gems known and an additional 10 or so superb MS66 specimens. Strike and especially luster, color and overall eye appeal are nearly always first rate for examples of the 1932, possibly the best overall for any of the rare dates in the entire series. But even by the high standards for the issue, the Duckor specimen offered here really stands out, undoubtedly the reason why this specimen is the single highest graded 1932 at MS66+. When I purchased the Amon Carter 1932 double eagle for Dr. Thaine Price in 1984 I considered it to be the finest and most beautiful example I had seen and it subsequently was graded MS66 by PCGS after Dr. Price's collection was sold at auction in 1998. However, when dealer Kevin Lipton showed this coin to me later in 1984, I purchased it for Dr. Duckor immediately because I felt it was every bit as beautiful as the Price coin and even slightly finer overall and the (+) designation to the MS66 grade of the Duckor coin would seem to bear that out. Almost three decades later after seeing numerous other 1932 double eagles and handling many of them, I still consider these two the best I have seen.

## 1912 Theodore Roosevelt-Signed Photograph

**4653** **1912 Theodore Roosevelt Inscribed Signed Photograph. Excellent Condition.** 10.75 inch. x 13.5 inch in a 19.5-inch x 21.5-inch wooden frame. The imprint of Underwood & Underwood appears on this impressive sepia portrait of President Theodore Roosevelt. The photograph is inscribed entirely in Roosevelt's hand: "*To R.C. Townsend with all good wishes from his friend Theodore Roosevelt July 2nd 1912.*"

Underwood & Underwood was noted for its early 20th century photography of political subjects. This particular image is considered rare, and the inscription date is interesting and historically important, falling after the Republican National Convention held in June 1912, but before the National Progressive Party Convention held on August 7.

Known as the Bull Moose Party, the National Progressive Party was Roosevelt's answer to his one-time friend, Robert Taft, who received the Republican nomination two months earlier. Dissatisfied with Taft's previous presidential term, Roosevelt entered his name as a candidate in 1912, and then left the party when they nominated the incumbent president.

Two months after the August convention, Roosevelt was the victim of an assassination attempt, and when asked if he was healthy enough to again serve as president, he replied that he was "fit as a bull moose," inadvertently giving the party its famous nickname. The short-lived political party was formed in 1912 and had entirely disbanded within six years.

No stranger to change, nearly a decade earlier, when he served as the nation's 6th president, Roosevelt pursued a change in the national coinage. Contacting Augustus Saint-Gaudens in 1905, his coinage redesign program was continued with the various denominations through 1916, using several sculptors in addition to Saint-Gaudens.

## 1920 Theodore Roosevelt Bas Relief Portrait Plaque by James Earle Fraser

**4654 1920 Theodore Roosevelt: Bronze Bas Relief Portrait Plaque by James Earle Fraser. Excellent Condition.** 10 inch x 11.75 inch. This work was produced by the Decorative Arts League of New York in a limited casting, possibly limited to an edition as small as 25 pieces. This example has lovely blackish-brown patina with ochre tone on the portrait. Minor blue-green oxidation is present at the upper right.

Renowned sculptor James Earle Fraser (1876-1953) executed this attractive plaque featuring the likeness of the late President Theodore Roosevelt in a profile view to the right. Inscribed below: "Aggressive Fighting for the Right is the Noblest Sport the World Affords."

This plaque of Roosevelt is especially fitting in the context of the Dr. and Mrs. Duckor Collection of Saint-Gaudens double eagles, a series that began when Roosevelt, the subject of this bas relief, contacted Saint-Gaudens, the mentor of Fraser who created the plaque.

Fraser is known in numismatics as the designer of the Buffalo nickel and various commemorative issues. He was born in Winona, Minnesota, on November 4, 1876, the son of Thomas Fraser, a railroad engineer. As a teenager, he studied at the Art Institute of Chicago and participated in artwork at the World's Columbian Exposition. Soon after, he was admitted to the École des Beaux-Arts in Paris. A sculpture that was completed in 1894 when he was just 17 years old, the "End of the Trail," is generally considered his most famous individual work. That sculpture won the $1,000 award of the American Art Association in Paris, where Augustus Saint-Gaudens was a judge. As a result of that competition, Saint-Gaudens asked Fraser to be his assistant, and he became Fraser's mentor. Fraser's remarkable career came to a close on October 11, 1953, when he died at his Westport, Connecticut, home.

HERITAGE AUCTIONS HA.com

Smithsonian
*National Museum of American History*
*Kenneth E. Behring Center*

The National Numismatic Collection, housed in the Smithsonian's National Museum of American History, is among the finest numismatic collections in the world. Its holdings of United States coins and currency are unparalleled. The collection consists of more than 1 million objects, including paper currency and 600,000 coins, tokens and medals. Two of the treasured specimens relate to the Smithsonian's own founding—its name and original funding came from British nobleman James Smithson, who bequeathed his estate to the United States of America in 1829 to create "an establishment for the increase and diffusion of knowledge among men." The bequest was paid in the form of newly minted British gold sovereigns, all but two of which were melted down. The last two originals are now preserved in the NNC.

The Smithsonian is proud to be the home of this great collection and recognizes its commitment to keep the NNC accessible both to scholars and the general public. Long-term preservation and extended access to the collection through exhibitions at the Museum, national tours, and online databases are among the Museum's priorities. But in recent years, federal funding alone has not provided sufficient resources to achieve these goals. To ensure a prominent place for numismatics at the Smithsonian and in American history, the Museum needs help from the community to create a dedicated fund devoted to the care, research, and accessibility of the NNC.

Heritage Auctions has generously offered to support the Museum's efforts to create a special fund to support the NNC during the Heritage auctions at the FUN show in January 2012. The Smithsonian is grateful to Heritage for their extraordinary efforts and generous support on behalf of the Museum. Your support will help the NNC prosper in many ways, including by enabling new acquisitions, traveling exhibits, and a comprehensive catalog of holdings online. Join forces with other collectors to help preserve one of the world's great treasures and provide support for the future of numismatics!

## *Details*

**Sellers**: To contribute to this endowment, sellers agreed to donate the full proceeds of the sale of their objects, or a percentage thereof, to the Smithsonian. Heritage will transfer these proceeds to NMAH. Donations to the Smithsonian are tax deductible to the extent they exceed the value of benefits received in return, and sellers/donors will receive an appropriate gift receipt from the Smithsonian.

**Purchasers**: Purchasers of the coins, currency, and other items are not entitled to charitable contribution deductions for any part of the payments they make for any object sold at auction.

**Buyer's Premium**: Heritage will charge a buyer's premium on all sales. However, for sellers donating 100% of the sales proceeds to the Smithsonian, Heritage is donating 100% of the buyer's premiums associated with those sales. For sellers donating less than 100% of the sales proceeds, Heritage is donating to the Smithsonian an equivalent percentage of the buyers' premiums associated with those sales.

**Smithsonian**: Please note that no collections or property of the Smithsonian, the NMAH, or the NNC will be auctioned and the consigned objects are not intended for acquisition by the Smithsonian, the NMAH, or the NNC. Neither the NNC, the NMAH, nor the Smithsonian make any representation or warranty as to the provenance, condition, grading, or value of any coin or other object for auction.

HERITAGE AUCTIONS HA.com

Dear Bidder:

Welcome to Double Platinum Night! More than 150 consignors contributed a wealth of lots to these best-of-the-best sessions, more than 950 coins. In fact, Platinum Night-worthy coins in the main catalog had been included, that number would be over 1,000 items! To give these amazing coins the time and attention they deserve, we have divided Platinum Night into two evening sessions and three catalogs. The *Dr. and Mrs. Steven L. Duckor Collection* has its own catalog and will sell at the start of the second Platinum Night evening, and the following Featured Collections have at least one Platinum Night entry:

*The Harvey B. Jacobson, Jr. Collection • The Cherokee County Collection • The Galt's Gulch Collection • The Jim O'Neal Gold Type Collection • The Klamath Mountain Collection • The Denis W. Loring Collection of 1793 Large Cents • The Teton Ranch Collection • The Paul J. Seaton Collection • The Marilou Collection • The Stephen L. Schechter Collection*

The usual range of bidding options applies to Platinum Night: pre-auction bids through HA.com, mail, fax, and e-mail, as well as in-the-moment opportunities by telephone and through our award-winning proprietary online bidding platform, Heritage LIVE!™ Of course, many collectors prefer to bid in person, basking in the excitement of the most important U.S. coin auction of the year, and we would be happy to see you there. Whether you plan your trip around the FUN convention or extend your holiday travel a few days, make sure to visit our booth on the bourse floor and say hello.

Good luck with your bids, and may your collecting in 2012 get off to a great start!

Sincerely,

Greg Rohan
President

Todd Imhof
Executive Vice President

## THE HARVEY B. JACOBSON, JR. COLLECTION
## EARLY HALF EAGLES

### Choice XF 1796/5 Half Eagle, BD-1
### Scarce Second-Year Issue
### Popular Overdate

**4655 1796/5 Small Eagle XF45 PCGS. Breen-6418, BD-1, High R.4.** A reported mintage of 6,196 half eagles was accomplished in 1796, but it seems certain that some of those coins were actually dated 1795. The Mint experienced grave difficulties with die breakage in 1795, the first year in which gold coins were struck, and 12 different die varieties are known for that date. The entire mintage of 1796 overdated coins was achieved with a single die pair, the very scarce BD-1 variety, when an unused 1795 die was overdated with a 6 and combined with the reverse used to strike the BD-12 variety of 1795 half eagles.

John Dannreuther estimates the actual mintage of 1796 overdated coins at a meager 1,057-2,000 pieces, with only 80-100 examples surviving today in all grades. Even this small estimate may be too liberal, as Heritage has only handled an example of the 1796/5 half eagle on 24 prior occasions since 1993, and this issue tends to change hands more frequently than most, because of the popularity of the overdate.

The reverse die was lapped after its use in 1795, and some detail in the wreath and eagle's feathers was lost. This coin represents the Bass-Dannreuther Die State a/c, with a perfect obverse and the reverse lapped once again. A final die state exists, with the obverse cracked from the edge to the bottom of the 6 in the date, but that die state is seldom encountered.

The present coin is an attractive Choice XF example that retains much of its original detail and mint luster. The obverse is sharper than the reverse because of the noted lapping. The pleasing yellow and greenish-gold surfaces show only minor abrasions, with traces of prooflike reflectivity in sheltered areas around the devices. Population: 3 in 45, 21 finer (11/11).

*From The Harvey B. Jacobson, Jr. Collection.* (#8067)

## 1798 Half Eagle, MS61
## Possibly Finest Known BD-5
## Terminal Die State

**4656** **1798 Large Eagle, Large 8, 13 Star Reverse MS61 NGC. Breen-6429, BD-5, High R.5.** Bass-Dannreuther Die State c/b, the terminal die state with a prominent obverse die crack from star 7 to the back of the head, and another down to the right from the E in LIBERTY. This piece is clearly finer than the Bass Core Collection coin illustrated in Dannreuther's reference, and it is also finer than any other example the cataloger has notes about. Both sides are brilliant and lustrous with faint green overtones. A few scattered marks and trivial toning spots are evident on each side.

*From The Harvey B. Jacobson, Jr. Collection.* (#8078)

## 1799 Half Eagle, MS62
## Small Stars Reverse, BD-1
## Elusive Early Variety

**4657 1799 Small Stars Reverse MS62 PCGS. Breen-6433, BD-1, High R.5.** Bass-Dannreuther Die State b/d. The 1799 Capped Bust Right half eagle claims a mintage of just 7,451 pieces, with nine different die varieties known for the date. Seven varieties used a small star punch on the reverse, with two dies employing a larger star punch. Probably 1,500-2,500 pieces of the original mintage were of the rare BD-1 variety, represented by the coin offered here. The BD-1 variety is recognized by the position of the 1 in the date near the curl, and the Cross Star pattern on the reverse, with stars 3,8,9,10, and 11 in a straight line. The obverse die was used only for this variety, but the reverse had been used to strike the 1798 BD-8 variety.

In *Early U.S. Gold Coin Varieties,* John Dannreuther estimates the surviving population of the BD-1 variety at just 35-45 pieces. This seems like a liberal figure, since PCGS has certified only 54 specimens of all the Small Stars varieties together. Unfortunately, the grading service does not differentiate between the various Small Stars die marriages, but the BD-1 is known to be quite elusive.

This coin shows a light crack through stars 10-13 on the obverse, and a crack from the edge to the eagle's beak on the reverse, with the reverse heavily clashed, indicating Die State b/d. Later die states reveal further clashing, lapping, and cracks, suggesting both dies probably failed with this issue, most likely at the same time.

The present coin is an attractive MS62 specimen, with vivid orange and greenish-gold surfaces that show prooflike reflectivity in sheltered areas. A touch of softness is evident on the central devices, and a scattering of minor contact marks explains the grade. Population (for all Small Stars varieties): 11 in 62, 10 finer (11/11).

*From The Harvey B. Jacobson, Jr. Collection.* (#8081)

## Choice AU 1799 Half Eagle
## Rare BD-8 Variety, Large Stars Reverse

**4658** **1799 Large Stars Reverse AU55 PCGS. Breen-6437, BD-8, R.6.** Bass-Dannreuther Die State b/b. The die cracks described in the Bass-Dannreuther reference are present but very faint. BD-8 is a rare marriage. Dannreuther estimates only 22 to 30 examples are known. This is a partly lustrous representative with light peach-gold toning. Each side has a few tiny strike-throughs, as made, but there are no noticeable marks. One small, slightly bright area is left of the cap, and an area of steel-gray patina is near the TE in UNITED. As is the case for the Bass plate coin, the strike is generally sharp with softness limited to the eagle's left (facing) claw and the border of the shield and left wing. A desirable example of this decidedly rare die pairing.

*From The Harvey B. Jacobson, Jr. Collection.* (#98081)

## Near-Mint 1805 Half Eagle
## Better BD-3 Die Marriage

**4659** **1805 AU58 PCGS. CAC. BD-3, High R.5.** Ex: Harry W. Bass, Jr. Collection. Bass-Dannreuther Die State a/e without an advanced rim die break at 1 o'clock on the reverse. The Wide Date 1805 variety, scarcer than its Close Date counterpart (BD-1 and BD-2). The Bass-Dannreuther standard reference estimates between 35 and 45 B-3 examples are known. This is a canary-gold Borderline Uncirculated representative with bright luster throughout the peripheries and devices. Liberty's hair and cap display inconspicuous mint-made adjustment marks, and the fields exhibit wispy abrasions. A single small, thin dig near the right shield corner provides an identifier for the pedigree researcher. An affordable yet problem-free example of a difficult die pairing.

*From The Harvey B. Jacobson, Jr. Collection.* (#8088)

## 1806 BD-4 Half Eagle, AU55
## Terminal Die State
## Ex: Bass Collection

**4660 1806 Pointed Top 6, 8x5 Stars AU55 PCGS. Breen-6447, BD-4, High R.5.** Ex: HW Bass Jr. This is the terminal die state for BD-4, with a delicate obverse die crack through the cap, and a reverse rim break obliterating the top of the T in UNITED. The lustrous light yellow-gold surfaces are moderately abraded with minor adjustment marks at the center of the obverse, creating design weakness at the center of the reverse. A lovely example that is likely one of the dozen finest survivors of the die pair.

*Ex: 1968 ANA Sale (Abe Kosoff), lot 939; Harry W. Bass, Jr. (Bowers and Merena, 10/1999), lot 775.*

*From The Harvey B. Jacobson, Jr. Collection.* (#8090)

## Draped Bust MS62 1807 Five Dollar
## BD-1, Only Small Reverse Stars Variety

**4661 1807 Bust Right MS62 NGC. Small Date, Small Obverse Stars, Small Reverse Stars, Breen-6449, BD-1, High R.4.** Ex: Byron Reed. Bass-Dannreuther Die State b/c. The sole die variety with small reverse stars. BD-1 has a small date, unlike BD-6, and has small obverse stars, unlike BD-5. BD-7 and the "common" BD-8 are the Bust Left John Reich type. Neither NGC or PCGS distinguishes between 1807 half eagles aside from the obvious Bust Left and Right subtypes, but the four different 1807 Bust Right design subtypes are each collectible.

The present well struck sun-gold representative displays substantial cartwheel luster and features a minimally abraded reverse. Obverse marks are moderate and consistent with the grade. Combined NGC Census for all Bust Right varieties: 27 in 62, 27 finer (11/11).

*Ex: Byron Reed Collection (Spink America, 10/1996), lot 107.*

*From The Harvey B. Jacobson, Jr. Collection.* (#8092)

## Near-Mint 1808 Half Eagle
## Normal Date, BD-4 Variety

**4662** **1808 AU58 PCGS. Breen-6457, BD-4, High R.3.** Bass-Dannreuther Die State c/a, the only die state known for this variety. The 1808 Normal Date half eagle is known in two die varieties, and two more varieties are known that display the 1808/7 overdate. This coin is an example of the BD-4 variety, with a perfect date and a wide space between 5 and D in the denomination. The BD-4 obverse die was used on the other Normal Date variety of the year, and the reverse was later used to strike the 1809/8 BD-1 variety. Probably no more than 175-225 examples of the BD-4 survive today in all grades.

The present coin displays only a touch of wear on the sharply detailed design elements. The surfaces are a vivid orange-gold color, with prooflike reflectivity in sheltered areas, and only minor abrasions in the fields. Population: 40 in 58, 79 finer (11/11).

*From The Harvey B. Jacobson, Jr. Collection.* (#8102)

## 1808 BD-3 Half Eagle, MS64
## Only Two Finer PCGS Coins

**4663** **1808 MS64 PCGS. Close 5D, Breen-6456, BD-3, R.4.** This variety has confused many notable numismatists over the past century. Part of the reason is its similarity to BD-2, which shares the same reverse die. One way to tell the two varieties apart is to examine the exact center of the obverse. BD-3 shows a tiny dot, probably from a compass point when the die was first laid out. BD-2 instead has a small incused circle in the same location. BD-3 and BD-4 use the same obverse die, further complicating matters. Clapp and Newcomer failed to collect or designate BD-3, but Edgar H. Adams noted it as his number 3. Breen (1966) listed two 1808 die pairs, 3-A and 4-A, that each turned out to be different die states (unclashed and clashed) of BD-3. Miller (1997) continued Breen's error, as Bass' research was yet unpublished. The present piece is the unclashed die state, which Dannreuther catalogs as Obverse State a and Reverse State d.

This boldly struck near-Gem has original green-gold toning, with hints of peach across the open fields. The surfaces are impressively smooth, and in fact the only feature that can be used for pedigree purposes is a tiny area of dark toning near the left foot of the I in UNITED. Unquestionably among the finest known 1808 BD-3 half eagles.

PCGS reports 14 pieces certified as MS64, with two finer (11/11). However, these figures combine BD-3 and BD-4 examples, and there may be resubmissions as well.

*Ex: Bartle Collection (Stack's, 10/1984), lot 1112; Harry W. Bass, Jr. Collection, Part III (Bowers and Merena, 10/1999), lot 789; California Sale (Ira & Larry Goldberg, 10/2000), lot 888; Wayne Rich Collection (Bowers and Merena, 3/2002), lot 222; A Gentleman's Collection of Early Gold Coins (American Numismatic Rarities, 6/1005), lot 1011; Milwaukee ANA Convention (Heritage, 8/2007), lot 1901.*

*From The Harvey B. Jacobson, Jr. Collection.* (#8102)

## 1808/7 Half Eagle, MS62
## Key BD-1 Variety

**4664** **1808/7 MS62 PCGS. Wide Date, Breen-6454, BD-1, R.6.** Bass-Dannreuther Die State b/c, with the fatal die crack completely bisecting the obverse. The 1808 half eagle has a reported mintage of 55,578 pieces, with four die varieties known for the date. Two varieties were struck from overdated 1807 dies, including the rare BD-1 die marriage represented by the coin offered here. The BD-1 is identified by the short 1 in the date centered over a dentil. The BD-1 probably accounted for 2,000-3,000 pieces of the reported mintage, with only 20-30 examples surviving today.

This coin is an attractive MS62 example, with sharply detailed design elements and slightly subdued mint luster. The pleasing yellow-gold surfaces are accented by hints of rose and green, and show an extensive network of die cracks on the obverse. Population: 5 in 62, 5 finer (11/11).

*From The Harvey B. Jacobson, Jr. Collection.* (#8103)

## 1810 Small Date, Small 5 Half Eagle
## Rare BD-2 Variety
## Condition Census Near-Mint Example

**4665 1810 Small Date, Small 5 AU58 PCGS. CAC. Breen-6461, BD-2, R.6.** According to Mint records, 100,287 Capped Bust Left half eagles were struck in 1810, a huge mintage for the time. This large production was divided among four different die varieties distinguished by the different size numeral punches used in the date and denomination. The coin offered here belongs to the rare Small Date, Small 5, BD-2 variety that uses the same size date punches as the issues of 1808 and 1809.

The initial mintage of the Small Date, Small 5 variety must have been quite small, probably only 2,000-4,000 pieces. The variety is decidedly elusive today, with John Dannreuther estimating the surviving population at 25-30 pieces, while PCGS believes the total is even smaller, only about 20 specimen in all grades. These figures put the 1810 BD-2 in the same rarity class as the 1854-O and 1856-O double eagles. Current population data shows a total of 11 coins certified at PCGS and NGC combined (11/11).

There are only two die states known for the 1810 Small Date, Small 5, as the obverse die shattered early in the production run. This coin represents the final Bass-Dannreuther Die State b/b, with extensive die cracks evident on both sides. This was the only use of the obverse die, although Walter Breen mistakenly believed it was used on the other Small Date variety of this year. The reverse die was later used to strike the even rarer Large Date, Small 5, BD-3 variety.

The present coin is a Condition Census near-Mint example, with vibrant mint luster and vivid antique-gold color. The design elements are sharply detailed in most areas, with just a touch of softness on the eagle's claws. Only a few minor contact marks are present, explaining the grade. Visual appeal is outstanding. We expect spirited bidding from early gold specialists when this exceptional lot crosses the auction block. Population: 1 in 58, 1 finer (11/11).

*From The Harvey B. Jacobson, Jr. Collection.* (#8105)

LIBERTY
1810

UNITED STATES OF AMERICA
E PLURIBUS UNUM
5 D.

# Gem 1810 Half Eagle
# Small Date, Tall 5, BD-1 Variety
# Tied for Finest Certified

**4666** **1810 Small Date, Tall 5 MS65 PCGS. Breen-6462, BD-1, High R.3.** Bass-Dannreuther Die State c/c. The 1810 Capped Bust Left half eagles were produced in large numbers, with a reported mintage of 100,287 pieces. Four die varieties are known for the date, differentiated by the size of the numerals in the date and denomination. The coin offered here is an example of the scarce BD-1 variety, with the Small Date and a Tall 5 in the denomination. The numerals in the date are from the same size punches used for the dates in 1808 and 1809, while the 5 in the denomination is from the punch previously employed on the 1808A reverse die. John Reich's "signature" star punch, with the outermost point scalloped, was used on star 13, identifying him as the engraver of this die.

The BD-1 variety undoubtedly accounted for a significant portion of the reported mintage, probably 20,000-30,000 pieces. Die evidence indicates the BD-1 was struck on two occasions, as the early die states show no sign of die rust, while the final die state shows rust lumps on both sides. This coin represents the final Bass-Dannreuther Die State c/c, with die cracks between stars 3-6, the numerals in the date, and from O through the wing and AMER on the reverse. Both sides show evidence of die rust in several locations, and faint clashing is observed above the left wing. The reverse die was used once more, in the 1811 Tall 5 variety, BD-1.

Despite the substantial mintage, the BD-1 is scarce in today's market, with perhaps 150-225 pieces known in all grades. PCGS and NGC have combined to certify a total of 165 examples of this popular issue, with the majority of the coins seen in circulated or lower Mint State levels. High-grade examples are very rare, with PCGS grading only two coins in MS65, with none finer, while NGC has seen no specimens finer than MS64 (11/11).

The 1810 half eagle was a popular date with early collectors and examples began to appear at auction as early as the A.C. Cline Collection (M. Thomas & Sons, 6/1855), lot 184. Numismatists began to notice the different die varieties at an early date as well. William Strobridge noted the small date on the coin in lot 385 of the Seavey Descriptive Catalog in June 1873, and the BD-1 variety was fully described in lot 915 of The Randall Collection (W. Elliot Woodward, 6/1885), "1810 No. 3; small date; reverse has large 5; fine, scarce." Later students of die marriages, like Edgar Adams and Waldo Newcomer, were fully aware of the BD-1 variety, but Walter Breen misidentified the obverse, believing it to be the same as the obverse used on the other Small Date variety of 1810, the rare BD-2.

The present coin is a magnificent Gem, tied for finest certified with one other example at PCGS. The design elements are sharply rendered throughout, with complete star centrils and fine definition on the hair strands and eagle's feathers. The yellow and orange-gold surfaces radiate satiny mint luster, with exceptional eye appeal. On close inspection, a few minor contact marks are evident in the fields, but they do little to detract from this coin's terrific appeal. We can find no auction record of an MS65 graded coin of this variety, so early gold specialists should bid accordingly.

*From The Harvey B. Jacobson, Jr. Collection.* (#8106)

## Extremely Rare Large Date, Small 5 1810 Half Eagle, BD-3

**4667 1810 Large Date, Small 5 — Smoothed Fields — Net Grade VF30 PCGS. Breen-6460, BD-3, High R.7.** Bass-Dannreuther Die State a/c. The Bass-Dannreuther reference describes BD-3 as "*the* rarity of this type! Estimates by most researchers have all been no more than a half dozen coins. This number might be generous, as the author can trace only four or five examples. Harry Bass owned *two* of them!" The 1810 Large Date, Small 5 receives separate Guide Book listing at an enormous premium relative to the more plentiful Large Date, Large 5 (BD-4) and Small Date, Tall 5 (BD-1).

BD-3 pairs the Large Date obverse of the "common" BD-4 with the Small 5 reverse of the rare BD-2. Small 5 is something of a misnomer, and Narrow 5 might be a more accurate description of the denomination numeral. The present coin displays considerable luster and if problem-free would certainly grade AU. The fields are a bit bright, particularly just beneath the scroll, although no smoothing is obvious when inspected beneath a loupe. This well defined example has pale honey-gold color and lacks noticeable abrasions. One small strike-through (as made) is beneath the eagle's neck.

We are only able to trace auction appearances (dating back to 1976) of four different examples. They are:

1) C.W. Krugjohann Collection (Bowers and Ruddy, 5/1976), lot 1326; Fairfield Collection (Bowers and Ruddy, 10/1977), lot 1758; Harry W. Bass, Jr.; ANA Museum.

2) AU55 "cleaned and buffed-up." Pre-Long Beach Sale (Superior, 2/2000), lot 1082.

3) Net VF30. Auction '80 (Paramount, 8/1980), part of lot 923; Harry W. Bass, Jr. Part II (Bowers and Merena, 10/1999), lot 794. **The present coin.**

4) Very Fine. Akers plate coin; Americana Sale (Stack's, 1/2006), lot 3020.

*From The Harvey B. Jacobson, Jr. Collection.*

## Choice AU 1818 Half Eagle
## Scarce Perfect Dies, BD-1 Variety
## Ex: Harry Bass

**4668** **1818 AU55 PCGS. CAC. Breen-6471, BD-1, R.5.** Coinage of ten dollar gold pieces was suspended after 1804, and no quarter eagles were produced from 1808-1821, leaving the Capped Bust Left half eagle as the only U.S. federal gold coin in production for more than a decade. There were significant gaps in the coinage of that denomination, as well. The War of 1812 played havoc with the national economy, and by the time that conflict ended in 1815, the mintage of half eagles was down to the meager total of 635 pieces. The years 1816 and 1817 saw no mintage of gold coins accomplished at all, but there was a substantial recovery in 1818, when a large production of 48,588 half eagles was achieved.

The 1818 half eagle is known in three different die varieties, with this coin representing the very scarce BD-1 variety, with perfect dies. The other two die marriages exhibit significant errors, with the letters in STATESOF run together on the BD-2 variety, and the D in the denomination punched over a 0 in the BD-3. The BD-1 was a significant portion of the reported mintage, probably 10,000-15,000 pieces, and John Dannreuther estimates the surviving population at 50-65 specimens in all grades. This coin is from an intermediate die state, with the obverse perfect and the reverse showing the crack from D through the base of AMERICA, but not the other cracks that indicate reverse Die State b.

The present coin is a lightly circulated Choice AU example, with much of the original mint luster intact and only a trace of wear on the devices. The surfaces are a pleasing yellow-gold color, with strong highlights of orange. Population: 4 in 55, 30 finer (11/11).

*Ex: Shapero Collection (Stack's, 10/1971), lot 973; Harry Bass; Harry W. Bass, Jr. Collection (Bowers and Merena, 10/1999), lot 808.*

*From The Harvey B. Jacobson, Jr. Collection.* (#8119)

## Select 1818 Capped Bust Left Half Eagle
## Rare 5D over 50, BD-3 Variety
## Only Two Finer Coins at PCGS

**4669 1818 5D Over 50 MS63 PCGS. CAC. Breen-6472, BD-3, R.5.** Bass-Dannreuther Die State a/a. The Capped Bust Left half eagle was the only gold denomination struck in 1818, after a hiatus of three years, with a substantial mintage of 48,588 pieces. There are three die varieties known for the date, all of them scarce-to-rare and easily recognized. This coin represents the most elusive of the three die marriages, the BD-3 variety, with the D in the denomination punched over a 0. The error probably occurred when a 0 punch was mistaken for a D, as it seems unlikely that a half eagle die would be confused with a half dollar. This was the only use of the obverse die, but the reverse was employed the following year to coin the famous 1819 BD-1 variety. The 5D/50 variety was first noticed in 1906, when the Chapman brothers cataloged a specimen in lot 205 of the Harlan. P. Smith sale:

> "1818 Erratic stars, one being placed beneath the lower curl of hair near the date. Rev. The D in the denomination has been cut over the letter 0 showing that the die sinker originally made it 50 instead of 5D. Uncir. Mint lustre."

The rare BD-3 variety probably accounted for no more than 7,500-10,000 pieces of the reported mintage, and PCGS estimates the surviving population at 25-35 examples. PCGS and NGC have combined to certify a total of 21 specimens in all grades, with PCGS grading five coins in MS63, with two finer, and NGC recording two submissions at the Select level, with a single piece finer (11/11).

The present coin is an attractive Select specimen, with vivid orange-gold surfaces that show highlights of lilac and few signs of contact. The design elements are sharply rendered throughout, with complete star centrils and fine definition on the hair and eagle's feathers. This coin possesses outstanding eye appeal and vibrant mint luster to complement its unusual die characteristics and historical interest.

*Ex: ANA National Money Show (Superior, 3/2000), lot 843. From The Harvey B. Jacobson, Jr. Collection.* (#8120)

## Important MS62 1819 Half Eagle, BD-1 Blundered Denomination 5D Over 50 Only a Few Known Mint State Examples

**4670 1819 5D Over 50 MS62 PCGS. Breen-6473, BD-1, High R.6.** Bass-Dannreuther Die State a/b with the ERT from LIBERTY clashed in the shield. The 1819 is a formidable rarity within the Capped Head Left type. Two die varieties are known, and both are very rare. Both receive separate listing in the Guide Book due to a mint-blundered denomination on BD-1. The normal reverse BD-2 is even rarer, listed as R.7 by Dannreuther. The 5D over 50 variety is ranked #90 in the 2003 Jeff Garrett and Ron Guth reference *100 Greatest U.S. Coins*.

The reverse die for BD-1, first used for the 1818 BD-3, is the only blundered denomination of the half eagle denomination. Among quarters, 25C over 50C varieties are known for the 1822 and 1828, and among half dollars, an 1807 50 over 20 and an 1836 50 over 00 is known. In all of these instances, the die engraver briefly forgot which denomination was intended. Since more half dollar dies were produced than for any other silver or gold denomination, it is unsurprising that all of the various blundered denomination mint errors involved the half dollar denomination.

The present example is well struck and has yellow-gold toning with occasional small dashes of gunmetal-gray near the reverse periphery. A loupe reveals only unimportant contact, with a brief thin mark on each side of the T in LIBERTY noted solely for pedigree purposes. Population: 1 in 62, 3 finer (11/11).

There have been only a few auction appearances of certified Mint State examples of the 1819 5D over 50. They are:

1) MS63 PCGS. Portland ANA (Heritage, 8/1998), lot 7628.

2) MS63 NGC. Diocese of Buffalo Collection (Heritage, 8/1997), lot 7606.

3) MS63 PCGS. Numismatic Gallery, 1946; "Memorable" Collection, Numismatic Gallery, 1948; Wolfson Collection (Stack's, 10/1962), lot 361; Abner Kreisberg, 2/1972; Harry W. Bass, Jr. Collection, Part II (Bowers and Merena, 10/1999), lot 812.

4) MS62 PCGS. Milwaukee Central States (Heritage, 4/1999), lot 6020. The present lot.

*From The Harvey B. Jacobson, Jr. Collection.* (#8124)

## Near-Gem 1820 Half Eagle
## Square Base 2, BD-2

**4671 1820 Square 2 MS64 PCGS. CAC. Breen-6476, BD-2, High R.5.** Bass-Dannreuther Die State a/a without clash marks. BD-2 can be identified by wide repunching on the final star. A tiny die lump on the reverse field where the rear talon of the left (facing) flaw normally resides, and a die scratch extends from the upper horizontal shield line into the right wing.

Although nine different die varieties of 1820 half eagles are known, the date is nonetheless scarcer than the 1813. Demand for the 1820 is increased by its three separate *Guide Book* listings, one for the Square Base 2 (BD-1 through BD-4) and two for the Curl Base 2, one each for the Small Letters (BD-6, BD-8) and Large Letters (BD-5, BD-7, and BD-9) reverses.

Among the Square Base 2 die varieties, BD-3 is the least rare with 50 to 65 pieces known. Most high grade auction records for the 1820 Square 2 are appearances of BD-3. The rarity of the BD-2 is underappreciated, as the Bass-Dannreuther reference estimates only 20 to 25 examples are known. In our Permanent Auction Archives, we note only one other MS64 or better instance of BD-2, a different MS64 PCGS example offered as lot 10347 in our July 2005 San Francisco ANA.

This is a remarkable Choice example of this scarce date. The rich butter-gold surfaces are original and the strike is precise throughout. Only Liberty's shoulder curl lacks absolute detail. We note a brief vertical lint mark (as made) beneath Liberty's eye, and a minor mark near the second S in PLURIBUS provides another identifier. Luster dominates design elements and the eye appeal is incontrovertible. It could be many years until another BD-2 of similar quality becomes available at a major auction. Combined PCGS Population for all four Square Base 2 varieties: 11 in 64, 4 finer (11/11).

*From The Harvey B. Jacobson, Jr. Collection.* (#8125)

## 1820 Capped Bust Left Five, MS64
## Very Rare Curl Base 2, Small Letters
## BD-8 Variety
## Second-Finest Certified Example, Ex: Childs

**4672 1820 Curl 2, Small Letters MS64 PCGS. CAC. Breen-6478, BD-8, High R.7.** Bass-Dannreuther Die State b/c. The year 1820 saw a landmark production of Capped Bust half eagles, with 263,806 pieces struck. The mintage was by far the largest of the decade, and it yielded nine interesting die varieties, based on the style of the 2 in the date and the size of the letters in the legend. This coin represents the very rare BD-8 variety, with a curved base on the 2 and small letters on the reverse. The obverse die had been used before, to strike the BD-7 variety, and the reverse was previously employed to coin the BD-6 die marriage. Both dies seem to have failed during the striking of this issue, although no terminal injury is apparent on the obverse. The coin offered here is the same one referred to in the text of the Bass-Dannreuther reference as being provided by Larry Hanks as an example of the late die state. The fatal reverse crack through OF on the reverse is plainly evident.

All nine varieties of the 1820 half eagle are rare-very rare, and the BD-8 variety is among the most elusive. The mintage of this issue probably accounts for approximately 6,000-8,000 pieces of the reported production total, and John Dannreuther estimates the surviving population at a mere 4-6 specimens. Currently, PCGS has graded only three examples, the finest in MS66, this coin in MS64, and another piece in MS63, while NGC has certified only one specimen in MS62 (11/11).

The present coin is a delightful Choice example, with vivid yellow and greenish-gold surfaces that display vibrant mint luster and traces of prooflike reflectivity in selected areas. The design elements are sharply detailed throughout, and eye appeal is exceptional. This importance of this lot to students of early die varieties cannot be overstated.

*Ex: B. Max Mehl; purchased by C.F. Childs on May 29, 1944; Walter H. Childs Collection (Bowers and Merena, 8/1999), lot 706, realized $42,550.*

*From The Harvey B. Jacobson, Jr. Collection.* (#8126)

## Borderline Uncirculated 1821 Half Eagle, BD-1 PCGS has Certified Only Eight Examples

**4673 1821 AU58 PCGS. CAC. Breen-6479, BD-1, High R.6.** Bass-Dannreuther Die State a/a. The 1821 is one of several great rarities within the Capped Head Left series. Two die varieties are known, and these share the same reverse. BD-1 is distinguished from the even rarer BD-2 by the positions of stars 7 and 13. Star 7 points to a corner of Liberty's cap, and star 13 barely touches the shoulder curl.

The present example is pleasing for a number of reasons, especially its originality. The caramel-gold surfaces are never bright, and abrasions are inconsequential aside from a faded thin mark on the cheek and minor striae on the field beneath the eagle's left (facing) wing. The strike is precise throughout, and high point friction is limited to the forehead and shoulder curls, the claws, and the extremities of the eagle's wings. A wide band of luster fills the margins. The portrait and eagle also shimmer with luster.

Only a handful of certified 1821 half eagles have appeared at auction. We note only the following appearances:

1) MS62 NGC. Superior, 5/2006, lot 1104.

2) MS61 NGC. BD-2. Bowers and Merena (9/1984), lot 127; Auction '89, Superior (7/1989), lot 888; Michael I. Keston Sale (Superior, 1/1996), lot 112; Superior, 5/2001, lot 4043.

3) AU55 NGC. BD-2. George H. Earle (Henry Chapman, 6/1912), lot 2391; Flanagan Collection (Stack's, Spring 1944), lot 1097; Lee Sale (Stack's 10/1947), lot 1240; New Netherlands (6/1957), lot 378; Baltimore ANA (Heritage, 7/2008), lot 1954.

4) AU55 NGC. BD-1. Pre-Long Beach Sale (Superior, 5/2003), lot 3697; Frog Run Farm Collection (American Numismatic Rarities, 11/2004), lot 1797; Bowers and Merena, 3/2009, lot 3707.

5) AU55 NGC. BD-1. Stack's, 4/1983; Rajj Collection (Stack's, 8/2011), lot 7671.

6) AU53 PCGS. BD-1. Bowers and Merena, 11/2009, lot 3684.

*From The Harvey B. Jacobson, Jr. Collection.* (#8129)

## Mint State 1823 Half Eagle, BD-1
## Remarkably Smooth Fields

**4674** **1823 MS61 PCGS. BD-1, High R.4.** Bass-Dannreuther Die State a/a without clash marks. The only die pairing known for the 1823. A fully struck representative of this better date. Toned pumpkin-gold overall with hints of lime-green on the open fields. Uncommonly devoid of abrasions for the MS61 level, though we note a few faint hairlines on the field beneath the eagle's left (facing) wing. The reverse peripheral legends display minor strike doubling, as coined. The eye appeal is exceptional for the designated grade, and the piece is certain to be a highlight of an advanced collection of early half eagles. Population: 5 in 61, 14 finer (11/11).

*From The Harvey B. Jacobson, Jr. Collection.* (#8131)

## Select Mint State 1824 Five Dollar, BD-1
## Important Rarity in Mint State

**4675 1824 MS63 PCGS. CAC. Breen-6482, BD-1, High R.5.** Bass-Dannreuther a/b. The only 1824-dated dies. Dannreuther estimates that only 30 to 40 pieces are known in all grades, but here is a Select Mint State example with rich peach toning and an even, precise strike. Evaluation beneath a loupe reveals only minor, unobtrusive abrasions. A broad band of luster encompasses the margins and the devices are lustrous.

The rarity of the 1824 remains underappreciated. Dannreuther writes, "coins of this date are much more difficult to locate than those dated 1823; they are more than twice as rare as that date. A census is difficult, as many of the coins have appeared multiple times at auction, making the date/variety appear more available than it really is."

Only a few certified Mint State examples of the 1824 have appeared at auction. We know of the following such appearances:

1) MS64 PCGS. George W. Cogan, 3/1882; Garrett Collection, Part 1 (Bowers and Ruddy, 11/1979), lot 466; Auction '90 (Superior, 8/1990), lot 1318; Benson II (Ira & Larry Goldberg, 2/2002), lot 1998.

2) MS64 PCGS. Superior 9/1999, lot 1985. Photo not available. Possibly the same coin as #3.

3) MS64 PCGS. Margene Heathgate Collection (Superior, 6/1997), lot 1488; Superior, 2/1998, lot 3399; Pre-Long Beach Sale (Ira & Larry Goldberg, 2/2006), lot 1069.

4) MS63 PCGS. 1963 FUN Sale (Federal Brand, 1/1963), lot 4183; 17th Annual Southern California Sale (RARCOA, 2/1972), lot 869; Long Beach Signature (Heritage, 2/2009), lot 2685.

5) MS62 PCGS. Classics Sale (American Numismatic Rarities, 12/2003), lot 940.

6) MS61 PCGS. FUN Bullet (Heritage, 1/1991), lot 591. Not photographed. Possibly the same example as #5.

*From The Harvey B. Jacobson, Jr. Collection.* (#8132)

## 1825/1 Half Eagle, MS62
## Rare Overdate, BD-1 Variety
## Only Four Finer Coins at PCGS

**4676 1825/1 MS62 PCGS. CAC. Breen-6483, BD-1, High R.5.** All half eagles produced in 1825 are overdates, with two distinct varieties known for the date. The BD-1 variety, represented by the coin offered here, has historically been called the 1825/1, because the underdigit resembles a 1 more than anything else, but John Dannreuther believes the numeral is actually a partially effaced 4. The other die variety for the year has always been called the 1825/4 because the undertype is easily recognizable. The two varieties share the same reverse, but the obverse die differs in several respects, most notably the placement of the 8 in the date. The 8 on the BD-1 variety is considerably lower than on the BD-2, so the BD-2 is definitely not just a different die state of the BD-1, as some researchers have suggested. NGC has begun to certify this issue as 1825/4 Partial 4, but PCGS retains the older 1825/1 nomenclature.

The BD-1 variety is a rare coin in today's market, with both PCGS and John Dannreuther estimating the surviving population at 25-30 examples in all grades (the BD-2 is extremely rare, with just two specimens known). The BD-1 probably accounted for about 15,000-17,500 examples of the reported 20,060 piece mintage for the year. PCGS and NGC have combined to certify only 20 coins of the BD-1 variety in all grades (11/11).

The present coin is an impressive MS62 specimen, with proof-like greenish-gold surfaces, highlighted by vivid traces of orange. The design elements are well-detailed, and the overdate is plainly visible. This coin possesses terrific eye appeal to complement the Mint State preservation rarely seen on coins of this era. Population: 1 in 62, 4 finer (11/11).

*From The Harvey B. Jacobson, Jr. Collection.* (#8133)

## 1826 BD-1 Half Eagle, MS62+
## Less than 40 Known of the Date

**4677** **1826 MS62+ PCGS. CAC. Breen-6485, BD-1, High R.5.** Bass-Dannreuther Die State a/e. This 1826 half eagle has a Large Letters reverse die that was previously used in 1820 for BD-4, 5, and 7. A different Large Letters reverse die, also first used in 1820, was used for the production of 1821 through 1824 half eagles. New reverse dies were created for the 1825 half eagles, and the old 1820 die was resurrected in 1826. Later in the year, an entirely new pair of dies was created for 1826 BD-2, the new reverse die carrying over for production of all 1827 and some 1828 half eagles.

Although Mint records state that 18,069 half eagles were coined in 1826, the number of survivors today is extremely small. John Dannreuther estimates a population of just 30 to 40 pieces in all grades, a figure the cataloger accepts. The second variety, with the Small Letters reverse, is extremely rare with three examples known today, including the Bass specimen at the ANA, the Smithsonian specimen in Washington, and an MS65 example in the David Akers collection, the only collectible example of that second variety, carrying a provenance back to the John Story Jenks collection.

Most surviving 1826 half eagles are AU or lower grade Mint State coins, such as this Plus-designated Select Mint State specimen, a fully lustrous yellow-gold example with frosty mint brilliance, featuring delicate green and rose overtones. The surfaces have a few minor marks that are expected for the grade. The central obverse is a trifle weak, with remaining details bold. Population: 1 in 62+, 3 finer (11/11).

*From The Harvey B. Jacobson, Jr. Collection.* (#8135)

## AU58+ 1827 Half Eagle, BD-1
## Only 14 Pieces Certified by PCGS

**4678 1827 AU58+ PCGS. CAC. Breen-6486, BD-1, High R.5.** The sole die marriage for this rare date. The reported mintage was 24,913 pieces, but most of the issue was exported and melted. The Bass-Dannreuther reference estimates only 35 to 45 examples are known. PCGS has certified 14 pieces in all grades, some of which may be represent duplicate submissions. The present coin is crisply struck aside from blending at the top of the shield. The apricot-gold toning is original, and consequential marks are confined to a few unobtrusive abrasions on the portrait near the jaw. Remaining luster is prevalent throughout the reverse border and on the eagle, scroll, cap, and hair. A ring of luster outlines individual stars. A desirable example of a seldom-encountered date.

# Choice 1828 Half Eagle
# Rare Perfect Date, BD-4 Variety
# Second-Finest Known

**4679** **1828 MS64 PCGS. CAC. Breen-6488, BD-4, High R.6.** Taken as a whole, the Capped Bust Left half eagles of the 1820s are probably the rarest group of coins in the U.S. federal series. Famous ultra-rarities like the 1825/4 (two examples known) and the 1822 (three known) have dominated numismatic headlines whenever a specimen was offered. The coin offered here represents a date and variety that can hold its own, even in that august company, the famous 1828 BD-4 half eagle.

Mint records indicate that 28,029 Capped Bust Left half eagles were struck in 1828, with that smallish total split between four different die varieties. Two of the varieties have a perfect date, while the other two are overdates, 1828/7 (see the description of the 1828/7 elsewhere in this catalog). The present coin displays a perfect date, and stars 1 and 13 are positioned close to the bust, identifying the BD-4 variety. The other perfect date variety of this year, the BD-3, shows the stars much further away from the bust. Experts estimate that the BD-4 variety probably accounted for more than half of the reported mintage, approximately 15,000-20,000 pieces.

John Dannreuther and PCGS both estimate the surviving population of the BD-4 at 12-15 pieces, but we can account for only nine separate examples in our roster below. PCGS and NGC have combined to certify 11 coins in all grades over the years (11/11), but that total probably includes some duplication. Both services list a single specimen in MS65, but those certification events almost certainly represent the same coin. This coin is acknowledged by most experts to be the second-finest known.

The 1828 BD-4 is known in a single die state, Bass-Dannreuther Die State a/b. The crack between 5 and D in the denomination, seen on all examples of the BD-4, is easily visible on this specimen This variety was the only use of the obverse die, but the reverse was used to strike the extremely rare BD-3 variety of this date, and the 1829 Large Date variety (see the description of the 1829 Large Date elsewhere in this catalog).

This coin is a spectacular Choice example, with sharply detailed design elements in most areas, although a touch of softness is apparent on the hair around Liberty's face and the eagle's wing. For some reason, this central weakness is seen on almost all examples of the 1828. The star centrils are complete and the claws and feathers are all sharp. The attractive yellow-gold surfaces display vibrant mint luster, and many areas of prooflike reflectivity, with outstanding eye appeal.

With an auction history that began at least as early as 1865, the 1828 half eagle has always been a valuable, sought-after date, even though its infrequent appearances have caused this issue to be somewhat out-of-sight, out-of-mind over the last two decades. The last time the present coin was offered at public auction was in the Michael Keston Collection, more than 15 years ago, when it realized a strong price of $57,750. It may be decades before a comparable specimen becomes available, so the discerning early gold specialist should bid accordingly. Population: 1 in 64, 1 finer (11/11).

The following roster was expanded from earlier work by Saul Teichman, Mark Borckardt, and Karl Moulton.

**Roster of 1828 BD-4 Half Eagles:**

**1. MS65 PCGS.** William Woodin, displayed at the 1914 ANS exhibition; Waldo Newcomer (plate match from the Newcomer plates); Davies-Niewoehner Collection (Paramount, 2/1975), lot 561; Auction '79 (Stack's, 7/1979), lot 817; possibly Mack Pogue.

**2. MS64 PCGS.** Dupont Collection; Farish Baldenhofer Collection (Stack's, 11/1955), lot 1246; Samuel Wolfson Collection (Stack's, 10/1962), lot 372; Auction '82 (Paramount, 8/1982), lot 1933; R.E. Naftzger, Jr.; Naftzger-Paramount Fixed Price List; October Sale (Superior, 10/1990), lot 2095; Michael Keston Collection (Superior, 1/1996), lot 119; **the present coin.**

**3. MS63 Uncertified.** Davis-Graves Collection (Stack's, 4/1954), lot 1452; Clifford T. Weihman, Josiah K. Lilly, Smithsonian Institution (grade per Garrett and Guth).

**4. MS62 NGC.** Harlan Page Smith Collection (S.H. & H. Chapman, 5/1906), lot 217; John H. Clapp Collection; Louis Eliasberg; United States Gold Coin Collection (Bowers and Ruddy, 10/1982), lot 386; Charles Kramer Collection (Stack's/Superior, 11/1988), lot 329; Fort Lauderdale Collection (Superior, 1/2005), lot 1028.

**5. MS62 PCGS.** William Hesslein; John Work Garrett, purchased on 11/25/1919; Johns Hopkins University; Garrett Collection Part I (Bowers and Ruddy, 11/1979), lot 470; Harry W. Bass, Jr.; Harry W. Bass, Jr. Collection (Bowers and Merena, 10/1999), lot 819.

**6. AU55 Prooflike Uncertified.** Col. E.H.R. Green; King Farouk; Palace Collections of Egypt (Sotheby's, 2/1954), lot 243; Norweb Collection (Bowers and Merena, 10/1987), lot 778; Harry W. Bass, Jr.; Harry W. Bass, Jr. Research Foundation.

**7. AU55 PCGS.** Margene Heathgate Collection (Superior, 6/1997), lot 1492.

**8. AU55 Sharpness, Repaired, Uncertified.** Heman Ely Collection (W. Elliot Woodward, 1/1884), lot 840; All the Kingdoms of the World (W. Elliot Woodward, 10/1884), lot 1156; Randall Collection (W. Elliot Woodward, 6/1885), lot 933; unknown intermediaries; William Cutler Atwater Collection (B. Max Mehl, 6/1946), lot 1645; Amon G. Carter, Jr. Collection (Stack's, 1/1984), lot 663; FUN Signature (Heritage, 1/1999), lot 5700; Smith and Youngman Collections (Bowers and Merena, 3/2003), lot 2272; 68th Anniversary Sale (Stack's, 10/2003), lot 2112. This coin is traceable through its early appearances by the presence of the initials G.W. and the date 1806 inscribed in the fields, mentioned in the descriptions. After the Carter sale, the initials were removed, but the coin is still recognizable.

**9. XF Sharpness, Repaired, Uncertified.** Joel Rettew; Rare Coin Review 26; Auction '79 (Rarcoa, 7/1979), lot 1234; Dr. Jon Kardatzke Collection (Ira and Larry Goldberg, 6/2000), lot 1314.

**Roster of 1828 BD-3 Half Eagles:**

**1. PR67 Uncertified.** Mint Cabinet, Smithsonian Institution, grade per Garrett and Guth.

**2. AU55 Prooflike Uncertified.** David S. Wilson Collection (S.H. Chapman, 3/1907), lot 78; William Forester Dunham Collection (B. Max Mehl, 6/1941), lot 2101; J.F. Bell Collection (Rarcoa, 4/1963), lot 605; Public Auction Sale (Kreisberg-Schulman, 4/1967), lot 775; Auction '81 (Rarcoa, 7/1981), lot 442; Bryan Sale (Paramount, 1/1982), lot 813; Auction '88 (Akers, 7/1988), lot 904;NCI, purchased by Harry Bass on 5/23/1989; Harry W. Bass Research Foundation.

**Earlier Appearances Not Attributed by Die Variety:**

**A.** Sixth Semi-Annual Sale (W. Elliot Woodward, 3/1865), lot 2779, realized $52.50 to John F. McCoy.

**B.** A specimen exhibited to the Boston Numismatic Society on February 4, 1869 by George Seavey; Seavey Descriptive Catalog (William Strobridge, 6/1873), lot 483; Parmelee Collection of Coins (Strobridge, 6/1873), lot 788, realized $18. Parmelee purchased the Seavey Collection intact before the date of the intended sale. After he integrated Seavey's collection with his own, he sold many duplicates in Strobridge's sale of 6/1873.

**C.** Mendes I. Cohen Collection (Edward Cogan, 10/1875), lot 148, realized $13.50 to John W. Haseltine.

**D.** Henry Adams Collection (Edward Cogan, 10/1876), lot 1301, realized $10.50.

**E.** Phineas Adams; William J. Jenks; Sixty-Ninth Sale (John W. Haseltine, 6/1883), lot 362.

**F.** James Ten Eyck Collection (B. Max Mehl, 5/1922), lot 193, realized $680.

**G.** Col. James W. Flanagan Collection (Stack's, 3/1944), lot 1104, realized $925 to J.F. Bell; J.F. Bell Collection (Stack's, 12/1944), lot 350, realized $1,000.

**H.** Adolphe Menjou Collection Numismatic Gallery, 6/1950), lot 1472, realized $1402.

*From The Harvey B. Jacobson, Jr. Collection.* (#8137)

**1828/7 MS64 NGC. CAC. Breen-6487, BD-1, R.7**

**1828/7 MS64 NGC. CAC. Breen-6487, BD-1, R.7**

## Choice 1828/7 Half Eagle, BD-1
## Finest of Five or Six Examples Known
## Ex: Byron Reed/Suros

**4680** **1828/7 MS64 NGC. CAC. Breen-6487, BD-1, R.7.** The 1828/7 Capped Bust Left half eagle is a legendary rarity in the U.S. gold series, with scarcely a half dozen examples known. Off the market for more than 12 years, the coin offered here is the finest-known example of this remarkable issue. The 1828/7 was missing from such great collections as Garrett, Norweb, and Pittman, and some of the greatest coin dealers in history, including B. Max Mehl and Abe Kosoff, never had the chance to catalog this coin. Heritage is excited to offer a specimen of the 1828/7 for the first time in the Harvey B. Jacobson, Jr. Collection.

Mint records indicate 28,029 half eagles were produced in 1828, but the great majority of that mintage was melted almost as soon as it was issued because the intrinsic value of the coins was greater than their face value. When Joseph Mickley published his monograph *Dates of United States Coins and Their Degrees of Rarity* in 1858, the 1828 half eagle was one of the three dates from the 1820s that he designated as rare (the 1822 and 1824 were the others). Numismatic legend has Mickley beginning his collecting activities before 1820, one of the earliest American collectors in the field, so he probably purchased coins of that period directly from the Mint or his bank shortly after they were issued. That he had trouble locating an 1828 half eagle, despite his considerable connections and lack of contemporary competition, speaks volumes about the rarity of the date in the early 19th century.

The elusive nature of the 1828 half eagle is compounded by the fact that there are four different die varieties known for the date, all of them quite rare in their own right. This coin represents the very rare BD-1 variety, distinguished by the overdate and the small period after D in the denomination. John Dannreuther estimates the BD-1 variety accounted for approximately 4,000-8,000 pieces of the reported mintage, with only 3-5 examples surviving today in all grades. The other overdate variety, BD-2, is known by only a single specimen. The two overdate varieties were not recognized as different dies until recent times, when Andrew W. Pollock III noticed the large period after the D on the BD-2 coin. Dannreuther's evaluation of this issue's rarity is supported by population data from the leading grading services. Currently, NGC has certified only this specimen of the BD-1 in MS64, with just two more examples in MS63, while PCGS has graded a single specimen in MS63 (11/11). It is likely that one of these MS63 certification events is a duplicate submission, as we can account for only two coins in this grade in our roster below. There is also an example of the BD-1 in the National Numismatic Collection in the Smithsonian that Jeff Garrett and Ron Guth evaluate as AU58. The single BD-2 coin has been graded AU55 by PCGS (11/11). Two of the four (or five) BD-1 specimens are impounded in institutional holdings, leaving only two (or three) examples in collector's hands, less than (or equal to) the number of 1913 Liberty Head nickels available for collecting purposes.

Tracing the history of the 1828/7 half eagle in the 19th century is extremely difficult because few catalogers took note of the overdate when describing the coins and plated appearances are virtually nonexistent. Thus, while several early appearances of the 1828 half eagle are noted in the literature, it is impossible to determine which variety was being cited in the majority of cases. Fortunately, the history of this coin is absolutely clear back to the late 19th century, as it was purchased by Byron Reed, who donated his collection to the City of Omaha after his death in 1891. Reed's collection was carefully preserved for many years by the Omaha City Library, and much of it still remains in the Durham Western Heritage Museum. His 1828/7 half eagle was deaccessioned and sold, along with many other items, in a memorable auction conducted by the firms of Christie's and Spink America in 1996.

Dr Juan XII Suros later purchased this coin as part of his landmark collection of overdate coins, reportedly paying $300,000 for this piece by private treaty. Our present consignor acquired the coin after the Superior Stamp & Coin auction of the Suros collection in February 1999.

The present coin is an attractive Choice example of this extremely rare issue. As expected with such a rare coin, the 1828/7 BD-1 half eagle is known in a single die state, Bass-Dannreuther Die State a/c. The obverse die was also used to strike the unique specimen of the 1828/7 BD-2 variety, and this was the third, and last, use of the reverse die. The design elements of this coin are sharply detailed in most areas, as the stars show most of their radial lines and Liberty's hair displays crisp definition. A touch of softness can be seen on the eagle's left (facing) wing and claws, but most of the central detail is strongly impressed. The surfaces are brightly lustrous, with traces of prooflike reflectivity in selected areas. Rich greenish-gold color enhances the outstanding visual appeal. This coin combines extreme rarity, exceptional eye appeal, and the highest available technical quality. The finest of only two (or three) specimens in private hands, it may be another decade before this specimen becomes available again.

The following roster was prepared from notes supplied by well-respected researcher Saul Teichman.

**Roster of 1828/7 BD-1 Examples.**

**1. MS64 NGC.** Byron Reed; Omaha City Library/Durham Western Heritage Museum; Byron Reed Collection (Christie's/Spink America, 10/1996), lot 117; Dr. Juan XII Suros Collection (Superior, 2/1999), lot 247; **the present coin.**

**2. MS63 NGC.** Possibly George Seavey; Lorin G. Parmelee Collection (New York Coin & Stamp, 6/1890), lot 978; H.P. Smith Collection (S.H. & H. , 5/1906), lot 216; John Clapp; Clapp Estate; Louis Eliasberg; United States Gold Coin Collection (Bowers and Ruddy, 10/1982), lot 385; possibly Pogue Collection.

**3. MS63 PCGS.** Waldo Newcomer; Col. E.H.R. Green; King Farouk; Palace Collections of Egypt (Sotheby's, 2/1954), lot 244; Dr. Clifford Smith Collection (Stack's, 5/1955), lot 1690; 1976 ANA Auction (Stack's, 8/1976), lot 2944; Naftzger-Paramount fixed price list; Auction '82 (Paramount, 8/1982), lot 1932; Harry W. Bass, Jr.; Harry W. Bass, Jr. Research Foundation.

**4. AU58 Uncertified.** Mathew Stickney Collection (Henry Chapman, 6/1907), lot 670; Virgil Brand, 311th Sale (Morgenthau, 10/1933), lot 222; possibly Louis Eliasberg; H.R. Lee Collection (Stack's, 10/1947), lot 1247; Clifford T. Weihman, Josiah K. Lilly, Smithsonian Institution.

**Pedigree of the 1828/7 BD-2 Example.**

**A. AU55 PCGS.** Col. James W. Flanagan, purchased from Stack's in January 1940 for $845; Col. James W. Flanagan Collection (Stack's, 3/1944), lot 1103; J.F. Bell Collection (Stack's, 12/1944), lot 349; Dupont Collection; Farish Baldenhofer Collection (Stack's, 11/1955), lot 1245; Metropolitan New York Convention (Stack's, 5/1958), lot 1235; Samuel W. Wolfson Collection (Stack's, 10/1962), lot 371; John Murrell; Auction '80 (Paramount, 8/1980), lot 927; Auction '88 (Akers, 7/1988), lot 903; Brooks Collection (Bowers and Merena, 6/1989), lot 377; Michael Keston Collection (Superior, 1/1996), lot 118; Dr. Richard Ariagno Collection (Ira & Larry Goldberg, 5/1999), lot 719.

Note: The Col. Green plate was used as a stock photo in the Flanagan, Bell, and H.R. Lee catalogs, and the plates for the 1828/7 and 1828 are reversed in the Flanagan sale, making plate matching during this era problematic. Col. Green is reported to have owned a second example of the 1828/7 half eagle, but if so, his place in the pedigree is uncertain.

*From The Harvey B. Jacobson, Jr. Collection.* (#8138)

## PROOF EARLY HALF EAGLE

**1829 Large Date PR64 PCGS Secure. CAC. Breen-6489, BD-1, R.7**

**1829 Large Date PR64 PCGS Secure. CAC. Breen-6489, BD-1, R.7**

# 1829 BD-1 Large Date Half Eagle, PR64
# The Garrett Specimen
# The Only Certified Proof of Its Type

**4681** **1829 Large Date PR64 PCGS Secure. CAC. Breen-6489, BD-1, R.7.** Ex: Garrett. Although Mint records claim that 57,442 examples of the 1829 half eagle were struck, these coins, including the Large Date and Small Date varieties, have been known as important rarities since the 1860s. Some intricacies of the issue have only become known more recently, and some unresolved questions remain. The year was transitional, witnessing the last use of the open collar for the Large Date coins, and the debut of the close collar for the Small Date coins. The Close Collar produced coins of a uniform and slightly smaller diameter with a beaded border. The two variety descriptions, Large and Small Date, have been used since at least 1873. In the Seavey Descriptive Catalog, published that year, William Strobridge described an 1829 half eagle as the "Old Type," referring to a Large Date specimen. Today we are aware of seven Large Date coins in all grades, including proof, Mint State, and circulated pieces.

**Early Auction Appearances**

The earliest auction appearance that we have found for an 1829 half eagle was just 35 years after they were minted, in W. Elliot Woodward's May 1864 sale of the McCoy Collection. At the time, Woodward noted that the date was very rare with "not more than six known." The 1829 half eagles made several additional auction appearances throughout the remainder of the 19th century and into the 20th century, although specimens are difficult to track, as most were unplated. Many were called proof regardless of their actual appearance.

In the early and middle decades of the 20th century, roughly from the 1920s to the 1960s, coin dealers and auction houses called nearly any coin with a mirrored finish a proof. The problem was compounded by poor auction plates, or in some cases no plates at all. The publications of Walter Breen, including the Hewitt monograph series, *Proof Encyclopedia,* and *Complete Encyclopedia,* complicated matters as he promulgated the proof status of such coins, often without verifying their true status. Of course there were exceptions to the rule, and some individuals had a better understanding of strike status than others. One of the worst, calling virtually anything a proof or "semi-proof" was B. Max Mehl. A well known numismatic promoter, Mehl did a great deal to enhance coin collecting to the general public, but his actual numismatic knowledge was less than many of his contemporaries.

During the last four decades a great deal has been learned about early minting technology, and numismatists today have the advantage of knowing with near certainty the identity of proofs versus prooflike business strikes, while some catalogers took pains to provide conservative descriptions of the coins they offered. In that category are sales such as the Garrett and Eliasberg sales, among others.

Sorting out the roster of early proof gold coinage is a project requiring careful study. A number of today's best numismatic minds have worked on the study, including individuals such as John Dannreuther, Jeff Garrett, and Saul Teichman. The late Harry W. Bass, Jr., also had an excellent understanding of strike quality. Relying in part on the observations of those individuals, the cataloger will attempt to analyze all of the large diameter early gold issues from 1820 to 1829, commenting on pieces described as proof in past offerings, creating a roster of known specimens. In addition, a complete roster of all known 1829 half eagles of both diameters, large and small, will be attempted.

**Early Proof Coin Criteria**

The first step in an accurate roster of early proofs is understanding what such a coin should look like. Many years ago this cataloger developed the following criteria for identifying of early specimen and proof coins that were struck in the screw-press era (1792-1836). There are exceptions to the rules, and there will be other individuals who have different thoughts.

Specifically, the following rules will guide identification:

1. The strike should be crisp and sharp and certainly should be exceptional for the given die combination. Centering should be excellent. The old rule that the coin should show evidence of double strike is discounted.

2. The planchet should show excellent workmanship, with faint adjustment marks permissible.

3. Dies should be well made with no major defects. Faint clash marks, die cracks, or lapping are allowed, but major cracks, breaks, and heavy clash marks are unexpected.

4. The planchet should show evidence of burnishing to create a mirrored finish, and the dies should show evidence of polishing to accent the mirrored finish. The absence of one or the other is permissible, but at least one of the two minting techniques must be evident.

5. The fields should be fully mirrored, with crisp junctions at the devices. Slight die bulging, as sometimes seen in front of the face on the smaller silver coins, is permissible, but heavy die bulging is not allowed.

**True Proofs and One-Sided Proofs**

Numismatic literature discusses so-called "one-sided" proofs, and, indeed, such coins do exist. Those coins typically have a proof obverse and a Mint State reverse. The one-sided proofs need to be distinguished from two-sided proofs as they are clearly different pieces. Are they less desirable, or perhaps more desirable due to the unusual production method? Those hybrid pieces require a special designation-perhaps Specimen versus proof, or to borrow from B. Max Mehl, perhaps the one-sided proofs could be called "semi-proofs."

John Dannreuther discussed the one-sided proofs in *Early U.S. Gold Coin Varieties, A Study of Die States, 1795-1834:*

> "The Mint struck these oddities and we can only guess why only one side of these examples received Proof treatment. Not only was the obverse die the single die prepared for striking Proofs, but also the planchets were burnished only on the side to receive the Proof striking. Because these two situations only occur on purpose, we must conclude that the Mint intentionally struck one-sided Proofs."

True two-sided proof examples are struck from specially prepared die pairs, obverse and reverse. They were struck on planchets burnished on both sides. The few survivors that exist today show the special care taken to produce real works of art.

**Survey of Proof Half Eagles (1820-1829)**

The following record of early proof half eagles will show that only 11 proofs exist for all dates of the type from 1820 to 1829, including three one-sided proofs. The total surviving population includes four pieces in the Smithsonian Institution, four pieces in the Harry W. Bass, Jr. Core Collection on display at the ANA Museum in Colorado Springs, and just three others in private hands, including this PR64 PCGS 1829 from the Garrett Collection. Most grades reported in the following census are estimates of the cataloger and others.

**1820 Half Eagles**

Past literature and auction catalogs have suggested that as many as four to six proof 1820 half eagles exist, but only two specimens have claim to proof status. There is no proof in the Smithsonian Institution and the only proofs that have appeared during the last three decades were the 1979 ANA and Norweb specimens.

**1. PR65.** George Earle Collection (Henry Chapman, 6/1912), lot 2388; Thomas Melish Collection (Abe Kosoff, 4/1956), lot 1943; Norweb Collection (Bowers and Merena, 10/1987), lot 772; Harry W. Bass Jr.; Bass Core Collection.

**2. PR63.** Harlan P. Smith (Chapman Brothers, 5/1906), lot 208 [the plate is incorrectly labeled lot 210]; George H. Hall (Stack's, 5/1945), lot 1892; 1979 ANA (New England Rare Coin Auctions, 7/1979), lot 149.

**1821 Half Eagles**

Only two proof 1821 half eagles are positively identified today, and both reside in museum collections. Apparently for the first time ever, complete proof sets were produced in 1821, although there is no documented occasion for their issue. No other proof 1821 half eagles have appeared in past literature.

**1. PR65 Cameo.** Mint Cabinet; National Numismatic Collection; Smithsonian Institution.

**2. PR63.** J. Colvin Randall Sale (W.E. Woodward, 6/1885), lot 927; William H. Woodin (1914 ANS Exhibit, plate 15); Waldo C. Newcomer; Col. E.H.R. Green; B.G. Johnson; King Farouk (Sotheby's, 2/1954), lot 237; Norweb Collection (Bowers and Merena, 10/1987), lot 773; Harry W. Bass, Jr.; Bass Core Collection.

**1822 Half Eagles**

None of the three known examples have even remote claims to proof status.

**1823 Half Eagles**

The five dollar gold pieces were the only gold coins struck in 1823, and there are no proofs currently known. However, proof silver and minor coins exist, so the existence of a proof 1823 half eagle is possible.

**1824 Half Eagles**

Several past claims have been published that the Smithsonian Institution has a proof 1824 half eagle, including in Cory Gillilland's *Sylloge of the United States Holdings in the National Numismatic Collection of the Smithsonian Institution*. However, Jeff Garrett and Ron Guth, numismatists who are extremely familiar with the Smithsonian gold coin collection, write in *Encyclopedia of U.S. Gold Coins 1795-1933,* that "no Proof 1824 half eagles are known to exist, despite previous claims that the example in the Smithsonian is a Proof." There are no records of any other proof examples.

**1825/1 Half Eagles**

At PCGS Coin Facts (www.pcgscoinfacts.com), David Hall writes: "There are only two proofs known of this date. One example is in the Smithsonian and the other is in the Harry Bass Collection.

**1. Proof.** Lorin G. Parmelee (New York Coin & Stamp Co., 6/1890); Charles Steigerwalt; William H. Woodin; Waldo C. Newcomer; Col. E.H.R. Green; Col. Flanagan Collection (Stack's, 3/1944), lot 1100; J.F. Bell Sale (Stack's, 11/1944), lot 346; Louis E. Eliasberg, Sr.; H.R. Lee Sale (Stack's, 10/1947), lot 1243; King Farouk (Sotheby's, 2/1954), lot 240; Dr. Wilkison; Mocatta Metals. David Akers considers this specimen a true proof.

**2. PR/MS67.** Mint Cabinet; National Numismatic Collection; Smithsonian Institution. Garrett and Guth report that the Smithsonian specimen is "a delightful PF-67 coin with a mirrored obverse and a frosty reverse." In other words, it is a one-sided proof.

**3. Proof/Mint State.** Stanley Kesselman (12/18/1970); Harry W. Bass, Jr.; Bass Core Collection. This piece is considered a one-sided proof with a Mint State reverse.

**1825/4 Half Eagles**

Only two examples of this rarity are known, and the Eliasberg piece has been described in the past as a proof. However, most students today describe the coin as a prooflike Mint State example.

**1826 Half Eagles**

Past literature has claimed the existence of several proof 1826 half eagles, but the modern reexamination of such coins will show that only one or two proof examples are actually known. One of those is the Smithsonian specimen, and the other has not been seen since the 1954 Farouk Sale. At PCGS Coin Facts, David Hall describes the Smithsonian specimen as a unique proof of 1826.

**1. PR67.** Mint Cabinet; National Numismatic Collection; Smithsonian Institution.

**1827 Half Eagles**

In *Encyclopedia of U.S. Gold Coins 1795-1933,* Garrett and Guth write that both reported proofs of 1827 have been discredited. "The Smithsonian example is an MS-64 coin and definitely not a Proof or even a presentation strike. Harry Bass, Jr. called his coin an impaired Proof, but it, too, is not a Proof, but merely prooflike."

**1828/7 Half Eagles**

Although a single proof has been described in past numismatic publications, it is now believed that no proof 1828 overdate half eagles exist. Garrett and Guth write that "the Eliasberg 'Proof' is now generally believed to be a Mint State example." The coin was graded AU55/MS60 in the Eliasberg catalog.

**1828 Half Eagles**

At PCGS Coin Facts, David Hall writes that "there is only one proof that has ever been positively verified. It is the gem proof in the Smithsonian." Garrett and Guth concur, writing: "Only one Proof 1828 half eagle is known to exist; the coin is from the normal, non-redated dies. The piece is the PF-67 Smithsonian example, struck using a close collar."

**1. PR67.** Mint Cabinet; National Numismatic Collection; Smithsonian Institution.

**1829 Large Date Half Eagles**

When it was offered as part of the conservatively graded Garrett Collection sale, this specimen was called a Mint State coin with the comment that "quite possibly this piece was struck as a Proof; it is definitely a special striking, perhaps a presentation piece." Until it was recently certified, numismatists had overlooked the Garrett coin and believed that the only proof 1829 Large Date piece was the one-sided proof Bass specimen. The two known proof 1829 Large Date half eagles are recorded below in our 1829 half eagle roster.

**Other Appearances**

A number of early half eagles have been called proofs in past auction catalogs and are now discounted as prooflike business strikes. A few extreme cases involve coins that were called proofs even though they showed no mirror finish on either side.

**1820-A.** World's Greatest Collection (Numismatic Gallery, 1/1946), lot 368. Kosoff described this coin as a proof, but the plate suggests nothing of the sort. The selling price of $310, only $10 more than the uncirculated 1820 in lot 369, also suggests that the coin was Mint State rather than proof. The same image was used in the Memorable catalog (lot 318), and in the Melish catalog (lot 1945), and the same comments apply.

**1820-B.** Thomas Melish Collection (Abe Kosoff, 4/1956), lot 1942. Called proof by Kosoff, but there was no plate and it is impossible to trace today.

**1820-C.** William H. Woodin (1914 ANS Exhibition); Waldo C. Newcomer; Col. E.H.R. Green. This piece was called proof in the 1914 ANS book, but there was no plate and identification from the Newcomer plate is inconclusive. Some sources state this coin later went to King Farouk but the Farouk catalog has nothing resembling a proof 1820 half eagle.

**1820-D.** J.F. Bell, Part II (RARCOA, 4/1963), lot 598. Breen calls this specimen a proof in his *Proof Encyclopedia*. However, the catalog description, "A Brilliant Uncirculated Gem that looks like a proof," suggests otherwise.

**1823-A.** J. Colvin Randall Sale (W.E. Woodward, 6/1885), lot 928.

**1823-B.** Golden Sale of the Century (Abner Kreisberg and Hans M.F. Schulman, 3/1962), lot 2484. Walter Breen implied that the Golden Sale coin is a proof. However, the catalog description, "A magnificent gem specimen with full proof luster," suggests the coin is not a proof. The catalog plate is indistinct, but shows a coin that appears to lack the necessary qualifications of a proof.

**1825-A.** Charles Zug (S.H. Chapman,10/1909); Norweb Collection (Bowers and Merena,10/1987), lot 776. Some observers consider this piece to be a one-sided proof with a Mint State reverse. However, it was graded "MS-63 or finer, prooflike gem" in the Norweb catalog where the describer wrote: "A superb strike with prooflike obverse and frosty reverse."

**1825-B.** George H. Hall (Stack's, 5/1945), lot 1895. The plate in the Hall catalog is identical to the plates in the Flanagan, Bell, and Lee catalogs. However, Louis Eliasberg, Sr., purchased the coin at the Bell sale, according to a named copy of the catalog, and held that piece until it sold with his duplicates in 1947.

**1826-A.** J. Colvin Randall Sale (W.E. Woodward, 6/1885), lot 931; Lorin G. Parmelee (New York Coin & Stamp Co., 6/1890), lot 965; Charles Steigerwalt; William H. Woodin; Waldo C. Newcomer; Col. E.H.R. Green; King Farouk (Sotheby's, 2/1954), lot 241. This piece has not been seen since 1954. The coin plated in the Farouk catalog appears to match the plate in the Stack's catalog of the Hall Collection, and that coin in no way resembles a proof.

**1826-B.** George H. Hall (Stack's, 5/1945), lot 1896. Graded Extremely Fine in the Hall catalog. The plate suggests a higher grade but it is not a proof.

**1827-A.** Harlan P. Smith (Chapman Brothers, 5/1906), lot 215; John H. Clapp; Louis E. Eliasberg, Sr.; Eliasberg Estate (Bowers and Ruddy, 10/1982), lot 384. Graded AU55 in the Eliasberg catalog.

**1828/7-A.** Harlan P. Smith (Chapman Brothers, 5/1906), lot 216; John H. Clapp; Louis E. Eliasberg, Sr.; Eliasberg Estate (Bowers and Ruddy, 10/1982), lot 385; Stanley Kesselman.

**1828-A.** King Farouk (Sotheby's, 2/1954), lot 243; Norweb Collection (Bowers and Merena, 10/1987), lot 778. Graded "AU-55 Prooflike" in the Norweb catalog.

**1828-B.** David S. Wilson; W.F. Dunham Collection (B. Max Mehl, 6/1941); J.F. Bell (RARCOA, 4/1963), lot 605; Auction '81 (RARCOA, 7/1981), lot 442; Paramount 1/1982; Auction '88 (David Akers, 7/1988), lot 904; Harry W. Bass, Jr.; Bass Core Collection. Graded Choice AU in the catalog for Auction '81, and AU55 by David Akers in Auction '88.

**Roster of 1829 Large Date Half Eagles**

A number of numismatists, including some of the smartest and brightest minds, have attempted a complete roster of both types of 1829 half eagles, with considerable difference of opinion. The Heritage roster is updated from a variety of data compiled over many years. We believe this work is accurate. Of course, every past student has believed the same.

**1. PR64 PCGS.** Owned by Joseph J. Mickley by 1867 and probably before 1858, when he mentioned the 1829 half eagles in his monograph, *Dates of United States Coins and Their Degrees of Rarity;* W. Elliot Woodward; William Sumner Appleton; W. Elliot Woodward (privately, 1/1883); T. Harrison Garrett; Robert Garrett; John Work Garrett; The Johns Hopkins University (Bowers and Ruddy, 11/1979), lot 471; Stack's (10/1988), lot 82; 1989 ANA (Bowers and Merena, 8/1989), lot 548; Michael I. Keston Collection (Superior, 1/1996), lot 120. **The present specimen.**

**2. PR65/MS65.** David S. Wilson (S.H. Chapman, 3/1907), lot 79; Virgil M. Brand; Armin Brand; Frieda Brand; Jane Brand Allen; "Virgil M. Brand Collection" (Bowers and Merena, 11/1983), lot 280; Auction '85 (Superior, 7/1985), lot 941; Harry W. Bass, Jr; Bass Core Collection. Probably ex: Col. Mendes I. Cohen Collection (Edward Cogan, 10/1875), lot 149; John W. Haseltine; J. Colvin Randall Collection (W.E. Woodward, 6/1885), lot 934. Several researchers have suggested that the Cohen specimen went to Lorin G. Parmelee, but that now appears doubtful.

**3. MS66 ICG.** Lorin G. Parmelee Collection (New York Coin & Stamp Co., 6/1890), lot 988; Byron Reed Collection; Omaha City Library/Western Heritage Museum. Probably ex: W.E. Woodward (Sixth Semi-Annual Sale, 3/1865), lot 2780; William Strobridge; then possibly to George Seavey, who exhibited an 1829 half eagle at the Boston Numismatic Society on February 4, 1869; Seavey Descriptive Catalog (William Strobridge, 6/1873), lot 490; Lorin G. Parmelee, who bought the entire Seavey Collection en masse before the sale; Parmelee Collection (Strobridge, 6/1873), lot 789, withdrawn. Heritage numismatist David Stone believes that this coin, offered as a duplicate from the Parmelee Collection, was withdrawn from the sale when Parmelee realized that it was a Large Date, and therefore not a duplicate.

**4. MS65 or finer.** Harlan Page Smith Collection (Chapman Brothers, 5/1906), lot 218; John H. Clapp; Clapp Estate (1942); Louis E. Eliasberg, Sr.; Eliasberg Estate (Bowers and Ruddy, 10/1982), lot 387.

**5. MS65 PCGS.** Col. E.H.R. Green; King Farouk (Sotheby's, 2/1954), part of lot 244; Dr. Clifford Smith (Stack's, 5/1955), lot 1691; 1976 ANA (Stack's, 2/1976), lot 2945; Harry W. Bass, Jr. Collection (Bowers and Merena, 10/1999), lot 820. This piece may have belonged to Waldo C. Newcomer and William H. Woodin, as suggested in the 1960s Breen monograph.

**6. MS63.** William Cutler Atwater Collection (B. Max Mehl, 6/1946), lot 1646; Josiah K. Lilly, Jr. Collection; Smithsonian Institution. The early provenance to Atwater is tentative but convincing.

**7. VF, Damaged.** Coen and Messer (New York); Edwin Shapiro; 1964 ANA (Federal Brand Enterprises, 8/1964), lot 2863; Paramount (11/1966); Kagin's; 1986 FUN Sale (Mid-American, 1/1986), lot 2029; 1997 ANA (Heritage, 7/1997), lot 5203. The obverse photo in the 1986 Mid-American catalog and the 1997 ANA catalog match, showing exactly the same coin. However, the reverse photos are dissimilar, suggesting two different coins.

**Other Appearances**

A. McCoy Collection (W. Elliot Woodward, 5/1864), lot 1958; J.O. Emery; Heman Ely (W. Elliot Woodward, 1/1884), lot 841.

B. Fifth Semi-Annual Sale (W. Elliot Woodward, 10/1864), lot 1652; J.O. Emery; Emery, Taylor & Loomis Collections (W. Elliot Woodward, 3/1880), lot 1012.

C. William J. Jenks Collection (W. Elliot Woodward, 4/1877), lot 346.

D. Phineas Adams; William J. Jenks; Sixty-Ninth Sale (John W. Haseltine, 6/1883), lot 363; Harold P. Newlin. This coin was offered to T. Harrison Garrett in October 1883, but he already owned an example, so he returned this piece to Newlin.

E. Rev. Foster Ely (Scott Stamp & Coin Co., 11/1888), lot 42.

**The Garrett Specimen**

Fully mirrored fields are evident on both sides with no indication of mint frost. The strike is bold and well-centered. Satin luster is limited to the devices. Slight weakness is noted only on the claws and the top edges of the two wings, and even the claws show some detail. Noticeable contrast is seen between the fields and devices, with crisp junctions at the edge of all devices. Mirrored finish is visible between dentils. Spaces between vertical shield stripes, as well as letters in LIBERTY and E PLURIBUS UNUM show satin luster with light reflectivity. Both sides show vibrant olive-yellow in the fields, with brighter yellow on the devices and splashes of Indian red, especially on the reverse. The surfaces show a few faint lines and contact marks consistent with the grade. A singular line inside stars 2 and 3 is the only provenance marker, clearly visible in the Garrett catalog plate.

No clash marks are visible on either side. A delicate die crack from the border to the knob of the 5 joins the bottoms of the 5 and D, but no other die cracks are found on either side. The crack is nearly invisible on this piece and is lighter than on the Bass one-sided proof. The Garrett specimen was clearly struck before the Bass coin. Only a few Large Size half eagles of the type struck from 1813 to 1829 can be called proofs, and nearly every such piece is a one-sided proof. **This specimen is the only certified proof of the entire type.**

*From The Harvey B. Jacobson, Jr. Collection.* (#8149)

## EARLY HALF EAGLES

**1829 Small Date MS61 PCGS. CAC. Breen-6490, BD-2, R.7**

**1829 Small Date MS61 PCGS. CAC. Breen-6490, BD-2, R.7**

# 1829 Small Date Half Eagle, BD-2, MS61
# Classic Gold Rarity, Prooflike Surfaces
# Ex: Harry Bass

**4682** **1829 Small Date MS61 PCGS. CAC. Breen-6490, BD-2, R.7.** The 1829 half eagle has been a celebrated rarity in the American gold series since the early days of the hobby. Because of the introduction of the close collar mechanism in 1829, two varieties of the date are known. The older type, struck with an open collar, is known as the Large Date. The coin offered here represents the close collar variety, naturally referred to as the Small Date. Both types are very rare, and a diligent search of auction records reveals that it has been 12 years since an example of either type was offered at public auction. Heritage is privileged to offer an example of both types of the 1829 half eagle in the Harvey B. Jacobson, Jr. Collection, and an example of the scarce 1829 quarter eagle elsewhere in this catalog. Since eagles were not struck in 1829, this constitutes a complete set of the gold issues of that year. We know of only eight or nine occasions when a complete set of 1829 gold coins has been included in the same offering, and only three times in the last 50 years (Garrett, Eliasberg, and Harry Bass).

Although there was an example in the Mint Cabinet, and Matthew Stickney seems to have acquired his specimen at an early date, through a private transaction, the Small Date coins were slow to appear on the numismatic market. This caused 19th century catalogers to believe they were even rarer than the Large Date type. Numismatists began to differentiate between the two types by June of 1873, when the first example of the Small Date to appear at auction was featured in lot 491 of the Seavey Descriptive Catalog by William Strobridge. This auction never actually took place, because Lorin G. Parmelee purchased the entire collection intact before the date of the sale. In his Sixty-Ninth Sale of June 1883, John W. Haseltine described the coin in lot 364 as:

> "1829 New type. This piece is a size smaller than the last described. The stars, date, and lettering on reverse being also smaller. I do not know that collectors are generally aware of its existence, as I believe that never but one has made its appearance in a sale. Strictly uncirculated and of the highest rarity and importance, showing, as it does, the beginning of the new type."

Coin dealer John Walter Scott called the 1829 Small Date "The the third in order of rarity in the Half Eagles, following 1822 and 1815." This perception of the relative rarity of the two types persisted far into the 20th century, although more examples of the Small Date type continued to appear, finally overtaking the Large Date in terms of total examples known. Present-day collectors believe there are at least 10 surviving examples of the Small Date variety, with seven Large Date specimens accounted for. A roster of Small Date coins appears below, and the Large Dates are listed in the description of that coin.

The present coin traces its history to the famous Harry W. Bass, Jr. Collection. Bass was a thoughtful student of the early half eagle series, and his work is the basis of much of what we know today about die states and emission sequences. As might be expected with such a rare coin, the 1829 Small Date half eagle is known in a single die state. The reverse die was used again on the BD-1 variety of the 1830 half eagle, but the 1829 Small Date, BD-2 variety was the first and only use of the obverse die.

This coin is a delightful Mint State example, with fully prooflike reflective fields and softly frosted devices that provide a slight cameo effect. The design elements are sharply detailed throughout, and the pleasing yellow-gold surfaces show only minor contact marks. A few light scratches in the left obverse field are noted for pedigree purposes. This lot represents an incredibly important opportunity for the early gold specialist, combining outstanding visual appeal and Mint State technical quality on a coin of surpassing rarity and historical interest.

**Roster of 1829 Small Date Half Eagles (expanded from earlier work by Saul Teichman and Walter Breen).**

**1. PR66 Deep Cameo.** National Numismatic Collection; Smithsonian Institution.

**2. PR64.** George Seavey; Seavey Descriptive Catalog (William Strobridge, 6/1873), lot 491; Lorin G. Parmelee Collection (New York Coin & Stamp Co., 6/1890), lot 989; Lyman H. Low; James Ten Eyck (B. Max Mehl, 5/1922), lot 194; Waldo C. Newcomer; Col. E.H.R. Green; King Farouk (Sotheby's, 2/1954), lot 245; Norweb Collection (Bowers and Merena, 10/1987), lot 779; Harry W. Bass, Jr.; Bass Core Collection.

**3. Mint State, Prooflike.** Thomas Cleneay (Chapman Brothers, 12/1890), lot 574; Byron Reed Collection; Omaha City Library/Western Heritage Museum (Spink America/Christies, 10/1996), lot 118. In the Spink/Christies catalog, the cataloger stated that Byron Reed acquired this coin from the Emery, Taylor, and Loomis Collection (W.E. Woodward, 3/1880). However, the plate from the Cleneay catalog is an exact match for this specimen.

**4. MS61.** Kagin's (11/1974), lot 1618; Julian Leidman (8/1978); Harry W. Bass, Jr. Collection (Bowers and Merena, 10/1999), lot 821; **the present coin.**

**5. AU55.** Phineas Adams; William J. Jenks; Sixty-Ninth Sale (John W. Haseltine, 6/1883), lot 364; Harold P. Newlin (privately, 10/31/1884); T. Harrison Garrett; Robert Garrett; John Work Garrett; The Johns Hopkins University (Bowers and Ruddy, 11/1979), lot 472; Stanley Kesselman; Gore and Long Collections (Bowers and Merena, 1/1990), lot 570.

**6. Choice AU.** Rev. Foster Ely (Scott Stamp & Coin Co., 11/1888), lot 43; Harlan Page Smith Collection (Chapman Brothers, 5/1906), lot 219; W.F. Dunham Collection (B. Max Mehl, 6/1941), lot 2102; 1963 FUN (Federal Brand Enterprises, 1/1963), lot 3187; NASC Convention (RARCOA, 2/1972), lot 871.

**7. AU50.** Col. E.H.R. Green; Clifford Tobias Weihman; Josiah K. Lilly, Jr. Collection; Smithsonian Institution. Possibly earlier from Waldo Newcomer.

**8. AU.** Matthew Adams Stickney (Henry Chapman, 6/1907), lot 671; Virgil Brand, per the Brand Journals; Thomas Melish Collection (Abe Kosoff, 4/1956), lot 1953; later, Kingswood Coin Auctions (2/1997), lot 119. Stickney died in 1894, but his collection was held intact for a number of years, and was sold in 1907 for the benefit of his daughters. It is likely that Stickney acquired this coin long before his death, possibly closer to the time of issue.

**9. AU.** 1967 Grand Central Sale (Paramount, 11/1967), lot 806; Superior (9/1970), lot 574; Davies-Niewoehner Sale (Paramount, 2/1975), lot 562; Paramount (5/1976), lot 1079.

**10. XF45.** Ben Green Sale (3/1906), lot 443; John H. Clapp; Clapp Estate (1942); Louis E. Eliasberg, Sr.; Eliasberg Estate (Bowers and Ruddy, 10/1982), lot 388; Auction '88 (David Akers, 7/1988), lot 905; Stack's (10/1989), lot 1484.

**Other Appearances**:

**A.** Emery, Taylor & Loomis Collection (Woodward, 3/1880), lot 1013. Mistakenly attributed to Byron Reed (see comments under number 3 above).

**B.** George H. Earle (Henry Chapman, 6/1912), lot 2397. This piece is plated in the Earle catalog, but no pedigree has been established.

**C.** Col. Flanagan Collection (Stack's, 3/1944), lot 1105; J.F. Bell Collection (Stack's, 11/1944), lot 351. The same plate was used for both appearances. Many firms, including Stack's, used stock photos in the 1940s, and a matching plate in several catalogs is no guarantee that the same coin was offered.

**D.** Adolphe Menjou Sale (Numismatic Gallery, 6/1950), lot 1473. Plated in the Menjou catalog, but no pedigree has been established.

*From The Harvey B. Jacobson, Jr. Collection.* (#8151)

## 1831 BD-2 Half Eagle, MS61
## The Norweb Specimen

**4683** **1831 MS61 PCGS. Breen-6494, BD-2, R.6.** Half eagle mintage figures from 1818 through 1834 are suspicious. Mint records indicate that there were 1,273,825 half eagles coined during that period. However, John Dannreuther records just 21 reverse dies used for that production, an average of more than 60,000 coins per strike. The average reverse die life is plausible, until die states are considered. Just 10 of the 21 reverse dies are known with die cracks, and they are always minor.

Mint records suggest that 140,594 half eagles were coined in 1831, and today, we know of two die varieties from one obverse die and two reverse dies, one of the latter carried over from 1830. John Dannreuther suggests that 14 to 18 examples of his BD-1 variety exist, alongside 22 to 30 examples of his BD-2. This cataloger believes that those estimates are a trifle optimistic, and further believes that they should be reversed. The actual number of pieces known for each variety is similar, and extremely small.

The Norweb specimen, with an unknown earlier provenance, is highly lustrous with satin mint brilliance. Both sides have faint field reflectivity with minuscule surface marks. The design motifs are bold and the eye appeal is excellent. Splashes of deep blue patina appear on the cheek and on other high points. Population: 1 in 61, 4 finer (11/11).

*Ex: Norweb Collection (Bowers and Merena, 10/1987), lot 781. From The Harvey B. Jacobson, Jr. Collection.* (#8153)

# EARLY PROOF SET

## Six-Piece 1888 Gold Proof Set
## Gold Dollar through Double Eagle

**4684** **Complete Six-Piece 1888 Gold Proof Set.** A carefully selected set of the six proof gold issues of 1888, including late issues of odd denominations such as the gold dollar and three dollar. Each proof is of at least Select quality with gold coins exhibiting Cameo or Deep Cameo contrast. This lot is the second of two lots that contain all 13 proof denominations for 1888. The other lot is in Wednesday's Platinum Night offering. The present lot includes:

**Gold Dollar PR65 Cameo PCGS.** Excellent detail and contrast with a touch of wateriness to the lemon-gold mirrors. The surface quality is solid, with only a pinpoint contact mark under the bust warranting individual mention. The holder-plastic over the reverse has several whitish scuffs that should not be taken as damage to the coin itself.

**Liberty Head Quarter Eagle PR65 Cameo NGC. CAC.** An attractive coin that shows contrast, not only between field and device textures, but interior and rim colors as well. The margins are butter-yellow, close to orange, while the rest of the coin is far paler with the exception of a couple of small coppery areas. Great quality and eye appeal. The listed mintage is just 97 proofs.

**Three Dollar Gold PR65 Cameo NGC.** Both sides have pale yellow-gold color and considerable contrast. The obverse offers a remarkably clean appearance, and while the reverse has a scattering of planchet flakes, these do not influence the technical grade, unlike a short line of contact marks above the RS in DOLLARS. A great display coin.

**Liberty Head Half Eagle PR64 Cameo PCGS. CAC.** Great black-and-gold contrast with the reverse virtually of Deep Cameo quality. A few small contact marks appear under Liberty's chin, but the reverse displays magnificently, and CAC confirms the accuracy of the technical grade. One of 95 proofs in the Mint records.

**Liberty Head Eagle PR63 Deep Cameo PCGS.** Though it might be the lowest-graded coin in the set, it is far from the least important, and this boldly contrasted coin with orange-kissed fields retains great majesty despite a line of scuffs to the left of the portrait. An apparent white spot over the middle of the eagle is in the plastic case, not on the coin. Mintage 75 proofs.

**Liberty Head Double Eagle PR65 Ultra Cameo NGC.** Strike, frost, and mirrors are all exquisite on this Gem. The fields are "black" at certain angles and the same pale gold as the devices at others. Flaws to the left of Liberty's chin and on her cheekbone contribute to the grade but have little effect on the eye appeal. Despite a mintage of 105 specimens, far fewer exist; Garrett and Guth suggest "only 20 to 30 coins known." (Total: 6 coins)

## 1849-C Closed Wreath Gold Dollar, MS64
## One of the Finest Known

**4685** **1849-C Closed Wreath MS64 NGC. Variety 1.** The obverse is semiprooflike with lovely, natural rich orange-gold color. Some ticks in the fields are accented by the depth of the reflectiveness and the most noticeable are located in the right field. A scratch from the star at 4 o'clock up into the field is mentioned mostly for identification purposes. The reverse is frostier with choice surfaces and slightly less intense coloration. This coin is well-struck, vibrant, and fresh with a wholesome and pleasing overall appearance. In fact, it is among the best looking 1849-C Open Wreath gold dollars this cataloger has ever seen, and it certainly qualifies as a Condition Census example.

The 1849-C Closed Wreath is the only collectible dollar struck at Charlotte and it is popular as a first year of issue. It is tied for the fourth rarest Type One dollar from this mint and is the sixth rarest of nine issues in higher grades. Of the 200-300+ known in all grades around a dozen to 15 exist in Uncirculated. This is one of just two graded by either service in MS64 (both by NGC) with none graded higher.

*Ex: February Signature (Heritage 2/2010), lot 1360, where it realized $34,500. This is, by far, an auction record for this date.*

*From The Cherokee County Collection.* (#7505)

## 1851-C Gold Dollar, Amazing MS66 Example Essentially 'As Struck'

**4686** **1851-C MS66 NGC. Variety 1.** Every now and then, a coin comes along that has no real reason to exist. The nature of production and distribution of the Southern mint gold is such that a survivor of any issue in Premium Gem quality is essentially unheard of. The NGC and PCGS population reports each show two MS66 examples of this date certified, although we tend to think those figures only represent three different coins. None have ever received a higher grade.

This is one of the three finest known Charlotte gold dollars of any date; the others are similarly graded and dated 1851-C as well. It is likely that this coin was saved as a souvenir, and it somehow has escaped the ravages of time and is essentially "as struck." Both the obverse and reverse display superb swirling mint luster atop clean, fresh fields. The strike is as sharp as one would expect to find on a Philadelphia dollar of this era with strong centers including a bold date and mintmark. The coloration is lovely with delicate orange-gold, rose, and greenish hues, in slightly different configurations, seen on both sides. There are a few tiny marks in the right obverse field, but the eye appeal of this piece is off the charts. This is a perfect type coin for the collector seeking one single ultrahigh-grade dollar from this mint, and it is one of the highlights of the Cherokee County Collection.

*Ex: Houston Signature (Heritage, 12/2008), lot 1784; Long Beach Signature (Heritage, 2/2010), lot 1373, where it brought $40,250, an all-time record at auction for an 1851-C gold dollar.*

*From The Cherokee County Collection.* (#7514)

## Select 1851-D Gold Dollar
## Only Two Finer PCGS Coins

**4687** **1851-D MS63 PCGS Secure. CAC. Variety 3-E.** Mint records indicate 9,882 gold dollars were struck at the Dahlonega Mint in 1851, a small total in absolute terms but somewhat generous in the context of the series. Doug Winter estimates the surviving population at 150-175 pieces in all grades, with 12-15 specimens in Mint State.

The present coin is an impressive Select example, with well-struck design elements that show just a touch of softness on the central devices. The pleasing greenish-gold surfaces radiate vibrant mint luster and show few signs of contact. Visual appeal is quite strong. Population: 4 in 63, 2 finer (11/11). (#7515)

## Near-Gem 1852-C Gold Dollar, Variety 2
## Condition Census Example

**4688** **1852-C MS64 NGC. Variety 2.** The 18 in the date is lightly repunched south, and clash marks are noted near the coronet tip and the left wreath stem. The strike is well-impressed for a Southern branch mint product, particularly on the curls near Liberty's ear. As seen on many gold dollars, the peripheries display cartwheel luster, while the open fields are moderately prooflike. There are three small patches of roughness on the obverse as made; this is not uncommon on this issue, which is known for poor die preparation. On the reverse, there is a shallow die defect from the right side of the 1 in the denomination down to the right side of the second L and the left side of the A in DOLLAR. This is found on about half of all known 1852-C dollars. Despite this defect, the date is still full and the strike is sharper than seen on many examples. Although the Charlotte Mint struck 72,574 half eagles in 1852, their emission of gold dollars was substantially smaller. A mere 9,434 pieces were struck, and of that amount probably only 80-85 pieces are extant today in all grades. This is a nice looking coin that qualifies as a lower-end Condition Census example.

Around two to three dozen Uncirculated 1852-C dollars are known. This is the second most available Charlotte gold dollar in high grades, but it is still many times scarcer than the 1851-C. The finest example we know of aware is an MS66 NGC, ex: Heritage (1/2000), lot 7555. There are at least five separate coins graded MS65 by NGC.

*Ex: Long Beach Signature (Heritage, 9/2006), lot 3017; FUN Signature (Heritage, 1/2007), lot 3351, where it sold for $16,100.*

*From The Cherokee County Collection.* (#7518)

## Superb Gem 1853 Gold Dollar
## Near-Perfect Surface Preservation

**4689** **1853 MS67 PCGS. CAC.** The design elements are remarkably well struck on both sides of this lovely little jewel. Even LA in DOLLAR is nearly completely formed. Gleaming mint frost illuminates the yellow-gold surfaces, which reveal fine-grained field textures and near-perfect preservation. As Garrett and Guth observe in *Encyclopedia of U.S. Gold Coins* (2008), the 1853 is by far the most common date in the gold dollar series. In Superb Gem condition, however, the issue becomes exceedingly scarce, and precious few have been so graded by the two major services. It seems like a foregone conclusion that such a pleasing, high-grade specimen will generate considerable attention when it crosses the auction block. Population: 6 in 67, 5 finer (11/11). (#7521)

## 1853 Gold Dollar, MS67
## Sharply Struck, Originally Toned

**4690** **1853 MS67 PCGS. CAC.** Seated silver coins were hoarded from circulation during the early 1850s, since their bullion content exceeded face value. The Philadelphia Mint responded to the coin shortage by striking millions of gold dollars. Mintages peaked in 1853, the year silver coin was finally reduced in tenor. The 1853 is a plentiful type coin in lower Mint State grades, but Superb Gems are very rare. The present lustrous example displays green-gold and peach toning. The strike is full except on a few outer star points. Population: 6 in 67, 5 finer (11/11).

*Ex: James Mossman Collection (Heritage, 1/2009), lot 3987, which realized $16,100.*

*From The Jim O'Neal Gold Type Collection.* (#7521)

## Rare, High-Grade 1853-C Gold Dollar MS64, Tied for Second Finest Certified

**4691** **1853-C MS64 NGC. Variety 1.** The 1853-C is the fourth rarest Type One Charlotte gold dollar and it is the seventh rarest of the nine issues in higher grades. There are around 300 or so known from the mintage of 11,515 pieces, with 20 to 25 qualifying as Uncirculated by today's standards. Most Mint State 1853-C dollars are in the MS60-62 range, and properly graded MS63 and finer pieces are very rare.

The obverse is light green-gold shading to medium orange; the reverse shows a deeper hue with an attractive band of reddish-gold at the border. The luster is better than usual for this typically dull issue with the reverse showing considerable vibrancy; the fields are gently reflective and the borders display bright cartwheel sheen. There are some light ticks in the left obverse field; the reverse is clean and choice. The date is evenly impressed, and only the hair near the ear has blended detail. A small Mint-made strike-through resides behind the hair bun. The 1853-C is the final Type One Charlotte Mint gold dollar, and an impressive example that is exceeded, among slabbed 1853-C dollars, by just one coin, an MS65 NGC formerly in the Norweb Collection, lot 1869.

*Ex; FUN Signature (Heritage, 1/2007), lot 1870, where it sold for $16,675. This remains an all-time auction record for the date.*

*From The Cherokee County Collection.* (#7522)

## 1854 Type Two Gold Dollar, MS64+ Strongly Struck Throughout Rich Mint Luster and Color

**4692** **1854 Type Two MS64+ PCGS. CAC.** In 1853 a new Mint director, Thomas M. Pettit, succeeded George N. Eckert, but Pettit served only in April and May before dying in office. Mint Director James Ross Snowden succeeded Pettit and immediately took aim at the gold dollar as a target for redesign. The Type One gold dollars, introduced in 1849, did yeoman work at filling in for disappearing silver coinage (a byproduct of the California Gold Rush) and unpopular paper currency in the early 1850s. But the Type One gold dollars were too small and were thicker than they should be, Snowden felt. The redesigned Type Two gold dollars were, accordingly, of larger diameter but proportionately thinner. Striking problems, clash marks, and incomplete strikes that looked like worn coins, even when Uncirculated, were the result. Today the Type Two gold coins, while obtainable for a price, are in hot demand for type purposes. This piece shows only the lightest die clash marks in the fields, but most importantly the strike shows no evidence of weakness. The rich mint luster is reddish-gold with faint traces of lilac, and there are no mentionable abrasions on either side of this high-end near-Gem. (#7531)

## 1854 Type Two Gold Dollar, MS65 Above-Average Strike

**4693** **1854 Type Two MS65 PCGS.** The 1854 Type Two gold dollar is a common date by most measures. Indeed, it can be located through the near-Gem level of preservation with relatively little difficulty. The Gem population decreases significantly, but this grade level can still be acquired with patience and searching. Examples grading higher than MS65 are elusive.

The lustrous surfaces of the Gem in this lot display peach-gold patina imbued with traces of mint-green. Its design features are better struck than ordinarily seen, including the usually weak obverse portrait and the 85 of the date. A couple of fine linear marks on the cheek appear to be as made. Population: 51 in 65, 12 finer (11/11). (#7531)

## Gem 1854 Type Two Gold Dollar Rich Reddish-Gold Patina

**4694** **1854 Type Two MS65 PCGS. CAC.** The 1854 Type Two gold dollar was made to the extent of about 786,000 circulation strikes, roughly 10% less than the 1854 Type One gold dollars, at 856,000 business strikes. Statistically speaking, there is little difference in the two figures. However, as Walter Breen has correctly pointed out, the total mintage of the Type Two gold dollars — all mints and years — was only about one-seventh that of the total mintage of Type One gold dollars — about 1.7 million Type Twos versus 12.6 million Type Ones. The 1854 and 1855 Philadelphia Mint productions, by far the most generous among the six Type Two issues, resultingly come to the fore as in-demand type representatives.

This Gem is, like most of the issue, heavily die-clashed each side, but the strike is bold, an uncommon trait. The surfaces exhibit rich reddish-gold patina with a strong lilac accent on each side. A tiny planchet flake appears in the right obverse field between the head and the R of AMERICA. Population: 51 in 65, 13 finer (11/11). (#7531)

## MS66 1854 Type Two Dollar
## Well-Struck and Unclashed

**4695** **1854 Type Two MS66 PCGS.** The three dollar gold coin denomination was introduced in 1854, and Mint officials (and Chief Engraver James B. Longacre) took the opportunity to simultaneously attempt a solution to a problem plaguing another gold denomination, the one dollar coins. Their small size (13 mm in diameter) meant that they were all too easily lost—in a time when one dollar was a considerable sum of money—and they were "often confused with the small silver coins in circulation at the time," according to Garrett and Guth. (The silver three cent coin was 14 mm in diameter, although it weighed about half what the gold dollar did.) The size was accordingly increased to a diameter of 15 mm — which of course meant that the planchets had to be thinner for the fineness and net gold content to remain constant. The obverse was redesigned to the Indian Princess motif, mirroring the three dollar design.

Most Type Two gold dollars share two common striking problems: The dies would frequently clash together without one of the new, thinner blanks or planchets intervening, creating clash marks. The new design also juxtaposed the design high points on each side, leading to strike difficulties. Weak strikes are common among Type Two dollars, a prime factor in the lack of high-grade specimens and one that keeps most out of the higher Mint State grades.

This is a wonderful type coin. The surfaces display pronounced mint frost, and the striking details are strong in the centers of each side. Only slight softness is noted on the right side of the 8 in the date. There are simply no abrasions to remark upon on either side of this superior Type Two gold dollar. Population: 10 in 66, 2 finer (11/11). (#7531)

## Premium Gem 1855 Type Two Gold Dollar
## Thick, Frosty Mint Luster
## Few Finer at Either Service

**4696** **1855 MS66 NGC. CAC.**

> "An inviolable rule in American coinage is that if there are two deep areas in the dies, on the obverse and on the reverse, and if these areas are opposite each other when the dies are in a coining press, there will be problems. Unless the dies are precisely adjusted the correct distance apart, the metal will not flow in each direction to completely fill the recesses."

The quote above describes the Type Two gold dollar situation quite accurately — even though it actually comes from Bowers' *Guide Book of Buffalo and Jefferson Nickels,* in relation to the strike quality of Jefferson's cheek on the obverse versus the famous steps on the reverse.

Bowers' *Guide Book* on gold dollars talks about the strike difficulties encountered on the redesigned Type Two series:

> "From the very outset, difficulties in striking ensued. The high relief of the head of Miss Liberty on the obverse caused a situation in which metal flowing into the deep die recess for the obverse prevented the relief areas on the corresponding part of the reverse, particularly the central two digits of the date, from striking up properly, unless the dies were spaced unusually close together. However, very close spacing resulted in extreme die damage, creating a lose-lose situation. Also there were problems with the striking up of the wreath on the reverse. Longacre moved the stars to correct the reverse striking problems with the Type I; to eliminate the weakness in the wreath on the Type II, he moved the lettering closer to the edge, as well as enlarging and reducing the relief of the head."

This Premium Gem 1855 Type Two gold dollar is among nine submissions at this grade level at NGC, with four finer, and PCGS has posted equal numbers, although we suspect duplications (11/11). Both sides display original dusky-gold color, accented by glints of lilac on reverse. The dies are clashed, usual for the issue. Minor strike softness, however, is limited to the first L in DOLLAR and the 18 in the date, with slight porosity appearing in the same area, as often seen. This piece's thick mint luster is its strongest feature, and the grade is confirmed by the absence of any mentionable or distracting marks, rather just a few tiny luster grazes. This remarkable coin is one that will be quite difficult to upgrade. (#7532)

## Premium Gem 1855 Gold Dollar
## Briefly Coined Type Two Design

**4697** **1855 MS66 PCGS. CAC.** Intense luster joins forces with pristine surface quality on this straw-gold Premium Gem Type Two gold dollar. The unusually strong strike for the issue confirms the lofty grade assigned by PCGS and subsequently verified by CAC. A typical 1855 gold dollar will display weakness in the LL of DOLLAR and the 8 in the date. While those features are not bold on the current offering, they are more defined than one would expect for the date. Poorly placed design features on the obverse and reverse caused metal flow problems on the Type Two gold dollars, hence the inadequately defined areas described above. The characteristic die clash marks are observed on both sides and are mentioned here only for the sake of accuracy, as they do not detract from the overall eye appeal of this splendid coin.

Demand stemming from type collectors keeps the prices strong on all Small Head Indian Princess Type Two gold dollars, especially in the higher grades. And, while the 1855 Philadelphia issues are not difficult to find in general, the competition for superior examples is fierce. Those collectors seeking Gem or better specimens have fewer than 100 coins from which to select, regardless of the grading service. As of (11/11) PCGS has certified 15 pieces at the MS66 level, with only six coins finer, and no example has achieved a grade higher than MS67. As a point of reference, the Smithsonian Institution coin is considered to grade no finer than MS63.

*Ex: Baltimore Signature (Heritage, 3/2009), lot 2523, which realized $54,625.*

*From The Jim O'Neal Gold Type Collection.* (#7532)

## 1855-C Variety 1 Gold Dollar, AU58
## Only Three Finer at PCGS

**4698** **1855-C AU58 PCGS. CAC. Variety 1.** The Type Two gold dollars were coined at all operating mints in the middle 1850s, including Philadelphia in 1854 and 1855, Charlotte, Dahlonega, and New Orleans in 1855 only, and San Francisco in 1856.

The central reverse is extremely weak, affecting the 8 and the LL in DOLLARS; each of those features are obliterated, with only the bottom of the 8 visible. Both sides of this high grade specimen have bluish-gray patina on the devices with lustrous yellow-gold fields and delicate greenish overtones. Population: 6 in 58, 3 finer (11/11). (#7533)

## 1855-C Type Two Gold Dollar, MS61
## First of Two Examples in This Collection

**4699** **1855-C MS61 NGC. Variety 2.** Attributable by the final date in the digit almost entirely below the right base of the A in DOLLAR, and all digits are well struck; the 8 in Variety 1 is weakly struck. The first of an amazing two Uncirculated examples of this rare, one-year Charlotte issue. This piece is from a later die state than the next coin, as seen by the stronger clash marks and weaker overall detail. On this piece, the surfaces are less smooth as well, the result of an inferior-quality planchet. There is deep, splashy orange-gold color seen on both sides which may appeal to many bidders, but should probably be examined in person. The underlying surfaces lack any significant marks and appear rather lustrous. The depth of the Cherokee County Collection of Charlotte Gold can be seen by the fact that there are two Uncirculated examples of this rare Type Two date.

*From The Cherokee County Collection.* (#7533)

## 1855-C Type Two Gold Dollar, MS62
## None Are Certified Finer

**4700** **1855-C MS62 NGC. Variety 2.** The 1855-C is a one-year type coin with an original mintage of 9,803 pieces. It is less rare than the 1855-D dollar but far rarer than the 1855-O or 1856-S. There are over 300 coins known with most in the Very Fine to Extremely Fine range. This issue seems to be chronically overgraded by the services due to the difficulty in determining wear, as most 1855-C gold dollars were struck on defective, porous planchets. There are no more than four or five true Mint State pieces known, none better than MS62.

In addition to its Mint State rarity, the 1855-C is plagued by mint-made production problems. The strike on this piece is somewhat above average for the issue. The quality of the planchet is clearly above-average for the issue with some mint-made roughness near UNIT in UNITED and less extensive roughness in the upper left obverse field below STAT in STATES. Free of any actual wear, this is a superior quality coin that possesses good appeal and displays superior quality for the date and grade. A couple of planchet flakes on the cheek and neck and some swelling under the chin do not detract, nor do some light handling marks in the reverse field. Each side is a bit light from the standpoint of color but the luster and "body" are good and the color is an appealing light yellow. In sum, this coin displays better-than-average eye appeal for the issue and designated grade, and is exceptional as such.

*Ex: Long Beach Signature (Heritage, 5/2009), lot 1472, where it sold for $23,000. This coin is tied with the Heritage 2005 FUN coin, lot 749 for the highest price ever realized by an 1855-C gold dollar at auction. From The Cherokee County Collection.* (#7533)

## 1856-D Gold Dollar, AU58
## An Important Key Date

**4701** **1856-D AU58 PCGS. Variety 8-K.** The only known dies. The 1856-D gold dollar, from a scant mintage of 1,460 pieces, is always in great demand as a key to the series. PCGS and NGC combined have certified only 80 examples, mostly in Extremely Fine and About Uncirculated grades. A mere six Mint State coins have been seen by each service.

Variegated peach-gold and mint-green patina compete for territory on both sides of this near-Mint State specimen, each of which displays a good amount of luster. Its strike is somewhat better than usually seen on the issue; all letters in LIBERTY are strong, as are most of the wreath elements, including the bow knot that is often weak. On the other hand, the U in UNITED and 5 in the date exhibit characteristic weakness, and the O in DOLLAR is filled, as typical. Light circulation marks are visible over each side, the most notable being a pinscratch on the left obverse. All in all, this is a nice representative of this key-date issue. Population: 13 in 58, 6 finer (11/11). (#7543)

## 1856-D Gold Dollar, MS62
## From the Duke's Creek Collection
## Probable Second Finest Known

**4702** **1856-D MS62 NGC. Variety 8-K.** Ex: Dukes Creek. Only 1,460 examples of the 1856-D gold dollar were minted from a single die pair in May 1856. The strike is typical with a weak obverse and strong reverse. Some flatness is noted on the hair above the ear and around the face. The U in UNITED is weak, the bases of 85 are weak, and the O in DOLLAR is filled. Those characteristics are typical of all survivors. The borders are stronger than usual with nearly complete denticles.

The surfaces are excellent for the date and grade, showing no detracting marks to the unaided eye. A tiny nick can be seen in front of Liberty's nose with magnification. Both sides have subdued, satin luster with splashes of pale blue-green over the reddish-gold color. This is a handsome example of a rare date.

The 1856-D is the third rarest Dahlonega gold dollar in terms of overall scarcity, trailing only the 1855-D and the 1861-D. It is the second most difficult issue in high grades, trailing only the 1855-D. The PCGS and NGC population data include several pieces in the MS60 to MS61 grade range that could be considered "enthusiastically graded." These numbers are also inflated by resubmissions. In our opinion, there are only four to six strict Mint State coins known of this issue. The Duke's Creek example is high in the Condition Census, and it is likely to be the best piece available to advanced collectors for quite some time. Census: 1 in 62, 1 finer (11/11).

*Ex: Leon Farmer Collection; Hancock and Harwell; Duke's Creek (Heritage, 4/2006), lot 1488.* (#7543)

## 1857-C Gold Dollar, MS61
## Rarest Type Three C-Mint in High Grades

**4703** **1857-C MS61 NGC. Variety 1.** The only dies known for the date. In high grades (AU-Mint State), the 1857-C falls approximately in the middle of the scale as far as all Charlotte Mint gold dollars are concerned. However, among Type Three issues, of which there are only two, the 1857-C is the rarer. There are just a small number of properly graded Uncirculated pieces known and few are known higher than MS62. The surfaces are bright and lustrous with brassy-gold hues atop lightly abraded surfaces. There are areas of mint-made granularity on nearly the exact same spots as on the Winter plate coin and these are seen on virtually all examples of this date. Typically impressed, both sides are generally bold with a few areas of striking softness here and there. The green-gold color is evenly distributed, and the eye appeal also benefits from a lack of individually mentionable abrasions.

*Ex: Long Beach Signature (Heritage, 6/2004), lot 6172. From The Cherokee County Collection.* (#7545)

## 1858 Gold Dollar, MS68
## One of Two Finest

**4704** **1858 MS68 PCGS. CAC.** The gold dollars of 1858, from a mintage approaching 118,000 pieces, were apparently paid out shortly after the time of issue, after which they were seen in circulation for the next several years. David Bowers writes in *A Guide Book of Gold Dollars,* 2008: "Relatively few Mint State coins were saved by intent or chance. In fact, among old-time collections, choice and gem *Proof* 1858 dollars have appeared more often than have equivalent-quality circulation strikes—and Proofs are rarities. Circulated examples are seen with frequency and can be easily acquired." And Jeff Garrett and Ron Guth say in their *Encyclopedia of U.S. Gold Coins*: "The 1858 gold dollar is more rare than either the 1856 or 1857 Philadelphia Mint issues, and as such, it is underrated at current price levels. Although this date is many times rarer than its later-date counterparts, it sells for only a small premium."

PCGS and NGC have graded about 250 1858 gold dollars in Mint State, a number of which are likely resubmitted or crossover coins. Fewer than 20 of these are Gem or finer examples. The MS68 specimen offered here is tied with one other PCGS coin for the finest certified. This latter piece is from the James and Margaret Carter Collection (Stack's, 1/1986), lot 42, and later from the New York Connoisseur's Collection, American Numismatic Rarities, 3/2006), lot 1399.

The present 1858 example is endowed with vibrant satiny luster residing on peach-gold surfaces that are immaculately preserved. An exacting strike imparts crisp definition to the design features, including the first 8 in the date, an element that is lightly impressed on many other surviving examples. Light clash marks are barely visible on both sides, not unusual for gold dollars of the era. Close inspection with a loupe reveals a couple of nearly imperceptible marks on Liberty's cheek and below the E in AMERICA and one near the reverse rim at 8:30. We mention these *solely* for pedigree purposes as they take nothing away from the coin's overall outstanding eye appeal.

*Ex: The Sweet Collection; The Classics Sale (American Numismatic Rarities, 3/2004), lot 1283; ANA Sale (Heritage Auctions, 7/2008), lot 1878.*

*From The Jim O'Neal Gold Type Collection.* (#7548)

## 1859-C Gold Dollar, MS63
## Second in Overall Rarity

**4705** **1859-C MS63 PCGS Secure.** Struck in medium green-gold with some light haziness seen on both the obverse and the reverse. The obverse is well-made, lustrous, and clean; the reverse is a hair less choice with a small mint-made defect seen above the second L in DOLLAR. The strike and appearance are typical for the date but the quality of this coin is far above average and it is actually tied with two others as the highest graded at PCGS.

The 1859-C is tied for second rarest of the nine collectible gold dollars from Charlotte in overall rarity. It is more common in high grades than once assumed and this is possibly the result of a small hoard that existed at one time. Only one PCGS coin has sold at auction, in our Long Beach Signature in June 2004, lot 6174 brought $24,150.

*From The Cherokee County Collection.* (#7552)

## 1861-D Gold Dollar, AU Details
## Produced by the Confederacy

**4706** **1861-D — Harshly Cleaned — NGC Details. AU. Variety 12-Q.** The 1861-D is well-known as the rarest Dahlonega gold dollar. It is also collectible as the only gold coin that can definitively be said to have been struck by the Confederate States of America. The mintage is unknown, but is estimated to have been between 1,000 to 1,500 pieces. The Harshly Cleaned disclaimer refers to uniform brightness seen over each side. The devices show even softness over the high points, but it is difficult to know whether this is from poor quality production that is seen on all 1861-D dollars or from actual wear. Struck from the leftover 1860-C die, part of the production problem of this issue is seen by the very faint UN in UNITED seen on all examples. The surfaces are lightly marked. (#7559)

## 1880 Gold Dollar, MS68+
## Exceptionally Lustrous and Colorful

**4707** **1880 MS68+ PCGS. CAC.** Occasionally gold dollars are found in high grades from the 1880s. The 1880 was an especially favored date because of the mintage of only 1,636 pieces. The number of high-grade examples known points to the existence of a small hoard at one time. This is a fabulous coin. The mint luster is thick and frosted and rolls around each side unimpeded by abrasions. Both sides exhibit rich reddish-gold and lilac color that is evenly interspersed. The striking definition is complete also, but the strong suit of this coin is definitely the luster. Simply outstanding. Population: 1 in 68+, 1 finer (11/11). (#7581)

## 1881 Gold Dollar, MS68
## Pristine and Problem-Free

**4708** **1881 MS68 PCGS. CAC.** The 1881 gold dollar issue is well known for its overall quality. According to the 2008 second edition of *Encyclopedia of U.S. Gold Coins 1795-1933* by Garrett and Guth:

> "There are at least 100 examples of the date that have been graded superb MS-67 or better. More examples of this date than any other have reached the MS-69 level. It is obvious that 1881 gold dollars were saved in significant quantities at the time of issue."

This remarkable example, among the finest at PCGS, displays a beautifully frosty appearance over pristine, honey-gold and greenish surfaces. The design elements are crisply reproduced, and problems of any kind are simply nonexistent. Population: 37 in 68, 0 finer (11/11). (#7582)

## 1855 Type Two PR62 Cameo Gold Dollar
## Only 7-10 Proofs Believed Known

**4709** **1855 PR62 Cameo NGC.** There is considerable controversy surrounding not only the number of extant proof 1855 Type Two gold dollars, but also the pedigree of several of the pieces. As far as we can tell, there are 7-10 known representatives of this rare proof gold dollar, and we provide the most current roster available below.

The present coin is a lovely proof with deeply mirrored fields and lightly frosted devices. The hair curls over Liberty's forehead are a little softly impressed, but, unlike the Starr specimen, the date is fully defined, even over the top of the second digit. The color is basically yellow-gold, some orange-tinged accents have settled in the recesses of the obverse portrait and the left reverse wreath. The scuffy overall appearance of both sides confirms the PR62 designation, but the only worthwhile pedigree markers are a group of minuscule planchet flakes (as struck) in the obverse field before Liberty's neck. Clearly, this is a rare coin, and it should find a home in one of the finest proof gold collections.

The following roster was compiled from auction appearances, and it seems likely that several of these coins may have been recertified since their last offering, so grades may have changed.

**1. PR66 Deep Cameo PCGS.** John F. McCoy Collection (W. Elliot Woodward, 5/1864), lot 2001; William A. Lilliendahl; Sixth Semi-Annual Sale (Woodward, 3/1865), lot 2829; Mendes I. Cohen; Cohen Collection (Edward Cogan, 10/1875), lot 241; Lorin G. Parmelee Collection (New York Coin & Stamp, 6/1890) lot 1255; William H. Woodin Collection (Thomas Elder, 3/1911), lot 852; Thomas Melish (Abe Kosoff, 4/1956), lot 1743; John Jay Pittman Collection (David Akers, 10/1997), lot 866; Dr. Robert J. Loewinger (Heritage, 1/2007), lot 3100; Madison Collection (Heritage, 1/2008), lot 3051, realized $373,750.

**2. Gem Proof**. Elmer Sears (4/1909); John H. Clapp; Clapp Estate (1942); Louis E. Eliasberg, Sr.; Eliasberg Collection (Bowers and Ruddy, 10/1982), lot 26; Jay Miller; Ed Trompeter (Superior, 2/1992), lot 1.

**3. PR65 PCGS**. F.C.C. Boyd; World's Greatest Collection (Numismatic Gallery, 1/1946), lot 9; Floyd T. Starr Collection (Stack's, 10/1992), lot 1084; FUN Signature (Heritage, 1/2005), lot 30023, realized $287,500.

**4. Gem Proof**. John Story Jenks Collection (Henry Chapman, 12/1921), lot 5822; Memorable Collection (Numismatic Gallery, 3/1948), lot 9; Harold S. Bareford (Stack's, 12/1978), lot 29; King of Siam Sale (Superior, 1/1993), lot 1262.

**5. Proof**. J.P. Morgan; ANS.

**6. PR62 Cameo**. Long Beach Signature (Heritage, 10/2001), lot 8097; Pre-Long Beach Sale (Superior, 6/2002), lot 4744; Long Beach Signature (Heritage, 6/2011), lot 4462. **The present coin.**

**7.** Abe Kosoff; Jimmy Hayes; Norman Stack.

*Additional Listings per Walter Breen*

**A**. Belden Roach (B. Max Mehl, 2/1944), lot 1041; Will W. Neil (B. Max Mehl, 6/1947), lot 2303.

**B.** G.H. Hall (Stack's, 5/1945), lot 1678, probably ex J.F. Bell (Stack's, 12/1944), lot 9.

**C.** Mocatta Metals (early 1975).

*Additional listings from other sources:*

**PR64.** Mid-American (5/1987), lot 1063. (#87602)

## 1856 Slanted 5 Gold Dollar, PR64
## One of Perhaps 10 Known
## Superior Eye Appeal

**4710** **1856 Slanted 5 PR64 PCGS. CAC.** All known 1856 gold dollars in proof are the Slant 5 variety. These are very rare; Bowers (2008) estimates eight to 10 specimens extant, and Garrett and Guth (2008) likewise suggest that "fewer than 10 coins can be accounted for." PCGS has graded a mere two examples, the present near-Gem being one of these. NGC has seen only six specimens.

Rich orange-gold surfaces are imbued with traces of mint-green and exhibit exquisitely impressed design elements. The obverse portrait is mildly frosted and well highlighted against the mirrored fields, with the reverse just slightly less so. Die polish lines are visible in the fields. Were it not for an unobtrusive graze in the left obverse field (an excellent pedigree marker) this piece might well have attained Gem status. It yields superior eye appeal. Population: 1 in 64, 1 finer (11/11). (#7606)

## Premium Gem Proof 1860 Gold Dollar
## Among the Top Three PCGS Coins

**4711** **1860 PR66 PCGS. CAC.** Two PR66 Cameo coins and this undesignated PR66 piece are the only better-than-Gem specimens of the proof 1860 gold dollar issue certified by PCGS (11/11). While not labeled Cameo, this coin possesses considerable contrast, though the obverse cameo effect is weaker than that of the reverse, hurting its chances for a designation on re-grading. Deep yellow mirrors surround sharply struck devices rendered in "gold-frost." While the plastic holder shows a number of scuffs and marks, these should not be interpreted as damage to the coin itself, which has technical appeal as impressive as the grade suggests. Proof 1860 gold dollars are far more elusive than their official mintage of 154 pieces might suggest; PCGS suggests there are "25 to 35 known."

*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution.* *See page 3 for details.* (#7610)

Smithsonian

## PR66 Cameo 1860 Gold Dollar Among the Finest Certified

**4712** **1860 PR66 Cameo NGC.** According to Mint records, 154 proof gold dollars were produced at Philadelphia in 1860, although it is believed that fewer than 50 pieces have survived into the 21st century. This specimen is certainly among the finest of those extant. The mirrored fields are colored an even orange-gold, but surrounding the frosted head of Liberty is a thin line of light yellow-gold, highlighting the cameo effect. One small area of brilliance occurs just below the ear of the frosted head, giving the appearance of a sparkling gem earring. The reverse is equally attractive from a color standpoint, but light porosity shows at the O in DOLLAR, and a minute, curved lint-mark above the A. These minor imperfections are only mentioned for future identification purposes. Sure to be a popular item in the sale. Census: 1 in 66 Cameo, 0 finer (10/11).

*Ex: FUN Signature (Heritage, 1/2007), lot 3367.* (#87610)

## 1865 Gold Dollar, PR66 Ultra Cameo Only One Finer

**4713** **1865 PR66 Ultra Cameo NGC.** Mint records show a mintage of only 25 proof gold dollars at the end of the Civil War in 1865, and this survivor is a remarkable example from that limited production. In nearly two decades of auction archives, this is only the fourth appearance of a proof 1865 in any of our auctions. Past offerings include one each in 1996, 2005, and 2010, the last offering equal to this piece for the finest that we have offered.

Just six of the 15 NGC certified examples have received the Ultra Cameo designation, including three submissions at this grade, and one finer piece (11/11). Another 11 submissions have been certified at PCGS, none with their Deep Cameo designation. Resubmissions are clearly part of those population totals, as the two services record more certification events than the original mintage. The alternative is that some fully prooflike business strikes have been graded as proofs. There are probably only 12 to 15 true proofs known.

This Premium Gem Ultra Cameo proof is undoubtedly just that, a remarkable specimen with no question about its proof status. The strike is full, the bright yellow surfaces are nicely contrasted, the fields are deeply mirrored, and the devices are fully lustrous. A small lint mark at the top of the obverse further proves its proof status. An incredible example for the connoisseur. (#97615)

## Deep Cameo Gem Proof 1878 Gold Dollar Only 20 Proofs Issued

**4714** **1878 PR65 Deep Cameo PCGS.** Although the final six dates of gold dollars have proof mintages of more than 1,000 pieces, only 20 proof gold dollars were issued in 1878, along with 3,000 business strikes. As a result, the proof 1878 is rare today, and PCGS has certified only nine examples in all grades. Among those, none are certified in grades above PR65, and only one other specimen is certified by PCGS as Deep Cameo (11/11). This is a crisply struck Gem with sun-gold centers and cherry-red margins. Void of post-strike detractions, and the sole imperfections are a tiny lint mark on the obverse field near the profile and minor incompleteness of strike on portions of the central reverse field. Minor repunching is present on the base of the 1 and the loops of the first 8 in the date. (#97628)

## PR66 Deep Cameo 1879 Gold Dollar Second-Finest at PCGS

**4715** **1879 PR66 Deep Cameo PCGS. CAC.** Without exception, every regular-issue proof gold coin dated 1879 is an important rarity. Only 30 proofs of each denomination were coined, and few survive today. Auction records suggest that the proof gold dollars are not as rare as the larger-denomination pieces, although many deceptive first-strike coins exist, some of which have been called proofs in the past. Both proofs and business strikes were produced from the same die pair, creating further confusion.

However, there is no doubt about the proof status of this beauty. It displays amazingly profound cameo contrast, with brilliant yellow-gold luster on the devices and deeply mirrored fields. This piece is likely the second-finest known, behind a PR66 Deep Cameo that we handled in 2003, which now is apparently in a PR66+ Deep Cameo PCGS slab. There are no finer examples in any designation.

There are about a dozen examples known, possibly as many as 15, including two in the Smithsonian Institution and one in the Western Heritage Museum, ex: Byron Reed. Others include the Garrett, Eliasberg, Bass, Carter, and Trompeter specimens, all different coins from this piece.

*Ex: FUN Signature (Heritage, 1/2007), lot 3768.* (#97629)

## 1883 Gold Dollar, PR67 Cameo Tied for Finest at PCGS

**4716** **1883 PR67 Cameo PCGS. CAC.** Only 207 proofs were made of the 1883 gold dollar, even though the business strikes saw a generous (for the time and series) production of 10,800 coins and were on an uptrend that would end the series in 1889. There has been confusion in the past over prooflike business strikes versus proofs, but this no-questions example shows the diagnostic die rust in the hair behind the ear that Breen mentions for B-1 in his *Proof Encyclopedia*. The reverse matches as well: "Normal 8's, first almost wholly below L; tops of wreath usually join; extra outlines to DOLLAR. R-5." Breen also mentions a different reverse die as B-2, R-6.

This Superb Gem proof offers deeply reflective fields that contrast against copious mint luster on the devices. The surfaces are near-perfect, as expected, with bright yellow-gold coloration. The strike is softly executed on the lower hair on the obverse. Population: 2 in 67 Cameo, 0 finer (11/11). (#87633)

## Cameo PR66 1886 Gold Dollar Excellent Late-Date Proof

**4717** **1886 PR66 Cameo NGC. CAC.** On its creation in the late 1840s, the gold dollar was meant to be a functional denomination. By the mid-1880s, it had turned into a gift-giving novelty, with four-figure mintages of proofs and most of the coins sold going to the children of the East Coast upper crust as holiday presents. This gleaming PR66 Cameo specimen may have been bought as a gift, but if so, it was kept remarkably well. Pale yellow-gold coloration is visible full-time on the frosted devices and at the non-"black" angles of the mirrors to the light. Marvelous visual appeal. (#87636)

## 1888 Gold Dollar, PR65 Ultra Cameo
## Only Four Certified Finer

**4718** **1888 PR65 Ultra Cameo NGC.** The recorded mintage of proof gold dollars exceeded 1,000 pieces annually for the last six years of the series, including 1,079 of these 1888 examples. In addition to about 300 true proofs that survive, many deceptive early business strikes exist with full prooflike surfaces. For today's collector, coin certification provides excellent security against purchasing one of those business strikes as a proof.

This true Gem Ultra Cameo proof has all the characteristics expected of such a coin. The strike is full, the light yellow surfaces are pristine, the contrast is remarkable, and the overall eye appeal is extraordinary. Although NGC and PCGS have certified a total of 230 proof 1888 gold dollars, few can match this piece. The combined population includes just four similar coins, with only four other finer pieces. Census: 3 in 65 Ultra Cameo, 4 finer (11/11). (#97638)

## 1889 Gold Dollar, Gem Cameo Proof
## Difficult to Locate in High Grades

**4719** **1889 PR65 Cameo NGC. CAC.** The 1889 gold dollar is a curious issue. The mintage of proofs was a whopping 1,779 pieces. However, there is considerable evidence to suggest that mishandling occurred in the Philadelphia Mint. The 1889 is more likely to be found mishandled or in lower grade than any other date in the series. This is not one of those pieces. This is a sparkling Gem proof with significant mint frost over the devices and deep mirrors in the fields. The only flaws we see are a small planchet flake out of the right obverse field, and several tiny lint marks in the reverse fields. Both sides display significant orange-peel texture, commonly seen on late 19th century gold proofs. Census: 3 in 65 Cameo, 8 finer (11/11). (#87639)

## 1796 No Stars Quarter Eagle, AU Details
## BD-2, First Year of Denomination
## One-Year Design Type

**4720 1796 No Stars — Repaired — NGC Details. AU. Breen-6113, BD-2, R.4.** The quarter eagle denomination was struck for the first time in 1796, with the production split between two major design types. It is thought that 897 specimens of the No Stars type were struck first, followed by 432 examples of the With Stars motif. Two die varieties are known for the popular No Stars type, identified by the length of the arrows in the eagle's claw. This coin represents the more available BD-2 variety, with shorter arrows that extend only to the end of N in UNITED. Although the No Stars variety is not quite as rare as the other type, it has always enjoyed special popularity as a one-year type issue.

The 1796 quarter eagle has been popular with collectors since the earliest days of the hobby. An example of both types was featured in the John F. McCoy Collection (W. Elliot Woodward, 5/1864), with the No Stars variety in lot 1961, "1796 Without stars, uncirculated, a fine impression, extremely rare." The coin realized a respectable $15 to Heman Ely. In recent times, the 1796 No Stars has set one price record after another, with the Gem example in lot 3058 of the FUN Signature Auction (Heritage, 1/2008) realizing $1,725,000.

The present coin is an attractive piece in many ways, but the central obverse shows some heavy scratches and a depression in the surface that indicates some extensive repair, possibly a patched hole. Unfortunately, many survivors of this issue were used in jewelry, and this type of repair is often encountered. The peripheral design elements are well-struck, and the surfaces are lightly abraded, apart from the noted scratches. The satiny mint luster borders on prooflike in some areas. Altogether, this coin is an attractive representative of one of the most important issues in the U.S. gold coinage series. (#7645)

## XF Sharpness 1796 Quarter Eagle With Stars, BD-3

**4721** **1796 Stars — Plugged, Harshly Cleaned — NGC Details. XF. Breen-6114, BD-3, High R.5.** Estimates of just 30 to 40 survivors of the only 1796 With Stars variety suggest their considerable importance, regardless of their overall quality or appearance. This piece is one that will see considerable demand, since it will prove to be affordable compared to problem-free examples. A hole at 12 o'clock was carefully plugged, and the E in LIBERTY was reengraved with moderate skill, as were part of the eagle's tail and the arrow feathers. Portions of the surfaces are whizzed, affecting obverse stars 13 to 15. Despite its faults, the present coin will allow many collectors to obtain an example of this challenging and rare first-year date. (#7647)

LIBERTY
1796

UNITED STATES OF AMERICA

## MS62 1796 With Stars Quarter Eagle, BD-3
## Early Die State, Bright, Problem-Free Surfaces

**4722** **1796 Stars MS62 NGC. Breen-6114, BD-3, High R.5.** The 1796 With Stars quarter eagle is a rare and vastly underrated 18th century gold coin variety. It is neither as illustrious as its sibling, the 1796 No Stars quarter eagle, BD-2, Normal Arrows, a one-year type, nor yet as rare as the BD-1, the 1796 No Stars, Extended Arrows die pairing, an extremely rare (High R.7) marriage that Harry W. Bass, Jr. "rediscovered."

Nonetheless, the 1796 With Stars is a coin that sees great demand at any grade level, as a first-year issue of an important U.S. gold denomination. The mintage is estimated at 432 pieces, of which only 40 to 50 coins survive today. The 1797 With Stars is also a one-year type (although sometimes unrecognized as such), as it is the only quarter eagle with 16 obverse stars, arranged eight on the left and eight on the right. The number of stars reflects Tennessee's joining the Union on June 1, 1796, making 16 states in all — although the Mint soon realized the folly of continuing to add one star for each new state.

As Bass-Dannreuther put it, "In 1797 the Mint returned to 13 obverse stars and any departure from that number, either on the obverse or reverse, was due either to the use of leftover dies or die-cutting errors."

Jeff Garrett and Ron Guth put the extreme rarity of the 1796 With Stars into perspective in the second edition of their gold reference:

> "This subtype is somewhat rarer than the 1796 , No Stars quarter eagle, yet it generally sells for much less in comparable grades. Most examples are in circulated condition, with a cluster at the About Uncirculated level that may represent unreported resubmissions. Mint State examples are extremely rare ... ."

The present MS62 NGC example is in the same grade (but not the same coin) as the Ed Price Collection coin, a piece that brought the same price, $172,500, in a couple of auction appearances with us in 2009 (Los Angeles, 7/2009, lot 1205; Baltimore, 3/2009, lot 2568). The same coin brought $207,000 the year before in our Baltimore Signature (Heritage, 7/2008), lot 1452. In 2005 yet another MS62 NGC specimen traded hands for $219,650 in our Dallas Signature (Heritage, 11/2005), lot 2363.

The present coin is one of six submissions at the MS62 grade level at NGC, and there are four finer (11/11). We nonetheless suspect duplications in those numbers, as the temptations and rewards for successful crack-outs at such levels are considerable. Nonetheless, as a middle-Mint State example of such a rare first-year gold coin subtype, we have high hopes for this piece when it crosses the auction block.

The surfaces are fabulous and bright, exhibiting a prevalent green-gold hue with a slight complement of pale reddish patina. The R in LIBERTY is clogged, and the fields are slightly reflective overall. There are no obvious planchet adjustment marks or singular signs of contact. This piece also appears to be from an early die state, with no visible lapping or clashing.

Heritage has been privileged in the past to offer one of the most celebrated examples surviving of the 1796 With Stars, a Gem example in our FUN Signature (Heritage, 1/2008), lot 3059, which realized $1,006,250. That piece was accompanied by a Gem 1796 No Stars in the previous lot, both of which are tied for the finest known. (#7647)

## Very Rare 1797 Quarter Eagle, BD-1, AU53 Excellent Luster and Eye Appeal

**4723** **1797 AU53 PCGS. Breen-6115, BD-1, R.6.** Bass-Dannreuther Die State b/a. After the meager mintage of an estimated 963 1796 No Stars quarter eagles and then 432 With Stars quarter eagles, the Mint in 1797 produced an even skimpier total, 427 examples of the 1797, assuming none of the 1796 dies were carried over. Bass-Dannreuther apparently believe the opposite — that some of the 1797-dated coins may have been struck in other years — as they estimate that 427 to 585 coins were struck of the BD-1 1797. They further estimate that 20 to 25 coins survive today in all grades, producing a survival rate of 4% or 5%. This is particularly interesting because all known examples of the BD-1 show a large obverse die crack running from the Y in LIBERTY to touch stars 12 and 13, and a single, unique late-state coin is known where this area has turned into a massive retained cud covering stars 8 through 11, most of 12, and touching two points of star 13.

Given the die state evidence, we are left with two possibilities: That the obverse die cracked quite early in the mintage but managed to survive for several hundred strikes — doubtful at best — or that all of examples struck before the die cracked managed to succumb to attrition — a slightly more plausible explanation, since examples with such a bold die break might have had a greater chance of being saved.

The reverse die was used to strike the JR-1 1798/7 dimes as well as this quarter eagle variety, apparently after the quarter eagles, as none are known with the later die states that the dimes show.

The present example shows exuberant surfaces that show considerable luster remaining for the grade, with yellow-gold coloration . A few small ticks and abrasions appear scattered about under a loupe, none worthy of note. The strike is a trifle weak in the centers of each side, but all these footnotes are minor compared to the excellent eye appeal of this very rare coin. (#7648)

**1798 Close Date, Four Berries MS64 NGC. Breen-6116, BD-1, High R.5**

**1798 Close Date, Four Berries MS64 NGC. Breen-6116, BD-1, High R.5**

# 1798 Close Date, Four Berries Quarter Eagle
# MS64, BD-1, High R.5
# Lower Mintage Than the 1796 Two and a Half

**4724** **1798 Close Date, Four Berries MS64 NGC. Breen-6116, BD-1, High R.5.** The U.S. Mint is recorded as having coined 1,094 quarter eagles in 1798, an amount that we notice is less than the combined mintages for the first-year 1796 No Stars and With Stars varieties — put at 963 and 432 pieces, respectively, for a total of 1,395 coins.

The Mint in 1798 was largely occupied with making large cents and silver dollars, a plentiful mintage exceeding 1.84 million of the "old coppers" and more than 327,000 silver dollars. No half cents, half dimes, quarters, or half dollars were made in 1798, and the output of the rare 1798 eagle or ten dollar gold piece was nearly as skimpy as that of the quarter eagles, 1,742 pieces between the two *Guide Book*-listed varieties, BD-1 and BD-2.

The Mint in 1798 was in the slow process of changing over from the Small Eagle reverse to the Heraldic Eagle reverse, which in this year first showed up on the silver dime denomination, produced in the smallish extent of 27,550 pieces, and the aforementioned silver dollars.

The Mint in this year also continued to fiddle with the star arrangements on both obverse and reverse of various denominations, as witness the Draped Bust, Heraldic Eagle reverse dimes known with both 16 Star and 13 Star reverses, and the Draped Bust, Small Eagle reverse silver dollars, known with both 15 Star and 13 Star obverses.

Even after apparently settling on a 13 Star arrangement rather than continuing to add new stars for new states joining the Union, the Mint tried various combinations of stars in an apparent attempt to find the most aesthetically pleasing arrangements. Bass-Dannreuther note in *Early U.S. Gold Coin Varieties* that the 1798-dated quarter eagles are "exceptions to the 7+6 or 8+5 star arrangement for the obverse of most of this series," noting that the 1798 coins have their stars arranged 6 left, 7 right. These are the only U.S. coins of any denomination with that particular star arrangement.

Only two die varieties, each monogamously paired, are known for the 1798 quarter eagles. Even though we have added the "4 Berries" to the boldface lot subhead it is redundant, as the Close Date obverse appears only with the 4 Berries reverse, BD-1, while the Wide Date obverse is paired solely with the 5 Berries reverse, BD-2.

Bass-Dannreuther also note that the Close Date, 4 Berries is the first to use the "new style reverse with 'Thick Neck' with 13 stars around the eagle's head, six vertical stripes in the shield, and the punch by Robert Scot, the chief engraver at the time. This replaced the John Smith Gardner punch that was used for the previous dates and varieties."

The BD-1, rated high R.5, is estimated by Bass-Dannreuther to survive in the extent of 25 to 30 pieces in all grades, a variety that is "twice as rare as the other 1798 issue," which survives to the extent of 45-55 coins.

The present near-Gem NGC-graded piece is the sole example at that service, with three submissions in MS62 in second place. PCGS has seen three "certification events" in MS64, with two in MS65 the finest (11/11). The fields on this piece are bright and semiprooflike, the surfaces mostly yellow-gold with occasional dabs of reddish patina. The strike is sharp except in the immediate centers, where some vertical planchet adjustment marks appear. (#97649)

## '1802/1' Quarter Eagle, MS62, BD-1
## Lustrous, Frosted Surfaces

**4725** **1802/1 MS62 PCGS. CAC. Breen-6118, BD-1, R.4.** Bass-Dannreuther Die State Obverse a / Reverse b. The "1802/1" quarter eagles were produced to the meager extent of a reported 3,035 pieces. Three different reverse dies were successively paired with a single obverse to produce the three marriages known for the issue. The 1802 quarter eagles have long been considered overdates; in fact, the current (2012) *Guide Book* still lists them as such. Bass-Dannreuther have this to say:

> "Harry Bass also realized that the overdate status of this die was questionable. The fact that there were no quarter eagles dated 1799, 1800, or 1801 should lend credence to the overdate status of the 1802, but most researchers have come to the conclusion that whatever is under the 2 is not the vestiges of a 1."

The logic is, unfortunately, flawed, a *non sequitur;* the non-existence of 1801-dated quarter eagles, or any other date for that matter, has no bearing at all on the status of the 1802s. The obverse die could just as easily have been overdated from any earlier year or a new obverse created for the year, as was apparently the case. The present piece certainly reinforces that proposition, as even under high magnification the small 2 in the date shows little of anything besides some planchet adjustment marks.

The reverse die on this pairing is called the "Spike Shield" in Bass-Dannreuther, for the tiny artifact that runs from the top left shield corner to the scroll above. Deep reddish patina on each side of this piece complements bold mint luster and nicely frosted surfaces. A few light contact marks are consistent with the grade, none worthy of note. The strike is somewhat soft in the centers. Population: 3 in 62, 7 finer (11/11). (#7650)

## Eye-Appealing MS62 1804 Quarter Eagle BD-2 14 Star Reverse

**4726** **1804 14 Star Reverse MS62 PCGS. Breen-6119, BD-2, R.4.** This is a simply lovely 1804 Stars Reverse quarter eagle, one with eye appeal that immediately suggests an even finer grade. The two-toned surfaces show deep, rich orange-yellow competing with smaller areas of sage-gold, with both sides showing much prooflike luster even though not certified as such. The two quarter eagle varieties of the year, the 1804 13 Star Reverse and 14 Star Reverse, share a common obverse, but the BD-1 13 Star is rated High R.6 by Bass-Dannreuther (12-14 known), while the BD-2 14 Star Reverse is R.4 (150-200 known).

The 14 Star reverse was also used to strike the slightly rarer 1804 JR-2 dimes, a masterstroke of Mint efficiency that was nonetheless commonplace in a few instances until reverse denominations were added to the John Reich-redesigned quarter eagles beginning in 1808. Numerous such examples are known for dimes and quarter eagles dated between the years 1797 and 1807. The 14 Star Reverse shows six stars in two even rows — a cross pattern in Bass-Dannreuther terminology — plus one star on each side of the eagle's head. Bass-Dannreuther note that this is the only Robert Scot quarter eagle with an "obvious cross pattern of stars," which led Walter Breen to suggest that the reverse was, in fact, a leftover from around 1798.

Under a loupe a few minor ticks and scrapes appear consistent with the grade, all minor and undistracting. A tiny planchet void appears near Liberty's chin. A few planchet adjustment marks appear on the reverse rim around 10:30. The strike is well-executed, save for minor softness on the arrows and claws on the lower reverse. Population: 6 in 62, 2 finer (11/11). (#7652)

## 1804 14 Star Reverse Quarter Eagle, BD-2 MS62, Bright, Semiprooflike Surfaces

**4727 1804 14 Star Reverse MS62 PCGS. CAC. Breen-6119, BD-2, R.4.** With less than 200 pieces believed to be extant in any condition, the 1804 quarter eagle is a coin that the vast majority of today's collectors will only read about. Acquisition of an example in any condition would be considered a milestone for even the most advanced collections, but obtaining a true Mint State example is a goal few realize. This sentiment is supported by the fact that the finest Smithsonian Institution specimen is considered to grade AU55.

While the much rarer BD-1 variety of this issue displays 13 reverse stars, the current example, BD-2, is known as the 14 Star Reverse variety. The significance of the 14 stars is not definitively known, although it is widely accepted that the extra star was simply the result of a die layout error. The budget-conscious early Mint would not have discarded a die for such a minor issue, hence the existence of this variety today. Some numismatic researchers conjecture that this reverse die, which was also used to strike the 1804 JR-2 dimes, is actually an unused 1798 die. The main evidence cited to support this theory is the cross pattern arrangement of the reverse stars, as opposed to the arc pattern that became the accepted style on later issues.

The three known die states of this variety are of little concern to most collectors since any attempt to collect this issue by die state, or even die variety for that matter, is reserved for the most esteemed and financially capable of numismatists. But for the sake of posterity, this example is Die State a/a, with both sides free of lapping, clashing, or cracks found on later states. It is interesting to contemplate how a coin with a mintage of 3,327 pieces (the obverse die was used on both BD-1 and BD-2) could have fatigued to the point of developing die cracks. The reverse die was also employed to strike at least a few thousand 1804 dimes, yet it is only known in the perfect state.

The current piece has bright, lustrous surfaces with a semiprooflike finish in the fields. Each side has a slight overlay of reddish patina, noticeable both in the fields and over the devices. The strike is bold, although a few slight marks and shallow planchet flakes appear on both sides. Population: 6 in 62, 2 finer (11/11).

*Ex: Leo Beranek Collection/FUN Signature (Heritage, 1/2008), lot 3062, which brought $63,250.* (#7652)

## Near-Mint 1805 Two and a Half, BD-1
## Just 1,781 Pieces Minted

**4728** **1805 AU58 PCGS. Breen-6121, BD-1, R.4.** Bass-Dannreuther Die State c/b with a nearly imperceptible die crack joining the 805 in the date. This briefly circulated near-Mint representative retains considerable peach-red luster. The centers show incompleteness, especially on the eagle's neck, but the surfaces are refreshingly unabraded aside from a few trivial marks on the field between the vertical shield stripes. Dannreuther estimates the rarity of the 1804 as R.4, but likely duplications among third-party data accumulated over a quarter-century suggest the date may be closer to R.5. Population: 12 in 58, 7 finer (11/11). (#7653)

## 1805 Quarter Eagle, BD-1, AU58
## Scarce Low-Mintage Issue

**4729** **1805 AU58 PCGS. CAC. Breen-6121, BD-1, R.4.** Bass-Dannreuther Die State b/a. Only a single die pair is known for the 1805 quarter eagles, minted in the tiny amount of 1,781 pieces, The obverse die was nonetheless overdated to produce the 1806/5 quarter eagles as well, and the hardy reverse die was used not only for the 1805 quarter eagles but the 1806 and 1807 pieces as well, *plus* more than 150,000 1807-dated dimes.

It seems astounding to call such an early gold coin variety "merely" very scarce or R.4, Bass-Dannreuther estimating that 100 to 150 survive in all grades. The strike on the present near-Mint State piece is sharp save for the immediate centers. The surfaces show a pronounced olive-gold tinge complementing an overlay of reddish patina. A few light planchet adjustment marks appear in the center reverse, and several small, stray abrasions are evident, consistent with the grade. Population: 12 in 58, 6 finer (11/11). (#7653)

## 1806/4 Quarter Eagle, AU53, 8x5 Stars BD-1, Good Luster Remaining

**4730** **1806/4 8x5 Stars AU53 PCGS. CAC. Breen-6122, BD-1, High R.4.** Bass-Dannreuther Die State b/b. Only two 1806 quarter eagle varieties are known, both overdates, the 1806/4 with stars arranged eight and five, and the 1806/5 with stars seven and six. The 1806/4 is seen a bit more frequently than is the 1806/4, but both are rare or nearly so. The 1806/4 was created from an unused 1804-dated die, while the reverse, shared between the two varieties, was a leftover from 1805. The obverse die state is early for b, showing some but apparently not all of those listed in BD. The strike is weak in the centers, but good luster remains over green-gold surfaces with an accent of reddish patina around the rims. A few horizontal planchet adjustment marks occur in the center reverse. Population: 5 in 53, 18 finer (11/11). (#7654)

## 1825 BD-1 Quarter Eagle, MS61
## Virgil Brand Specimen
## Second Finest of Six Known

**4731** **1825 MS61 PCGS. CAC. BD-1, R.7.** John Dannreuther suggests that eight to 10 examples of this rare variety are known, although the present cataloger believes that only six are known. Harry W. Bass, Jr., is credited with the discovery. He purchased his specimen, an amazing double-struck example, from Numismatics, Ltd., in October 1974. It is likely that he only later identified the new die marriage. The Bass specimen was plated 84 years earlier in the December 1890 sale of the Thomas Cleneay collection that the Chapman Brothers sold at public auction. The Bass coin is plated in the *Bass Museum Sylloge* and in the Bass-Dannreuther early gold reference, and it is on display at the ANA Museum in Colorado.

The present cataloger identified a second example in the January 2000 Bowers and Merena Rarities auction. That coin had appeared earlier in the Virgil Brand sale, and is the same coin offered today. Four additional pieces have been identified since that time. Another example appeared in the October 1994 James Stack sale, reappearing in the July 2004 Richmond Collection sale, and later in the October 2005 Atlanta Sale. The ANS has an example, another appeared in Auction '85, and one additional piece was offered in the November 1988 Bowers and Merena auction. We are unaware of any others.

This lovely prooflike Mint State piece has brilliant yellow surfaces with delicate green overtones. It is sharply struck and shows only a few faint hairlines and other surface marks. A small planchet depression joins the fourth lowest feather in the left (facing) wing, serving as an important provenance marker.

*Ex: Virgil Brand; Brand Estate; Bowers and Merena (11/1983), lot 88; Bowers and Merena (6/1984), lot 1018; Bowers and Merena (1/2000), lot 298. The Brand catalog notes this was either from Charles Steigerwalt, privately, October 30, 1893, or from B. Max Mehl (5/1916), lot 110.* (#7664)

## 1827 Quarter Eagle, BD-1, MS62
## Rare Early Gold Type

**4732** **1827 MS62 PCGS. CAC. Breen-6131, BD-1, R.5.** Bass-Dannreuther Die State a/c. The quarter eagle denomination in the early years of the U.S. Mint was apt to be a sporadic and low-mintage affair; even so, in the first decade after the quarter eagle was introduced in 1796 and up through 1808, most years saw at least a tiny mintage, even though there were gaps.

After 1808, things fell apart.

No more quarter eagles were produced until the 1821 issue, then the 1822 and 1823 were skipped, and the 1824 was produced using a die overdated from 1821, making the 1824/1. Then 1825 through 1827 saw contiguous issues, although the 1826 is actually 1826/6.

The 1827 quarter eagles were produced in the reported amount of 2,800 coins, all from a single die pair. The doughty reverse die was, however, first used in 1825, then reused in 1826 and 1827. So the reverse on the 1827 has actually been lapped, or repolished, to remove the die clashing that appears on the 1826/6. In the words of Bass-Dannreuther, 1826/6, Reverse State b, clashed: "This combination has the outline of the wing in front of the neck and the chin and neck area is evident as a triangular area below the left end of the scroll to the wing on the reverse."

The surfaces on this piece are understandably prooflike — understandably, more so on the obverse than on the reverse. The peripheries are well-detailed and the centers, even though they are stronger than usual, show a tad of softness on the high-point hair curls of Liberty and the shield stripes on the reverse. A small cluster of tiny marks in the obverse field near stars 1 and 2 fails to detract from the overall excellent eye appeal. Population: 5 in 62, 8 finer (11/11). (#7666)

## Select 1829 Quarter Eagle, BD-1
## Fully Struck and Deeply Reflective

**4733** **1829 MS63 PCGS. CAC. Breen-6132, BD-1, High R.4.** Bass-Dannreuther Die State a/a. After skipping the denomination in 1828, in 1829 the Mint again struck quarter eagles, and again the mintage was tiny, at 3,403 coins. The 1829 is the first issue of a new subtype, one the *Guide Book* calls, in full, Capped Head to Left, Reduced Diameter (1829-1834). John Dannreuther writes:

> "The main change for this type was not the modified design or the *punched,* bead-like dentils, but the striking of the coins in a close collar. This not only added a third die that produced the reeding, it allowed a higher obverse and reverse rim to be cut into the die. These higher rims made possible more sculptured designs and protected the devices, lettering, date, and fields from wear."

Understandably, only a single die pair was required, and the new design subtype meant that only the prime die state is known (no reuse of earlier dies). The present Select Mint State coin is one of eight such submissions at PCGS and there are another eight finer, although it is difficult to conceive of a more *aesthetically pleasing* example (11/11). The surfaces throughout each side are dazzling and deeply reflective, and only the most minor field marks on each side disturb the uniform, mirrorlike sheen. The strike is full throughout the obverse, including the high-point hair curls under Liberty's headband and all star centrils. A touch of strike weakness is confined to the vertical shield stripes, but the wing feathers overall boast marvelous articulation. Distinctive, original yellow-gold coloration prevails on each side. (#7669)

## 1830 Quarter Eagle, BD-1, MS63
## Well-Struck, Semiprooflike Surfaces

**4734** **1830 MS63 NGC. CAC. Breen-6133, BD-1, R.4.** Bass-Dannreuther Die State a/a. The story of the 1830 quarter eagles is a virtual carbon copy of the 1829, a low-mintage affair in this case totaling 4,540 coins — a slight uptick from the previous year — with but a single die pair and a single die state known, since so few examples were struck. The surfaces on this Select Mint State specimen are an even, consistent yellow-gold, with semiprooflike fields. The surfaces are well-struck if not completely so. A few small marks on Liberty's lower neck and the obverse fields nearby account for the grade but are totally undistracting. There is a shallow, irregularly shaped planchet flaw around star 1. A nice example of the Capped Head Left, Reduced Diameter subtype. Census: 4 in 63, 9 finer (11/11). (#7670)

## Near-Gem 1833 Quarter Eagle, BD-1 R.5, Heavily Melted Late-Series Issue

**4735** **1833 MS64 NGC. Breen-6136, BD-1, R.5.** Bass-Dannreuther Die State a/c. Despite the low mintage of 4,160 pieces for the 1833 quarter eagles, the late reverse die state is easily explained when one realizes that the same die was used for the reverse of the 1831- and 1832-dated pieces of that denomination as well. When the reverse was used for the 1831 pieces the dies clashed, leaving an impression of the neck of Liberty in between the ribbon and the juncture of the shield and eagle's neck on the reverse, producing state b. The dies were subsequently lapped (also in 1831), although Bass-Dannreuther write that "the lapping is so light that distinguishing between State a and c is nearly impossible; the clashed state, b, is obvious." No further die deterioration occurred during the run of the 1832 mintage, leaving the reverse as here, in state c, for 1833.

David Akers and later Bass-Dannreuther write that the 1833 quarter eagle issue is the "most difficult date to obtain of the *common* issues, 1829 to 1833." However, as is usual when the word "common" is bandied about, its context must be guardedly examined. Bass-Dannreuther estimate that the R.5 1833 survives to the extent of only 60 to 80 pieces in all grades, and they follow that "common" remark with this: "The 1831 date/variety certainly is the most available of this type, although the 1829 and 1830 are seen with almost the same frequency as that benchmark issue. However, all the known examples of this entire type number only into the hundreds, as the noted meltings consumed the vast majority of them."

The present near-Gem is certainly among the few finest survivors of the issue. NGC has seen six submissions at this grade level, with one each in MS66 and MS67 finer (11/11). Orange-gold coloration prevails over surfaces that are evenly struck and semiprooflike, although some high-point detail is lacking. A few small, scattered marks account for the grade, the only one of note to the right of the second S in STATES. (#7673)

## 1831 BD-1 Quarter Eagle, PR63 Cameo
## Only Five Certified Proofs

**4736** **1831 PR63 Cameo NGC. BD-1, R.7 as a proof.** Star 1 points to the center of a dentil and is quite close to it. The digits in the date are spaced progressively narrower from left to right, with the greatest distance between the 1 and 8. Light obverse clash marks appear in the form of a second inner set of dentils partially visible around the rim. On the reverse — carried over from 1830, and used through 1834 — the numerator is much shorter than the denominator in the fraction. The U in UNITED was first engraved too far left, then reengraved in the proper position. A tiny die crack joins the left top corner of the T in UNITED to a dentil nearby. There is some strike softness on the eagle's wing to the left of the shield.

There is only one die marriage known for the year among the recorded mintage of 4,520 business strikes. While the proof mintage is unknown, they are extremely rare, even though a handful are certified at NGC and PCGS. More precisely, PCGS has certified one PR63 and one PR66, while NGC has graded the present PR63 Cameo, one PR64 Cameo, and one in PR66, for a total of five coins (11/11).

Many of the same die diagnostics show on the Bass example depicted in the Bass-Dannreuther *Early U.S. Gold Coin Varieties,* a coin that Bass called "Proof?" with the question mark. Both Bass-Dannreuther and Garrett and Guth note that unquestioned proofs as well as questioned ones exist for the 1831 quarter eagle. NGC, of course, clearly believes in the proof status of this piece — as do we. We would mention, however, that not all early proofs are fully struck, contrary to the opinions of some collectors. The highly mirrored, deeply reflective fields and the lack of any visible clash marks or adjustment marks are convincing themselves of a proof striking, but the incomplete strike on the reverse certainly does not rule out the coin's status. The fields also lack any hint of frostiness. This lovely yellow-gold specimen is destined for an advanced early gold collection. (#7686)

# CLASSIC QUARTER EAGLES

## 1834 Classic Quarter Eagle, MS64 ★ Small Head Obverse

**4737** **1834 Classic MS64 ★ NGC. Small Head, Breen-6138, Variety-1, R.1.** Exactly four die varieties of 1834 Classic Head quarter eagles are known, with two distinctive head styles, known today as the Small Head and the Large Head, the latter sometimes also called the Booby Head. In his *Complete Encyclopedia,* Walter Breen described two different reverse variations for the Small Head, one with large arrowheads and the other with small arrowheads. No examples of the Small Head, Small Arrows variety have been seen by any specialists since then, and it is nearly certain that the variety is a phantom.

This Small Head quarter eagle is boldly defined with highly reflective fields and satiny devices, all in light yellow-gold, with hints of peripheral rose toning. The surfaces have a few trivial, grade-consistent marks. Census: 4 in 64 ★, 17 finer (11/11). (#7692)

## Gem 1838 Classic Head Quarter Eagle Conditional Rarity Exceptional Luster and Strike

**4738** **1838 MS65 NGC. Breen-6146, Variety-19, R.2.** Ex: Freedom Collection. Just one die marriage is known for the 1838 Classic Head quarter eagle. Although the issue has a tendency to be grouped with the more obtainable issues in the Classic series such as the 1834 and 1835, few people have seen a sufficient number of Mint State pieces to pass judgment on its rarity above AU. Most high-grade examples appear to range from AU58 to MS62; at the Gem level or finer the 1838 is extremely rare, with perhaps 10-12 distinct specimens known. This piece shows a strong strike and exceptional luster beneath rich reddish-gold color. Field marks are light, and the only abrasions of note are a pair of small ones above the eagle's right wing that we mention for pedigree purposes, not because of their distracting nature. Census: 6 in 65, 2 finer (11/11).

*Ex: FUN Signature (Heritage, 1/2000), lot 7609; FUN Signature (Heritage, 1/2007), lot 3402; ANA Signature (Heritage, 8/2007), lot 1825.* (#7696)

## Uncirculated 1838-C Two and a Half Always-Popular First Year of Issue

**4739** **1838-C MS61 PCGS. Variety 1.** This attractive coin displays nice reddish-gold color that deepens at the borders. The coloration appears original as it is similar in hue and configuration on both sides. The obverse has a few minor ticks in the fields but it is clean for the grade; the reverse has marks scattered about but these are not inconsistent with the assigned grade. Well struck for the issue with above-average details seen on the feathers. All in all, a highly pleasing example of this popular and numismatically significant issue.

Only 7,880 examples were made of which a few hundred are known today. It is doubtful if more than 10 or so are known in Uncirculated. The 1838-C is always in demand as a first-year-of-issue and it is among the most popular coins produced at the Charlotte mint, regardless of denomination.

The last PCGS MS61 that Heritage sold was lot 4469 in the June 2011 Long Beach sale and that coin brought a solid $28,750.

*From The Cherokee County Collection.* (#7697)

## 1839-C Variety 24 Quarter Eagle, MS60 Late Die State

**4740** **1839-C MS60 NGC. Variety 24.** The mintmark is over the left side of the 3, and the reverse lacks a berry in the olive branch of this scarce variety. Parallel lines in the ear and below the Y of LIBERTY appear to be clash marks from the shield. A few faint clash marks are also evident on the reverse, and a prominent vertical die crack extends through the upright of the E in STATES.

Both sides of this exactingly struck quarter eagle show full satiny yellow luster with myriad surface marks and faint hairlines as the grade implies. Census: 4 in 60, 13 finer (11/11), for all three 1839-C varieties. (#7699)

## 1839-C Two and a Half, MS61
## First of Two Uncirculated Examples

**4741** **1839-C MS61 NGC. Variety 1.** Formerly designated as an overdate, there is little to suggest an underdigit on this piece. The 1839-C is generally a well-produced issue with a surprising number of high-grade (AU and better) examples known. However, in mint condition only five to ten pieces are believed extant. To underscore the depth of the Cherokee Collection, two Uncirculated pieces, this one and the following MS62, are contained in this impressive offering. The fields on this piece show obvious die striations, which produced the bright, semiprooflike finish seen on each side. The striking details are generally well brought up, but the usual high point softness is seen on Liberty's hair curls around the face, the star centers, and the wings on the eagle. The bright yellow-gold color has taken on a slight reddish cast, most apparent around the devices and within the recesses.

*From The Cherokee County Collection.* (#7699)

## 1839/8-C Quarter Eagle, MS62
## Variety 23, Former Winter Plate Coin
## Fourth Finest Known

**4742 1839/8-C MS62 PCGS Secure. Breen-6149, Variety 23, R.3.** Ex: Dingler. This is the so-called "overdate" variety, although its status as an overdate has now been discredited. The 2012 *Guide Book* notes, "So-called 9 over 8 varieties for P, C, and D mints are made from defective punches."

This piece, formerly from the Paul Dingler Collection, is the **plate coin used in the Winter 1998 reference for the 1839/8 variety.** The issue is sought after not only due to its variety status, but also because of its position as a two-year branch mint subtype in the Classic Head series. Because of the confusion surrounding the "overdate" versus those pieces found with a recut date, the certified population data must be viewed with more grains of salt than usual. The reverse, the same as used on the 1838 C-mint quarter eagles, shows extensive die cracks.

The central obverse is quite sharp on the present piece, save for minor softness on the hair curls about the ear. The rest of Liberty is quite well-detailed, although most of the peripheral stars lack central details. The two mint-made defects, one on the cheek and one behind the eye, must not be mistaken for poststrike damage. The reverse is also sharp, with undistracting weakness on the left (facing) upper wing and shield border. UNITED shows doubling, and raised die lines appear there.

While common in circulated grades (by the standards of Charlotte quarter eagles), the 1839-C is very rare in properly graded Uncirculated. In fact, it is rarer than the heralded 1838-C in Mint State. There are an estimated five to ten known in Uncirculated and the best we are aware of is an NGC MS63 that was sold as lot 6137 in our February 1999 auction. This coin is listed as the fourth finest known in Winter's Condition Census listing and it is the single finest graded at PCGS.

*Ex: Elrod Collection; Doug Winter-Lee Minshull; Paul Dingler Collection, formerly graded MS62 PCGS; Central States Signature (Heritage, 4/2009), lot 2675, where it brought $32,200.*

*From The Cherokee County Collection.* (#7699)

# LIBERTY QUARTER EAGLES

## 1840-C MS61 Quarter Eagle
## Seldom Available in Uncirculated Grades

**4743** **1840-C MS61 PCGS Secure. Variety 1.** A solid coin for the grade with light yellow-gold color that deepens to red from 1 to 3 o'clock on the obverse; some light toning on the reverse is mostly seen on the eagle's feathers. Lustrous and lightly marked with a few small abrasions that limit that grade but are not out of keeping with the MS61 grade assigned by PCGS. There is a mark between stars 4 and 5 and a small dig near the leaves opposite the NIT in UNITED which serve as immediate identifiers. This desirable coin is numismatically significant as the first of the long-lived Liberty Head design from this mint.

A total of 12,822 examples were struck, of which as many as 200-250 might exist today. The 1840-C is a little more available in higher grades than formerly believed but it remains rare in Mint State with fewer than 10 known. The finest that we are aware of is the PCGS MS63 that is ex: Elrod.

*Ex: Quality Sales Corporation Auction (9/1973), lot 1032; Bass IV (Bowers and Merena, 11/2000), lot 133.*

*From The Cherokee County Collection.* (#7718)

## 1840-C Quarter Eagle, MS63
## Among the Finest Certified

**4744** **1840-C MS63 NGC. Variety 1.** As with many of the higher-grade examples of this issue, the present coin is extremely well-struck. Interestingly, the 1840-C tends to be the best-struck of the four mints that made quarter eagles in this year. Even more interesting, by 1842 the strike of quarter eagles had diminished significantly. The green-gold surfaces on this specific example are slightly reflective, and there is intermixed satiny luster around the devices. The fields are virtually free of marks, and this is certainly an impressive example that would fit into even the finest set of Charlotte quarter eagles.

As with many first-year-of-type coins, the 1840-C quarter eagle was saved in small quantities and, as a result, there are a decent number of Uncirculated pieces known. None grade higher than MS63, and the population of coins in this grade at both PCGS and NGC is slightly inflated by resubmissions. It is likely that just two or three separate MS63 coins are known, and this is the only one currently available to advanced collectors.

*Ex: Ashland City Collection/FUN Signature (Heritage, 1/2003), lot 4652, where it realized $18,975; FUN Signature (Heritage, 1/2007), lot 3405, for $18,400; Summer FUN Signature (Heritage, 7/2009), lot 1301, where it brought $21,850; ANA Signature (Heritage, 8/2007), lot 1827, where it was hammered down for $20,700.*

*From The Cherokee County Collection.* (#7718)

## 1841-C Quarter Eagle, MS62
## One of the Finest Known

**4745** **1841-C MS62 PCGS Secure. Variety 1.** Fairly deep orange-gold toning is evident on both sides with some purple hues forming at the left reverse rim. A bit of haze can be seen atop the lustrous surfaces and beneath this there are some ticks that are consistent with the grade. The strike is excellent for the issue with very crisp detail seen on the obverse and reverse. This remains the only MS62 example graded by PCGS and none have been recorded in grades above this at this service (11/11).

Only four or five examples are known in Uncirculated, making this the second rarest quarter eagle from Charlotte in high grades. The finest is the raw Byron Reed coin, owned by the Omaha City Library, which grades at least MS63. The Pittman coin has been graded MS62 by NGC, as has the Bareford coin.

*Ex: Goldbergs (5/2006), lot 3676, where it brought $23,575; Dallas Internet Auction (Heritage, 7/2006), lot 24506, where it realized $27,315; Central States Platinum Night (Heritage, 5/2007), lot 2220, where it sold for $23,000.*

*From The Cherokee County Collection.* (#7721)

## Near-Mint 1842-C Two and a Half
## Very Rare Any Finer

**4746** **1842-C AU58 NGC. Variety 1.** Lightly worn and lustrous with nice reddish-gold and orange colors, in similar configurations, on the obverse and reverse. There is a small, sharp dig below the bun in the right obverse field that quickly identifies the piece; there is also some deeper toning above and below the eagle's left (facing) wing. The rarity of this date is best expressed by the fact that this is the only quarter eagle in the Cherokee County Collection that is not Uncirculated (!).

The 1842-C is the fourth rarest Charlotte quarter eagle overall but it is the rarest in high grades. We know of just three or four in Uncirculated as well as another 12 to 16 in properly graded About Uncirculated. There were only 6,729 struck.

*Ex: ANA Signature* (*Heritage 7/2009*), lot *2343, where it brought $8,337.50, R.M. Phillips Limited Partnership Collection.*

*From The Cherokee County Collection.* (#7724)

## 1843-C Large Date, Plain 4 Quarter Eagle MS63, One of the Finest Known

**4747** **1843-C Large Date, Plain 4 MS63 NGC. Variety 1.** Ex: Dingler. This is one of the nicest coins in the collection from the standpoint of appearance. It is frosty and "fresh," with lovely mottled orange-gold and reddish-gold hues in different configurations on the obverse and the reverse. The strike is typical for the issue, with some weakness noted in the central reverse. There are a few ticks in the obverse fields that one would expect from any coin of this design in MS63; the reverse is clean and choice. This is clearly among the top five or six known of this variety, and it is certainly the finest that is currently available to the collector. An impressive and important coin for the date collector or a wonderful type coin for the person searching for one high-quality quarter eagle from the Charlotte mint.

The 1843-C Large Date is far more available than its Small Date counterpart. In high grades, however, the Large Date is a rare and overlooked coin. There are an estimated 10 to 15 pieces known in Uncirculated. This includes one in NGC MS66, a PCGS MS65, and solitary MS64 examples at NGC and PCGS.

*Ex: Paul Dingler Collection, (Stack's 3/1989), lot 180; Long Beach Signature (Heritage, 2/2009), lot 2452, where it brought $13,800.*

*From The Cherokee County Collection.* (#7728)

## Key 1843-C Small Date Quarter Eagle, MS62 Ex: Dingler Collection

**4748** **1843-C Small Date, Crosslet 4 MS62 PCGS Secure. Variety 1.** Ex: Dingler. This is one of the most exciting quarter eagles in this exceptional collection. The obverse is somewhat prooflike and has nice medium green-gold color; the reverse is more satiny in texture, and it has a great appearance with some reddish hues forming on the highlights. A small amount of friction in the obverse fields, probably from storage in an album or cabinet, is enhanced by the reflectiveness on this side. This is one of the two or three finest examples of this key issue that we have seen; fresh, nice, and rare as such.

The 1843-C Small Date is the rarest Charlotte quarter eagle and the fourth rarest in high grades. It has the lowest mintage of any issue in the series with just 2,988 pieces believed to have been produced. Around 100 are known today with most in the XF40 to AU50 range. The Cherokee/Dingler example we offer here is tied with one other coin as the finest graded at PCGS and it is clearly well up in the Condition Census listings for the issue.

*Ex: Paul Dingler Collection; Superior (5/1992), lot 2494; Long Beach Signature (Heritage, 2/2009), lot 2454, where it brought $28,750. When owned by Paul Dingler, this coin was in a PCGS MS61 holder.*

*From The Cherokee County Collection.* (#7729)

## 1844-C Quarter Eagle, MS62
## Second Finest Known
## Ex: Clapp/Eliasberg/Elrod/Dingler

**4749** **1844-C MS62 NGC. Variety 1.** Ex: Eliasberg. The typical example of this misunderstood date is worn and dull with poor eye appeal. The present example, which has long been recognized as among the finest known 1844-C quarter eagles, has excellent luster for the issue. What is most remarkable about this coin, though, is its color. The obverse and reverse both show attractive orange-gold and reddish-gold color, and this is one of the few high-grade 1844-C quarter eagles that retains its rich natural hues. The strike is a bit weak, even for this issue, with flat radial lines in the stars and a very soft impression at the central reverse. There are some light ticks in the obverse fields but it is still choice for the grade. This piece is somewhat hard to appreciate for the collector who is unfamiliar with the idiosyncrasies of the issue but it is a remarkable piece with a great pedigree to boot.

The 1844-C is less rare from an overall standpoint than formerly believed. It remains rare, though, in higher grades. In Uncirculated it is very rare with an estimated four to six pieces known. The Eliasberg/Elrod/Dingler coin is the second finest, trailing only a single PCGS MS63 that is Ex: Bass II, lot 365.

*Ex: Elmer Sears, November 1920; John H. Clapp Collection; Eliasberg Collection (Bowers and Ruddy, 10/1982), lot 131; Stanley Elrod Collection (Stack's, 5/1986), lot 1346; Paul Dingler Collection; Long Beach Signature (Heritage, 2/2009), lot 2462, where it brought $17,250.*

*From The Cherokee County Collection.* (#7735)

## 1846-C Quarter Eagle, MS63
## Tied for Second Finest Graded

**4750** **1846-C MS63 PCGS Secure. Variety 1.** Ex: Dingler. After a fire closed the Charlotte Mint in 1844, the facility reopened in 1846. The quarter eagle and half eagle from this year are both scarce, low-mintage issues, and the former holds the dubious honor of being among the most poorly produced issues from this mint. The present example shows this poor production with a sharp but irregular strike and numerous areas of mint-made granularity (this is probably due to the fact that the dies had been shipped to the Mint in 1844 and they rusted after sitting unattended until 1846). The surfaces have taken on a hazy orange-gold hue, but the underlying luster is clearly evident. A small, relatively fresh scratch on the cheek is not all that conspicuous; a few marks in the field are light and well-scattered.

Of the 4,808 pieces struck, it is believed that around 125 or so exist today in all grades. The 1846-C is the third rarest Charlotte quarter eagle in higher grades. Around six to eight coins exist in Uncirculated. The finest is ex: Bass II, lot 381, and it is graded MS64 by PCGS. The Cherokee County example is tied with one other coin (graded MS63 by NGC and Ex: Elrod) for second finest.

*Ex: Paul Dingler Collection; Long Beach Signature (Heritage, 2/2009), lot 2470, where it brought $27,600.*

*From The Cherokee County Collection.* (#7741)

## Near-Gem 1847-C Quarter Eagle Frosty and Boldly Struck

**4751** **1847-C MS64 NGC. Variety 1.** The only known dies for this date. The production of 23,226 examples of the 1847-C quarter eagle is among the highest Charlotte Mint totals for any issue in the series. Only in 1843 did Charlotte produce more quarter eagles, but the 1843-Cs comprise two major varieties, so some consider the 1847-C to have the highest mintage of any issue. This is an instance where mintage actually relates to the number known today. This near-Gem is tied with a few other pieces as the finest known, and it is a top-quality piece, The surfaces are boldly struck — highly unusual among Charlotte Mint coinage — and it has fully brilliant and frosty green-gold luster. A few light handling marks are noted in the fields. Census: 3 in 64, 0 finer (11/11).

*Ex: Long Beach Signature (Heritage, 2/2008), lot 2365.* (#7745)

## MS64 1847-C Quarter Eagle Exceptional Quality, CAC Approval

**4752** **1847-C MS64 NGC. CAC.** The 1847-C quarter eagle is a common issue by Charlotte standards and it is perhaps the best-made coin ever produced by this facility. Thus, it is perfect for use in a high-quality type set. It is likely that this lovely borderline Gem will wind-up in a type set as it is a fresh, frosty example that has a strike as sharp as one could hope for. There are a few tiny marks seen in the obverse fields; the reverse is Gem quality. This is the only Charlotte quarter eagle that is available in this grade with any degree of regularity. Given the fact that a nice MS64 generally trades in the $20,000 range, it is not an unrealistic purchase for many collectors.

The 1847-C is the most common Charlotte quarter eagle both in terms of overall and high-grade rarity. There are as many as three or four dozen known in all grades of Uncirculated. There are still no Gems accounted for but there are at least a half dozen properly graded MS64s, of which this is one.

*Ex: Long Beach Signature (Heritage, 5-6/2007), lot 2165; FUN Signature (Heritage, 1/2010), lot 2101, where it brought $19,421.*

*From The Cherokee County Collection.* (#7745)

## 1848 'CAL' Quarter Eagle, AU Details America's First Commemorative?

**4753 1848 CAL. — Repaired, Cleaned — NGC Details. AU.** Both sides of this AU Details "CAL" quarter eagle display bright yellow-gold surfaces. The design elements are relatively well defined, including the star centers, most of Liberty's hair, and the dentilation, most of which is quite bold. The eagle's neck feathers are a touch weak, as sometimes seen on this issue. The coin has been moderately polished, and magnification brings out light rim filing on both sides, but no other repairs are readily apparent. Prospective bidders should not be intimidated by the NGC disclaimers, as these impairments do not unduly detract.

1,389 quarter eagles of 1848 were stamped with the abbreviation CAL. on the upper reverse. Garrett and Guth, in their *100 Greatest U.S. Coins*, raise an interesting question about this issue: "Why just this one batch of Quarter Eagles was counterstamped (with CAL.) is a mystery. If the goal were to show the gold's origin, the same should have been done for the millions upon millions of gold coins created in later years from the steady stream of gold that flowed out of California." Possible answers to this question notwithstanding, many numismatists consider the 1848 CAL to be the nation's first commemorative coin. (#7749)

## Choice AU 1848 CAL. Quarter Eagle
## Historic Commemorative Issue
## Only 1,389 Pieces Struck

**4754** **1848 CAL. AU55 NGC.** A scant 1,389 CAL quarter eagles were minted in 1848, from the first shipment of gold to reach the Philadelphia Mint from the newly-discovered California gold fields. California had only recently come under the jurisdiction of the United States, after the Mexican War of 1846, and the territory was still under the authority of a military governor. The shipment of 230 ounces of gold was sent by Col. R.B. Mason, the military governor, to Secretary of War William A. Marcy. Marcy delivered the bullion to the Mint, with instructions to coin the specially marked quarter eagles to commemorate the important historic events unfolding in the Far West.

The new issue was immediately popular with both numismatists and the general public. An example was featured in the Dr. Lewis Roper Collection (Moses Thomas, 2/1851), generally considered to be the first all-coin auction held in the United States. Dr. Joel Orosz has discovered that Roper was actually a '49er himself. Perhaps the appearance of this important commemorative issue helped influence him to make the arduous journey to the gold fields.

Experts estimate fewer than 75 examples of the CAL quarter eagle survive today in all grades. Coins in Choice AU condition are very scarce. Current population data reveals NGC has certified only four coins in AU55, with 29 finer, while PCGS has graded six Choice AU specimens, with 28 finer (11/11).

The present coin is an attractive Choice AU example, with vivid orange-gold surfaces and reflective, prooflike fields. The strike details are sharp throughout, and the eye appeal is extraordinary. The CAL quarter eagle is listed as one of the *100 Greatest U.S. Coins* by Jeff Garrett and Ron Guth. (#7749)

## Uncirculated CAL. 1848 Quarter Eagle
## First Issue From California Gold

**4755** **1848 CAL. MS61 NGC.** To commemorate the historic events of the California Gold Rush, a special coinage of quarter eagles was produced from the first shipment of gold bullion to arrive at the Philadelphia Mint from the gold fields. The shipment provided 230 ounces of the precious metal, which was transformed into 1,389 regular-issue quarter eagles, each coin bearing the inscription "CAL." above the eagle's head on the reverse.

The issue was immediately popular as a souvenir of the most important economic event of the pre-Civil War era. An example was featured in the Roper Sale (M. Thomas & Sons, 2/1851), considered to be the first real coin auction held in the United States. Early auction listings often described the coins as proofs, as in lot 2812 of the Sixth Semi-Annual Sale (W. Elliot Woodward, 3/1865):

> "1848 Brilliant proof, having on the reverse Cal., to indicate that it was coined from the first gold of California received that year, *excessively rare*."

Modern research disputes these early listings. To quote Jeff Garrett and Ron Guth, "However, modern study has revealed that all were struck from the same pair of dies at the same time and that the dies had a Prooflike, not Proof, finish."

Regardless of their status as proof or business-strike issues, the coins are among the most attractive examples of U.S. coinage ever issued, and collectors of many disciplines pursue the date avidly. Many commemorative enthusiasts consider the 1848 CAL. quarter eagle the first U.S. commemorative coin, while type collectors consider it a one-year type coin. Of course, Liberty Head quarter eagle specialists include the issue in their sets, as well. Experts estimate fewer than 75 examples of this rare issue survive today in all grades. The 1848 CAL. quarter eagle is listed as one of the *100 Greatest U.S. Coins*.

The present coin is an impressive Mint State example, with reflective yellow-gold surfaces on the reverse and hints of light green on the obverse. All design elements are sharply detailed, and there are discernable elements of field-device contrast present, though not enough for a Cameo designation. Outstanding eye appeal and unparalleled historic interest make this coin a "must have" for the advanced collector. Census: 4 in 61, 17 finer (11/11). (#7749)

## 1848-C Two and a Half, MS61
## An Underappreciated Charlotte Issue

**4756** **1848-C MS61 NGC. Variety 1.** Struck in light yellow-gold with slightly subdued luster, as commonly seen on this issue. There are scattered marks on the obverse and a bit of broken luster over the high points; the reverse is choice with richer color and surprisingly good detail for the issue. There is natural dirt on the reverse in the denticles above STAT in STATES, which adds to this coin's considerable charm. All in all, a considerably above-average example of one of the rarest Charlotte quarter eagles in high grades.

The 1848-C is the ninth-rarest of 20 Charlotte quarter eagles, but it is among the rarest in true Mint State. Only three or four Uncirculated pieces exist, and just one grades better than MS61. There are two varieties known. Variety 1, of which the Cherokee County coin is an example, comes with a better strike than Variety 2 and is considered more desirable by specialists as a result.

*From The Cherokee County Collection.* (#7750)

## Famous Gem 1849-C Quarter Eagle
## The Bass Example

**4757** **1849-C MS65 NGC. Variety 1.** As one might expect, any Charlotte quarter eagle graded MS65 by one of the two major services is exceedingly rare. Off the top of our collective heads, we can think of just a handful: the Elrod 1842-C, a pair of Gem 1843-C Large Dates, the present 1849-C, and the Bass 1855-C (which is also part of this collection) and offered a few pages further into this memorable catalog. The 1849-C that we offer here is literally "as struck" with glowing light yellow-gold color, glittering surfaces that are free of any significant non-Mint made marks and a quality of strike that is almost unheard of for the date. This is far and away the finest known 1849-C quarter eagle and, it goes without saying, a highlight of the Cherokee Collection.

The 1849-C is one of the rarest Charlotte quarter eagles in Uncirculated. We are aware of just four that qualify as such. The present example brought a remarkable $103,500 in its last auction appearance, smashing the previous auction record of $39,100 which was set by this same coin in the Bass II sale held in 1999.

*Ex: Stack's (5/1968), lot 712; Harry Bass Collection; Bass II (Bowers and Merena, 10/1999), lot 422, where it brought $39,100 as an MS62; Baltimore Auction (Bowers and Merena, 3/2010), lot 3609, where it realized $103,500.*

*From The Cherokee County Collection.* (#7753)

## 1850-C Quarter Eagle, MS62
## One of the Finest Known

**4758** **1850-C MS62 NGC. Variety 1.** Ex: Dingler. Struck in light yellow-gold with splashes of deeper color seen at the borders. This is the typical die state for this variety with multiple clash marks in the centers on both sides. This clashing appears to have somewhat weakened the letters in LIBERTY but the overall strike is a bit more detailed than usually seen for this issue. The luster is a bit grainy in texture which gives the coin a slightly lackluster texture. There are some minor contact marks in the fields that are in keeping with the assigned grade.

The 1850-C quarter eagle is a bit less rare than its mintage of 9,148 pieces might suggest. There are as many as 250-300 examples known in all grades but almost all grade AU50 or below. In Uncirculated, this remains a very are coin with around four to six properly graded pieces accounted for. The finest is owned by a specialist and is Ex: ANR 9/2005, lot 1123 (it is graded MS63 by NGC and it brought $25,300 in that sale). The present example is regarded as the second finest and, at one time, it was in a PCGS MS62 holder.

*Ex: Paul Dingler Collection; Long Beach Signature (Heritage, 2/2009), lot 2504, where it brought $14,950.*

*From The Cherokee County Collection.* (#7756)

## MS62 1851-C Quarter Eagle
## Rarely Available in Uncirculated

**4759** **1851-C MS62 PCGS Secure. Variety 1.** Ex: Dingler. Somewhat cloudy with orange-gold color turning to a vivid purple hue over the high spots of the obverse and the reverse. There are some light old hairlines in the left obverse field; the reverse is choice and shows very strong detail for this issue. This piece was at one time graded MS61 by PCGS but it appears to have been upgraded to MS62 since the publication of the third edition of Doug Winter's book on Charlotte gold which was released in mid-2008.

There are probably no more than a half dozen examples of the 1851-C quarter eagle known in Uncirculated and most of these have been off the market over the past decade. The finest is the Bass II coin, lot 445, now graded MS63 by PCGS.

*Ex: James A. Stack Auction (Stack's, 10/1994), lot 905; Long Beach Signature (Heritage, 2/2009), lot 2512, where it brought $13,800.*

*From The Cherokee County Collection.* (#7760)

## 1852-C Two and a Half, MS62
## Ex: Elrod, Second Finest Known

**4760** **1852-C MS62 NGC. CAC. Variety 1.** Ex: Elrod. Because there were no quarter eagles struck at the Charlotte Mint in 1853, the 1852-C saw heavier-than-usual circulation. It is ranked as the seventh-rarest of 20 quarter eagles from this mint in terms of its high-grade rarity. This lovely example, a coin well-known and highly regarded by specialists, is another highlight of the Cherokee Collection and a personal favorite of this cataloger. It has an exceptional overall appearance for a date that is almost never seen with good eye appeal. Medium to deep green-gold color attests to its originality and a good deal of satiny luster clings to the undisturbed underlying surfaces. The strike is above-average for the issue, and there are just a few small, insignificant abrasions on the surfaces — a really special and literally irreplaceable coin.

There are as many as four Uncirculated 1852-C quarter eagles but two standout: the present coin and the Bass II, lot 453 example (graded MS63 PCGS,) which is the finest known. The Bass coin is off the market for the time being, making the present example by far the best available to specialists.

*Ex: Paul Dingler and Stanley Elrod Collections; Long Beach Signature (Heritage, 2/2009), lot 2517, where it brought $16,100.*

*From The Cherokee County Collection.* (#7764)

## MS62 1854-C Quarter Eagle
## Tied for Second Finest Known
## Ex: Ashland City

**4761** **1854-C MS62 NGC. Variety 1.** After a one-year hiatus, production of quarter eagles at the Charlotte Mint resumed in 1854. There were 7,295 pieces struck, and it appears unlikely that more than 150-200 (if that) are known today. This example is clearly among the better survivors with bright light yellow-gold surfaces that exhibit a decent amount of frosty luster. The strike is typical for the issue with softness seen in the centers, especially on the reverse. A small scratch off the right foot of the second A in AMERICA serves as clear identification.

An estimated six or seven Uncirculated 1854-C quarter eagles are known. The finest is an MS63 NGC that has never appeared at auction. Six have been graded MS62 by NGC, of which we can trace four distinct specimens.

*Ex: Ashland City Collection/FUN Signature (Heritage, 1/2003), lot 4700, where it brought $17,250).*

*From The Cherokee County Collection.* (#7770)

## Amazing 1855-C Quarter Eagle, MS65
## The Finest Known and Ex: Bass

**4762** **1855-C MS65 NGC. Variety 1.** Ex: Bass. Collectors of one-of-a-kind branch mint gold coins have two opportunities to obtain a Gem Charlotte quarter eagle in the Cherokee County Collection: the 1849-C offered above and the present 1855-C. This piece was unknown to most experts until it appeared for sale (as an MS64 PCGS) in the Bass II auction held in October 1999. It is clearly the finest known example of this rare date and is characterized by superb luster below nice orange-gold color. The coin is naturally vibrant and bright and has a "freshness" about it that is exceptional for the issue. The strike is typical, with the stars flatly impressed on the radial lines, while the centers show some minor weakness on the high spots, as always. There are a few small ticks in the field, but even the most particular collector will be impressed by the luminous appearance this coin presents. Some minor planchet roughness appears, as made, which is evident on nearly all known 1855-C quarter eagles. Unquestionably the finest known and a wonderful match to the Gem 1855-C half eagle offered for sale later in this catalog.

The 1855-C is the second rarest Charlotte quarter eagle after the 1843-C Small Date. There are around 100 examples known from the original mintage of 3,677 pieces. This date was formerly among the rarest issues in the series in high grades, but enough About Uncirculated and Uncirculated pieces have shown up in recent years (through new discoveries and gradeflation) that it is no longer accorded the respect that it was a decade or two ago. Six or seven Uncirculated pieces exist of which this is clearly the finest.

*Ex: Harry Bass Collection (Bowers and Merena, 10/1999), lot 476, where it brought $41,400 as a PCGS MS64; obtained via private treaty by the consignor from Doug Winter.*

*From The Cherokee County Collection.* (#7775)

## 1856-C Quarter Eagle, Ex: Elrod
## The Only MS63 Certified of This Issue

**4763** **1856-C MS63 NGC.** Ex: Elrod. A terrific strike for this issue and really "as made" but showing a high degree of roughness on the planchet as made and common for this issue. At one time, this coin was quite deeply and beautifully toned. It was subsequently dipped and upgraded from MS62 PCGS to MS63 NGC. It should be pointed out that not everyone who saw this coin in its original state was as head-over-heels about it as was this cataloger, and it now has a more commercially viable look that should appeal to many potential bidders. Some light rose and reddish-gold hues can be seen on both sides, and there is more luster visible than on just about any other known example of this scarce date.

There are an estimated five or six examples known of the 1856-C quarter eagle in Uncirculated condition. NGC has graded an example in MS64 which has never appeared at auction. The present piece is the second finest, and it is still the only MS63 ever graded by a third-party service.

*Ex*: *Paul Dingler Collection, Stanley Elrod Collection*; *Long Beach Signature (Heritage, 2/2009), lot 2533, where it realized $18,400.*

*From The Cherokee County Collection.* (#7778)

## 1858-C Quarter Eagle, MS63
## One of the Finest Known

**4764** **1858-C MS63 PCGS. Variety 1.** Naturally bright and vibrant with the body of an MS63+ to MS64 coin but with just a few too many light abrasions in the fields to grade a full MS64. The appearance of this coin is exceptional for the issue. It is nicely toned in pale rose-gold shades and has excellent overall detail. This is one of the finest known examples of the date. It is tied with three others at PCGS for the finest at the service; NGC has graded four in MS63 as well, with none finer. This would make a perfect coin for the quality-conscious type collector searching for a single superb quarter eagle from this mint.

In high grades, the 1858-C is one of the two most common quarter eagles from this mint. There are as many as two dozen known in Uncirculated with most in the MS60 to MS62 range. In properly graded MS63, the 1858-C is extremely rare with probably no more than three or four known.

*Ex*: *Baltimore Signature (Heritage 3/2009), lot 2635, where it realized $17,250 as an NGC MS63.*

*From The Cherokee County Collection.* (#7787)

## Uncirculated 1859-D Two and a Half
## Final Dahlonega Issue

**4765** **1859-D MS61 NGC. Variety 21-M.** The 1859-D is the final quarter eagle issue from the Dahlonega Mint, a fact decided by dwindling output of local gold mines and a reduced inflow of California bullion. From a mintage of 2,244 pieces, only a single variety is known, which retains the same reverse die first used in 1847. The date is entered low and a bit too far to the left. The present honey-gold example is sharply struck given its Southern branch origin, although the eagle's left (facing) leg and the curls near the ear show minor incompleteness. No abrasions are visible on either the fields or devices, and a small mark on the obverse rim at 5:30 is mentioned solely as an identifier. Census: 7 in 61, 1 finer (11/11). (#7789)

## 1859-D Variety 21-M Quarter Eagle, MS62 Possible Finest Known

**4766** **1859-D MS62 PCGS. CAC. Variety 21-M.** The only die pair known among survivors from the production of 2,244 coins, marking the end of the denomination at Dahlonega. Winter estimates as many as 140 survivors, although the mintage implies a lower total. Only 10 to 12 of those coins, including the present specimen, are Mint State, despite a higher certified population that includes 21 submissions graded MS60 to MS62. The latter grade is the finest that either service has certified. A roster of Mint State pieces is included in the Second Edition of Douglas Winter's *Gold Coins of the Dahlonega Mint: 1838-1861*. Most 1859-D quarter eagles that still exist grade in the XF to AU range.

Current certified population data implies an average grade of just under 55 at PCGS and NGC, with only six MS62 submissions and a probable smaller number of actual coins. The present example is one of those MS62, tied for the finest known 1859-D quarter eagle.

Winter writes that there is always some weakness on the right leg and left claw, with other central details normally sharp. This piece shows some atypical weakness on the reverse, with poor design definition around and below the shield. However, clean surfaces lacking the usual heavy abrasions trump the weak strike, and the frosty yellow luster with its delicate green and rose overtones further improves the eye appeal. Population: 5 in 62, 0 finer (11/11). (#7789)

## 1860-C Quarter Eagle, MS62
## Highly Collectible, Final-Year Issue

**4767** **1860-C MS62 NGC. Variety 1.** This example has bright yellow-gold surfaces that show some amount of reflectiveness. As is typical for this issue, there are areas of mint-made roughness in the planchet and these are compounded by some minor abrasions in the fields.

The 1860-C is the final year of issue for quarter eagles from this mint. There were 7,469 pieces produced, of which around 200 or so are known. The 1860-C is very rare in Uncirculated with six or seven pieces known, the best of which, an MS63 NGC, was sold back in October 1993 by Heritage and which seems to have been off the market since then.

*From The Cherokee County Collection.* (#7792)

## Select 1872-S Quarter Eagle
## Underrated Condition Rarity

**4768** **1872-S MS63 PCGS. CAC.** Only 18,000 1872-S quarter eagles were struck, and unlike the date's 1871-S predecessor, which has an appreciable population of Uncirculated coins, the 1872-S is very rare at any level of Mint State, especially MS63 and above. This Select example has generous, subtly frosted luster and a decent (though not full) strike. Only a handful of wispy abrasions pass through the fields, and of the coin's few marks, none are serious enough to warrant individual mention. The color is primarily pale yellow-gold, though a few areas show an apricot overtone. Population: 3 in 63, 1 finer (11/11). (#7816)

## Superb Gem 1892 Quarter Eagle Spectacular Luster

**4769** **1892 MS67 PCGS.** As a denomination, the quarter eagle experienced severe neglect beginning in 1880 and lasting for more than two decades. The 1892 has the smallest quarter eagle business strike mintage of its decade, just 2,440 pieces, and collecting the date poses a challenge even for those with the financial wherewithal to pursue the finest examples. This magnificent Superb Gem will provide an end to one collector's search. Flashy, swirling apricot and yellow-gold luster surrounds intricately detailed, delicately frosted devices. Carefully preserved with incredible eye appeal. A tiny copper spot at the denticles between the first 2 of the denomination and the nearby bullet can serve as a pedigree marker. Population: 3 in 67, 0 finer (11/11). (#7844)

## Gorgeous MS68 1907 Two and a Half Sole Finest PCGS-Graded Coin

**4770** **1907 MS68 PCGS.** This is the *only* 1907 quarter eagle awarded the MS68 grade by PCGS (11/11), a remarkable distinction that makes this piece immediately desirable to Registry Set collectors. Beyond that pool of potential bidders, there are general series enthusiasts who might want to end their collections on a high note, or type collectors seeking the ultimate Liberty quarter eagle.

Regardless of motivation, it is easy to agree that this is a simply gorgeous piece. The strike is impeccable, and rich yellow-gold luster graces wonderfully smooth fields. Both sides are essentially flawless to the unaided eye.

*Ex: The Dr. Mani and Kay Ehteshami Collection (Heritage, 9/2010), lot 5231.*

*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#7859)

Smithsonian

# PROOF LIBERTY QUARTER EAGLES

## 1864 Quarter Eagle, PR66 Ultra Cameo
## Celebrated Civil War-Era Rarity
## None Certified in Higher Numeric Grades

**4771** **1864 PR66 Ultra Cameo NGC. CAC.** The 1864 proof Liberty quarter eagle is one of the rarest issues of the series, but it has always been overshadowed by its close cousin, the famous 1863 issue. The 1863 quarter eagle was only produced in proof format, and its limited mintage of 30 pieces was widely publicized at the time of release, creating an instant classic rarity.

Most numismatists would be surprised to learn that the 1864 proof, with its reported mintage of 50 examples, is just as rare as the 1863 in today's market, possibly even rarer. Jeff Garrett and Ron Guth estimate there are 15-20 specimens of the 1863 quarter eagle still extant, and only 12-18 examples of the proof 1864. The 1864 was not a proof-only issue, but high-grade business-strike examples are even more elusive than the proofs. NGC and PCGS have combined to certify a total of 30 1864 proofs in all grades, but this undoubtedly includes a large number of duplicate submissions. It is likely that many examples of the 50-piece 1864 proof mintage went unsold and were melted after the end of the year.

The present coin is a magnificent Premium Gem with stunning black-on-gold Ultra Cameo contrast between the richly frosted devices and the deeply mirrored fields. The design elements display razor-sharp definition in all areas, and the vivid orange-gold surfaces are virtually free of post-strike defects. A tiny planchet flaw between stars 1 and 2 can serve as a pedigree marker. We can find no record of an auction appearance of an 1864 quarter eagle in this grade, but the spectacular PR65 Cameo coin in lot 5033 of the FUN Signature Auction (Heritage, 1/2011), realized $80,500. Census: 2 in 66 Ultra Cameo, 0 finer (11/11). (#97890)

## 1865 Quarter Eagle, PR65 Ultra Cameo Classic Wartime Rarity, Only 25 Struck

**4772** **1865 PR65 Ultra Cameo NGC. CAC.** The Civil War era was a time characterized by economic and political uncertainty, resulting in the hoarding of all precious-metal coins. The government suspended specie payments, and no gold coins circulated at par. The government was understandably reluctant to issue gold proof sets at face value for paper money during these years, and the ordering process was both arduous and expensive. Writing to T. Harrison Garrett in February 1883, prominent coin dealer W. Elliot Woodward shed some light on the proof set situation:

> "I have sets of gold proofs for 1862-'64-'65, each six pcs., par value each $41.50. They cost in gold when issued $43 each at a time when gold was worth anywhere from 1.20 to 2.85. Gold being so very dear at the time, the number issued was very limited, probably not above 1/2 a dozen, especially of '64 and '65."

Thus, we see that anyone wishing to order a gold proof set in 1865 would first have to purchase $43 face value in gold coins from a bullion dealer, because the Mint would accept only gold in payment. The bullion dealer might charge as much as $120.40 for these coins. As a result, very few proof sets were sold. Woodward's estimate of "1/2 a dozen" may be accurate as pertains to complete gold proof sets, but a few more single coins were probably ordered of the lower denominations. The reported mintage of 1865 quarter eagles was only 25 pieces, and some examples likely went unsold and were melted at year-end. Jeff Garrett and Ron Guth estimate the surviving population at "fewer than 15 coins in private hands today."

The present coin is a magnificent Gem, with profound contrast between brightly mirrored fields and sharply detailed, frosty devices. The pleasing surfaces show a slight orange-peel effect in some areas, typical of proofs from the later 19th century. Only a few minor hairlines and contact marks prevent an even finer grade. Census: 2 in 65 Ultra Cameo, 2 finer (11/11). (#97891)

## 1881 PR64 Deep Cameo Quarter Eagle Among the Finest Graded

**4773** **1881 PR64 Deep Cameo PCGS.** The 1881 quarter eagle had a remarkably low production run of only 51 pieces. Only 29 certification events have been recorded at both major services, giving credence to the estimate by Garrett-Guth of "20 or so" surviving examples. The vast majority of the proofs known are either non-Cameo or Cameo. It is surprising for an issue with such a limited mintage that only six pieces have been certified (all in PR63 or PR64) with Deep Cameo contrast. This example has deep, even reddish-gold surfaces over each side. A few grade-limiting contact marks appear on Liberty's face and in the right obverse field. Population: 4 in 64 Deep Cameo, 0 finer (11/11). (#97907)

## 1883 Quarter Eagle, PR67 Ultra Cameo Tied for Finest at NGC

**4774** **1883 PR67 Ultra Cameo NGC. CAC. B-1.** The first day of January 1879 was a historic one in U.S. numismatics. For many years, since the Civil War, gold and silver did not circulate, and paper money could not be redeemed at banks for gold or silver. That changed in 1879, however, when "parity" was again achieved. Although the Mint had produced large quantities of gold and silver coins in preparation for the event, the U.S. public also had many gold and silver coins squirreled away, and other coins had been shipped to Canada. Once average Americans realized they could redeem paper money for gold or silver anytime they chose, they preferred paper currency for its easy portability — the exceptions were largely in the West, where "hard money" was an established tradition since the days of the California Gold Rush. Many previously hidden gold and silver coins flowed back into the banking system, and new mintages of gold and silver coin issues were for the most part depressed for the next decade or so, through about 1890.

The mintage of the 1883 quarter eagle in business strike format was typical of the time and denomination, a meager 1,920 pieces. Eighty-two proofs complemented the business strike production, although Walter Breen writes that two obverse dies are known for the emission. The present coin is struck from the B-1 dies, showing die polishing in Liberty's ear hole and no polish on the leftmost vertical shield stripe on the reverse. The left edge of the bottom serif on the 1 in the date is over the left edge of a dentil.

The present PR67 Ultra Cameo NGC piece is tied with one other example as the numerically finest Ultra Cameo at that service (11/11). The reddish-tinged surfaces demonstrate profoundly deep fields mirrored against the chalky devices. The obverse fields show striations from die polishing, and as expected of the grade, there are no obvious flaws. The strike is full throughout both sides. A nice morsel of coiner's caviar for the proof gold connoisseurs. (#97909)

## Singular PR65 Cameo 1885 Quarter Eagle

**4775** **1885 PR65 Cameo PCGS. CAC.** Among the more remarkable quirks of the proof Liberty quarter eagle section of the PCGS *Population Report* is that there is only one Cameo-rated 1885 quarter eagle, the present specimen (11/11). There are four Deep Cameo coins and 13 non-Cameo examples from the same year, but a higher numeric grade appears on only one of each (in both cases PR66). It is difficult to dispute either the beauty or the contrast of this Cameo Gem coin, primarily pale yellow with occasional evidence of richer color. Small cloudy areas are present at the left obverse and reverse. (#87911)

## 1885 Quarter Eagle, PR67 Ultra Cameo Pristine, Fully Struck Surfaces

**4776** **1885 PR67 Ultra Cameo NGC. CAC.** The quarter eagle denomination throughout most of its history was a neglected and underutilized one, sporadically minted as business strikes in favor of the half eagle, made regularly since 1795, and the double eagle, introduced in 1850. The decade of the 1880s was a particularly low-mintage era for the quarter eagle business strikes. In the case of the 1885 the mintage was a meager 800 pieces, one of two sub-1,000-coin productions along with the 1881, at 640 coins.

While 19th century proof gold coins are rarities in their own right, the low-mintage business strikes in this series make it much more difficult to find those pieces in high grade, perhaps leading to some spillover among those collectors for whom completeness is a driver.

The production figure for the proof 1885 quarter eagles was a nominal amount at 87 coins, but Jeff Garrett and Ron Guth write in their *Gold Encyclopedia,* second edition, that "for some reason an unusual number of Proof quarter eagles entered circulation. There are quite a few impaired Proof examples known."

The frosted motifs of this Superb Gem Ultra Cameo yield incredible gold-on-black contrast with the deeply mirrored fields. The piece is fully struck throughout, giving the coin even greater eye appeal. Close inspection with a loupe reveals no mentionable flaws on the immaculately preserved peach-gold surfaces. This pristine piece is tied for the finest known at NGC and likely unimprovable. Census: 2 in 67 Ultra Cameo, 0 finer (11/11).

*Ex: ANA Signature (Heritage, 7/2008), lot 1907, which realized $48,875.* (#97911)

## 1892 Quarter Eagle, PR64 Deep Cameo
## Low Total Mintage

**4777** **1892 PR64 Deep Cameo PCGS.** The proof mintage of 105 pieces for this issue complements the business strike emission of only 2,440 examples, providing extra pressure on the small supply of proof coins from date collectors. Many business strikes are understandably prooflike, deceptively so, according to Garrett and Guth. The authors also note that many proof examples are impaired or damaged. Not so the present specimen, with excellently contrasting surfaces, reddish-gold coloration, and a bold, problem-free strike that brings up all the fine detail to good advantage. Population: 7 in 64 Deep Cameo, 6 finer (10/11).

*Ex: FUN Signature (Heritage, 1/2007), lot 3433, realized $18,975.* (#97918)

## 1893 Quarter Eagle, PR65 Ultra Cameo
## 106 Minted, Half Survive
## Seldom Seen Finer

**4778** **1893 PR65 Ultra Cameo NGC.** Remnants of repunching remains visible at the lower parts of all four digits, a diagnostic feature of proof 1893 quarter eagles. From 1859 to 1891, just two proof quarter eagle issues, 1860 and 1887, had mintages of 100 coins or more. From 1892 to 1907, no issues had mintages of less than 100 coins. In 1893, for example, the Philadelphia Mint recorded a proof mintage of 106 coins. For most issues in the 1890s, about half the original proof production are thought to survive.

Certification data at NGC and PCGS supports the survival, once resubmissions are considered. The two grading services have certified 73 submissions, including nine PR65 Ultra Cameo coins, and 13 finer Ultra or Deep Cameo pieces (11/11). This amazing specimen, a splendid Gem Ultra Cameo proof, has brilliant yellow surfaces with deeply mirrored fields and highly lustrous devices. Contrast is exceptional and the strike is full. Census: 5 in 65 Ultra Cameo, 11 finer (11/11). (#97919)

## PR66 Ultra Cameo 1893 Two and a Half Deeply Mirrored and Nicely Frosted

**4779** **1893 PR66 Ultra Cameo NGC. CAC.** The mintage of quarter eagle business strikes in 1893, at 30,000 pieces, was the largest since the slump that began in 1880. Only 106 proofs were produced, however, typical for the era. The quarter eagle was the smallest gold denomination since the gold dollar had been discontinued in 1889, and proof examples were popular. This Premium Gem Ultra Cameo displays a pronounced orange-peel effect on the obverse, less so on the reverse. Orange-gold color dominates surfaces that are essentially flawless, deeply mirrored, and nicely frosted. Census: 6 in 66 Ultra Cameo, 4 finer (11/11). (#97919)

## 1894 Quarter Eagle, PR66 Ultra Cameo Deeply Contrasted Surfaces

**4780** **1894 PR66 Ultra Cameo NGC.** The mintage of business strike 1894 quarter eagles dropped drastically from the previous year, 30,000 pieces in 1893 to 4,000 in 1894. The proof production was a moderate 122 coins, but collectors desiring completeness may opt for a nice proof against an elusive business strike. The surfaces of this pristine PR66 Ultra Cameo example are orange-gold and deeply mirrored, setting up stark contrasted against thickly frosted devices on both sides. This piece is one of five submissions in PR66 Ultra Cameo at NGC, with seven in PR67 and one in PR68, all Ultra Cameo (11/11). (#97920)

## 1894 Quarter Eagle, PR67 Ultra Cameo
## Only One Certified Finer

**4781** **1894 PR67 Ultra Cameo NGC.** It is believed that less than half of the 122-coin mintage of proof 1894 quarter eagles survive today. NGC suggests that "no more than 44 examples" are known while PCGS Coin Facts suggests a higher total of about 70 survivors in all grades. The true survival is probably somewhere between those extremes, or about 50 to 60 examples. Many of those survivors are in lower grades or impaired to some degree, and examples at the top grades are extremely rare.

PCGS has never graded a Superb Gem proof with any designation, and NGC has only certified seven examples in PR67 Ultra Cameo, with a single finer piece (11/11). This beauty has delightful light yellow surfaces with extraordinary contrast between the deeply mirrored fields and the boldly defined, frosty yellow devices. Minuscule lint marks, as struck, are evident on the obverse. (#97920)

## 1895 Quarter Eagle, PR67 Ultra Cameo
## Stunning Field-Motif Contrast

**4782** **1895 PR67 Ultra Cameo NGC. CAC.** The proof quarter eagles of 1895 come from a mintage of 119 pieces. While NGC and PCGS have certified more than 100 coins, Garrett and Guth (2008) suggest that only 50 to 70 examples are actually known. Our Superb Gem Ultra Cameo offering displays stunning gold-on-black contrast and exquisitely struck design elements. Both sides yield gorgeous pumpkin-orange coloration, and neither reveals post-strike impairments. A small, light bluish toning spot midway between the 2 in the fraction and the arrow feather might help future catalogers and researchers identify the coin. Census: 8 in 67 Ultra Cameo, 0 finer (11/11).

*From The Jim O'Neal Gold Type Collection.* (#97921)

## 1897 Quarter Eagle, PR67 Ultra Cameo Impressive Design Candidate

**4783** **1897 PR67 Ultra Cameo NGC. CAC.** Proof quarter eagle production inched upward in the 1890s, with a mintage of 136 proofs in 1897. Like most other dates, it is thought that about half of those coins survive today, or about 70 pieces. The combined 132-coin NGC and PCGS certification total in all grades is just four coins short of the mintage. However, that total includes an unknown number of resubmissions.

NGC has graded four coins as PR67 Ultra Cameo, with 12 finer coins (11/11), although it is difficult to imagine any examples with more eye appeal than the present piece. Both sides have fully and deeply mirrored that provide a wonderful frame for the highly lustrous and sharply defined yellow-gold devices. This impressive specimen is well-suited for a specialized collection or high-grade type set. (#97923)

## PR67 ★ Ultra Cameo 1899 Quarter Eagle Rich Apricot Toning

**4784** **1899 PR67 ★ Ultra Cameo NGC.** A richly toned Superb Gem that displays apricot and orange shades. The original color and exceptional eye appeal were undoubtedly the inspiration for the NGC Star designation. This is a razor-sharp and pristine specimen with glassy fields and luminous devices. The sole identifier for pedigree purposes is a tiny lint mark (as coined) on the field above the nose tip of Liberty. Only 150 proofs were issued, and few of those survive in the present remarkable quality. Census: 7 in 67 ★ Ultra Cameo, 2 finer with a Star designation (11/11). (#97925)

## 1900 Quarter Eagle, PR68 Ultra Cameo
## An Exceptional Type Coin

**4785** **1900 PR68 Ultra Cameo NGC. CAC.** The mintage of proof quarter eagles in 1900 increased to 205 recorded pieces from 150 in 1899; perhaps the extra production was for collectors who wished to observe the nominal start of a new century, even if the actual start was 1901. The Mint during this era produced both complete gold proof sets and individual pieces to order, as demand dictated; Breen estimates that 115 to 120 complete sets were made, but quarter eagles, as the lowest gold denomination, were popular collectibles, explaining the extra complement of them.

Fortunately for collectors, the rather generous mintage — Breen calls the 1900 quarter eagle "possibly the least rare proof of the design" — has led to the survival of a few incredibly high-grade pieces such as this PR68 Ultra Cameo NGC specimen. NGC has seen eight submissions at this grade level — likely not all separate coins — and there are even two submissions finer, in PR69 Ultra Cameo (11/11). (Note that the entire NGC Census Report comprises only six proof Liberty Head quarter eagles of all dates in PR69 Ultra Cameo, two of which are dated 1900 — clearly the issue is among the finest-produced, with good survivability to boot. Part of the good survival rates is itself due to the small denomination, as larger proof gold pieces were more likely to be spent when hard times came knocking.)

This PR68 Ultra Cameo coin shows the repunching on the 1 and 9 in the date that Breen mentions in his *Proof Encyclopedia*. The surfaces are fully struck throughout both sides, profoundly mirrored and deeply contrasted, and the surfaces seem free of even the smallest distraction. An exceptional piece for collectors who desire the finest available examples. (#97926)

PR66 Cameo 1904 Quarter Eagle
Intensely Contrasted Surfaces

**4786** **1904 PR66 Cameo PCGS.** The mintages of proof Liberty Head quarter eagles actually declined as the series crept to its end in 1907, the zenith having been reached during the 1900-1901 centennial observances. The year 1904 saw 170 proof quarter eagles coined, although clearly more survive in high grade than issues from earlier decades. The contrast on this Premium Gem proof seems to verge on the Deep Cameo level. The marvelous, intense reddish-orange coloration over mostly unperturbed surfaces, save for a small patch of marks in the right reverse field, adds to the exceptional eye appeal. Population: 5 in 66 Cameo, 1 finer (11/11). (#87930)

## INDIAN QUARTER EAGLES

1908 Premium Gem Quarter Eagle
Nearly Unimprovable for the Issue

**4787** **1908 MS66 PCGS.** Although the 1908 two and a half is a relatively common date in the Indian quarter eagle series, finding Premium Gem Uncirculated or better examples can be challenging, especially when the eye appeal of an offering is nicer than one would expect for the assigned technical grade. This amber-gold piece is blanketed in rich, satiny luster and boasts pleasing, distraction-free surfaces. The resulting aesthetic qualities of this example exceeds what is typically encountered at the MS66 grade level and the next owner will likely view this coin as unimprovable for the issue. Only two examples have been graded finer as of (11/11) by PCGS.

*Ex: Long Beach Sale (Heritage Auctions, 9/2008), lot 3363.*

*From The Jim O'Neal Gold Type Collection.* (#7939)

## 1909 Quarter Eagle, Sharply Struck MS66 Wonderful Luster and Color

**4788** **1909 MS66 PCGS. CAC.** This is a pleasingly detailed representative with attractive, reddish-gold and lilac color interspersed over each side. These attributes are consistent with the issue's description in Garrett and Guth, which reads in part: "This 1909 issue is more sharply and completely struck than the quarter eagles seen in [1908]. Most examples have eye appeal and are quite lustrous." The authors further note that the issue is available for a price through most grades, even Gem. Registry enthusiasts know that finer examples, such as this MS66 coin, are substantially more elusive. Housed in a green label holder. Population: 16 in 66, 0 finer (11/11).

*Ex: Central States Signature (Heritage, 4/2008), lot 2414; ANA Signature (Heritage, 7-8/2008), lot 1911.*

*From The Jim O'Neal Gold Type Collection.* (#7940)

## 1911-D Two and a Half, MS63 Sharply Defined Throughout

**4789** **1911-D MS63 PCGS.** The price of gold goes up, the price of gold does down. Even though September 2011 saw a memorable steep selloff in gold and silver as well as many basic industrial metals, the lower price of gold made most of the issues in the Indian Head quarter eagle series even more collectible than previously. Save for the key 1911-D quarter eagle, most of the other pieces can be acquired in AU or thereabouts for relatively modest premiums over spot gold. But as the saying goes, "Buy the keys first" — the 1911-D, in this case. This is a well-preserved example that displays bright, sparkling luster. The strike is sharp throughout, including the mintmark. The yellow-gold surfaces has occasional accents of reddish patina, most noticeable surrounding the devices. (#7943)

## Select 1911-D Quarter Eagle
## The Famous Key Date

**4790** **1911-D MS63 PCGS.** In a short gold series with no melt rarities, one issue has a mintage less than a quarter of the next-lowest issue's total. That is the recipe for an obvious key date, and the 1911-D quarter eagle, production 55,600 pieces, has been established as such for as long as collectors have pursued the series as a whole. The present Select example has strong detail on the mintmark and the sunken-relief devices. Broad yellow-gold luster has a suggestion of orange, and the reverse is flashier. Just a handful of wispy abrasions account for the technical grade, and the overall visual appeal is grand. (#7943)

## 1911-D Two and a Half, Lustrous MS63
## Solid Example for the Grade

**4791** **1911-D MS63 NGC.** The Denver Mint produced all four authorized gold denominations in 1911, from quarter eagle through double eagle. The Saint-Gaudens 1911-D double eagle is fairly common within the series context, but the three lower-denomination gold issues are each *a key* to their series. The difference is, that the 1911-D quarter eagle is *the sole key to the set,* while the 1911-D half eagle and eagle are each among numerous key issues within those series. The 1911-D half eagle competes for top honors with the 1909-O and several conditionally rare S-mint fives, while the Indian eagle set hosts a range of issues from tricky to impossible. All of the foregoing serves to make the 1911-D quarter eagle a notable, popular, and singular rarity, even though most of our Signature auctions feature numerous examples. This is a bright, lustrous, well-struck example of this key issue that has very few abrasions to account for the grade. This would be an excellent representative for the collector assembling a well-balanced MS63 set. (#7943)

## Gem 1914 Indian Two and a Half
## Only Three Finer Coins at NGC

**4792** **1914 MS65 NGC.** The 1914 Indian quarter eagle is an elusive date, with a reported mintage of 240,000 pieces. Michael Fuljenz writes in his series reference of the 1914: "The 1914 is the second rarest Indian Head [quarter eagle] in terms of its overall rarity and it is one of the rarest in high grades. Gem examples are very rare." In fact, examples graded above the Gem level can virtually be counted on one hand. Fuljenz ranks the 1914 second in rarity in the series in Gem grade, solely behind the 1914-D issue.

The present coin is a spectacular Gem, with razor-sharp definition on all design elements. Even usual problem areas, like the lower headdress feathers and the eagle's leg, are strongly impressed. The light greenish-gold surfaces have a slightly granular texture, with bright mint luster. Census: 43 in 65, 3 finer (11/11). (#7946)

## 1914 Quarter Eagle, MS65
## Rich Color and Thick Mint Luster

**4793** **1914 MS65 PCGS. CAC.** Collectors less familiar with the series might group the 1914 Indian Head quarter eagle with the 1913 and 1912 issues, but such a move would be in the wrong direction. The 1914 has more in common with the 1914-D and the 1911-D.

While the 1912 saw a production of more than 600,000 coins and the 1913's was 722,000 pieces, the 1914 mintage of 240,000 examples was the second-lowest of the series. In Gem condition the 1914 is downright rare. Considering the numbers certified at NGC and PCGS in Gem and finer grades, the 1914 appears second only to the 1914-D, with the key 1911-D in third place in total Gems graded.

While this coin's MS65 grade is a combination of factors, they all work out, in essence, to *eye appeal*. No marks are visible without a loupe, and under magnification the few marks present are away from the focal areas, as expected. The color is wonderful antique-gold, with mattelike surfaces and good luster. The strike is sharp, well-defined on the headdress feathers and the eagle's plumage. PCGS has certified only three examples finer, with three more at NGC (11/11).

*Ex: ANA Signature (Heritage, 7-8/2008), lot 1913.*

*From The Jim O'Neal Gold Type Collection.* (#7946)

## Well-Defined 1914-D Gem Quarter Eagle Nearly Unobtainable Any Finer

**4794** **1914-D MS65 NGC.** The present 1914-D quarter eagle Gem offering is a special coin in the current sale because it is the highest grade that most collectors can hope to locate of this issue. NGC has certified just one example finer (a Superb Gem in MS67) and PCGS has graded none better than MS65.

Frosty vibrant luster runs over both sides, each of which displays yellow-gold coloration. The design features are better defined than typically seen on the issue, including the Indian's headdress feathers and the eagle's leg and wing feathers, the elements of which are often weak. The eagle's shoulder feathers are also sharp. A few minute abrasions are consistent with the grade classification, and a couple small splashes of light reddish patina are visible on the obverse. (#7947)

## Gem 1914-D Quarter Eagle, Once Part Of Number One All-Time Registry Set

**4795** **1914-D MS65 PCGS Secure.** Ex: Donald A. Kutz. Previously the 1914-D entry in The Donald A. Kutz $2 1/2 Indian Collection, which rates as the PCGS Number One All-Time Finest Registry Set for the series; recently the collector "sidegraded" by adding The Shrike Set's MS65 PCGS, CAC example. (See our September 2011 Long Beach Signature Auction 1159, lot 4252.) Of course, many Registry Set collectors looking to dethrone the Donald A. Kutz set could gain from adding this Gem in a PCGS Secure holder.

As of (11/11), PCGS has graded 40 examples of the 1914-D two and a half in MS65 with no Plus or numerically finer pieces. Combined with the NGC figures (including a single numerically finer coin), the 1914-D emerges as a borderline condition rarity in Gem. This may not seem impressive, but consider that *every other* Indian quarter eagle issue has at least one PCGS-certified example in MS66 or better, and except for the 1911-D, the 1914-D has the lowest PCGS population of Gem-and-better pieces. If the 1911-D is the obvious all-grades key date, the 1914-D is the key in high grades.

This elegant Gem example shows off a great mix of technical merits and eye appeal, pointing to why the coin was included in the Donald A. Kutz collection in the first place. Yellow-orange and wheat outer tones also appear at the inner reverse, while the obverse has a light, almost canary-gold hue. Excellent detail with a single readily visible flaw over the eagle's wings but only wispy marks elsewhere.

*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#7947)

Smithsonian

## 1926 Premium Gem Quarter Eagle Elusive at This Grade Level

**4796** **1926 MS66 PCGS.** It is uncommon to locate this or any other date in the Indian quarter eagle series in such a superior state of preservation. The incuse design lends itself to abrasions in the fields, which are exposed rather than recessed as on other coins. As a result, even comparatively available issues such as the 1926 are elusive in grades above Gem. The delightful Premium Gem in the present lot is just such a coin. It has strong mint frost and attractive golden-rose and mint-green coloration interspersed with traces of lilac on both sides. The design features are sharply defined, including the Indian's hair and headdress feathers and the eagle's shoulder and leg plumage. Neither NGC nor PCGS has certified a numerically finer representative (11/11).

*Ex: ANA Sale (Heritage Auctions, 7/2008), lot 1915.*

*From The Jim O'Neal Gold Type Collection.* (#7950)

# PROOF INDIAN QUARTER EAGLES

## Matte Proof 1911 Quarter Eagle A Splendid Premium Gem

**4797** **1911 PR66 PCGS.** The history of the proof gold coinage of the United States after 1902, and particularly starting with the introduction of the new Saint-Gaudens and Pratt designs in 1907 and 1908, is interesting but confusing. In the case of the quarter eagle proofs, the Mint in 1908 introduced a heavy matte, coarse-grained texture that bombed with the collecting public. The Roman or satin finish of the 1909-1910 coinage was similarly unpopular, and in 1911 the matte texture reappeared. The matte texture of 1911 was, however, a finer-grained effect that apparently had better resilience: "This date has the largest population of gem condition or finer pieces, and if a PF-66 or even PF-67 coin is desired, this date is the most obtainable of the series" (Garrett and Guth, 2006).

This piece boasts splendid, smooth olive-gold surfaces that appear almost completely undisturbed. Only a couple of tiny luster grazes appear under a loupe, under the ED of UNITED on the reverse and to the left of IN above the eagle's back. The strike is all that can be desired. A wonderful coin to represent this elusive matte gold proof type. Population: 11 in 66, 15 finer (11/11).

*From The Jim O'Neal Gold Type Collection.* (#7960)

## Matte PR66 1911 Quarter Eagle Coarse-Grained Surfaces

**4798** **1911 PR66 PCGS. CAC.** After the Mint reverted to the matte or sandblast finish from the Roman or satin finish used in 1909 and 1910, the 1911-dated dated quarter eagles were produced in a darker matte finish similar to the 1908. This piece displays coarser granules than on the 1908 pieces, with yellowish-green color prevailing and lilac at the top of the reverse. A series of extremely faint, almost imperceptible grease stains runs from the chin to star 3 on the obverse, a trait that would likely go unnoticed without strong magnification. The surfaces are free of mentionable contact. Population: 11 in 66, 15 finer (11/11). (#7960)

## Fine-Grained Matte PR66 1912 Quarter Eagle

**4799** **1912 PR66 PCGS. CAC.** The Mint in 1912 produced a fine-grained sandblast or matte-textured surface on the proof gold, visible on the present Premium Gem proof quarter eagle. Garrett and Guth write that the fine sandblast texture is composed of "reflective microscopic facets." Those tiny reflective granules are on display here against a background of pale greenish color. The surfaces are essentially unmarked and flawless in terms of post-strike contact, but the strike is surprisingly soft, especially noticeable on the lowest feather of the headdress and the eagle's breast. Population: 9 in 66, 4 finer (11/11). (#7961)

## Gem Matte Proof 1913 Quarter Eagle
## Few Finer at PCGS

**4800** **1913 PR65 PCGS. CAC.** The 1912 and 1913 matte proof quarter eagles both show about equal rarity and similar surface finishes, and both are absolutely rare in the overall scheme for the type. The surfaces on this Gem PCGS proof show medium-sized granules that create the typical modicum of reflectivity at the microscopic level. The surfaces exhibit deep reddish-gold coloration, complementing a daub of lilac on the Indian's face and the eagle's wings. The grade is limited from an even finer one by a couple of near-imperceptible contact marks on the upper reverse. An issue seldom seen finer. Population: 14 in 65, 9 finer (11/11). (#7962)

## 1913 Quarter Eagle, PR67
## Remarkable Matte Finish

**4801** **1913 PR67 NGC.** The 1913 had a mintage of 165 proofs, and of that number perhaps 60-75 separate coins are believed known today. The average grade is quite high, with that from our auction data being 64.4. The Garrett-Guth (2008) average grade is somewhat higher at 65.3. Given that one should find it somewhat easy to locate a high grade (if a 1913 proof can be found), a PR67 such as this is very close to the finest obtainable. Only four PR68 examples have been certified, and this coin is tied with nine other PR67s as second finest (11/11). This immaculate coin has dark, almost khaki-green color. The surfaces are finely faceted with minute granularity from the matte finish. There are no obvious contact marks or shiny spots on either side of this remarkable piece of matte proof gold.

*Ex: ANA Sale (Heritage Auctions, 7/2008), lot 1916.*

*From The Jim O'Neal Gold Type Collection.* (#7962)

## Last-Year Matte PR66 1915 Quarter Eagle

**4802** **1915 PR66 PCGS. CAC.** The 1915 gold coinage comprised the last of the matte proof gold of the Saint-Gaudens and Pratt designs, ringing down the curtain on what was certainly the most celebrated performance in American numismatics. (A few McKinley commemorative gold dollar proofs were struck in 1916.) The surfaces on this last-year proof display medium-sized granules over olive-tinged surfaces accented with lilac on the Indian's neck. A shallow diagonal depression appears on the reverse, up to the left from the I in IN. The low mintage of an even 100 proofs ensured that this issue would be among the rarest in the series. Population: 5 in 66, 2 finer (11/11). (#7964)

# THREE DOLLAR GOLD PIECES

## Gem 1854 Three Dollar Gold Sharply Struck With Dazzling Luster

**4803** **1854 MS65 PCGS. CAC.** The 1854 three dollar gold was the first-year issue of what some considered to be an unnecessary denomination. Many were saved as souvenirs and others circulated only briefly, with some ending up as cufflinks or other jewelry. Specimens are fairly available through the MS64 grade level, but Gem and better coins are more difficult. PCGS and NGC have seen fewer than 30 submissions pieces in MS65, with about 20 finer (11/11).

The present Gem exhibits dazzling luster radiating from peach-gold surfaces accented with tinges of lime-green. The design elements are well-impressed, including the hair beneath the headband, which is often weak on this issue. The lower part of the 8 in the date reveals minor softness. Both sides are nicely preserved, although an unobtrusive pinscratch is concealed in the hair beneath BER, along with a minuscule obverse rim tick at 11 o'clock. Population: 19 in 65, 10 finer (11/11).

*Ex: ANA Signature (Heritage, 4/2006), lot 1770, which garnered $26,450.* (#7969)

## Seldom-Seen Mint State 1854-D Three Dollar Bright, Brassy-Gold Surfaces

**4804** **1854-D MS60 NGC.** Ex: Kupersmith Collection. The 1854-D was the only three dollar gold piece struck at the Dahlonega Mint, to the extent of 1,120 coins. The Dahlonega Mint was established in 1838 to strike locally mined North Georgia gold into coinage.

Jeff Garrett and Ron Guth write in *Encyclopedia of U.S. Gold Coins*:

> "The quality of the coins struck at the Georgia mint was miserable, due in part to poorly prepared dies and in greater part to an almost complete inattention to quality control. Virtually all (1854-D three dollar coins) are poorly struck on dull, lackluster planchets"

David Bowers, in *United States $3 Gold Pieces*, notes that most extant examples grade from Very Fine to About Uncirculated. He estimates that only two to four Mint State coins exist today. NGC and PCGS have seen a total of 13 Uncirculated pieces, some likely resubmissions. None of the certified coins grade higher than MS62.

The present Mint State example is among the finest that most collectors can hope to obtain. Its bright brassy-gold surfaces display satiny luster in the protected areas and a somewhat better-than-average strike. Most of the bonnet is sharp, and LIBERTY is bold. The reverse wreath is much better defined than usual, including the leaf to the left of the date, an element typically incomplete. The dentils reveal the usual shallowness, however, and portions of the hair are weak. Several minuscule handling marks are noted but do not significantly detract. Collectors desiring a high-grade example of this issue should give this coin serious attention. (#7970)

## Near-Mint 1854-O Three Dollar
## Advanced State of the Dies

**4805** **1854-O AU58 NGC. Variety 2.** Most 1854-O threes show some trace of a die crack through the mintmark, it is almost diagnostic. This piece shows the same forked crack on the left and one crack on the right side of the O as the MS63 coin in this sale. Heavy die lapping is also seen on the reverse with missing portions of the ribbon loops on the lower wreath. Only slight high-point friction is seen over the devices and in the fields, and there is significant luster remaining surrounding the devices. The coin is green-gold, and there are a number of small, but individually insignificant abrasions on each side. A shallow planchet depression extends from the middle of the headdress to the rim between the TA in STATES. (#7971)

## 1854-O Three Dollar Gold Piece
## Rare Mint State Example

**4806** **1854-O MS61 NGC. Variety 1.** The 1854-O three dollar is popular as the only New Orleans coin of this denomination. Despite a relatively low mintage of 24,000 pieces, this issue is easy to obtain in most grades, except Mint State. NGC and PCGS combined have graded only 20 Uncirculated pieces to date, *none* finer than MS63. The present MS61 example is thus the finest that most collectors are likely to encounter, as the two services have seen only five pieces finer, some of which may well be resubmitted coins. Its bright peach-gold surfaces display considerable luster and exhibit well-defined design features. The mintmark shows no trace of a die crack. Distributed light handling marks limit the grade, nevertheless, a rather nice piece for the designated grade. (#7971)

## 1854-O Three Dollar Gold, MS63 Sole Finest Certified of This First-Year Branch Mint Issue

**4807** **1854-O MS63 NGC. Variety 2.** The strange, unusual three dollar gold denomination debuted in 1854. Three mints made the first coins, and two other mints could have. Philadelphia understandably made the lion's share, an enormous output of 138,618 business strikes (plus a handful of 1854 proof threes; please see the nice one in the present Platinum Night), apparent anticipation for the popularity of a new denomination that turned out to be anything *but* popular.

The Dahlonega Mint made a valiant effort — let's give them a D — with a small complement of 1,120 pieces, the only time the mint in northern Georgia ever struck the denomination.

The mintage at New Orleans, the Queen of the Delta, was a respectable 24,000 pieces, certainly admirable given the large numbers of other coins — chiefly silver Seated coinage but quite a few gold pieces as well — that the facility managed to turn out in 1854.

While San Francisco made no three dollar gold pieces, it was established and striking its first gold coins by April 1854, so it certainly could have made a few pieces — and they would probably have been great rarities, like the 1854-S quarter eagles and half eagles.

Finally, the Charlotte Mint also failed to strike any gold threes in 1854; in fact, it never struck the denomination at all, although again the theoretical possibility existed.

The 1854-O issue represents, as well, the only time that New Orleans struck the denomination. It seems as though the pieces circulated in and around New Orleans rather widely, as most certified examples average about Choice XF, and Mint State examples are great rarities. The well-circulated condition of most 1854 threes seems to indicate a burgeoning local economy, powered by steam, riverboat, and international traffic, one of the main reasons that the New Orleans Mint was established in the first place in 1838.

The present Select Mint State example shows a slight greenish tinge over semiprooflike surfaces that are sharply struck throughout. Two linear planchet flaws appear, one through the I in UNITED, a second to the left of U. Some planchet flaking is evident to the right of OF. The reverse shows pronounced die cracks through the mintmark, one extending to the right margin at 4 o'clock. This piece is the single finest example certified of the issue at either NGC or PCGS (11/11). (#7971)

## Near-Gem 1856 Three Dollar Scarce in Mint State

**4808** **1856 MS64 PCGS.** By the third year of the three dollar denomination, it was clear that demand was supplanted by the quarter eagle. The 1856 mintage at Philadelphia was only 26,010 pieces, about one-fifth the 1854 coinage and about one-half the 1855 emission. The 1856-S had a higher mintage than its Philadelphia counterpart, for the first and only time for the series. Although later Philly dates were hoarded to some extent, especially the 1878, the 1856 is very scarce in Mint State, and is a great rarity above the MS64 level. This is a coruscating near-Gem without any visible marks. There are a couple of minuscule strike-throughs (as made) on the right obverse field and a brief, slender streak of struck-in grease near the right wreath end. Population: 33 in 64, 3 finer (11/11). (#7974)

## 1868 Three Dollar Gold, MS66 Frosty Two-Toned Surfaces Tied for Finest at PCGS

**4809** **1868 MS66 PCGS.** After the Civil War ended in 1865, gold and silver coins remained a precious commodity that was hoarded and remained totally absent from circulation, except on the West Coast. Similarly, mintages of gold coins remained extremely small, especially at the Philadelphia Mint. At the time, the only operating branch mint was in San Francisco. The New Orleans, Dahlonega, and Charlotte mints had all ceased operations at the start of the Civil War, and only New Orleans would eventually reopen. The Carson City Mint was in the planning stages but had not yet opened its doors.

Total production of three-dollar gold pieces during 1868 was 4,875 coins, including 25 proofs. Today, it is estimated that fewer than 100 Mint State examples of the 1868 survive, along with 300 to 400 circulated pieces, according to Q. David Bowers in *The United States $3 Gold Pieces*. Nearly all existing Mint State coins are in the lower numeric levels from MS60 to 63. Gem survivors are extremely rare, as the population totals amply demonstrate. The present coin is one of just two MS66 coins at PCGS, with none finer (11/11). NGC has never graded an MS66 and has only certified one finer piece.

This is a remarkable Premium Gem example of this better date, with frosty yellow-gold luster on both sides. The surfaces display hints of pink and traces of blue or green toning. Perhaps the only criticism of this example is the strike, which exhibits some weakness at the ribbon bow on the reverse.

*Ex: Dallas Signature (Heritage, 10/2006), lot 2656, which brought $38,813.* (#7989)

## 1880 Prooflike Three Dollar, MS64
## Deeply Reflective Fields

**4810** **1880 MS64 Prooflike NGC.** The 1880 three dollar is a rarity whether it is a business strike (mintage of 1,000 pieces) or as a proof (36 pieces). Of course, the low mintage of circulation strikes means all are essentially first-strikes, and in the past there has been confusion between prooflike business strikes and actual proofs. This must have been one of the first coins produced. The fields are deeply reflective and there is significant mint frost over the devices. A few tiny marks are distributed over each side, but the only one of any significance is a planchet flake out of the right obverse field. Only three other pieces have been so certified by NGC and none are finer (11/11). (#8002)

## Gem 1883 Three Dollar Gold Piece
## An Excellent Type Coin

**4811** **1883 MS65 NGC. CAC.** The 1883 three dollar gold piece is a popular date because of its low mintage of 900 pieces. A fairly high number of the original mintage has survived to the present day, however, judging from the more than 300 coins that have been graded by NGC and PCGS. A relatively large number of these are in the Mint State levels of preservation, making the issue a popular choice for high-grade type collections.

The yellow-gold surfaces of this Gem display pleasing field-device contrast, especially when the coin is tilted under a light source. Additionally, all of the design elements are sharply impressed, enhancing even more the coin's outstanding eye appeal. This is a minimally marked example, just a breath away from the next highest grade. Census: 7 in 65, 0 finer (11/11).

*From The Jim O'Neal Gold Type Collection.* (#8005)

## Attractive 1885 Select Three Dollar

**4812** **1885 MS63 NGC.** Only a few gold issues had mintages under 1,000 pieces, including the 1885 three with a business strike production of only 801 coins. As such it is scarce in nearly all grades. The bright surfaces of this brassy-gold Select specimen display partially prooflike fields that offer mild contrast with the devices when the piece is rotated under a light source. An exacting strike imparts sharp definition to the design elements. Magnification brings out light grade-limiting handling marks in the fields. Nevertheless, this is a highly attractive coin for the grade. Census: 9 in 63, 20 finer (11/11). (#8007)

## Semireflective Gem 1887 Three Dollar

**4813** **1887 MS65 PCGS.** The 1887 three dollar gold piece has the highest mintage of any business strike issue for the final decade of the denomination. Of course, "highest" is relative, because the mintage amounts to just 6,000 pieces, an order of magnitude below the production of type dates such as the 1854 and 1878. While a number of examples were saved in Mint State, Gems such as this lot are condition rarities. Butter-yellow fields offer watery partial reflectivity, while the interiors show lavender-silver accents. The strike is a trifle soft, but the preservation is excellent. Population: 24 in 65, 8 finer (11/11). (#8009)

## Premium Gem 1888 Three Dollar Tied for Finest NGC-Certified

**4814** **1888 MS66 NGC.** An exquisite canary-gold Premium Gem that boasts potent luster and a full strike. A loupe is required to view the few trivial field abrasions that limit the grade. An important example of a popular penultimate date that is unimprovable in an NGC holder. As is the case with all survivors from the meager business strike production of 5,000 pieces, the obverse is strongly die doubled, visible on UNITED. On the reverse, the date is deeply entered and slopes strongly north. Proofs of this date do not exhibit obverse die doubling and have a level date. Census: 16 in 66, 0 finer (11/11). (#8010)

# PROOF THREE DOLLAR GOLD PIECES

## Incredibly Rare 1854 Three Dollar Gold
## PR64 Cameo, One of the Two Finest Certified

**4815** **1854 PR64 Cameo PCGS. CAC.** Heritage has the privilege of offering the numerically finest 1854 proof three dollar gold piece that we have ever handled in PR64 Cameo PCGS, a coin of immense historic importance and tied for the finest known.

The three dollar gold denomination was authorized by the Mint Act of 1853, a modern convenience that would supposedly enable the public to buy sheets of 100 three-cent stamps with one specimen of the new denomination.

The plan failed miserably. The first pieces came off the presses in 1854; the public remained unimpressed, and for most of its short history, the three dollar gold denomination was little struck and seldom seen.

As Q. David Bowers writes in *The United States $3 Gold Pieces 1854-1889:*

> "On April 28, 1854, the Mint struck 15 Proof examples that were sent by Mint Director James Ross Snowden to the Secretary of the Treasury James Guthrie in Washington. Others were retained at the Mint, including two by Chief Engraver Longacre. Interested numismatists could obtain specimens there. Thus was initiated what became an uninterrupted string of Proof issues, although production was exceedingly low for the next several years."

When cataloging the John Jay Pittman example (Akers, Part Two, 5/1998), lot 1886, David Akers published a census of nine pieces but added that a few other examples might survive. Akers wrote:

> "Approximately 15-20 1854 Three Dollar Gold pieces were struck in Proof to mark the first year of issue of this new, unusual, and ultimately unnecessary denomination. We know that 15 Proofs were sent to the Secretary of the Treasury on April 28, 1854, and it is likely that a few others were struck for inclusion in presentation sets. Today, only an estimated 7-10 Proofs can be accounted for, nearly all of which are of relatively low quality. This would seem to indicate that most of the Proofs eventually must have ended up in the hands of non-numismatic people who did not know how to care for them properly."

A clue to the existence of subsequent proofs is also provided by Breen when he writes, "It is probable that a few others [proofs] were made at the beginning of the new coinage of this denomination, May 1, 1854." By the time Bowers published his series reference in 2005, he estimated that 20 to 30 proofs in all had been made, of which some 10 to 14 survive. For what it is worth, we publish here the combined certified populations at NGC and PCGS as of November 2011:

**—NGC.** PR64; PR62 (2); PR61; PR58.

**—PCGS.** PR64 Cameo (2); PR63 Cameo (2); PR62.

The certified populations thus include 10 specimens, likely counting duplications. One specimen is known in the Smithsonian. As Akers noted, most of the certified examples are at the PR63 level or lower. The present PR64 Cameo example as noted is tied for finest at PCGS assuming the two submission events are different coins, which we believe they are. The other PR64 Cameo PCGS is the Garrett-Johns Hopkins-Wayne S. Rich example (Bowers and Ruddy, 2/1979, lot 417; Bowers and Merena, 3/2002, lot 192: "Olive-gold with some delightful pale orange highlights."), a piece that brought $73,600 nearly 10 years ago.

The fields on this near-Gem are deeply mirrored and set up excellent contrast with the moderately frosted devices. A few light hairlines appear in the field, far less severe than on most specimens seen. The strike details are pinpoint-sharp, uniformly so. Another distinguishing characteristic from the Garrett-Johns Hopkins example is the coloration, here yellow-gold with a noticeable tinge of red around the margins. As one of the two finest examples of this incredibly rare first-year subtype, with the small DOLLARS on the reverse — and the only PR64 Cameo with the CAC green label — this piece should be set for some spirited bidding when it crosses the auction block, a standout coin even among the many great coins in this superb Platinum Night session. Population: 2 in 64 Cameo, 0 finer (11/11).

*Ex: Ohringer Collection (Goldbergs, 9/2008), lot 1231, which realized $149,500.* (#88017)

## 1871 PR63 Cameo Three Dollar
## Probably Only 10 Survivors

**4816** **1871 PR63 Cameo NGC.** Mint records show 30 proofs were minted, but few have survived. Although Dave Bowers estimated 15 to 20 known proofs, we believe the true number of survivors may be around 10 coins, including the Eliasberg PR65, the Trompeter PR64, the Smithsonian Institution PR64 Cameo, the Bass Collection proof, the Garrett Collection proof, and the Norweb impaired proof. Few other auction records exist, and only 16 submissions to NGC and PCGS have been certified. This lovely Cameo proof has excellent contrast with rich reddish-gold surfaces and deeply mirrored fields. A few scattered marks can be seen on each side. Census: 3 in 63 Cameo, 0 finer (11/11).

*Ex: Long Beach Signature (Heritage, 9/2007), lot 3363.* (#88034)

## Gem Cameo Proof 1874 Three Dollar
## Recorded Mintage of 20 Proofs

**4817** **1874 PR65 Cameo NGC.** The recorded proof mintage of this issue, just 20 specimens, contrasts with the bounteous 41,800 business strikes made the same year. Not all numismatic scholars agree with the proof figure; Garrett and Guth, in the *Encyclopedia of U.S. Gold Coins,* write that they "have no faith in the mintage figure for this date, as nearly 30 examples have been certified" by major grading services.

NGC and PCGS together account for 29 certification events, and even after accounting for the inevitable tide of resubmissions, the typical survivorship estimates — the PCGS *Population Report* suggests "16 to 18 known" — do not fit known survival rates for similar proof issues. Of course, even if a handful of proof 1874 three dollar gold pieces were minted "off the record," the issue is still very rare regardless of condition, and the marketplace treats it as such.

An interesting wrinkle of the NGC *Census Report* data is that all 14 of the certification events are in the Cameo category (no "plain" or Ultra Cameo pieces), and further, that all 14 events slot into one of two grade levels: 12 were graded PR64 Cameo, and two PR65 Cameo. This Cameo Gem specimen has great contrast between sharply struck, distinctly frosted devices and pale gold mirrors that turn "black" at certain angles to the light. The left obverse field shows minor clouding and a long die polishing line, the latter a natural feature left by the dies and not an influence on the technical grade. (#88038)

UNITED STATES OF AMERICA

3
DOLLARS
1875

# 1875 Three Dollar Gold Piece, PR64
# Pedigreed to Lorin Parmelee in 1890
# The '29th Greatest U.S. Coin'

**4818** **1875 PR64 PCGS. CAC.** Aside from the unique and currently unavailable 1870-S, the proof-only 1875 three dollar gold piece is the rarest issue in the series, a classic American numismatic rarity. Inclusion of an 1875 three dollar gold piece defines a great collection of that series. Jeff Garrett lists it as number 29 in the third edition of *100 Greatest U.S. Coins*. Garrett writes: "The 1875 $3 gold piece has been a long-time favorite among numismatists, given its tiny mintage and perennial fame."

Mint records state that 20 proofs were minted on February 13, 1875. However, current research shows that about 30 pieces are known today, suggesting an original mintage of approximately 60 proofs. Many pages have been written about the existence of original and restrike varieties, originating with Walter Breen in the 1950s. Breen explained that some pieces have prominent rust marks on the letters OL in DOLLARS, and assumed that those pieces were restrikes. Others have picked up the idea, such as Jeff Garrett and Ron Guth in the *Encyclopedia of U.S. Gold Coins 1795-1933,* writing: "The mintage of 20 Proofs is on the low side, thanks to some extra striking that went on at a later date in secrecy."

In his 1976 auction analysis of the three dollar gold pieces, David Akers addressed the question of original and restrike pieces:

> "The term 'restrike' has been used when discussing the 1875, but properly used, the term 'restrike' denotes a coin that is struck in a year later than its date. Such has not been conclusively proven to be the case with the 1875 three dollar gold piece, and although there are differences between known specimens, it is more than likely that they were merely struck at different times during the same year rather than in different years."

Determining the existence of restrikes, coins struck in years after 1875, necessitates an exhaustive review of dies and die states for all years. If a common obverse die can be found for 1875 and for later issues, and if the later issues are found to be an earlier die state, then the existence of true 1875 restrikes will be proven. In the May 2000 Bass catalog, offering this identical specimen, Dave Bowers wrote:

> "The difference between 'originals' and 'restrikes' is a bit fuzzy as per contemporary literature, and perhaps if more details are learned from other specimens, the situation would become more clear."

The obverse of this specimen has the lower loop of the first S filled and shows a die line through the F in OF. Scattered die rust is evident in the fields and hidden in the devices. The reverse has a short die line near the denticles at 1:30. There are also raised rust marks on OL of DOLLARS. The existence of characteristics of both "original" and "restrike" pieces shows that there actually is just one die variety.

The late Harry W. Bass, Jr., owned two examples of the proof-only 1875 three dollar gold piece. The other specimen was retained for the Bass Core Collection, now on display at the American Numismatic Association museum in Colorado Springs, Colorado.

Bass acquired this splendid Choice proof from the Eliasberg sale in 1982, where the catalog gave an earlier provenance to the Wilcox Collection in 1901:

> "Of the greatest rarity-but 20 coined! The only specimen offered at auction in ten years! Originally from Parmelee collection through S.H. & H. Chapman to Seagrave to S.H. & H. Chapman again, and sold in the set to Wilcox."

Parmelee may have acquired this specimen directly from the Philadelphia Mint in 1875, as he was active throughout the 1870s. Just 15 years after it was minted, this piece realized $51 in the Parmelee sale, a substantial sum at the time. The second most expensive three dollar gold piece in that sale realized just $15, and most others sold for less than $10 each.

This beauty has highly lustrous yellow-gold devices with bold features that display delicate orange highlights, all over deeply mirrored fields with attractive greenish patina and faint violet overtones. Population: 4 in 64, 0 finer (11/11).

*Ex: Lorin G. Parmelee (New York Coin & Stamp Co., 6/1890), lot 1398; Lincoln T. Seagrave; C.S. Wilcox, Esq. (S.H. and H. Chapman, 11/1901), lot 150; John H. Clapp; Clapp Estate (1942); Louis E. Eliasberg, Sr.; Eliasberg Estate (Bowers and Ruddy, 10/1982), lot 301; Harry W. Bass, Jr.; Bass Estate (Bowers and Merena, 5/2000), lot 283.* (#8039)

## 1876 Three Dollar, PR65+ Cameo
## One of the Finest Known
## Only 45-60 Believed Extant

**4819** **1876 PR65+ Cameo NGC.** Only proofs were struck of the 1876 three dollar, and precious few of those. The official mintage was only 45 pieces, but it appears that more were actually produced but not officially recorded. Harry Bass identified two die states of one die, and another completely different die that he believed were restrikes. This coin appears to come from that second die pairing. However, concerning the restrike status of these coins, the Bowers-Winter reference on the series states: "The use of a rusted obverse die does not seem to indicate that this issue was made later than 1876, as the die could have rusted before that time." There is a subtle difference between the two dies, but it is discernible when pointed out. The difference lies in the placement of the 1 in the date relative to the first L in DOLLAR. On the "originals," the flat part of the 1 is completely under the left serif of the first L. On the so-called restrikes, the 1 is shifted slightly left. Also, Harry noticed the lack of parallel lines near the I in LIBERTY on the obverse.

The often-seen "halo" in the obverse fields is also seen on this piece, this is seen on a number of dates in the proof three dollar series. Slight orange-peel texturing is seen in the fields, an indication that the planchet was placed in an annealing furnace that was too hot for gold, and had not cooled sufficiently from annealing silver, nickel, or copper planchets. The fields show deep reflectivity and the devices are heavily frosted, yielding the pronounced cameo contrast seen on each side. Mint-made die striations are seen on each side, but there are no mentionable post-striking defects on either side. Census: 1 in 65+ Cameo, 1 finer (11/11). (#88040)

**1876 PR66 Cameo NGC. CAC**

**1876 PR66 Cameo NGC. CAC**

# 1876 Three Dollar Gold, PR66 Cameo
# Sole Finest Cameo Graded of This Proof-Only Issue

**4820** **1876 PR66 Cameo NGC. CAC.** The present Premium Gem Cameo proof 1876 three dollar gold is the finest Cameo example of the issue certified at either service, and NGC has graded one each in PR66 and PR67 Ultra Cameo numerically finer (11/11). The 1876 is, like the 1875 that precedes it, a proof-only issue in the series; no business strikes were made in either year.

Like so many early proof issues, conjecture is plentiful when it comes to the 1876 three dollar gold pieces. Q. David Bowers writes in the 2005 series reference:

> "The 1876 $3 is in essence déja vu 1875. Only Proofs were struck, no coins at all for circulation. The Mint stated that just 45 were made, but many numismatists believe that a few more were coined and not reported. Similar to the 1875, the 1876 is a famous rarity. Indeed, it is the second rarest Philadelphia Mint three-dollar coin, but is not the rarest *Proof*.
>
> "As to how many were actually struck and how rare they are today, guesses are aplenty and facts are scarce. The authors estimate that perhaps 40 to 60 are known, this based upon the historical record and considered opinion. If you like number games, contemplate that just 20 certifications have been done for the 1875 $3 as compared to 68 for the 1876, and you can conclude that whatever the rarity of the 1875 may be (also a guessing game), the 1876 is nearly four times more plentiful. However, in the real world that is not the case.
>
> "In his 1979 study of the $3 series, David W. Akers commented that Proof 1876 threes appeared more often at auction than did Proofs of any other date. Perhaps this should be modified by a comment to the effect that anyone seeking to complete a date run of $3 coins absolutely *needs* a Proof 1876, but for all other years, save for 1875, a circulation strike will do."

The combined certified population totals now stand at 20 proof examples of the 1875 versus 80 of the 1876 proofs at NGC and PCGS combined, and the kind folks at PCGS offer their own survival estimates: 17 to 20 of the 1875, and 35 to 40 of the 1876.

Number games aside, this piece is definitely in the upper echelon, both numerically and aesthetically, of the certified survivors. The surfaces are deeply mirrored on each side, displaying nicely frosted devices. There is a slight "halo" effect apparent in the obverse fields. The die rust in the Indian princess's headdress puts this coin in the later striking period that Walter Breen mentions in his *Proof Encyclopedia:* "25 made on June 13 have slight traces of die rust in feathers." There is no mentionable contact on either side.

It is unclear exactly why the Mint chose to strike a second batch of proof threes four months after the first striking (and indeed, it is possible that there was another striking at a later date), but given the Centennial date of the coins, our bet would be that the first batch actually sold out and a second batch was run off. Given the popularity of 1876-dated coinage, the many observances of the American Centennial, both numismatic and non, and the high proof mintages for other 1876-dated pieces whose numbers we know, this seems a more than likely scenario. Census: 1 in 66 Cameo, 0 finer (11/11). (#88040)

## 1878 Three Dollar Gold, PR66 Deep Cameo
## Only 20 Pieces Struck
## Possibly Finest Known

**4821** **1878 PR66 Deep Cameo PCGS.** From the early days of the Civil War until January 1, 1879, the U.S. government refused to exchange gold coins at par with its own paper money. Anticipating a major demand for low-denomination gold coinage when the ban on specie payments was lifted, the Philadelphia Mint struck a large mintage of 82,304 business-strike three dollar gold pieces in 1878. Surprisingly, the rush to exchange paper for gold never took place, as people had become used to paper money over the years and found it more convenient than coins. The business-strike three dollar coins became a drug on the market, and mintages were drastically reduced in succeeding years.

The same factors that produced the huge mintage of business-strikes mitigated against a large production of proofs in 1878. Government policy still demanded payment for gold proof coins be made in gold, so collectors had to pay a steep premium to bullion dealers to get the necessary gold coins and then mail them in insured packages to the Mint for payment. Few collectors were willing to participate in such a program, and demand for gold proof sets hit rock-bottom. Only 20 sets were minted, delivered on February 9, 1878. Apparently, there was no demand for individual three dollar coins, and they were all included in the sets. Today, no more than 10-12 specimens survive in all grades.

The present coin is a magnificent Premium Gem with profound Deep Cameo contrast between the deeply mirrored fields and the frosty devices. The vivid greenish-gold surfaces display attractive accents of lilac. The fields have the orange-peel texture of the best 19th century proofs and show no mentionable signs of contact. The design elements are sharply detailed throughout, and the characteristic rust spot can be observed near Liberty's ear, with the "tear drop" visible at her eye. This coin has realistic claims to the title of "finest known," as it is the only PR66 Deep Cameo certified at either of the leading grading services. PCGS has certified two coins in PR66 without the Cameo designation and NGC has graded no coins above the PR65 numeric grade (11/11). This coin has been in the same PCGS-numbered holder since at least 2002, so grade inflation is not an issue. (#98042)

## 1883 Three Dollar, PR65 Ultra Cameo
## Only Two Finer NGC Pieces

**4822** **1883 PR65 Ultra Cameo NGC.** The series of three dollar gold pieces, struck from 1854 to 1889, had the shortest life of any regular issue gold denomination, and the coins are extremely popular in all grades, including proofs. Just 89 proofs were minted in 1883, along with a low business strike mintage of only 900 coins. The total production of less than 1,000 1883 three dollar gold pieces was one of the lowest figures in the entire series, meaning collector demand is extremely high.

Certification data shows that only about 20% of all surviving 1883 proof threes exhibit the highest level of contrast. This lovely Gem Ultra Cameo proof, one of just 22 Deep or Ultra Cameo pieces certified at NGC and PCGS in all grades, has incredible field-to-device contrast with fully defined devices and impressive eye appeal. Census: 4 in 65 Ultra Cameo, 2 finer (11/11). (#98047)

## Fully Struck PR66 Deep Cameo 1883 Three Dollar Gold None Finer at PCGS

**4823** **1883 PR66 Deep Cameo PCGS. CAC.** This Premium Gem Deep Cameo proof 1883 three dollar gold is one of nine such submissions at PCGS, and there are no Deep Cameos finer (11/11). In fact, there are no examples numerically finer at PCGS regardless of contrast level, although NGC has certified three PR67 submissions, including one Cameo and two Ultra Cameo.

By the year 1883, the three dollar gold denomination appeared to be gasping its last breath. Business strikes numbered a mingy 900 pieces, with a complement of some 89 proofs struck during the year. The obverse die was a carryover from the 1882 threes. Breen writes in the *Proof Encyclopedia:*

> "Obv. as on some 1882 proofs, sometimes with rust in feather above T, different from business strikes. Rev. Low date slanting down to right, very top of 1 entirely below serif of L. Owing to low mintage of business strikes (900) this date has become almost as famous as 1881."

The present coin does display a bit of die rust in the feather below T, along with the noted reverse diagnostic. The surfaces are a consistent, even orange-gold, the sole exception a smudge of light red to the right of the 3 in the denomination. The surfaces exhibit excellent mirrored reflectivity, contrasting with moderately frosted devices. There are no mentionable signs of contact, and the strike is full throughout both sides, the reverse being particularly well-detailed and showing off the intricate design to full advantage. Some orange-peel effect appears on the reverse. The added pressure from business strike collectors may lead to strong bidding on this piece, and alert series enthusiasts will come prepared. (#98047)

## 1884 Three Dollar Gold, PR67 Deep Cameo Tied With One Other for Finest at PCGS

**4824** **1884 PR67 Deep Cameo PCGS. CAC.** The Mint is known to have produced a stingy production of an even 1,000 business strikes of the 1884 three dollar gold. What is an open question, however, is how many were ever actually *released*. Q. David Bowers has this to say in *The United States $3 Gold Pieces 1854-1889:*

> "Harry W. Bass, Jr. considered the 1884 to be the rarest circulation strike $3 of the 1880s. Without question, in *circulated* grades it carries the palm, with only 25 to 35 estimated to exist. Regarding Mint State coins, the 1884 is very rare, but not the rarest.
>
> "It is quite likely that many of the 1,000 pieces coined remained in the Mint and were later melted. A comparison of the 1884 issue with the 1880, of like mintage, is instructive. The latter issue is readily available in Mint State, from small hoards, but no such caches have been reported for the 1884, although in the late 1930s both Thomas L. Elder (New York City) and Ira S. Reed (Philadelphia) had a few, perhaps from pieces rescued from gold coins turned into banks during the government recall. Numismatically savvy employees of the Philadelphia Mint, the Treasury Department, and banks were steady sources of gold coins for the Philadelphia and New York City dealers of that era. When valuable coins were seen, the employees exchanged them for common dates. The late P.B. Trotter, Jr., a Memphis banker and numismatist, was earning $15 per week as a teller in the 1930s. He rescued many coins for his collection, but did not have enough capital to save all of the rare 1795-1834 coins that came his way and was forced to let some higher mintage issues pass by."

All of the foregoing tells us that surviving proofs of the 1884 three dollar gold in many cases may fill in in complete sets for collectors seeking one of the elusive business strikes. And the present Superb Gem Deep Cameo proof is among the few finest certified at PCGS, tied with only a single other submission with none finer (11/11). The surfaces throughout boast deep reddish gold patina with lilac accents in the headdress. The fields are nicely mirrored, with deep mint frost coating the devices. The extra letter outlines around RICA confirm the proof status. A slight orange-peel effect appears. The only mentionable identifier is a tiny spot between S and O on the obverse. (#98048)

## Boldly Struck and Contrasted 1886 Three Dollar, PR66 Cameo Sole Finest at PCGS

**4825** **1886 PR66 Cameo PCGS. CAC.** The number of proofs produced in the waning few years of the three dollar gold series actually saw an uptick, into the low hundreds except for the 1888, at 291 proofs the largest mintage of the entire series. While 1886 saw 142 proofs manufactured, however, the number of circulation strikes made was only 1,000, the same recorded quantity as in 1884. In 1887 through 1889, the business strikes finally saw a similar upturn, with 6,000; 5,000; and 2,300 pieces made, respectively.

Bowers puts the 1886 issue in an interesting perspective in his series reference:

> "The rarity of choice Mint State 1886 threes is so extreme that Proofs seem common in comparison! For the specialist, here indeed is a rarity of the first order — a landmark among $3 coins of later dates, For a long period of time most collectors have had to satisfy themselves with circulated coins or Proofs. A listing of early auctions featuring Mint State coins could be made on one side of a small piece of scrap paper without using all of the space.
>
> "The typical circulated 1886 is in AU grade and of fairly attractive appearance. Mint State coins as presently interpreted are mostly at lower levels. Truly choice and gem coins are almost impossible to find.
>
> "Proofs were made in the largest quantity to date in the series and are therefore easy enough to find, with market appearances being fairly frequent. Of course, all of this is relative, and it might be worth mentioning that a Proof 1886 $3 is at least six or seven times rarer than a Proof 1895 Morgan dollar ... ."

Deep reddish-gold patina in the fields and bold reflectivity sets up excellent contrast with the frosted, lighter gold-colored devices on this splendid Premium Gem Cameo proof, the sole such at PCGS and tied with five other submissions at NGC (11/11). Interestingly, this piece is also tied for numerically finest with one PR66 and one PR66 Deep Cameo at PCGS.) The strike is boldly impressed throughout, save for trivial softness on the bowknot. (#88050)

## Flawless 1887 Three Dollar
## PR67 Deep Cameo
## Unusual Proof Struck in Medallic Turn
## Sole Finest at PCGS

**4826** **1887 PR67 Deep Cameo PCGS. CAC.** The mintage of 1887 three dollar gold proofs was a generous production of 160 coins, but what is so interesting about this issue is not only the medallic turn that some pieces were struck in, but also the subsequent error that derived from them. Walter Breen describes an error proof 1887 three in a Lester Merkin 1965 auction that:

> "had first been given an impression or two with dies aligned [in medal turn] or 180° from normal. After which occurrence, the press operator or someone discovered the error, realigned the dies in the press, *replaced the struck coin therein,* gave it two or three more blows — about 5° away from what would have been normal alignment — and passed the resulting mishmash as a coin suitable for inclusion in proof sets."

The present coin is NOT an example of the error coin, but it is an example of the minority struck in medal turn. Bowers writes in the Bass *Sylloge:*

> "The die orientation varies on Proofs. Although most have the usual 180° alignment, some are oriented with dies in the same direction (0° or medal-wise). A few were struck first with the 0° alignment, then put back in the press after the alignment was changed to the usual 180°, then struck again. Several of these have been reported, beginning with the discovery piece in Lester Merkin's November 1965 sale."

The present Superb Gem Deep Cameo PCGS example is the *single finest certified* at that service. The surfaces display a predominant lemon-yellow coloration with a hint of red. The fields are quite deeply mirrored and offer profound contrast against the moderate mint frost on the devices. Microscopic planchet porosity appears, as made, in the right obverse field, but the piece is flawless, for all intents and purposes. Population: 1 in 67 Deep Cameo, 0 finer (11/11). (#98051)

## PR66 Cameo 1888 Three Dollar Gold
## Few Finer Certified

**4827** **1888 PR66 Cameo NGC. CAC.** The plentiful production — 291 recorded proofs, by far the largest production of the series — has ensured that a few wonderful high-grade survivors such as the present Premium Gem endure today in the hands of collectors. Although the series ended the following year in 1889, far fewer proofs of the latter year survive.

Although NGC and PCGS combined have seen 227 submissions of the 1888 proof threes, a huge majority of them carry the Cameo designation, and most of them cluster at the PR64 Cameo grade level. In the PR66 Cameo grade of the present specimen, NGC has seen 17 submissions, with one PR66+ and two PR67, all Cameos (11/11).

The surfaces on this Premium Gem are bright and pleasing, a light, even reddish-gold color. A single tiny dark speck on the high point of the cheek is the only mentionable pedigree identifier, along with some minor contact on the date digits. Some apparent microporosity that appears in the same area as on the 1887 proof three, also in this auction, is explained by a comment from Bowers, who notes that "examples typically have an 'aura' or graininess in the obverse field, this being characteristic of other $3 Proofs of this era, and is from the striking process."

Both the three dollar gold and the one dollar gold denominations would be ended in the following year, the former never much needed at all due to the existence of the similar-sized quarter eagle and the handier half eagle, the latter's existence obviated by the glut of Morgan silver dollars and the widespread availability of paper currency, for Americans of either persuasion. (#88052)

## 1888 Three Dollar, PR64 Ultra Cameo
## The Only NGC-Certified

**4828** **1888 PR64 Ultra Cameo NGC.** The 1888 sports the highest proof mintage of any three dollar gold coin (291 pieces). Many examples must have been saved, as NGC and PCGS have seen about 230 coins, making the issue extremely popular among proof type collectors.

The near-Gem Ultra Cameo specimen in the current lot stands out among surviving examples in that it is the *only* three dollar piece given this designation by NGC. Both sides display pronounced gold-black contrast and attractive peach-gold patination. The design elements are exactingly struck, further adding to the coin's pleasing eye appeal. Light handling marks preclude a higher numerical grade. (#98052)

## Gorgeous PR66 Cameo 1889 Three Dollar End-of-Series Condition Rarity

**4829** **1889 PR66 Cameo PCGS.** Two denominations were last produced in 1889 and terminated by law in 1890, the three cent nickel and the three dollar gold. The last commercially relevant mintage of the nickel coins was in 1881, and for the gold, 1878. While the three dollar gold never fell to the same depths as the three cent nickel, which experienced the indignity of issues with tiny business strikes that were smaller than the same year's proof output, the end of the gold denomination was still ignoble.

Just 2,300 business strikes were produced for 1889, and the accompanying proof mintage amounted to just 129 specimens. Both figures were a steep decline from the previous year's tallies; in the case of the proofs, 291 pieces were struck in 1888, but just 129 such coins were made for 1889. The difference cannot be explained in terms of overminting and melting, either; the number of certification events is remarkably close to the mintage in both cases. Why the drop? Garrett and Guth suggest that "Either the collectors had no clue that this was the last year of the denomination, or the did not care..."

This is a remarkably well-preserved and attractively contrasted representative of the final proof three dollar gold issue. Yellow-gold luster occasionally pales, and when the strongly mirrored fields are tilted out of the light, the sparkling of the frost creates remarkable contrast. Planchet flaws at the tip of the bust and below the trailing hair supply pedigree markers for the future. Extremely rare this fine. Population: 3 in 66 Cameo, 0 finer (11/11). (#88053)

Stunningly Contrasted Deep Cameo
PR64 1889 Three Dollar

**4830** **1889 PR64 Deep Cameo PCGS.** The previous year's three dollar gold proof production overshot collector demand by a wide margin, and the stated mintage for the 1889, 129 specimens, is far closer to how many coins were sold. (The Mint, of course, did not get a chance to refine production any more, as 1889 was the last year of issue.) This starkly contrasted specimen is pale yellow-gold with considerable frost on the devices and a sharp black-and-gold effect at the proper angle to the light. Hairlines in the fields and barely visible contact marks on Liberty's cheek and nose contribute to the grade, but the most obvious apparent marks in the photograph are actually on the plastic holder and not the coin itself. One of just three Deep Cameo specimens certified by PCGS (11/11). (#98053)

## PROOF FOUR DOLLAR GOLD PIECES

Famous 1879 Flowing Hair Gold Stella
Judd-1635, XF Details

**4831** **1879 Flowing Hair, Judd-1635, Pollock-1833, R.3 — Plugged, Harshly Cleaned — NGC Details. XF.** The 1879 and 1880 gold stellas are sufficiently famous and distinctive that they receive a full page of attention in 2012 *Guide Book,* where they are listed in the gold section despite their technical status as patterns. In his 1988 *Encyclopedia,* Walter Breen discusses the well-known numismatic legend about stellas appearing on the necklaces of D.C. madams, perhaps with the present piece in mind. It has a prominent plugged hole, which affects the C for "copper" in the obverse legend and much of the word FOUR on the reverse. The reverse has a decent appearance aside from the plug at 6:30, but the obverse displays wear on the portrait, and that side is bright and hairlined from cleaning. Yet for many collectors who would otherwise be shut out of owning this famous issue, all the problems taken together won't matter. It's still a stella.

## PR62 1879 Flowing Hair Gold Stella
## Judd-1635
## Especially Attractive for the Grade

**4832 1879 Flowing Hair, Judd-1635, Pollock-1833, R.3, PR62 PCGS.** No. 18 on the list of *100 Greatest U.S. Coins:* not too shabby a performance for a pattern that started out as a rather bizarre, impractical experiment at international currency reform. Jeff Garrett, with Ron Guth, ranks both the 1879 and 1880 stellas — four types are known in all — at number 18 in the third edition of the noted reference. (The notion of lumping together the 1879 Flowing Hair with the three other stella variants is a bit bizarre as well, as the others are at least R.6 or higher — the 1879 Coiled Hair, and the 1880-dated examples of both designs.)

In any case, the 1879 Flowing Hair stella's very *availability,* compared to the rest of the series, makes any example offered at auction the subject of intense bidding and feverish demand. (It must be mentioned, too, that the odd denomination adds to the appeal: Between the two cent bronze, the three cent nickel or silver, and the four dollar gold, advanced collectors can play a mighty game of "show and tell" with their noncollector friends. )

The stella or four dollar gold never had any serious chance at success, as it approximated but did not equal any of various circulating European currencies of its time — sort of an early euro experiment. Given the current economic mess in the European Union, that should give some idea of the stella's viability at the time.

The current PR62 example, certified by PCGS, shows clearly the die striations through the central high points. It is our belief that all pieces possess these striations, since the stellas were struck on shaved-down half eagle planchets of normal fineness rather than struck in the special metric alloy noted on the obverse. (We are still waiting for someone to perform nondestructive metallurgical analysis to prove or disprove this theory once and for all.) The fields are deeply reflective, the devices mildly frosted. Deep reddish-orange coloration prevails against glints of hazel around the device margins. A few hairlines in the fields, rather than overt contact marks, are the grade determinant. As an especially attractive example for the grade, we think this piece should see spirited bidding — both from American and our increasingly international contingent, as a coin that has managed finally to transcend its former limitations. (#8057)

**1879 Judd-1635, Pollock-1833, R.3, PR67 ★ Cameo NGC**

**1879 Judd-1635, Pollock-1833, R.3, PR67 ★ Cameo NGC**

# Famous 1879 Flowing Hair Stella in Gold
# Judd-1635, Elite PR67 ★ Cameo

**4833** **1879 Judd-1635, Pollock-1833, R.3, PR67 ★ Cameo NGC.** There are five stella types, not four, although the fifth one — a design subtype of the 1879 Flowing Hair known as the Small Head — is little-known even today.

As with so much else regarding the specifics of the stella production, there are few facts and much speculation. The year 1879 was one of major upheaval at the Mint. In June 1878 Congress accused Mint Director Henry R. Linderman, an avid — too avid — numismatist, with official misconduct. He remained in his post until resigning in December 1878, passing away in disgrace the following month at age 53, a cloud hanging over his reputation that continues to this day. The Mint received a new director, Horatio Burchard, in February 1879, but the parade of numismatic delicacies produced for Mint insiders and the well-connected would continue through the end of Burchard's tenure in 1885.

William Barber passed away on August 31, 1879, after serving as Mint assistant engraver from 1865 to 1869 and as chief engraver from then until his death. His son Charles appears to have been universally disliked but was still appointed to fill the post of his father more than three months later.

It is against this backdrop of change that the mysterious stellas were created. While the 1879 and 1880 Coiled Hair and Flowing Hair stellas are known by even the most casual numismatists, the differences in the Small Head and Large Head versions of the 1879 Flowing Hair have received scant attention in the numismatic press—nor have, as far as we know, the several interesting obverse design differences that become apparent on close examination. A short list includes these:

**—1879 Flowing Hair, Large Head, Judd-1635.** *Date:* Large, arcing, close to the rim (but further than on the Small Head), 1 higher than 879. *Other obverse legends:* Farther from the rim but tightly spaced (a star nearly touches the high-point ornament on the headband). *Head:* Slightly larger than the Small Head. *Bust tip:* Points to star 1.

**—1879 Flowing Hair, Small Head, Judd-1636a.** *Date:* Large, arcing, close to the rim, 1 higher than 879. *Other obverse legends:* Closer to the rim than on the Large Head. *Head:* Slightly smaller than the Large Head. *Bust tip:* Points to top of 1. The Small Head is known only from a unique copper striking in copper, dating to the Harlan P. Smith sale of 1906, lot 1447. It has been gilded since.

**—1879 Coiled Hair, Judd-1638.** *Date:* Large, arcing, 1 higher than 879. *Other obverse legends:* Closer to the rim but loosely spaced.

**—1880 Flowing Hair, Judd-1657.** *Date:* Small, nearly straight, and far from rim. The logo date punch is clearly different from the 1880 Coiled Hair, and by far the smallest of any of the stellas. *Other obverse legends:* Closer to rim but loosely spaced.

**—1880 Coiled Hair, Judd-1660.** *Date:* Large, arcing, and close to rim, 1 higher than 880. *Other obverse legends:* Closer to rim but loosely spaced.

A mere description of the minute but fascinating differences in these five obverse dies, unfortunately, leaves us with more questions and fewer answers. The Flowing Hair designs are traditionally attributed to Charles Barber, while the Coiled Hair designs are sourced to George T. Morgan. But there seem to be too many stylistic differences between the 1879 Flowing Hair and 1880 Flowing Hair to attribute the engraving of the 1880 design to the scrupulous, detail-oriented Barber. (Admittedly, he had just taken over the post of chief engraver, and his father had passed away recently. Did he tighten his standards later on?)

Note the many contrasts in the two Flowing Hair coins: The 1879 shows the large, arcing date near the rim, with the other peripheral legends brought in considerably and spaced awkwardly. In contrast, the 1880 has a small, stingy, straight date that is much farther from the dentils. The peripheral legends, however, are better-spaced and nearer the rim. It stretches the bounds of credibility to believe that Barber engraved both of these dies.

The 1879 and 1880 Coiled Hair stellas, however, are notable more for their similarity than for their dissimilarities. On both issues, the 1 in the date is higher than the remaining digits, and the peripheral legends are equally close to the rim. The tip of the bust is aligned over the 1 of the date on both of the Coiled Hair designs—as is the Small Head 1879 Flowing Hair. Could this design have been engraved by George T. Morgan for some unknown reason?

Even as the low-mintage designs intrigue, it is clear that the 1879 Flowing Hair, Large Head stellas are the most numerous of all and the best-represented in collections; in fact, there are as many Superb Gem certification events for that type as there are known examples for several others, though the usual caveat applies, that certification events do not necessarily correspond one-to-one with available examples. As might be expected from the designation, this is a coin of extraordinary beauty, appreciably contrasted with strong yellow-gold mirrors around. Striations are faint and appear mostly on the reverse. Census: 3 in 67 ★ Cameo, 1 in 68 Cameo, 0 finer (11/11). (#88057)

**1879 Flowing Hair Stella PR66 Ultra Cameo NGC. Judd-1635, Pollock-1833**

**1879 Flowing Hair Stella PR66 Ultra Cameo NGC. Judd-1635, Pollock-1833**

# 1879 Flowing Hair Stella, PR66 Ultra Cameo
# One of the Finest Examples Known
# A Noble But Impractical Idea for International Coinage

**4834** **1879 Flowing Hair Stella PR66 Ultra Cameo NGC. Judd-1635, Pollock-1833.** The precise number of 1879 Flowing Hair stellas produced will almost certainly never be known. It is generally thought that there was an initial quantity of 15 or 25 pieces struck, followed by a second much larger production that was offered to congressmen only — outraging collectors of the era. The congressional offering was for three-piece sets along with two silver pattern dollars, Judd-1617/1618 and Judd-1626/1627, at the Mint's production cost of $6.10. (Note that the face value of the sets was $6.)

Judging from the available numismatic evidence — and there is little documentation other than the coins themselves — the quarter-century from roughly 1859 to 1884 was the peak of various Mint shenanigans aimed at enriching facility insiders and their coin-dealer cronies outside.

Among the more infamous numismatic hijinks were:

—The restriking of (and production of fantasy pieces and mules of) Gobrecht dollars dated 1836, 1838, and 1839 (circa 1875-76);

—Restrikes of the 1804 silver dollars (circa 1858-59);

—Concoction of the 1879-dated "Schoolgirl" and "Washlady" and like patterns for the exclusive benefit of Mint officials (circa 1879);

—Production of the limited-edition 1879 Coiled Hair and 1880 Flowing Hair/Coiled Hair stellas and other patterns, again for the private profit of Mint officials; and

—Clandestine production and distribution of 1884 and 1885 Trade dollars (circa 1885). (The 1884 Trade dollars were legitimately produced, but the 10 pieces struck, out of 875 proof sets, all went to the Mint's favored coin dealer, William Idler.)

In particular, the production of many of the 1879- and 1880-dated patterns, completely unpublicized and for the sole apparent purpose of lining the pockets of government officials, created consternation and furor in the numismatic fraternity, a *cause célèbre* that inspired one of the most prominent and trusted numismatists of the era, W. Elliot Woodward, to pen the passage below. Woodward was writing in the October 1880 catalog of the Ferguson Haines Collection concerning a rare 1802 half dime (the passage is quoted from Bowers' *Rare Silver Dollars Dated 1804 and the Exciting Adventures of Edmund Roberts*):

> "This piece is undoubtedly the rarest of the American silver series — not only that, but it must remain so, as the dies are no longer in existence.
>
> "Judging from my own experience, I believe that the purchaser of an 1804 dollar, or any one of many of the rarest of United States coins, has no guarantee that the son of some future director or chief coiner of the Mint will not, at an unexpected moment, place a quantity on the market. 'What man has done man may do,' and the ways of the Mint are past finding out, though transactions, such as restriking 1804 dollars, 1827 quarter dollars and rare half cents, and speculations in rare experimental coins designed, engraved, and struck at the expense of the government, have been too frequent not to be well understood. What the lords of the Treasury will do next is 'what no feller can find out.' We will wait and see.
>
> "In these days of investigation, an inquiry into the past operations of the Mint at Philadelphia, or rather into the past conduct of some of its officials, would, if properly conducted, be fruitful in results; and, if properly reported, would furnish what Horace Greeley used to call 'mighty interesting reading.'
>
> "As government is fond of illustrating its reports, as a frontispiece, is suggested a view of a son of a late official of the Mint, as he appeared at the store of the writer, when on a peddling expedition from Philadelphia to Boston, he drew from his pocket rolls of 'God Our Trust' patterns, and urged their purchase at wholesale, after sundry sets had been dispersed at $100 to collectors of rare coins, with the assurance that only a *very few* had been struck, and that the dies were destroyed.
>
> "Should, however, an investigation be ordered, it is to be hoped it will not be entrusted to that committee which requires 618 sets of the goloid coinage [this refers to the 1879 Flowing Hair stellas], costing nearly $4,000 for the metal alone, before it can decide whether to recommend the acceptance or rejection of the most stupid humbug and most stupendous swindle that has lately been honored with official attention."

"Stupid humbug" and "stupendous swindle" sounds like a harsh way to describe what has become one of American numismatics' most popular and highly priced coins. But then, Woodward and other 19th century dealers, were given to inflammatory language and accusations. Such well-known dealers as Woodward, Édouard Frossard, Edward Cogan, and Ebenezer Mason regularly exchanged printed barbs that today would surely warrant a well-founded libel case. What Woodward overlooked was the legitimate need for the four-dollar patterns we know as stellas. They were struck as a means to form a stable form of international currency, a noble but impractical idea.

This is a remarkably well-preserved example that has deeply mirrored fields on each side and strongly contrasting, frosted devices. The usual die striations are seen over the central obverse device of Liberty, as seen on all 1879 stellas we have examined. There are no obvious pedigree identifiers in terms of contact marks. The only possible identifier is a wavy lint mark to the right of the upright of the star in the field above the E in ONE on the reverse. This is one of the most attractive stellas known, one that will undoubtedly realize an extremely strong price when it is hammered down. Census: 3 in PR66, five finer (11/11).

*From The Jim O'Neal Gold Type Collection.* (#98057)

# EARLY HALF EAGLES

## AU53 1795 Half Eagle, BD-3
## First Year of Gold Coinage

**4835 1795 Small Eagle AU53 PCGS. Breen-6412, BD-3, High R.3.** Bass-Dannreuther Die State c/b. Dannreuther in his early half eagle reference seems unsure whether the broad line between the rim and the E in UNITED is a die scratch or die crack. It appears to be a die scratch (as made) in the opinion of the present cataloger. In either event, this is a pleasing example of a popular first-year early gold type. The fields display a hint of apricot toning, and luster dominates the stars, legends, wings, wreath, and curls. Some breast feather detail remains on the eagle, and the portrait displays only slight wear on the clothing and forehead. Marks are surprisingly minimal aside from a solitary pinscratch confined to the reverse border at 1 o'clock. (#8066)

## 1795 Small Eagle Five Dollar, BD-10, AU53
## An Excellent Type Coin

**4836 1795 Small Eagle AU53 PCGS. Breen-6415, BD-10, R.5.** The following attribute the variety: 1 in date just free of hair, star 1 overlaps lower curl, star 10 has one point to cap, four berries are on wreath, two on each side, inside and out, inside right is lowest seen and over the bottom leaf. A crack extends from the stem end through the right foot of the last A in AMERICA to the rim. Dannreuther and Bass estimate the original mintage of BD-10 as 750 to 1,250 pieces, with a surviving population of 40-50 examples in all grades.

The yellow-gold surfaces on this AU53 coin display whispers of red and retain a generous amount of luster. This well defined specimen reveals just a handful of light circulation marks, and displays three fine parallel, vertical lines (possibly roller marks) located at the margin left of stars 1,2,3. The demand from type collectors makes the Small Eagle series a popular one. (#8066)

## 1795 Small Eagle Five, BD-6, R.5
## S Over D Reverse, MS62
## Amazingly Sharp Strike

**4837** **1795 Small Eagle MS62 PCGS. CAC. Breen-6414, BD-6, R.5.** S/D in STATES. Bass-Dannreuther Die State Obverse b / Reverse c. The *Guide Book* makes this curious notation, one that we think makes it (or them) a *Guide Book* variety: "One variety has the final S in STATES punched over an erroneous D." Actually, *two* of the Bass-Dannreuther 12 listed varieties for the 1795 Small Eagle have the engraver's blunder, the BD-6 and the BD-5, but the BD-6 is the "final use of the blundered reverse die and is much more often seen than the first use of this odd die." The obverse die that distinguishes the BD-6 from the rarer (R.7) BD-5 shows the 5 in the date lying halfway over the drapery, and the tip of the 1 is free of the hair curl.

According to the Bass-Dannreuther reference, "Harry Bass obtained three examples of this rare and popular variety with only a couple of these showing up in auction each year."

The reverse die in particular is a comedy of errors, although describing them seems superfluous, as studying the reverse in closeup will abundantly answer "what's wrong with this photo?" The BD authors note:

> "This curious reverse die, as noted under the BD-5 variety, possibly was the result of either alcohol or a late night party, as the die sinker made numerous slips while preparing this reverse. The spikes from the dentils are also seen on this obverse die as well as the previous obverse die, although they are not as plentiful as seen on the reverse."

The present MS62 PCGS example boasts an amazingly sharp strike that has produced full breast feathers and full hair detail. The surfaces are semiprooflike and even olive-gold, accented by reddish tinges. The luster is a trifle subdued, possibly precluding an even finer grade. Light horizontal planchet adjustment marks appear in the center obverse. The only mentionable signs of contact are a series of shallow pricks between the eagle's head and the rim between F and A, as well as a minor scratch below the eagle's right (facing) wing. For all 1795 Small Eagle varieties, Population: 22 in 62, 13 finer (11/11). PCGS has certified two examples of the S/D in MS63. (#8066)

## 1795 BD-3 Small Eagle Five, MS63 ★
## The Third 1795 Die Marriage

**4838** **1795 Small Eagle MS63 ★ NGC. CAC. Breen-6412, BD-3, High R.3.** Bass-Dannreuther Die State b/a. The obverse has a delicate die crack from the border to star 12, showing its use after BD-2 and before BD-4. A type collection candidate, the BD-3 die pair is the most plentiful 1795 Small Eagle variety with an estimate of 175 to 225 survivors, according to John Dannreuther. The Smithsonian Institution has six 1795 Small Eagle half eagles, including five examples of this variety. The other Smithsonian coin is an example of BD-4, from the same obverse die.

The first half eagles were minted at Philadelphia at the end of July 1795, and they were the first official U.S. gold coins minted at the new coin factory. Robert Scot engraved a number of dies for the initial coinage, and today we know of 12 different die marriages dated 1795 alone. Die production included eight obverse dies dated 1795, one 1796/5 overdate obverse, and nine reverse dies.

Half eagle production totaled 8,707 pieces in 1795 and 6,196 coins in 1796, the total mintage of 14,903 coins including pieces of both dates from the 13 different varieties. There is no doubt that 1795 Small Eagle fives were coined at least into 1796, and some have suggested that additional pieces were minted in 1797 and 1798. However, the cataloger believes that, based on die state evidence, the 1795 half eagles were only coined into 1796 and probably no further.

The NGC Star designation combined with the green CAC sticker of the Certified Acceptance Corporation points to the exceptional quality of this specimen. This impressive Select Mint State specimen offers rich yellow luster with frosty devices and reflective, nearly prooflike fields. A few trivial marks, including short horizontal adjustment marks in Liberty's hair, prevent a higher grade. Those horizontal marks provide immediate identification of this specimen in past offerings. Census: 1 in 63★, 10 finer (11/11).

*Ex: Stack's (10/2008), lot 1271; Stack's (3/2009), lot 5850.*

*From The Jim O'Neal Gold Type Collection.* (#8066)

LIBERTY
1795

UNITED STATES OF AMERICA
E PLURIBUS UNUM

# 1795 BD-14 Half Eagle, MS62
## Historic Heraldic Eagle Five

**4839** **1795 Large Eagle MS62 PCGS. CAC. Breen-6422, BD-14, High R.6.** Bass-Dannreuther Die State c/c, with a reverse die crack through MERIC of AMERICA. The obverse die has a narrow date with two star points nearly touching the cap, the die being reused from its earlier marriage with the 1795 Small Eagle variety BD-7. Slight die lapping or polishing is evident at the eye, a later state than for BD-7. The mirrored fields also indicate die polishing.

The reverse has the stars crowded to the left with nine of the 16 stars below the first three clouds. It is an early die state with a die crack from the border over the E, through RIC, to the border after the final A. Later states have a full rim break outside that crack. The reverse die appeared twice on the 1795 Heraldic Eagle fives but made no other appearances. Its other 1795 appearance was for the unique BD-13. That piece shows a delicate crack through MERIC, much lighter than here, and lacks the polished or lapped feathers in the left wing that appear on the present coin.

In his early gold reference, Robert W. Miller, Sr., noted the existence of a BD-14 with a perfect reverse die. The existence of this variety in a perfect state would alter the emission sequence, and place BD-14 before *and after* BD-13. Until confirmation of such a coin, the BD-14 will continue to be listed second.

Most numismatic students believe that the 1795 Heraldic eagle fives were coined in 1797 or 1798, and the latter year seems more likely. The assumption is that the 1798 Small Eagle coins were the first half eagles minted in 1798, with the 1795 and 1797 Heraldic Eagle coins next, and finally the 1798 Heraldic Eagle pieces.

Just over a dozen examples of this High R.6 variety are known, mostly in higher circulated grades. The finest this cataloger has seen is an MS64 specimen from the James A. Stack Collection. The present specimen is second finest, and all others, including the near-Mint Norweb specimen, grade XF or AU.

This delightful Mint State example has brilliant greenish yellow-gold surfaces with fully reflective fields and satiny devices. Both sides show a few lint marks and some minor hairlines, including a thin scratch in the right obverse field. If graded separately, the reverse appears to be a point finer than the obverse. Population: 8 in 62, 3 finer (11/11). (#8075)

## 1796/5 Small Eagle Five Dollar, Breen-6418 BD-1, AU Details A Highly Desirable Type Coin

**4840 1796/5 Small Eagle — Improperly Cleaned — NGC Details. AU. Breen-6418, BD-1, High R.4.** This is the only variety of the year, showing a 6 over an obvious 5. Mintages for Capped Bust to Right, Small Eagle reverse five dollar gold pieces (1795-1798) are low, and survivors of any date are very scarce, making it one of the most desirable and valuable of early type coins. Indeed, a type set of U.S. coinage cannot be considered complete without a Small Eagle example.

The present offering is thus an important one in the current sale, displaying as it does strong AU Detail on all of its design features; in other words, this coin reveals no areas of mentionable weakness. Even the dentilation on each side is sharp, and the devices are nicely centered on the planchet. Light to medium intensity yellow-gold patination in the centers yields to reddish-gold at the margins, and close inspection shows no contact marks worthy of note. Fine hairlines are visible under magnification, accounting for the NGC disclaimer. These are not all that bad, however, and glimpses of luster can still occasionally be seen as the coin is rotated under a light source. (#8067)

## 1798 Large Eagle Five, AU55 Elusive 13 Star Reverse, BD-5 Example

**4841 1798 Large Eagle, Large 8, 13 Star Reverse AU55 PCGS. Breen-6429, BD-5, High R.5.** Bass-Dannreuther Die State c/b, with a heavy crack visible under ER. Mint records indicate 24,867 Capped Bust Right half eagles were struck in 1798, with two major design types and eight die varieties known for the date. A single very rare variety is known with the old Small Eagle reverse, and the others display the Heraldic Eagle motif. This coin represents the elusive BD-5 variety, with a Large 8 in the date and the first A in AMERICA positioned above the eagle's fourth feather. The BD-8 probably accounted for 2,250-3,250 pieces of the reported mintage, with a surviving population of 30-40 examples in all grades.

The present coin is a lightly circulated Choice AU example, with well-detailed design elements and much original mint luster. The pleasing yellow-gold surfaces show highlights of green, with only a few minor abrasions. Population: 13 in 55, 33 finer (11/11). (#8078)

## 1798 Heraldic Eagle Five Dollar, BD-4, MS63
## Large 8, 13 Star Reverse
## Near-Terminal Die States on Each Side

**4842 1798 Large Eagle, Large 8, 13 Star Reverse MS63 PCGS. CAC. Breen-6428, BD-4, High R.4.** Bass-Dannreuther Die State Obverse c to d / Reverse d. Harry Bass was known to be fascinated with the die states of early U.S. gold coinage in particular, a fortunate predilection that ultimately led to John Dannreuther's publication of the *Early U.S. Gold Coin Varieties, A Study of Die States, 1795-1834* — even if we seldom provide the correct full title.

The 1798 BD-4 die pairing is one where Bass could have probably collected several more examples than the two he already owned, as the variety marks the final stages of both the obverse and reverse dies: "The core collection example is a very *late* state and the terminal state can have several stages, the throes of *death* for a die."

The obverse of the present example shows numerous die cracks, but the heaviest by far is that traversing the tops of ERTY, a thick, wide rut that looks as though a long rectangular piece is ready to fall out of the die near the rim as it shatters. Lighter, wispy cracks join IB and several of the right-side stars, yet we find only the most minor traces of the crack through the "base of the date" that would mark the full obverse state d.

The reverse die appears that it was even closer to failure when this piece was struck, as two cracks near the rim have progressed to full-blown cuds, one to the left of the top of O and another between ES. The surfaces are even green-gold, with a soft strike in the center obverse and heavy die adjustment marks on the reverse from the eagle's neck down to the bottom of the shield. Heavy die rust appears throughout the reverse, and the mint luster is a bit subdued. One of the finest of this rare and fascinating variety. Population: 2 in 63, 0 finer (11/11). (#8078)

## 1798 Capped Bust Right Half Eagle, AU58
## Rare Large Eagle, Small 8, BD-6 Variety

**4843 1798 Large Eagle, Small 8 AU58 NGC. Breen-6430, BD-6, R.6.** Bass-Dannreuther Die State a/b, identified by the reverse die crack from the edge to the ribbon, and on to the right wing. The 1798 half eagles are known in two major design types, with seven die varieties that feature the Large Eagle reverse, and a single very rare variety of the Small Eagle type. This coin represents the rare BD-6 variety, with the small 8 in the date touching the bust and the Large Eagle on the reverse. The BD-6 has a surviving population of 30-40 pieces in all grades.

The present coin is an impressive near-Mint specimen, with well-detailed design elements that show just a touch of weakness on the central devices. The pleasing greenish-gold surfaces retain much of their original mint luster. Some light adjustment marks are evident on the bust. Census: 16 in 58, 15 finer (11/11). (#8079)

## 1799 Small Stars Reverse Half Eagle, High R.5 BD-2, MS63, Tied for Second Finest at PCGS

**4844 1799 Small Stars Reverse MS63 PCGS. Breen-6434, BD-2, High R.5.** Bass-Dannreuther Die State Obverse b-c / Reverse e, terminal state. Star 1 is well away from the lowest hair curls on the obverse, while on the reverse the small stars are arranged in four perfect diagonal rows. The 1799 is an important date among early half eagles, and it is considerably underrated. Mint State examples, regardless of variety, are quite rare. This die combination is tied for the second most common of nine varieties known for the date, yet there are only about 35 to 45 examples known of the BD-2, according to Bass-Dannreuther.

While the central obverse and reverse are weakly defined, as is often the case, the peripheral obverse and reverse details are bold. The obverse has highly lustrous, frosty yellow-gold surfaces, while the reverse is light yellow with hints of orange toning, partially proof-like with reflective fields. It appears that this example represents the terminal die state. The obverse is similar to that described as state b by J.D. Dannreuther, although with a few additional cracks and other die defects. The reverse is shattered, with extensive die cracks.

The BD-2 is one of the most common varieties of the 1799 issue, along with the BD-1 (with which it is tied) and the BD-6 (slightly more "available" at 40-50 pieces known). This is still a rare 18th century gold coin, yet one that is well-suited for type purposes. The total population of all nine die varieties is under 250 coins, according to Dannreuther. Famous gold collector Harry W. Bass, Jr. owned *18 examples* of the 1799 half eagle's nine varieties, according to the Bass-Dannreuther reference, but only one specimen in his collection represented this die combination. Population: 9 in 63, 1 finer (9/11).

*Ex: Central States Signature (Heritage, 5/2007), lot 2278, which brought $63,250.* (#8081)

## Near-Gem 1800 BD-5 Half Eagle Original, Boldly Struck Type Coin

**4845** **1800 MS64 PCGS. CAC. Breen-6438, BD-5, High R.3.** A total of five die pairings were used to coin 1800 half eagles, four of which share a common obverse die as on the BD-5. Here, the 1 in the date is lacking the upper left serif, often referred to as a Blunt 1. The reverse die is unique to this variety, however, and is recognized by a star touching the back of the eagle's neck. The Philadelphia Mint stepped up production of Capped Bust Right Heraldic Eagle half eagles in 1800 to a new high of 37,628 pieces. After a one-year hiatus, comparatively high mintage figures were also recorded from 1802 through 1807, when the new Capped Bust Left design was phased in. This issue and the 1802/1 are generally considered to be the two most obtainable dates from this challenging series.

This lovely, wholly original example is boldly struck in all areas, with especially sharp high-point definition noted on the reverse. Struck from an intermediate die state, a wispy die crack angles down between the IB in LIBERTY and continues to touch the bases of ER. The reverse exhibits a few more prominent die cracks, the most obvious of which advances from the lower left olive leaves through the right leg (facing), the base of the shield, and onto a claw on the eagle's left leg. The location of this particular die crack is often used for attribution of the BD-5, since it is visible on nearly all examples. An important opportunity for the advanced gold specialist. Among the few finest known, this piece has a certified population that has not changed one iota in the five years since we last offered this coin. Population: 6 in 64, 1 finer (11/11).

*Ex: FUN Signature (Heritage, 1/2007), lot 3497.* (#8082)

## 1802/1 Half Eagle, BD-8, MS63
## The 'High Overdate' Obverse

**4846** **1802/1 MS63 PCGS. CAC. Breen-6440, BD-8, R.4.** The obverse die used on the BD-8 is so-called High Overdate obverse, which was used on the BD-6 through BD-8 die pairings. The BD-1 through BD-5 feature the Centered Overdate die. The reverse of the BD-8 has perfect T's and the last S in STATES over the far right of a cloud. This Select Mint State example displays rich yellow-gold color with semiprooflike fields. The surfaces are sharply struck throughout, and there are no obvious or distracting marks on either side. This piece appears to show no obvious die cracks, although we note some triangular clash marks behind the head of Liberty. For all varieties, Population: 28 in 63, 16 finer (12/11). (#8083)

LIBERTY
1802

UNITED STATES OF AMERICA
E PLURIBUS UNUM

# Gem 1802/1 Half Eagle, BD-8
# One of Three Finest Certified

**4847** **1802/1 MS65 PCGS. CAC. Breen-6440, BD-8, R.4.** The 2 in the date is high and touches the bottom edge of Liberty's bust. (Two obverse dies are known for this year and denomination, with either a centered 2 or a high 2 in the date. Both of these obverse dies show the 2 repunched over a previous numeral 1, indicating that both were made from unused 1801-dated dies.) The 1 in the date lacks its top serif. The lower right serif of E in LIBERTY is repunched. A long spine on the reverse runs from a leaf into the R in AMERICA.

This die state is described by John Dannreuther (2006) as "***Obverse state c***, further clashed; ***Reverse State b,*** **clashed, lapped, crack** at UNI(TED)". (*Early U.S. Gold Coin Varieties, A Study of Die States,* 1795-1834; p. 255) A later die state is also known, with a prominent cud situated on the reverse rim above ITE in UNITED.

The accepted mintage for this date, distributed between eight different die marriages, is 53,176 pieces. Of that total number, Dannreuther estimates that between 13,750 and 22,250 coins were produced of the so-called "High Overdate" type, consisting of three distinct die varieties: BD-6, BD-7, and BD-8. Of all eight die marriages, BD-8 has the highest estimated total mintage, of between 10,000 and 15,000 examples. This variety is also the most available in terms of survivorship, with 150 to 200 pieces believed to be extant.

The surfaces display tremendous mint luster, giving this piece a wonderfully flashy, frosty appearance. The striking quality is good, with Liberty's hair tresses well defined, and exceptionally sharp feathers on the eagle's breast. The bright yellow-gold color is imbued with strong undertones of lime-green, increasing the coin's overall visual appeal. Die clash marks are noted on both sides, including several of the reverse horizontal shield lines that appear within Liberty's hair detail, above the ear. Several paper-thin adjustment marks also occur on the obverse, along with a few trivial nicks and pinscratches in the fields.

Neither NGC nor PCGS has distinguished between the various die varieties, when grading examples of the 1802/1 half eagle. Thus, we do not possess a breakdown of certified pieces; nor do we know how many of the certified populations represent coins that were resubmitted after initial grading. We do know, however, that there are currently only two known Gems: one at NGC and the current coin at PCGS. A single specimen has been graded even finer, at MS66, by PCGS (11/11). The present rather astonishing piece, therefore, is one of the three finest-graded examples of the 1802/1, and we anticipate great interest and highly-spirited bidding when it crosses the auction block.

*Ex: FUN Platinum Night (Heritage, 1/2009), lot 4046, which realized $138,000.*

*From The Jim O'Neal Gold Type Collection.* (#8083)

## 1803/2 Five Dollar, BD-4, MS62
## Impressive Eye Appeal

**4848** **1803/2 MS62 NGC. Breen-6441, BD-4, R.4** Four die varieties are known for 1803 Half Eagles, and all are 1803/2 overdates. BD-4 is attributed by a perfect T in LIBERTY. An arcing crack passes through the base of the date and the first 6 stars. The underdigit 2 is obvious to the naked eye, particularly on the base and top.

This well struck honey-gold example displays considerable luster, and the few minute handling marks are not serious. Light mint-made reverse adjustment marks run from 6 to 10 o'clock. Impressive eye appeal for the designated grade.

*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#8084)

## 1803/2 Half Eagle, BD-4, MS63
## Very Scarce Overdate Variety

**4849** **1803/2 MS63 PCGS. CAC. Breen-6441, BD-4, R.4.** The BD-4 is the only 1803-dated variety with a perfect T in LIBERTY. The 3 in the date barely touches the outline below the bust. This is the usually seen die state, with several peripheral obverse die cracks and a reverse die crack from 4 to 10 o'clock that wanders across the eagle's wings and shield. Light adjustment marks appear on the reverse but are largely relegated to the borders. A pair of lengthy, straight, parallel marks on the obverse that extend from the rim downward along the left side of B in LIBERTY, through Liberty's hat and well into the hair curls, are almost certainly Mint-made and probably adjustment marks as well. The strike is precise save for minor weakness near the left shield border. Luster is uniform throughout the fields and devices, and apricot toning across the reverse border confirms the originality. A few unimportant field grazes fail to distract the eye or threaten the designated grade. Population: 20 in 63, 13 finer (11/11). (#8084)

## 1803/2 BD-4 Half Eagle, MS64 Misplaced Overdate

**4850** **1803/2 MS64 PCGS. CAC. Breen-6441, BD-4, R.4.** Bass-Dannreuther Die State b/c. The obverse has a crack through the base of the date, extending left to star 1 and right to the border near star 13. Another crack joins the first six stars, a third crack joins the tops of LIBER, and a fourth crack joins TY and star 9.

Two different overdate obverse dies are known for 1803, common knowledge in the 19th century that was lost in the early 20th century. Walter Breen described this obverse as a die state of a single overdate die in his half eagle monograph published in the 1960s. More recent study, especially by Andrew W. Pollock, III, has confirmed that W. Elliot Woodward and others in the 19th century coin trade were correct about their variety identification.

John Dannreuther states that this variety was unlisted in the Breen monograph, but it is listed as "Breen 1-D," and it also matches the description for "Breen 1-A." The Bass-Dannreuther reference on early gold has greatly advanced our knowledge of the series. However, there is still much to learn.

Breen wrote that "the vast majority of specimens of this date are from this reverse die." Despite missing the different obverse die, he was correct regarding the rarity of this variety, or the lack thereof. Today we recognize the BD-4 as the most plentiful 1803/2 half eagle variety.

This Choice Mint State specimen ranks among the finest known survivors from the BD-4 die pair. It is similar to the Bass Core Collection specimen, and is finer than any other pieces known to the cataloger. Both sides have brilliant and frosty yellow-gold luster with few marks on either side. Population: 10 in 64, 3 finer (11/11), for all 1803/2 varieties. (#8084)

## 1804 Half Eagle, Small 8/Large 8, BD-7 MS64, Tied for Finest Certified

**4851** **1804 Small 8 Over Large 8 MS64 NGC. CAC. Breen-6442, BD-7, R.4.** Three different Bass-Dannreuther varieties share a common 1804-dated obverse that shows the large 8 in the date over a much smaller 8 underneath. Bass-Dannreuther call it Normal/Large 8, since they point out that the final numeral punch is the correct and normal one for the issue. Older collectors are used to the terminology Small/Large 8, simply in recognition of the considerable size difference in the two 8s. This is the terminology used in the *Guide Book*. In point of fact, however, all four date digits are repunched, the 180 obviously and the 4 a bit less so.

Whatever one chooses to call the three similar varieties, they are quite popular, due both to the famous 1804 date and to the easy visibility of the repunching on the date. As mentioned, three varieties, BD-5 through BD-7, share a common obverse. The BD-5 is very rare at High R.6, the BD-6 is rare at R.5, and the BD-7, as here, is very scarce at R.4. The reverse of the BD-7 can be spotted by the upper eagle's beak biting down on a star point, and the upright of E over the space between clouds. Bass-Dannreuther estimate that 7,500 to 12,500 coins of this die pairing were produced, of which 100 to 150 survive today. The present piece, in near-Gem condition, is one of two submissions at NGC with none finer, and the same totals show at PCGS.

The piece appears to be early in the life of the dies, as there are no visible cracks on either side. The surfaces are bright yellow-gold with a complementary reddish tinge. Ample luster proceeds from each side, with some semiprooflikeness appearing on the reverse. The strike is full, producing complete hair details on Liberty and the breast feathers on the eagle. A few planchet adjustment marks occur on the right rim on the reverse. Two parallel, straight indents run diagonally through the left side of the shield, appearing to be post-Mint contact. Census: 2 in 64, 0 finer (11/11). (#8086)

## 1805 Half Eagle, MS62
## Elusive Wide Date, BD-3 Variety

**4852 1805 MS62 PCGS. CAC. Breen-6444, BD-3, High R.5.** A moderate mintage of 33,183 Capped Bust Right half eagles was achieved in 1805, with five different die marriages known to collectors today. The coin offered here is an example of the rare BD-3 variety, characterized by the imperfect 1 in the date, star 1 distant from the bust, and star 9 close to Y in LIBERTY. John Dannreuther estimates an initial mintage of 2,000-3,000 pieces for BD-3, with a surviving population of 35-45 examples.

The present coin is an attractive example, with noticeably prooflike fields. Heavy clash marks can be seen in the right reverse field, with some adjustment marks in the center obverse. Sharply struck, with exquisite detail on the central devices, and only slight weakness on the peripheral stars. A few scattered field marks prevent an even higher grade. Population (all varieties): 44 in 62, 58 finer (11/11).

Smithsonian

## 1806 Round Top 6 Half Eagle, MS64
## 7x6 Stars, BD-6
## Nearly the Finest Obtainable

**4853 1806 Round Top 6, 7x6 Stars MS64 PCGS. CAC. BD-6, R.2.** Bass-Dannreuther Die State Obverse d / Reverse e. There are six Bass-Dannreuther varieties known for the 1806 half eagles, of which five die pairings show the Pointed Top 6, and the BD-6 is the sole combination that has the Round Top 6 (*Guide Book* term) or Knobbed 6 (Bass-Dannreuther term). While all of the Pointed Top 6 die marriages are very scarce to exceedingly rare, the 1806 BD-6 Round Top 6 variety is quite common for an early 19th century gold coin. Bass-Dannreuther estimate that this die pair could have produced as many as 50,000 of the 64,000-plus half eagles made during the year. Even so, there is little marketplace differentiation in the two main digit types, and the *Guide Book* lists only the Pointed Top 6 and Round Top 6 as varieties.

The present near-Gem is one of 33 submissions at this grade level at PCGS, and there are only a single MS64+ and a single MS65 finer (11/11), making this piece among the finest practically obtainable for most collectors. The surfaces offer even, reddish-tinged, satiny luster that is softly frosted and excellent in quality throughout both sides, definitely this coin's strong suit. The strike is somewhat irregular, sharp on the eagle's breast feathers but soft on the upper hair and the juncture of the left (facing) wing and the shield stripes.

Due to the relative availability of this variety and the number of die states known, Harry Bass managed to accumulate six examples in five different die states. The present coin shows the rust lump on the upright of the R, tiny crack and lapping at the lowest hair curls, and a small reverse crack through N to the arrowheads, along with some reverse clash marks. (#8089)

## Near-Mint Bust Right 1807 Half Eagle BD-2, Large Reverse Stars Small Date, Small Obverse Stars

**4854 1807 Bust Right AU58 PCGS. Small Date, Small Obverse Stars, Large Reverse Stars, Breen-6450, BD-2, R.5.** A middle die state with a light crack through the tops of UNITED but no evidence of clash marks. A faint die crack traverses rim to rim over the E in LIBERTY; this crack becomes a full-fledged cud in a later die state. This is a beautiful Borderline Uncirculated Bust Right half eagle from the final year of the type. The surfaces are mildly prooflike and the reverse periphery displays light orange toning. Evenly struck and void of visible marks. A lens can locate only faint hairlines. BD-5 is a very scarce die pairing, and one of three with its size combination of the stars and date. However, all eight 1807 five dollar varieties can eventually be acquired by the persistent collector, and would make an impressive and varied display. (#8092)

## 1807 Bust Right Half Eagle, BD-4, MS63 Attractively Patinated

**4855 1807 Bust Right MS63 NGC. Small Date, Small Obverse Stars, Large Reverse Stars, Breen-6450, BD-4, High R.4.** The right foot of R in LIBERTY rests on a die gouge, there is a crack above top of cap to the rim, leaf point touches right of I in AMERICA, and a diagonal spine runs from this leaf point across lower half of I.

Both sides of this Select example display a generous amount of luster and an attractive mix of yellow- and reddish-gold patination splashed with mint-green. The design features are well struck except for minor softness in the centers. Adjustment marks are located in the central reverse, but there are no significant post-strike impairments. The reverse is rotated a few degrees counterclockwise. Census: 27 in 63, 27 finer (11/11).

*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#8092)

## 1807 Bust Right Five, BD-1, MS64
## Small Date, Small Obverse and Reverse Stars
## Ex: Harry W. Bass, Jr.

**4856 1807 Bust Right MS64 PCGS. Small Date, Small Obverse Stars, Small Reverse Stars, Breen-6449, BD-1, High R.4.** Bass-Dannreuther Die State b/c, struck prior to the development of a rim cud above the T in UNITED.

The usually encountered 1807 half eagle is the BD-8 Bust Left variety, which is in fact among the most common die marriages of all early (old tenor) five dollar pieces, along with the 1810 BD-4. Although six different die varieties are known, the 1807 Bust Right is significantly scarcer than the BD-8. At the MS64 level, the 1807 Bust Right is approximately four times scarcer than its Bust Left counterpart.

The BD-1 receives a separate listing in Breen's 1988 *Complete Encyclopedia,* since it is the only die pairing for the date with small reverse stars. The reverse die is unfinished, as the right olive branch lacks stems on the berries, and two leaves are outlined but without inner details. Prominent raised die lines (as struck) appear on the right olive branch and the upper left shield tip.

This is a lustrous, pleasing near-Gem example. The obverse has a few faint hairlines, while the reverse is virtually pristine. The strike is sharp, save for the lowest right star on the reverse. The dies are rotated counterclockwise. This piece once belonged to Harry W. Bass, Jr., the most prominent die variety collector of early gold, and that he selected it for his collection speaks highly of its quality.

*Ex: A-Mark Coin (3/1978): Harry W. Bass, Jr. Collection (Bowers & Merena, 10/1999), lot 779; Salt Lake City ANA Money Show (Superior, 3/2001), lot 804; Frank Manthey Collection/Dallas Signature (Heritage, 12/2005), lot 1301; Julian Collection/ANA Signature (Heritage, 8/2007), lot 1899.* (#8092)

## 1807 BD-1 Half Eagle, MS64
## Rare Late State
## Two Reverse Rim Breaks

**4857 1807 Bust Right MS64 NGC. CAC. Small Date, Small Obverse Stars, Small Reverse Stars, Breen-6449, BD-1, High R.4.** Bass-Dannreuther Die state c/d, or perhaps later, with two reverse rim breaks. One joins the top of the T in UNITED, and another joins the top of the D. The reverse is rotated about 30 degrees counter-clockwise, as often on this die marriage.

The BD-1 die marriage has Small Reverse Stars, the only variety with that characteristic. Dannreuther suggests that this Small Stars reverse was a die leftover from 1806, since all 1806 varieties have similar stars on the reverse.

This example is one of the finest known of the die marriage, of similar quality to the Bass Core Collection specimen, and finer than most others described in our notes. It appears that the die state is also extremely rare. In the past 10 years, we have offered 26 examples of BD-1 in our auctions, including 23 with no reverse rim breaks and three with a single reverse rim break. This is the first example we have offered in that time period with two rim breaks.

A later die state exists with a third reverse rim break that joins the U of UNITED, and that die state is apparently unique. The only example we have seen appeared in the August 1983 Bowers and Merena sale, lot 1428.

A splendid Choice Mint State specimen, the surfaces exhibit brilliant green-gold luster and trivial marks. Light adjustment marks at the central obverse do little to detract from the wonderful eye appeal. (#8092)

## 1809/8 Half Eagle, BD-1, MS63
## Sharp, Reflective, and Well-Preserved

**4858** **1809/8 MS63 PCGS. CAC. Breen-6458, BD-1, High R.3.** Ex: Stack. The 1809/8 half eagle BD-1 die pairing is the only one known for the year of the 33,875 examples reportedly produced, but it is always possible that some of the mintage may have consisted of 1808- or even 1807-dated pieces. At High R.3, Bass-Dannreuther estimate that perhaps 250 to 325 examples survive today in all grades. This Select Mint State specimen displays deep reddish-gold coloration over surfaces that show superb mint frost and a faint glimmer of reflectivity in the fields. The piece is sharply defined throughout, with just a few tiny contact marks but remarkable preservation overall. Light clash marks appear on the reverse, and a small die crack runs from star 1 to the bust on the obverse. (#8104)

## 1809/8 Half Eagle, BD-1, MS64+
## Exceptional Preservation of Surfaces

**4859** **1809/8 MS64+ PCGS. CAC. Breen-6458, BD-1, High R.3.** This appears to be an intermediate die state between an early version of b/b and c/c. The die crack for Obverse State b only goes through the first four stars, rather than the first seven, but it does extend to the point of the bust. The reverse does not show the crack from the edge to the final S in STATES to O(F) to the edge. Along with Harry Bass and John Dannreuther, we also doubt the overdate status of this issue. An earlier die state in high grade would be needed to positively confirm it as an overdate. Such a coin should show a trace in the exergue above of the upper loop of the 8 above the 9, since there is something, presumably the bottom loop of an 8 or 9 in the lower loop of the 9 in the date. This coin, like the coin in the Bass core collection, shows die chatter on the reverse.

Only one variety is known of this date. The mintage is estimated between 20,000 and 33,875 pieces, quite a remarkable run to show such minimal cracking of the dies. Only 250 to 325 pieces are known today in all grades. There is remarkable distribution of the 1809 five in high grades from AU through MS64 with a couple of dozen examples in most grades. This may suggest that this date was held by banks as currency backing; after all, the half eagle was considered the workhorse denomination among gold coins produced by the Mint. As one might imagine, there are very few Plus coins certified at the MS64 level. This is a lovely example that has bright, frosted mint luster. There are very few marks or luster grazes that separate this coin from a Gem. Each side has just the slightest tinge of reddish patina, an indication of originality and careful preservation. The strike is complete throughout with full radials on the stars, sharp hair curls, and fully brought up feathers on the eagle. An exceptional early gold type coin. Population: 3 in 64+, 5 finer (11/11). (#8104)

## 1809 BD-1 Half Eagle, MS65 Tied for Finest at NGC

**4860** **1809/8 MS65 NGC. Breen-6458, BD-1, High R.3.** Bass-Dannreuther Die State b/b. The only die pair known for the 1809 half eagles is the BD-1 that is usually described as an 1809 over 8. There is clearly something under the 9 in the die, although the actual errant figure is sometimes debated. It might be an 8, or possibly a 9, or perhaps something else.

In *Early U.S. Gold Coin Varieties A Study of Die States, 1795-1834,* John Dannreuther writes:

> "Bass owned two examples of this date/variety. He seems to have doubted the overdate status of this variety. The author also doubts the overdate status of this example and believes that it may only be a misplaced 9."

The cataloger agrees with Bass and Dannreuther that this is not an overdate. Its uncertain status is little cause for concern, as it is a single-variety issue, and marginally the scarcest date of the short Capped Bust Left design type. Only about 250 examples are known in all grades. This piece is also one of just nine MS65 NGC coins with none finer (11/11), and it is only the fourth MS65 to appear in any of our sales since 1993.

We are unable to trace a provenance for this piece, although it is different than the Garrett, Eliasberg, or Bass coins. Both sides are sharply defined with frosty yellow luster showing distinct green toning and peripheral rose highlights. A few grade-consistent marks are evident although none are detracting. A lovely example for a specialized collection, or to represent John Reich's design in a type set. (#8104)

**1810 Small Date, Small 5 MS62 NGC. CAC. Breen-6461, BD-2, R.6**

**1810 Small Date, Small 5 MS62 NGC. CAC. Breen-6461, BD-2, R.6**

# 1810 Small Date, Small 5 Half Eagle, BD-2, MS62
# Sole Finest Known of This R.6 Variety

**4861** **1810 Small Date, Small 5 MS62 NGC. CAC. Breen-6461, BD-2, R.6.** Bass-Dannreuther Die State Obverse b (more or less) / Reverse b. The 1810-dated half eagles saw a generous mintage for the time and denomination, recorded at 100,287 coins. Those pieces were struck at fairly regular intervals according to the Mint Director's *Annual Report* for 1810, which lists deliveries in the first through fourth quarters at 22,060; 33,070; 22,217; and 22,940 pieces, respectively.

Today numismatists also recognize four different die pairings for the issue. Two are common, two extremely rare. The Bass-Dannreuther classifications parallel the *Guide Book* terminology nicely: The BD-1 is the Small Date, Tall 5, High R.3; BD-2 is Small Date, Small 5, R.6; BD-3 is Large Date, Small 5, High R.7; and BD-4, Large Date, Large 5, R.2.

The two Small Date varieties, BD-1 and BD-2, were nonetheless produced from different obverse *and* reverse dies, 1-A and 2-B. The Small 5 reverse die of the BD-2 was shared with the BD-3, dies 3-B, and finally, the BD-4 shared the Large Date obverse of BD-3 with the Large 5 reverse, dies 3-C, providing a die-linking for the four varieties of the year.

Regarding the present BD-2 variety, Small Date, Small 5, the Bass-Dannreuther reference estimates that the total mintage was some 2,000 to 4,000 coins (only 2%-4% of the yearly total), of which perhaps 25 to 30 are known today.

Garrett and Guth write of the 1810 Small Date, Small 5 variety in the 2006 first edition of their *Gold Encyclopedia:*

> "Four major varieties make up the population of the 1810 half eagle, some of which are difficult to tell apart unless the coins (or high-quality photographs of them) are compared with each other. The Small Date, Small 5 is the second-rarest variety among the four, exceeded only by the Large Date, Small 5. In high grade, these two rare varieties can sometimes be worth 10 times the price of the more common varieties, so it pays to learn the differing characteristics within this date. Since 1994, only eight Small Date, Small 5 examples have appeared at auction, led by a PCGS AU-55 coin that sold for $36,800 in 1997. The population reports show three MS-62s at the top level, which the authors suspect is a single coin. Surprisingly, the Smithsonian lacks an example of this variety."

Today, five years later, the NGC and PCGS populations still show three certifications in MS62, and as far as we can determine, the present MS62 NGC piece is that single coin to which they refer, formerly offered by Stack's in 2008. Positive identification is easy due not only to the advanced obverse die state but also the tiny dark flecks on the reverse at the D of UNITED and the tip of the eagle's left (facing) wing. The obverse die appears close to shattering on this piece, explaining the low production estimates and subsequent rarity. The largest die crack bisects the obverse from rim to rim, passing through the 1 in the date, the clasp, lower hair, Y of LIBERTY, the cap, and back to the rim at 2 o'clock. Another large crack intersects that one at right angles and runs downward to the rim at star 12, and a couple of other smaller, minor cracks appear. The reverse shows a couple of faint cracks through some of the lower peripheral details. The strike is sharply defined on each side, and deep reddish patina surrounds the margins. There are no visible signs of planchet adjustment or mentionable contact.

*Ex: Bergstrom and Husky Collections (Stack's, 6/2008), lot 2077, which realized $138,000.* (#8105)

## Select 1810 Half Eagle, BD-1
## Only Four Finer Examples at NGC

**4862 1810 Small Date, Tall 5 MS63 NGC. CAC. Breen-6462, BD-1, High R.3.** Bass-Dannreuther Die State c/c, with extensive die cracks and evidence of die rust on both sides. The present coin is an example of the BD-1 variety, identified by the Small Date and the Tall 5 in the denomination. The BD-1 is scarce in absolute terms, but it is still seen more often than the BD-2 and BD-3 varieties of this date. The number of BD-1 coins still extant probably does not exceed 225 examples, and may be as low as 150 specimens in all grades. Examples in Select Mint State condition are quite rare.

The coin offered here is an impressive Select specimen, with sharply detailed design elements and vibrant original mint luster. The pleasing yellow and greenish-gold surfaces display only minor signs of contact and no adjustment marks. Census: 8 in 63, 4 finer (11/11). (#8106)

## 1810 Half Eagle, MS64
## Large Date, Large 5, BD-4

**4863 1810 Large Date, Large 5 MS64 NGC. Breen-6459, BD-4, R.2.** Bass-Dannreuther Die State c/b. The 1810 half eagle is known in four different die varieties, ranging from high R.7 to R.2 on the rarity scale. The present coin represents the most available BD-4 variety, with a Large Date and a Large 5 in the denomination. John Dannreuther estimates the surviving population of the BD-4 at 500-750 pieces in all grades.

This coin is an attractive Choice example, that exhibits sharp detail on the obverse design elements, but shows some weakness on the central reverse. A few light adjustment marks are noted on the bust, but no significant post-strike distractions are evident. The lemon-yellow surfaces radiate vibrant mint luster. Census: 31 in 64, 7 finer (11/11). (#8108)

## 1810 Large Date, Large Five Half Eagle BD-4, A Superlative Near-Gem

**4864** **1810 Large Date, Large 5 MS64 NGC. CAC. Breen-6459, BD-4, R.2.** Bass-Dannreuther Die State a/a. The Large Date/Large 5 combination is by far the most plentiful of the four varieties known for the year, making it good bait for type coin collectors. Its *Guide Book* listing (all four are listed) makes it even more in demand. The obverse of this near-Gem displays semiprooflike fields, and both sides offer remarkably deep reddish coloration. The obverse is fully struck, the reverse less so, and there are a few scattered marks that account for the grade, especially in the right obverse field. A superlative example with no adjustment marks or mentionable distractions, struck from an early state of the dies. (#8108)

## Fully Struck MS63 1811 Small 5 Half Eagle, BD-2

**4865** **1811 Small 5 MS63 NGC. CAC. Breen-6464, BD-2, R.3.** Bass-Dannreuther Die State d/a. The Small 5 half eagle of 1811 is a tad more available than the Tall 5, but not by much. Both are desirable as type coins and far more often seen than many issues of the later 1810s and 1820s. The large mintage exceeding 100,000 pieces, divided by only two die varieties known for the year, helps explain their availability. The surfaces on this Select Mint State piece display pronounced green-gold coloration overall. The surfaces are fully struck, even on the reverse, and there are few mentionable signs of contact. Subdued mint frost prevails throughout. Census: 30 in 63, 25 finer (11/11). (#8109)

## Tall 5 1811 Half Eagle, BD-1
## Remarkable MS63 Example

**4866** **1811 Tall 5 MS63 PCGS. CAC. Breen-6463, BD-1, High R.3.** The two varieties of 1811 half eagle share an obverse, while the two reverse dies are differentiated most easily by the height of the 5 in the denomination. The Tall or Large 5 is slightly more elusive than its Small 5 counterpart, though both are scarce regardless of grade. Of course, at the Select Mint State level, "scarce" does not begin to cover this variety's condition rarity. The present coin has strong yellow-gold luster with traces of peach and honey. The strike is solid, and though a few reed marks appear to the left of the profile and a shallow line descends from Liberty's earlobe to close to her neck, the overall eye appeal is strong. For the variety, Population: 12 in 63, 7 finer (11/11). (#8110)

## Near-Gem 1813 Half Eagle, BD-1
## Eye-Appealing Type Coin Candidate

**4867** **1813 MS64 PCGS. CAC. Breen-6467, BD-1, R.2.** This near-Gem is a splendid example that represents the first year of issue for the new design, and the only reasonably common date in the entire series through 1834. John Reich's early Capped Bust design was self-modified to the Capped Head design. The central obverse motif is a female head facing left, wearing a cap, with flowing curls behind the head. The reverse was also slightly modified, but is essentially the same as the previous type. Later years of this design had dies produced by either Robert Scot or William Kneass, each merely being a copy of the John Reich design.

The entire design type from 1813 to 1834 exists to the extent of not more than about 2,000 coins for all issues combined. Given the large number of dates and the survival of 1813 alone, this is an extremely small total population, and a minute portion of the original mintage. Nearly every example coined was immediately exported, where the coins were exchanged for their bullion content and promptly melted. Few examples survived the process. In 1813, the mintage was 95,428 coins from two die marriages that share a common obverse. The BD-1 die combination is the single most plentiful variety of the entire design type, while the BD-2 combination is much rarer. All told, there are probably about 500 half eagles still surviving from this first issue.

This lovely example is highly lustrous with frosty light yellow-gold surfaces and excellent eye appeal. Both sides have the usual tiny scattered marks consistent with the grade. The strike is sharp and well-centered. Minor clash marks are visible on both sides. Population: 48 in 64, 3 finer (11/11).

*Ex: Denver Signature (Heritage, 8/2006), lot 5491; FUN Signature (Heritage, 1/2008), lot 3155.* (#8116)

## Near-Gem 1814/3 Half Eagle, BD-1 Late Die State, None Finer Graded

**4868** **1814/3 MS64 NGC. CAC. Breen-6468, BD-1, High R.4.** Bass-Dannreuther Die State Obverse c / Reverse d. The overdate 1814/3 half eagles are another of the several so-called "single-variety years," in that there are no other die pairings bearing this date. The recorded mintage was 15,454 coins, although not all may have borne the 1814/3 overdate — some may have been regular 1813-dated coins.

The overdate feature makes this a popular issue. The Bass-Dannreuther reference notes that the overdate feature "fades" in later die states, which is curious, because the present piece is a late state of the dies on both sides, and yet the overdate feature is still quite bold. In fact, it matches the description that Bass provides for his Obverse Die State a, unclashed specimen: "Remnants of a 3 clearly visible at both sides of top of 4, below its crossbar at left, and on both sides of crossbar at right." Perhaps the sharpness is greater on the unclashed Bass coin.

In other areas, however, the obverse of the present near-Gem is clearly and boldly clashed, like most examples seen of the issue. The most prominent clash is the "ear bars" from both the vertical and horizontal shield stripes that intermingle with the ear, hair, and ERTY. Other clashing is prominent behind the head, at the date, under the neck truncation, under the nose, and in front of the headband. The reverse shows clashing that is widespread but more subtle due to subsequent lapping of the die, along with some light die cracks.

This near-Gem displays deep color that is nearly to brown with some underlying red. The strike is remarkably sharp throughout. A small, straight scratch appears between stars 6 and 7, one of the only singular marks. There are none graded finer at either service. Census: 8 in 64, 0 finer (11/11). (#8117)

## 1820 Square Base 2 Half Eagle, BD-3, MS64
## A Remarkable and Fully Struck Specimen

**4869 1820 Square 2 MS64 NGC. CAC. Large Letters, Breen-6476, BD-3, R.5.** The *Guide Book* lists a generous mintage reported for half eagles in 1820, 263,806 pieces, and breaks them down into three varieties: The Curved-Base 2 (or Curl Base) with Small Letters or Large Letters, and the Square-Based 2, all known with Large Letters.

With so many coins made during the year, it is unsurprising that, in fact, far more Bass-Dannreuther varieties are known — nine in all, created from combinations of six obverse and six reverse dies. This works out to an average of about 29,000 coins per die pair, although the early Mint seems to have scarcely ever followed the Law of Averages. For example, the present BD-3 die pairing is one of four (BD-1 through BD-4) that show the Square Base 2, Large Letters attributes. In fact, the BD-3 and BD-4 were struck from the same obverse die. Nonetheless, Bass-Dannreuther estimate that some 80,000 to 100,000 examples of the BD-3 were struck of which 50 to 65 survive today, making it an R.5 variety. The authors estimate that the BD-4 was struck to the extent of only 3,000 to 5,000 pieces, with only two to four existing today.

The obverse of the BD-3 shows star 1 distant from the curl and star 13 nearly touching the bust, but the easiest identifier is the triple dentilation at star 9. The Large Letters reverse displays an arrow pointing to the right foot of the R and a feather tip over the right side of the flag on the 5.

The present near-Gem sports bright mint frost over surfaces that are largely yellow-gold, tined with a hint of red. Both sides are fully struck, showing complete breast feathers and shield stripes on the reverse and full hair details, star centrils, and cap folds on the obverse. This piece appears only a couple of tiny field marks away from a Gem grade. A remarkably attractive specimen. Census: 16 in 64, 5 finer (11/11). (#8125)

## 1823 Half Eagle, BD-1, High R.4, MS62
## Rare Single-Variety Issue of the Year

**4870** **1823 MS62 PCGS. CAC. Breen-6481, BD-1, High R.4.** Bass-Dannreuther Die State a/a. The 1823 half eagles are one of several single-variety years known for the coins of this series and decade: So few were produced that there was no need for more than one die pair. In fact, the 1823 was produced from a new 1823-dated obverse, of course, but the reverse was a reuse of a die that struck varieties of 1820 (BD-9), 1821 (BD-1 and BD-2), the famed 1822, and the 1823 and 1824, the last three each single-variety years. The reverse die can be identified immediately by the overlarge dot after 5D and the triangular break or opening at the bottom of each T. The present MS62 example boasts dazzling prooflike fields over surfaces that are bright yellow—gold with a trace of red. The strike is a bit on the soft side, but no planchet adjustment marks appear. A small cluster of contact marks at the bottom of the face are among the few scattered signs of contact. (#8131)

## 1827 Half Eagle, BD-1, High R.5, MS62
## A Rare Single-Variety Year

**4871 1827 MS62 NGC. CAC. Breen-6486, BD-1, High R.5.** Only a single die pairing is known for this rare issue, one that had a reported mintage of 24,913 pieces. The date 1827 is therefore sufficient to identify the obverse. The reverse is a carryover from 1826, which shows a "tiny, oblate period in the denomination," per Bass-Dannreuther, who nonetheless estimate that as few as 10,000 pieces and as many as the full complement of 24,913 coins could have been actually dated 1827. They posit that 35 to 45 examples survive today in all grades, putting this issue at about the median rarity level in a decade that is known for some of the rarest issues in U.S. numismatics. There are four other single-variety years known for the decade — the 1822, 1823, and 1824 — of which the last two are of about equal rarity to the 1827, while the 1822 is a classic numismatic rarity, with three known, of which two are in the Smithsonian. John Dannreuther writes that "Bass owned two coins of this rare date, which date/variety is about the same rarity as the 1824 and BD-1 of 1826, but it is less often seen than the 1823 or the 1820, as a date."

The present MS62 NGC example is one of four at this grade level, with nine finer (11/11). Deep reddish-gold coloration prevails throughout both sides of this specimen. The strike is sharp on the obverse but falls a bit on the soft side on the reverse. There are minimal marks for the grade, however. Bass-Dannreuther point out that by this time the "Mint's dies were now striking tens of thousands of coins without cracking," explaining why there is only a single die state known for the issue, Obverse a / Reverse b. (#8136)

## 1834 Classic Head, Plain 4 Five Dollar
## PR63 Ultra Cameo
## Incredible Early Gold Proof
## First Head, McCloskey 1-A

**4872 1834 Classic Head, Plain 4 PR63 Ultra Cameo NGC. CAC. First Head, Large Plain 4, Breen-6501, McCloskey 1-A.** The Classic Head gold coinage, introduced in 1834, removed E PLURIBUS UNUM from the reverse scroll and in other ways differed significantly from the previous Capped Bust coinage. The Mint produced a small number of proofs to celebrate the change, but it was clearly a tiny mintage; fewer still are known today. Pre-1838 proof gold is among the most elusive areas of U.S. numismatics, with the Classic Head pieces nearly on par in rarity with the earlier Capped Bust gold coins. Few proofs of any Classic Head gold issue are known today, and they are seldom offered at auction. Only a handful of times previously have we offered *any* proof Classic Head quarter eagles or half eagles. The Garrett-Guth gold reference notes that perhaps six pieces are known today of the proof 1834 Plain 4 half eagle. Those same authors list the issue as number 49 among the *100 Greatest U.S. Coins*.

This specimen presents a remarkable opportunity for type collectors or specialists in early U.S. proof coins. Like most known 1834 Classic Head half eagles, this example has the date irregularly spaced. The 1 and 3 are higher than the 8 and 4, and the date digits grow successively closer from left to right, with the left point of the 4 nearly touching the 3. The large 4 in the date is close to the curl, and the date is a so-called "fancy" or "script" 8, with a larger juncture of the loops than the loops themselves. On the reverse the denomination 5 D. has the 5 considerably higher than the D, which leans backwards and left toward the numeral. The right-side loop of the D shows traces of recutting to the right of the final letter. The arrowheads are large; the lowest touches the second A in AMERICA. The second S in STATES shows recutting on the middle curve, and the eagle has a tongue.

The highly reflective fields of this pretty greenish-gold example provide wonderful contrast with the deeply frosted devices, pleasingly so on both sides but a bit more intensely frosted on the obverse. The fields on each side reveal some scattered chatter from light contact, preventing a finer grade but hardly distracting. NGC has certified a single PR65 in numerically finer grade, along with three PR63 Cameos, but this is the sole PR63 Ultra Cameo, and there are none finer with any degree of contrast, either Cameo or Ultra Cameo (11/11). (#98180)

# LIBERTY HALF EAGLES

## 1839 Liberty Five, MS64
## Tied for Finest Certified

**4873** **1839 MS64 NGC.** Christian Gobrecht created the Liberty Head design that debuted on eagles in 1838, half eagles in 1839, and quarter eagles in 1840. The design is known by multiple names, including Braided Hair, Coronet Head, and Liberty Head. The latter name is the most familiar name today.

The 1839 is a one year subtype of the Liberty Head design with a sharply curved bust line. In the case of branch mint coins, the mintmark is located above the date in 1839, and was moved to the reverse the next year.

This Choice Mint State piece is tied for the finest certified with seven others at NGC and one at PCGS (11/11). Both sides have frosty yellow luster with delicate greenish patina on the devices, especially the obverse. The surfaces are outstanding, and the devices are boldly defined. An extraordinary opportunity. (#8191)

## 1839-C Coronet Five Dollar, MS63
## One of the Finest Known

**4874** **1839-C MS63 NGC. Variety 1.** While not as well-known as the 1838-C, the 1839-C is a one-year type. It employs Gobrecht's first rendition of the Liberty Head design (which was changed significantly in 1840) and has the mintmark placed on the obverse, the only Coronet half eagle to have the obverse mintmark. This example is among the finest known and it shows soft, frosty luster below nice light yellow-gold coloration. There are a few minor ticks on the surfaces, most notably a cluster of shallow marks below the lowest curl of Liberty; the reverse shows a mint-made vertical grease stain behind the eagle's neck and left (facing) wing.

As of the end of 2011, NGC had graded three examples of this date in MS63 with none finer, while PCGS had a population of one in MS63 with two finer. This example holds the all-time auction record by a considerable margin and it is the plate coin in Winter's third edition of *Gold Coins of the Charlotte Mint, 1838-1861.* There are an estimated eight to ten pieces known in Uncirculated with the finest being the Miller/Elrod coin, graded MS64 by PCGS.

*Ex:Palm Beach Signature (Heritage, 3/2005), lot 6941, where it realized $39,100; Baltimore Auction (Bowers and Merena, 3/2010), lot 3739, where it brought $126,500.*

*From The Cherokee County Collection.* (#8192)

## 1840-C Five Dollar, MS61
## Very Rare in Uncirculated Grades

**4875** **1840-C MS61 NGC. Variety 1.** There are two distinct "looks" found on this date. Many 1840-C half eagles are weakly struck and show roughness on the surfaces, especially at the borders. This glossy example is an exception to that rule and it has the look that specialists want to see on this date: sharp details and surfaces that lack any significant areas of porosity. The strike, as mentioned, is far above average for the issue and the color is a nice light reddish-gold. This issue is among the rarest of all Charlotte half eagles and it is significant as the first half eagle from this mint with the mintmark placed on the reverse.

A few decades ago, the 1840-C was essentially unknown in Uncirculated. But at least three or four nice Uncirculated pieces have turned up since then (including the NGC MS64 Pittman coin and the newly discovered PCGS MS63 and MS64+ duo that was first seen in the Heritage 2011 FUN auction). Today, the number of 1840-C half eagles that exist in Uncirculated is more likely in the range of seven to eight pieces.

*Ex: FUN Signature (Heritage, 1/2003), lot 4730, where it brought $16,100; Long Beach Signature (Heritage, 6/2004), lot 6264, where it sold for $17,825; Central States Signature (Heritage, 5/2007, lot 2295, where it realized $20,125 as NGC MS60; FUN Signature (Heritage. 1/2008), lot 3165, unsold.*

*From The Cherokee County Collection.* (#8196)

## 1841-C Half Eagle, MS61
## Fresh and Appealing, One of the Finest

**4876** **1841-C MS61 PCGS Secure. Variety 1.** From the standpoint of "body" and luster, this coin has the naked eye appearance of an MS62 to MS62+ but there are a few too many ticks in the obverse fields to grade as such; a reverse mark at the R in AMERICA is visible but less obtrusive. Very well struck for the date with bold detail in the centers and borders; toned in light yellow-gold hues with an area of slightly deeper color at star 7 on the obverse. A fresh, appealing coin that represents just about the best available quality for this date.

The overall rarity of this date has been understated in the past and it is actually one of the half dozen scarcest Charlotte half eagles. There are around six pieces known in Uncirculated, of which the finest, by a clear margin, is the Pittman/Farouk/Colonel Green coin that is graded MS64 by NGC. There are three coins currently graded MS61 by PCGS and the last comparable auction price realized for one is from our 2008 Long Beach Auction, lot 3213, which brought $17,250.

*From The Cherokee County Collection.* (#8203)

LIBERTY
1842

UNITED STATES OF AMERICA
FIVE D.

# Top-Notch 1842 Small Letters Half Eagle, MS66
# The Sole Finest Known and an
# Incredible Conditional Rarity

**4877** **1842 Small Letters MS66 PCGS. Breen-6536.** This Premium Gem 1842 Small Letters half eagle is the *sole finest certified of this issue at either PCGS or NGC,* the finest we have ever had the privilege to offer — a coin that is very scarce in any grade, and a phenomenal condition rarity at the MS66 grade level of this piece.

The Classic Head coinage that preceded Christian Gobrecht's Liberty Head or Coronet Head designs ended in 1838-39, and the subsequent design was phased in on eagles in 1838, half eagles in 1839, and quarter eagles in 1840. Mintmarks were introduced in 1838 with the opening of three branch mints in Charlotte, Dahlonega, and New Orleans, the first two making only gold coinage.

Throughout the late 1830s-early 1840s the Mother Mint in Philadelphia — which produced all coinage dies — fiddled with mintmark sizes and locations (obverse versus reverse, a debate settled by 1840 in favor of the reverse), the sizes of dates and peripheral legends, and even the width of rims and styles of edge-reeding on gold coins. Thus it is that the 1840 Broad Mill and Narrow Mill varieties of half eagles are known, as well as the Dahlonega half eagles of 1841 with small and medium mintmarks, and the various Philadelphia, Charlotte, and Dahlonega 1842 half eagles with different sizes of dates and letter fonts.

The 1842 Small Letters and Large Letters varieties of half eagle are both scarce to rare, the Large Letters overall a bit more so than the Small Letters. Even though many numismatists are unaware of the differences in the reverse die, they are readily apparent when given a side-by-side comparison. The Large Letters can be most easily distinguished by the small space between FIVE and D, while the Small Letters of course shows a wider gap there; a similar distinction occurs at the space between STATES and OF.

Given that the Small Letters 1842 half eagles may be a bit overshadowed by the Large Letters, the quote from Garrett and Guth's *Gold Encyclopedia* provides cogent context:

> "The Small Letters 1842 half eagle is a very scarce coin, more so than any of the Philadelphia Mint half eagles from 1839 to 1841. This date and variety combination is usually seen well worn. Most of the great collections that are sold at auction in the last few decades lacked an example in high grade. The only Mint State coin offered at auction in the last 15 years was the phenomenal NGC MS-65 coin that was sold as part of the Ed Milas Collection of No Motto half eagles."

That coin realized an incredible $57,750 more than 15 years ago (Stack's, 5/1995), lot 442.

This piece is definitely a different and nicer coin from the Milas-Stack's example, which is color-plated in that catalog. Although the surfaces on this Premium Gem are primarily canary-gold, a distinctive reddish-orange toning streak appears on the reverse through UNITED STA, and on the obverse a couple of patches of orange-gold appear near the rims as well. The piece is fully struck throughout, unabraded, and displaying bright, frosted luster.

Even in this incredible Platinum Night auction, this top-notch coin stands out from many of its fellows. The Eliasberg example was an AU55 piece, the Norweb coin a Choice XF. This piece is clearly a candidate for the finest cabinet, certainly the finest now known. Population: 1 in 66, 0 finer (11/11). (#8207)

## 1842-C Small Date Five, VF30
## Key to the Charlotte Five Dollar Series

**4878** **1842-C Small Date VF30 PCGS. CAC. Variety 1.** This coin is extensively worn but basically problem-free and certainly attractive for the grade; attractive enough, in fact, to gain approval from CAC. The wear is compounded by the fact that the strike is quite soft at the borders, especially on the obverse. On both sides, the deep golden centers are contrasted by splashes of reddish-gold towards the rims. There are many marks visible but none is especially deep or detracting. This is a very pleasing example of the rarest collectable Charlotte gold coin and a great option for the ambitious date collector of Charlotte half eagles who doesn't have the big budget required to purchase a high-grade 1842-C Small Date.

This is the rarest half eagle from this mint with an estimated 60-80 pieces known in all grades. While typically seen in lower grades, there are not many clean, problem-free examples in VF and PCGS has graded just seven in VF30 (out of a total of forty-two for the date). This is the only PCGS VF30 that has CAC approval and there are just five others in higher grades that have been approved by CAC.

*Ex*: *Central States Signature (Heritage 4/2010), lot 2355, where it brought $9,200. It was approved by CAC sometime after this auction appearance.*

*From The Cherokee County Collection.* (#8208)

**1842-C Small Date MS63 NGC. CAC**

**1842-C Small Date MS63 NGC. CAC**

# Select Small Date 1842-C Five Dollar Winter's Third Edition Plate Coin

**4879** **1842-C Small Date MS63 NGC. CAC.** Sole die pair for the year, in Die State I, the perfect obverse without rim cud at the top of the obverse. **The Winter Third Edition plate coin.** In *Gold Coins of the Charlotte Mint,* Doug Winter has little but praise for the 1842-C Small Date half eagles, at least as far as their rarity is concerned. He suggests that they were struck before their Large Date counterparts (noting that the 1841-C half eagles have a date more Small than Large), and offers these words about their rarity and importance: "The 1842-C Small Date is the rarest Charlotte half eagle. It is also the second rarest Charlotte coin, trailing only the excessively rare 1849-C Open Wreath gold dollar. This variety has long been considered a full-fledged member of the Charlotte half eagle series and no date set is truly complete without an example."

Out of 27,432 total 1842-C half eagles, Winter suggests a mintage of only 4,595 pieces from Small Date dies, and further subdivides the Small Date coins into two die states; he suggests that Die State I, the "perfect obverse," "probably represents the first 2,555 pieces that were produced on March 22, 1842." This would appear to conflict with Winter's next statement about Die State II with obverse cud, that "approximately three-quarters of all the known [Small Date] examples are from this state of the dies." Either one of Winter's population estimates is off, or the coins struck earlier disproportionately bore the brunt of circulation attrition; the latter certainly is plausible.

In any event, the best collection of Charlotte gold, must include an example of the 1842-C Small Date half eagle, and it demands one of the best-preserved survivors. Winter's third edition of the Charlotte reference, with information up to June 2008, suggested that this coin was the finest 1842-C Small Date five available and surmised that the sole MS63 coin in NGC's *Census Report* was actually this coin; a quick comparison between the January 2005 Heritage images and the coin picks up on several obvious pedigree markers, particularly the flaw above the vertical stroke in the 4 in the date, and confirms the surmise.

This remains the only NGC-certified 1842-C Small Date half eagle in MS63 or better, and the only serious rival to this coin's status as the premier 1842-C Small Date half eagle is a single PCGS MS63+ Secure example (11/11); no MS63 PCGS coins appeared in the *Population Report* until 2009, and the Plus Secure designation, which was not introduced by PCGS until 2010, points to a recent grade change. It is uncertain whether the MS63+ Secure PCGS example corresponds to any of the other entries in Winter's census of Uncirculated examples from 2008, all rated MS62 or less; if so, it would suggest that he rated the present coin *circa* 2005 over the MS63+ Secure example. In the absence of such confirmation, though, each collector trying to identify the "finest example" must weigh a PCGS Plus Secure MS63 against an NGC MS63 with CAC green label.

It would be hard to go wrong owning either coin, and certainly this example is a beauty. Like many of the early-state Small Date coins, it is sharply struck, even on the locks below the ERT of LIBERTY, a place Winter flags as a trouble-spot. A mint-made planchet flaw above the 4 in the date, the aforementioned pedigree marker, is common to this date and does not affect the technical grade, though several long, wispy abrasions in the left obverse field have an influence. The luster on each side is flashy and radiant, less overtly orange than the Winter plate would suggest but with clear hints of that color. A coin of great historic importance. (#8208)

## Large Date 1842-C Half Eagle, MS64
## One of the Finest Known

**4880** **1842-C Large Date MS64 NGC. Variety 1.** There are a number of visually impressive Charlotte half eagles in the Cherokee County Collection and this example, one of the finest known of the variety, clearly ranks as one of the finest in the collection. It is bright and extremely lustrous with the quality of strike one would expect to see on a Philadelphia coin of this era. There are a few light marks strewn about the fields, but this is a coin with real eye appeal and a piece that would work well as either a centerpiece of a date set of Charlotte half eagles or a single high-grade type coin.

The 1842-C Large Date is an extremely underrated issue that is actually one of the rarest Charlotte half eagles in terms of overall rarity. It is a bit more available in high grades and there are as many as seven to nine pieces in Uncirculated, including at least three very high-grade examples. The finest is the wonderful Milas/Eliasberg Gem, graded by NGC. The present example is tied with one other (Ex: 2004 ANA, Heritage, lot 352, where it sold for $35,650) and these are the only two coins for the date that have been graded MS64 by a major third-party service.

*Ex: Pre-Long Beach Rarities Sale (Bowers and Merena, 2/2007), lot 716, where it sold for $33,350); Milwaukee Rarities Sale (Bowers and Merena, 8/2007), lot 1800, where it brought $35,650.*

*From The Cherokee County Collection.* (#8209)

## Near-Gem 1842-C Large Date Five Second-Finest Known

**4881** **1842-C Large Date MS64 NGC. Variety 1.** Die State I. The two die states provide only minor differences. The early die state coins, as here, were struck from perfect dies, while the later die state coins had minor crumbling of the reverse die around the first two letters of STATES. Scarce and underappreciated, the Large Date is overshadowed by its Small Date counterpart, but both are rarities in their own right. The Small Date is the rarest C-mint half eagle, while the Large Date is the fifth-rarest. The mintage for the 1842-C half eagles of both varieties was 27,432 coins, according to the *Guide Book*.

Only 80-90 pieces are believed known in all grades, perhaps five or six Uncirculated. Winter lists this piece is listed as second-finest known. The finest Milas Collection coin is marginally nicer, graded MS64 by NGC and then regraded MS65 by the same service. Another MS64 NGC piece, the Bass Collection MS63 example, and three or four lower Mint State grade coins round out the Condition Census.

This absolutely splendid coin exhibits bright green-gold coloration. The strike details are fully brought up, including the peripheral stars, Liberty's hair curls, and the eagle's neck feathers. The fields show light die striations that impart a bright, semiprooflike sheen to the fields. Several tiny marks are scattered about, but few that could be used as pedigree identifiers.. Population: 2 in 64, 1 finer (11/11). (#8209)

## MS62 1843-C Five Dollar, Variety 2 One of the Finer Examples Known

**4882** **1843-C MS62 NGC. Variety 2.** Typically struck for the issue with slight weakness noted in the centers but relatively sharp overall, especially at the borders. The surfaces are smooth and glossy with medium orange-gold color on the obverse and across much of the reverse. The fields show a few small marks that are consistent with the grade and there are a few toning flecks seen on the obverse.

At one time, the 1843-C was one of the rarer Charlotte half eagles of this era in higher grades. But it appears that a small hoard of nice quality Uncirculated pieces (generally in the MS62 to MS63 range) surfaced sometime in the last decade or two. Today there are as many as a dozen pieces known in Mint State including two or three properly graded MS64s and another three or four in MS63. The current population between the two services is six in MS62 with eight finer, but this is inflated by resubmissions. There have been three MS62 coins sold at auction in the last four years. These are: David Lawrence (1/11), lot 5074, that brought $11,788), FUN Signature (Heritage 1/2008), lot 3170, a coin that realized $13,800, and Rarities Sale (Bowers and Merena, 1/08), lot 522, that realized $13,513.

*From The Cherokee County Collection.* (#8214)

## Select Mint State 1843-C Half Eagle Few Finer Survive

**4883** **1843-C MS63 PCGS. Variety 1.** Die State I. Mintmark is centered over the right half of the V in FIVE. Doug Winter estimates that only 225-250 coins survive in all grades of the 1843-C five, from a mintage of 44,277 pieces. Only 9 or 10 Mint State specimens are believed known. The present Select specimen shows, like most specimens, softness on Liberty's hair curls and the eagle's neck feathers. The peripheral details, however, are fully defined. The surfaces display bright orange-gold color with modest field reflectivity. This piece is only lightly abraded; the most obvious marks are a couple in the field just under the S of STATES and a milling mark under the eagle's beak. According to the Condition Census in the Winter second edition, only two separate pieces would grade finer than this coin, two MS64 PCGS pieces. We do not know if the third coin alluded to below is a duplicate. There is also one MS64 NGC coin. Population: 2 in 63, 3 finer (11/11). (#8214)

## 1843-D Medium D Five Dollar, MS62 Dazzling Fields, Great for a Type Coin

**4884** **1843-D Medium D MS62 PCGS. Variety 10-H.** Three tiny die lumps are between the first and second stars, with others below the 12th star and above 43 in the date. The mintmark is between the V and E in FIVE. Although this is one of the more common D-mint half eagles with a mintage of 98,452 pieces, this example offers bright, near-prooflike fields and lovely green-gold surfaces. Small ticks below the hair bun and above the eagle's neck are noted, but this example nonetheless is high-end for the grade, and it is certainly high-end in terms of eye appeal. Population: 2 in 62, 5 finer (9/11).
*Ex: Denver Signature (Heritage, 8/2006), lot 5501.* (#8215)

1844-C Five Dollar, MS61
Rare in Mint State

**4885** **1844-C MS61 NGC. Variety 1.** Sole die pair for the year. Intermediate between Die States II and III. The reverse crack from the rim through the first A in AMERICA and the wing to the neck, and a short crack from the tip of the opposite wing to the rim confirm Die State II. An arcing crack through the upper-left part of the shield confirms the incipient stage of Die State III.

The 1844-C is very rare in Mint State grades. NGC has certified only seven pieces in Uncirculated, none finer than MS63. The current MS61 example displays lustrous yellow-gold surfaces that exhibit better striking detail than ordinarily seen. While some of Liberty's hair and the arrow feathers and adjacent claw are a touch soft, as always, the date, shield, and eagle's neck, wing, and leg plumage are much stronger than usual. A couple of fine obverse linear marks limit the grade. Census: 3 in 61, 3 finer (11/11). (#8220)

1844-C Five Dollar, MS63
Ex: Ashland City
Tied for the Finest Graded

**4886** **1844-C MS63 NGC. CAC. Variety 1.** Ex: Ashland City. Die State II. Fewer than 200 examples of this date are known, from a mintage of 23,631 pieces. The 1844-C half eagle tends to be more worn than other dates of this era, probably because of the recently-earned reputation that the concurrently circulating Bechtler gold coins were said to be underweight, giving the Federal issues a better reputation. This pleasing example is one of the finest known and it is tied with one or possibly two others as the highest graded for the date. It has a blend of frost and semiprooflike reflectiveness seen beneath light golden-orange color. The strike is sharp with the exception of the eagle's neck which shows some weakness. There are scattered marks in the fields, most noticeably at the upper left and the lower right obverse. This is the first MS63 example of this date to sell at auction since the Goldberg's 2/2009, lot 1462 coin (which sold cheaply at $21,850). This is exactly the sort of coin that the serious collector of Charlotte gold should "put away" as it may be many years before another piece of this quality becomes available.

Both PCGS and NGC show populations of two in this grade and none finer, but the only other MS63s that we are aware of are an NGC MS63 in a North Carolina collection (probably Ex: Long Beach Signature (Heritage, 2/1999), lot 6247 and the PCGS MS63 Bass II, lot 932 coin (Ex: Bareford) that last sold in the Goldberg's 2/09 auction referenced above. There is also a very choice unencapsulated coin, which grades at least MS63, in the Charlotte Mint Museum collection.

*Ex: Ashland City/FUN Signature (Heritage, 1/2003), lot 4749, where it brought $25,300.*

*From The Cherokee County Collection.* (#8220)

## Uncirculated 1847-C Five Dollar High-Grade Charlotte Type Coin

**4887** **1847-C MS60 PCGS. Variety 1.** Wonderfully original with medium natural color that deepens at the 8 in the date. The fields are a little ticky (hence the grade) but there are no marks that deserve special mention other than a small depression in the obverse field between stars 2 and 3. We have seen inferior examples of this date in holders marked MS61 and even MS62.

As one might expect from an issue with the highest mintage of any half eagle from this mint, the 1847-C is one of the most common Charlotte issues. But it is scarcer than generally believed in higher grades and very rare in Uncirculated. There are fewer than a dozen known in Uncirculated. The finest is a PCGS MS65 that is Ex: Pittman/Farouk/Col. Green. There are also at least three that grade MS63: the Dingler/Elrod coin, the Cinclair coin (Ex: Stack's 1/07, lot 5142) and the Milas coin. The first is graded by PCGS while the other two are graded by NGC.

*From The Cherokee County Collection.* (#8233)

## 1848-C Five, Semiprooflike MS64 Tied for Finest Known

**4888** **1848-C MS64 PCGS Secure. CAC. Variety 1.** There are two wonderful, high-grade examples known of this date and it is six of one and a half dozen of the other which is the "best." The present example has wonderful yellow-gold color and glowing semiprooflike texture in the fields, an unusual trait for this date. The strike shows just a bit of softness in the centers on both sides but is certainly not an impediment to this coin's beauty. There is a shallow vertical mark at the end of Liberty's chin and a small cluster of marks between star 5 and the chin; the reverse shows a few moderate grease stains as made. A coin of impeccable beauty with a great pedigree to boot.

The grade distribution of the 1848-C half eagle is similar to that seen for the quarter eagle of this date. Both issues are reasonably common in VF and XF grades, scarce in the lower AU range, rare to very rare in properly graded AU58, and extremely rare in Uncirculated. There are around five 1848-C half eagles that are fully Mint State coins and the two finest are clearly the example in the Cherokee County collection and another MS64.

*Ex: Michael Brownlee; to Harry Bass in March 1972; Bass I (Bowers and Merena, 10.1999), lot 990, that brought $50,600; Long Beach Signature (Heritage, 2/2000), lot 6689, where it realized $47,150; FUN Signature (Heritage, 1/2009), lot 1506, that brought $57,500; FUN Signature (Heritage 1/2010), lot 2184, where it sold for $57,500. From The Cherokee County Collection.* (#8237)

## 1850-C Half Eagle (Sharp Mintmark), MS63 Condition Census Quality

**4889** **1850-C MS63 NGC. Variety 2.** This nicely detailed example has centers that show more detail than usual. This is an early die state of this variety that was made before the reverse die crack; some clash marks can be seen on both sides. The obverse is bright yellow-gold; the reverse is very choice with slightly deeper green-gold color. The mark on Liberty's chin serves as an instant identifier, and there is a cluster of small marks on the obverse between stars 5 and 6. This is one of the finest known 1850-C half eagles.

The 1850-C is similar in high-grade rarity to the 1849-C half eagle. There are an estimated 10 to 15 pieces known in Uncirculated. The finest certified example is Ex: Milas, lot 479, and it has been graded MS64 multiple times, by both PCGS and NGC. There is an uncertified piece in the Charlotte Mint Museum that is extremely choice as well. In MS63, we believe that there are three or four distinct coins known, including the example in the Cherokee County Collection. There have been a total of seven auction appearances for MS63 1850-C half eagles since 2000 but this includes a number of coins that have reappeared. The last MS63 that Heritage auctioned was lot 3176 in the 2008 FUN Sale (graded by PCGS) that realized $17,250.

*From The Cherokee County Collection.* (#8244)

## 1852-C Five Dollar, MS62 Pronounced Semiprooflike Fields

**4890** **1852-C MS62 NGC. CAC.** Struck in medium green-gold and nicely complemented by attractive natural orange and rose tones on the obverse and reverse. The strike is typical for the date with good overall sharpness on the obverse but some weakness on the eagle's neck and tail feathers. The luster tends a bit toward a semiprooflike texture than the usually seen heavy mint frost. Some minor marks in the fields, especially on the reverse, limit the grade. This would make a perfect type coin for the collector seeking a single decidedly above-average half eagle from this mint.

After a number of newly discovered coins in the MS63 to MS64 range, the 1852-C has become arguably the most available half eagle from this mint in Uncirculated. There are now as many as 20 to 25 pieces known in Mint State. There are still no Gems, but there are as many as 10 or so coins that legitimately grade in the MS63 to MS64 range.

*Ex: Long Beach Signature (Heritage, 2/2006), lot 2903, where it brought $8,060; ANA Signature (Heritage, 8/2006), lot 1862, where it sold for $9,200.*

*From The Cherokee County Collection.* (#8251)

## 1852-D Five Dollar, MS62
## Rare in Mint State

**4891** **1852-D MS62 NGC. Variety 28-U.** The obverse has the 1 well right of the bust tip, and the reverse has a vertical die line through the right side of the final S. The 1852-D five dollar is usually found in Extremely Fine or About Uncirculated grades. Mint State examples are rare. Indeed, NGC and PCGS have graded fewer than 30 Uncirculated pieces, none better than MS63.

The yellow-gold surfaces of this MS62 specimen display partially prooflike fields, and have mild field-device contrast when tilted under a light source. The design elements are generally well impressed, save for the usual softness in portions of Liberty's hair and the eagle's neck. A few scattered handling marks determine the grade. Census: 5 in 62, 3 finer (11/11). (#8252)

## Incredible 1853 Half Eagle, MS66
## Finest at PCGS by Three Grade Points

**4892** **1853 MS66 PCGS.** This incredible 1853 half eagle is the *finest certified at PCGS by three grade points* — the second finest are eight submissions in MS63 (11/11).

The Philadelphia Mint made an immense number of coins in 1853. The total for silver coinage alone totaled $9,077,571, six denominations from the silver dollar down to the lowly three cent silver. That may sound like an impressive total, but it assumes far greater significance when one realizes that it is actually composed of a staggering *61,729,200 individual silver pieces,* give or take. About one-fourth of those,15 million plus, were the 1853 With Arrows quarters from Philadelphia, but more than 11 million came in the form of silver three cent coins.

Another $67,059.78 in face value came in the form of copper half cents and cents, the vast preponderance more than 6.6 million large cents.

The economic backdrop to such coinage totals was, of course, the immense shipments of gold from California that for years (1849 to early 1853) had been driving the price of gold down as compared to silver or paper currency — in effect, raising the price of silver and driving the overweight silver coinage from circulation, to the point where it became profitable to melt silver whose bullion content had exceeded its face value. The launch of the reduced-silver-content Arrows and Rays silver coinage along with the silver three cent piece, America's first subsidiary silver denomination, put a stop to the disappearing silver.

Such prodigious silver productions meant, however, that gold coinage took a distant second place in Mint priorities in 1853. Philadelphia made a plentiful number of gold dollars, quarter eagles, and double eagles during the year, but half eagles and eagles suffered: 305,770 of the former, and 201,253 of the latter.

Even so, the 1853 half eagle is thought to be a common issue up to the Mint State level, where it is a conditional rarity. Most Mint State examples are in the lower grades, and the present Premium Gem is a wonder in comparison. The strike is full on the obverse and sharp on the reverse, if not quite absolute. Thick mint frost coats the devices, and the color is even, light reddish-gold. As demanded as this grade level, there are no singular marks. (#8253)

## 1853-C Half Eagle, MS62
## An Available Charlotte Type Coin

**4893** **1853-C MS62 NGC. Variety 1.** The obverse of this well-struck example has fairly deep orange-gold and reddish color that helps to slightly mask a bit of roughness in the left field; the reverse is slightly lighter with more significant roughness in the fields as well as a few marks. A solid coin for the grade with good luster and nice overall eye appeal.

The 1853-C is one of the more available Charlotte half eagles in terms of its overall and high-grade rarity. There are more than 300 examples known with most showing considerable wear. As many as a dozen exist in Uncirculated, the finest being the Bass II, lot 1041 coin (which Heritage later sold as lot 3032 in our 2004 FUN auction) that has been graded MS64 by PCGS. There are another three or four coins graded MS63.

*Ex: Cincinnati Signature (Heritage, 5/2009), lot 3778, where it sold for $11,500.*

*From The Cherokee County Collection.* (#8254)

## 1853-D Half Eagle, MS63, Ex: Green Pond
## Winter Plate Coin, Tied for Second Finest

**4894** **1853-D Large D MS63 PCGS. Variety 29-V.** Ex: Green Pond. The 1853-D is the most available Dahlonega half eagle, making it an excellent choice for mintmark type collectors. This piece boasts a marvelous pedigree from the Green Pond Collection, which we handled in our 2004 FUN Signature. At the time, we wrote:

> "The Green Pond Collection of Dahlonega Gold is one of the finest complete collections of these rarities ever assembled, holding dual PCGS Registry leadership as the #1 Current and #1 All-Time Finest Dahlonega Collection. The overall quality of every coin is simply incredible, with many 'finest known' and 'Condition Census' survivors. Nearly every Green Pond rarity is a plate coin in the second edition of Doug Winter's *Gold Coins of the Dahlonega Mint, 1838-1861.*"

The present piece is far better-struck than normal for the issue, with the reverse particularly sharp. Complete denticles appear on both sides. A planchet flaw runs from behind Liberty's head, ending near star 12. The surfaces are clean for the grade, orange-red on the obverse and greenish-gold on the reverse. The mint luster is heavier on the reverse than on the obverse. Eye appeal is excellent overall. **Plate coin in the Winter second edition.** Population: 5 in 63, 1 finer (12/11).

*Ex: Green Pond Collection (Heritage, 1/2004), lot 1056.* (#8255)

## Finest Known 1855-C Half Eagle
## Stunning and Original MS65
## Ex: Elrod, William Miller

**4895** **1855-C MS65 NGC. Variety 1.** We never had the foresight to ask noted Charlotte gold collector Stanley Elrod what was the single coin in his collection(s) he admired most but we would be hard-pressed to think that this fantastic 1855-C half eagle was not one of them. It is among the best Charlotte coins known of any date and it is clearly the finest 1855-C half eagle.

This coin is virtually "as struck" and shows nice natural orange-gold color on the obverse coupled with lighter even rose-gold on the reverse. The luster is satiny and bold. The surfaces have a bit of minor roughness in the fields (as made), and there is some weakness on the stars on the left that might be the result of an uneven strike or, perhaps, some minor lapping of the die. There are some minor foreign deposits within the date numerals that could be easily removed without harming the coin.

In a word, this piece is stunning and it is clearly a highlight of this (or any) collection.

There are as many as 250 examples of this date known with most in the VF-XF range. In Uncirculated, the 1855-C is extremely rare with maybe half a dozen known. The finest is, of course, the coin offered here and graded MS65 by NGC. The next finest is Ex: Bass II, lot 1068 (graded MS63 by PCGS, it sold for $33,350). The third best is Ex: Milas, lot 496, that sold for $38,500. It has been graded MS63 by PCGS and MS64 by NGC.

*Ex: Stanley Elrod Collection; North Carolina collection; William Miller/Long Beach Signature (Heritage, 2/1999), lot 6284, where it brought $67,275; obtained via private treaty from Doug Winter in 2010.*

*From The Cherokee County Collection.* (#8262)

## Uncirculated 1856-C Half Eagle Moderately Available in Mint Condition

**4896** **1856-C MS61 NGC.** Typically struck for the issue with some weakness seen at the obverse border from 3 to 6 o'clock and on the first few stars at the left; the reverse has weakness in the center but the periphery is a bit sharper overall. There is some reddish color in the center of the obverse, and the underlying surfaces on both sides show a number of abrasions with the majority of these on the left half of the obverse.

As recently as a decade ago, this date was among the rarest Charlotte gold coins of any denomination in Uncirculated and only one or two Mint State coins were known. Through some new discoveries and gradeflation, the number of certified Uncirculated examples has increased. The finest 1856-C half eagle is a PCGS MS63 that was in numerous Heritage auctions between 2006 and 2008. The population figures for this date in MS61 seem inflated by resubmissions.

*Ex: Houston Signature (Heritage, 11/2007), lot 61648.*

*From The Cherokee County Collection.* (#8267)

## Finest Known 1856-C Half Eagle, MS63

**4897** **1856-C MS63 PCGS. Variety 1.** Although the 1856-C half eagle for many years was regarded as common, in reality it is scarce in any grade and rare in Mint State. Since Doug Winter published his first edition, a few more pieces have come onto the market in Uncirculated; the second edition nonetheless says that perhaps five or six Mint State examples survive and that the 1856-C is "extremely rare in Uncirculated." The number of Mint State submissions at PCGS and NGC combined total 20, One can easily divide by a factor of two or three to determine one's own estimate of the actual number of Mint State pieces. Regardless, *this is the highest graded and only certified specimen of the 1856-C half eagle in MS63 at either service, with only two pieces listed in MS62 at NGC.*

This piece displays strike details that are atypically strong for the issue, with Liberty's hair curls all pleasingly delineated and separated, and bold, sculptural details on both the eagle and the peripheries. The surfaces display the usual soft, satinlike mint luster. Lightly abraded surfaces lack the numerous deep abrasions usually found, with attractive medium orange-gold hues. This specimen poses a prime opportunity for Charlotte gold specialists, one that will not go unnoticed. Population: 1 in 63, 0 finer (11/11).

*Ex: Denver Signature (Heritage, 8/2006), lot 5507, which realized $46,000.* (#8267)

## Choice Mint State 1857 Half Eagle
## Sole Finest NGC-Graded Example

**4898** **1857 MS64 NGC.** For many collectors, the idea of 1857-dated Mint State gold coinage begins and ends with the 1857-S double eagles from the *S.S. Central America*. To a lesser extent, however, the 1857 half eagle also fits the bill, though with a mintage in the high five figures, there is an understandable cap on the number of potential Mint State pieces. This near-Gem, the single-finest NGC-certified example of the issue (11/11) with just a few PCGS-graded peers, has deeply incised detail with swirling, shimmery luster that is as much orange as yellow. Carefully preserved and beautiful. (#8271)

## 1857-C Five, Bright, Semiprooflike MS62
## Condition Census Quality

**4899** **1857-C MS62 PCGS Secure. CAC.** Struck in bright yellow-gold with impressive semiprooflike luster and great overall visual appeal for the date and the grade. The strike is above-average for the issue with the only area that shows weakness noted on the eagle's neck. This coin is easily identified by the presence of a toning spot in Liberty's hair.

The 1857-C is one of the more available half eagles from this mint in higher grades, ranking 21st of 24 issues. There are around a dozen or so pieces known in Uncirculated with the finest being the NGC MS65 that is from the Elrod and Miller collections. Only one other coin, a PCGS MS63, that is Ex: FUN Signature (Heritage, 1/2004), lot 3037, is finer than MS62. The Cherokee County Collection example is clearly in the Condition Census for the issue, and it is one of just two MS62s that have been approved by CAC with one finer also having received CAC approval. *Ex: FUN Signature (Heritage, 1/2010), lot 2187, where it sold for $18,975.*

*From The Cherokee County Collection.* (#8272)

## 1857-D Half Eagle, MS62, Ex: Bass
## Sharply Struck and Pleasing

**4900** **1857-D MS62 PCGS. Variety 34-DD.** Ex: Bass. Formerly offered as lot 473 in the Bass III sale, where it was described in part as:

> "This is an extremely rare coin and is among the very finest known. Extremely sharp strike with frosty, brilliant yellow gold luster. Only occasional surface marks are noted, as expected. With a high degree of aesthetic appeal, which is quite unusual. Doug Winter noted: 'The majority of 1857-D half eagles do not have especially good eye appeal. This is the result of poor strikes, inferior planchets and numismatic abuse. Any example with good eye appeal is quite rare.' This example, which may qualify as second finest known is equal in quality to the plate coin in the Winter reference. However, the present piece is much more sharply struck.
>
> "Date logotype fairly shallow in the die — more resembling a typical Philadelphia Mint half eagle than one from Dahlonega."

Since those words were written in 2000, the population data have changed little. Both NGC and PCGS each show three pieces certified in MS62, with two finer, which could in reality represent only a small handful of individual coins (11/11).

*Ex: Purchased from Joe Flynn, March 17, 1978; Bass III (Bowers and Merena, 5/00), lot 473; Ashland City Collection/FUN Signature (Heritage, 5/2003), lot 4798; FUN Signature (Heritage, 1/2008), lot 3188.* (#8273)

## 1858-C Five Dollar, MS62
## The Perfect Charlotte Type Coin

**4901** **1858-C MS62 PCGS. Variety 1.** This date has become the most obtainable Charlotte half eagle in high grades and, as a result, it is ideal for the collector seeking a single high-grade piece from this mint. There are around 15 known in Uncirculated but, surprisingly, most are in the lower range of this grade and are MS60 to MS61. There is just one better than MS63 (an NGC MS64) and just one in MS63 (a second listing at NGC is a resubmission). In MS62, there are probably four to six known. As expected from most known high-grade examples, this piece is well struck both on Liberty's hair curls and the eagle's feathers. The bright mint luster is only interrupted by a number of small abrasions and mint-made porosity (only on the reverse).

*From The Cherokee County Collection.* (#8277)

## 1859-C Five Dollar, MS62
## Mid-Condition Census Quality

**4902** **1859-C MS62 PCGS. Variety 1.** This lovely example is among the finest known examples of this late-date Charlotte issue. Only bettered by two MS63 pieces and the fabulous MS66 coin formerly in the Elrod and Eliasberg Collections. Sharply defined on the obverse, the reverse shows the usual softness from an improperly annealed reverse die. The obverse fields are bright and moderately prooflike, a result of heavy die striations on that side. Even orange-gold toning graces both sides. Careful study locates a mint-produced strike-through on the field above the eagle's neck, and a couple of delicate hair-thin marks on the cheek. Population: 1 in 62, 2 finer (11/11).

*From The Cherokee County Collection.* (#8281)

## Select 1859-C Half Eagle
## Second-Finest Known, Ex: Elrod

**4903** **1859-C MS63 PCGS. Variety 1.** Ex: Elrod. A fabulous coin and formerly the representative piece in the William Miller Collection, where it was described as, "The 1859-C is extremely rare in strict Mint State with only five pieces currently known to exist. This is the second finest example known. This and the finest known both resided at one time in the collection of famed collector Stanley Elrod. The obverse on this piece shows the slight softness usually seen on the hair curls below BERT of LIBERTY, and the reverse is ill-defined, as always. The surfaces are remarkably clean for this normally heavily abraded issue. The only defects worthy of mention are numerous, small planchet flakes scattered over the reverse—mint-made problems being common to all 1859-C half eagles. Each side is semi-prooflike with evidence of heavy die striations in the fields."

*Ex: Stanley Elrod Collection (Stack's, 10/1982), lot 1341; William Miller Collection (Heritage, 2/99), lot 6296; Long Beach Signature Auction (Heritage, 6/1999), lot 6533; Jack Copeland (Royalty Coins); unknown intermediaries; Private collection.* (#8281)

## 1860-C Five Dollar, MS62
## Rarely Seen in Uncirculated Grades

**4904** **1860-C MS62 NGC. Variety 1.** The 1860-C is surprisingly available for a coin with a mintage of only 14,813 pieces. An estimated 150-200 coins are extant, but the vast majority are in the VF-XF grade range. Only seven or eight Uncirculated coins are known, the finest being a pair of NGC MS64s. The obverse on this piece is sharper than usually seen; the reverse shows the usual softness, a result of the reuse of the 1859-C reverse die. Both sides are peppered with numerous small abrasions, but the only marks of note are mint-made: an angling planchet depression in the lower left obverse field and the lower right field. The coin is bright overall with a touch of light reddish-gold patina.

*From The Cherokee County Collection.* (#8285)

## 1861-C Half Eagle, AU55
## Scarce in Choice AU Condition

**4905** **1861-C AU55 PCGS.** The 1861-C is an issue that is collectors love to speculate about. The Confederacy took control of the mint before the production run was complete, leaving 887 pieces still to be struck. The remaining 887 coins were struck after the mint's employees took loyalty oaths to the Confederacy, and are loosely considered CSA coins. The problem is which coins were those 887? Traditionally it has been thought that the pieces with a die crack through the top of AMERI were struck under the authority of the Confederacy. This piece shows that die crack, although it is light. An estimated 150 to 175 coins are estimated extant out of the original mintage of 6,879 pieces. Choice AU examples, such as this one, are especially challenging. As one would expect, there are numerous small, but individually insignificant abrasions over each side. The surfaces are orange-gold with remnants of a semiprooflike finish still visible around the devices. The strike is strong, especially on the obverse; the reverse shows just a touch of softness on the eagle's neck.

*From The Cherokee County Collection.* (#8289)

## Condition Rarity AU53 1871-CC Half Eagle

**4906** **1871-CC AU53 NGC. Variety 1-A.** The vastly more common die pair with spaced-out CC mintmark, though the condition of this coin, AU53, is anything but common. Out of 20,770 pieces struck for the issue, only 33 certification events list a finer grade within the combined certified population (10/11). Orange-gold surfaces are bright with luster and host sharply struck devices that show only slight bluntness from wear. Scattered minor abrasions and several small rim irregularities contribute to the grade, but this early half eagle must be considered an important coin for Carson City enthusiasts. (#8323)

## AU 1872-CC Half Eagle Unknown in Mint State

**4907** **1872-CC AU50 PCGS. Variety 1-B.** A low mintage of 16,980 pieces ensures the rarity of this early Carson City issue. No examples are certified as Mint State, and AU coins are rare. PCGS has graded one piece each as AG3 and Good 4, which demonstrates the need for lower denomination gold coins in Old West commerce. The present coin, however, has a broad band of luster across both borders, and its peach-gold surfaces lack relevant marks. The strike shows blending on the curls and the eagle's shield, typical for CC-mint coins of the era. Population: 10 in 50, 13 finer (11/11). (#8326)

## Condition Rarity AU50 1878-CC Half Eagle

**4908** **1878-CC AU50 NGC. Variety 1-A.** Sole die pair for the year, used to strike just 9,054 pieces total. The half eagle was the smallest gold denomination produced by the Carson City Mint, and aside from a handful of dates in the high five figures, mintages are almost universally depressed. As an AU50 example of the 1878-CC five, this lot qualifies as a condition rarity. Wear is light and focused on the high points, leaving considerable luster through yellow-gold fields and even a hint of flash at the margins. Wispy abrasions and two deeper marks like tears from the corners of Liberty's eye contribute to the grade. Census: 5 in 50, 16 finer (11/11). (#8346)

## Incredible MS65+ 1900-S Half Eagle With CAC Green Label

**4909** **1900-S MS65+ PCGS. CAC.** The 1900-S half eagle saw an ample production of 329,000 coins, and they are mostly well-made and attractive. One wonders if the 1900 date led to the saving of a disproportionate number of survivors. At any rate, one needs neither Pluses nor CAC stickers nor Gem grades — although all are present — to immediately appreciate this coin as among the few finest survivors of the issue. The surfaces are extremely lustrous, khaki-gold with greenish-gold tinges, totally original, fully struck on both sides, and free of all but a tiny stray tick or two. This piece is one of only two PCGS-certified Gems at CAC, with one CAC coin finer (an MS69 CAC). Population: 1 in 65+, 5 finer (11/11). (#8401)

## 1860 Half Eagle, PR66 ★ Cameo
## Ebullient Pre-War Proof Gold Rarity

**4910** **1860 PR66 ★ Cameo NGC.** Despite a stated mintage of 62 proofs, the 1860 five dollar gold is far more elusive in proof format than that figure would suggest. As Akers noted in his work on the denomination, the majority of pieces likely never left the Mint. A similar pattern appears for the 1859 and 1861 proof half eagles as well; the mintages appear high, yet those two issues are similarly elusive. In 1862, production of proof fives fell to 35 pieces, which was likely much closer to the number of specimens actually sold.

It is perhaps unsurprising that the Mint would make a miscalculation of this kind, as proofs were not offered to the general public until 1858. In a *Coin World* article dated February 7, 2005, Bruce C. Goldstein and Mike Nourse, wrote about the general topic in the first of two parts to "Early Proof Coins":

> "Prior to 1858, U.S. Proof coins were primarily made as presentation pieces to dignitaries and to a few lucky souls that were close to people at the Mint. ... Starting in 1858, the United States Mint made a deliberate effort to reach out to coin collectors (there weren't very many around at the time) by producing collectible Proof coins of all the various types of coins that were minted for regular use.

The Mint, not knowing what demand would be, likely overproduced the issue and subsequently melted the unsold remainders. The attrition of almost a century and a half claimed a number of others, and Garrett and Guth, in their 2006 work on American gold coinage, stated that "probably about 10 examples" remain today, several of which are impounded in museum collections. The number of specimens available to private collectors is very small, and the issue is an extreme rarity in the numismatic marketplace. As stated by Garrett and Guth, "It can sometimes be years between the offerings of an 1860 half eagle in Proof."

Certified population figures further reinforce the rarity of this proof issue. NGC has graded five examples, four described as Cameo and one as Ultra Cameo; the present example is the single finest of the Cameo pieces, graded PR66 ★ (11/11), compared to the PR64 and PR65 designations granted the other Cameo examples (and the PR64 awarded to the Ultra Cameo coin). Interestingly, the PCGS *Population Report* shows only a single certified example, an undesignated PR64 specimen.

From the second part of Goldstein and Nourse, dated February 14, 2005, a meditation on early proof survival rates:

> "A final area that should be mentioned when covering the survivability of early Proof coins is discussing the likelihood of a Proof coin remaining in collectible condition from the time it was purchased until the present day. From the time they were minted until they were preserved as the collectible that you could obtain today, these coins have had a very rough life. Immediately after they were minted they were essentially loose in a drawer at the Mint available for purchase. ... It is quite amazing that any of these survive in a shape that today we call gem (Proof 65+) considering what they could have gone through."

The elegant Cameo Premium Gem offered here, then, is one of the fortunate. It displays excellent contrast, a hallmark for the 1860 proof half eagles, and strong visual appeal. The strike is bold, and while the surfaces show a few tiny flaws (such as a small depression in the left obverse field), the overall visual appeal is remarkable, particularly when one considers the early issue. A sublimely important opportunity for the proof gold specialist who seeks to make an addition to a world-class collection

*Ex: Summer FUN Signature Auction (Heritage, 6/2008), lot 2037. From The Jim O'Neal Gold Type Collection.* (#88450)

## 1876 Half Eagle, PR65 Ultra Cameo Tied for Finest Certified Ultra Cameo at NGC

**4911** **1876 PR65 Ultra Cameo NGC.** The year 1876 continued to be a low mintage one for half eagles as only 1,387 business strikes and 45 proofs were coined. Today, any 1876 five dollar is considered very rare. Most of the business strikes closely resemble proofs with mirrored fields and frosted devices, however, proofs are easily distinguished by the presence of a small die lump on Liberty's neck just below the jaw, vertically above the 1 in the date. Proofs were struck on two occasions in 1876: 20 pieces on February 19, and 25 pieces on June 13. All 45 coins used the same die pairing.

This is a fully brilliant, fully struck example. A few hairlines are detected in the fragile fields with light magnification, but there are no singularly mentionable marks or spots worthy of consideration as pedigree identifiers. This coin displays stunning black-on-gold cameo flash when tilted in the light. Census: 2 in 65 Ultra Cameo, 0 finer (11/11).

*Ex: FUN Signature Auction (Heritage, 1/2006), lot 3501, realized $46,000.* (#98471)

## 1878 Half Eagle, PR65 ★ Cameo
## Only 20 Pieces Struck
## Ex: Bass

**4912** **1878 PR65 ★ Cameo NGC. CAC.** The 1878 proof Liberty half eagle is one of the rarest coins in the series, from a minuscule mintage of just 20 pieces. Proof gold mintages were uniformly low during the 1870s, with three other dates of that decade claiming an identical 20 piece production figure. Mintages began to increase toward the end of the decade, and were considerably higher in the 1880s. Most experts estimate less than 10 examples of the 1878 proof half eagle are extant today.

The low demand for proof sets probably derived from several sources, including the fact that the government would not exchange gold coins at par with paper money until January 1, 1879. Collectors had to pay for gold proof sets with other gold coins that could only be purchased from bullion brokers at a steep premium, and sent in insured packages. That few collectors were willing to participate in such an arduous and expensive process is not surprising. Writing in 1907, Samuel Hudson Chapman said, "These proof sets are exceedingly rare, and my estimate would be that there are not over five sets in existence of the years prior to 1890." Of course, a number of coins survived individually after the sets were broken up, accounting for the 10 or so examples we know about today. The number of coins available to collectors is further reduced by the presence of one specimen in the Smithsonian and another in the ANS.

The coin offered here traces its history to the famous Harry Bass Collection, a mark of distinction for any gold coin. This piece is an impressive Gem, with dramatic Cameo contrast between the frosty devices and the mirrored fields. The design elements are strongly impressed, except for a touch of softness on the arrow fletching and eagle's head. The attractive orange-gold surfaces are free of mentionable blemishes. Census: 1 in 65 Cameo, 0 finer (11/11).

*Ex: Paramount Rare Coin Company, purchased by Harry Bass on August 10, 1971; Harry W. Bass, Jr. Collection (Bowers and Merena, 11/2000), lot 531.*

*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#88473)

Smithsonian

## 1883 Half Eagle, PR66 Cameo
## Finest Cameo Example Certified

**4913** **1883 PR66 Cameo NGC. CAC.** The comments of Walter Breen in his *Proof Encyclopedia* are worthy of quoting in full concerning the 1883 proof half eagle:

> "Date slants crazily up to r., odd minute raised marks in both loops of second 8, left base of 1 r. of center. Rev. Tiny marks in second white stripe. Much rarer than lower denominations."

After citing a roster of nine examples, he finishes with:

> "It is doubtful if as many as 20 survive."

PCGS' CoinFacts site posits a slightly larger number of survivors, perhaps 30 in all — a figure that we believe to be on the high side, considering that NGC and PCGS combined have seen only 14 submissions in all grades, from an impaired PR55 NGC piece to a couple of PR67 Ultra Cameos at the same service. The average certified piece is a PR63 to PR64 example, with or without a Cameo designation.

The proof 1883 half eagle mintage was a smallish 61 pieces, lower than for any other gold denomination of the year except the eagle, made to the extent of only 40 coins.

The present Premium Gem proof Cameo example is one of the numerically finest at NGC, exceeded only by the aforementioned PR67 Ultra Cameos. There are no Cameos finer at either service (11/11). The surfaces on this coin are a beautiful yellow-gold, heavily mirrored and heavily frosted. The obverse is perfect as far as we can see, with the date "slightly" slanted to the right but the noted busyness inside the second 8. The reverse shows an interesting scribe line above TES OF AM and an area of swirling die polish below the eagle, both likely Mint-made. Census: 1 in 66 Cameo, 0 finer (11/11). (#88478)

## Richly Contrasted 1885 Half Eagle PR65 Deep Cameo, None Finer at PCGS

**4914** **1885 PR65 Deep Cameo PCGS. CAC.** The proof mintage of 1885 half eagles was large enough to escape notice, but apparently also small enough that few specimens survive today in high grades. A total of 66 pieces were made.

The Garrett-Guth *Gold Encyclopedia* says of the coins:

> "The survival of the 1885 half eagle is on par with that of the other issues of the early and middle 1880s. There are perhaps 20 or so examples known. Many coins of the original mintage probably entered circulation or were melted as unsold. Even today, there are very few individuals who actually collect Proof gold coins by date. The same was even truer in the 1880s. There are two examples in the Smithsonian, one from the original Mint Collection, the other donated by the Lilly family in the 1960s. At least two other coins are in tightly held collections. The 1885 half eagle is very rare in Proof."

Walter Breen calls the issue "extremely rare, more so than its mintage suggests, enough so as to be almost a forgotten coin." PCGS' CoinFacts website suggests that only 10 or so examples survive at the Gem proof level or finer. The present Gem Deep Cameo PCGS specimen displays rich reddish-gold coloration accented by splotches of lilac interspersed over the obverse, while the reverse is more even and consistent in color. A pronounced orange-peel effect, often seen on proof gold, appears on each side. The sole mentionable contact is a small vertical mark on Liberty's neck.

PCGS has seen only a single Gem proof example each in non-Cameo, Cameo, and Deep Cameo, the last being the present coin. There are no Deep Cameos finer (11/11). (#98480)

## 1887 Five Dollar, PR65 Cameo
## Proof-Only Date With Only 87 Pieces Struck

**4915** **1887 PR65 Cameo NGC.** The 1887 five dollar was only struck in proof format, and the production run was an easy-to-remember 87 pieces. Garrett-Guth state: " ... most did not survive. Many probably entered circulation, as this date has the largest number of impaired examples seen for Proof issues of the 1880s. Several Proofs may have been retrieved from circulation once the rarity of the date became known." The population data backs this up with six pieces certified from PR53 to PR58. With the coins that were dropped into circulation, several of which have obviously not survived, the actual number of survivors is lower than one would expect for a date with a similar mintage and business strike production. Probably only 20-25 individual examples are extant in non-Cameo, Cameo, and Ultra Cameo.

Gem examples of the 1887 five dollar have always been in great demand. Of course, collectors of the five dollar Liberty series need an example. But the demand goes beyond that. The proof-only status paired with the low survivorship has propelled Gem specimens into the "trophy coin" category. There will always be great demand for a high-grade 1887 five dollar.

The surfaces on this piece show even, light reddish-gold color and the deeply mirrored fields show the rippling orange-peel texture usually seen on proof gold from the latter half of the 19th century. Flaws useful for pedigree purposes are few indeed. The only one that might be viewable in a previous auction photo is a tiny planchet flake in the right obverse field between star 12 and the trailing hair curls. Our records show that this is the first Gem 1887 to appear at public auction since 2006 (in a Bowers and Merena auction), and before that was the Byron Reed coin in 1996. The tiny planchet flaw does not appear in the photos of either sale, leading us to conclude it has a different lineage. (#88482)

## 1893 Liberty Half Eagle, PR65 Ultra Cameo Only Three Finer NGC Coins

**4916** **1893 PR65 Ultra Cameo NGC.** This is only the second appearance of an Ultra Cameo proof 1893 Liberty half eagle in any of our Signature auctions since the start of our Permanent Auction Archives back in 1993. The other appearance was also a PR65 Ultra Cameo NGC specimen, a different coin than the piece offered here.

Just a trace of striking softness is apparent on each side: in the hair curls over the ear and on the eagle's right (left facing) leg. Both sides have remarkable eye appeal that is the result of brilliant yellow surfaces This lovely piece is destined for a first class collection of proof gold coinage. Census: 4 in 65 Ultra Cameo, 3 finer (11/11). (#98488)

## Select Proof 1897 Half Eagle Rare Cameo Specimen

**4917** **1897 PR63 Cameo NGC.** Only 83 proof Liberty half eagles were minted in 1897, and it is doubtful that more than half of that total survives today. PCGS and NGC have combined to certify only 38 specimens between them (12/11), and a number of impaired specimens are mentioned in the literature. This is only the eighth time Heritage has been privileged to offer an example of this issue in the last 15 years.

The present coin is a stunning Select specimen, with stark black-on-gold contrast between the deeply mirrored fields and the frosty devices. The design elements are sharply detailed throughout, and the rich greenish-gold surfaces show attractive highlights of lilac. Census: 3 in 63 Cameo, 15 finer (11/11). (#88492)

## Singular PR67 Ultra Cameo 1897 Five

**4918** **1897 PR67 Ultra Cameo NGC.** In the *Encyclopedia of U.S. Gold Coins* entry for this issue, Garrett and Guth note: "The Proof half eagles of 1897 are of about the same rarity as those of the previous few years." In other words, approximately 25 to 30 individual specimens survive; while NGC and PCGS show 43 certification events between them, proof gold is notorious for resubmissions due to the immense difference in price created by a single grading point.

Those survivors come from a pool of just 83 pieces, the stated proof mintage for half eagles that year, with an unknown quantity melted as unsold. It is worth noting that while the proof 1896 half eagle had a three-figure mintage, it is of comparable availability to the 1895 and 1897 issues, suggesting a relatively large excess coinage in 1896 that did not occur the year before and was not repeated. This assessment of the proof 1897 half eagle's rarity makes it a very rare coin regardless of condition.

This Superb Gem is tied for the finest proof 1897 half eagle in the combined certified population, regardless of Cameo status (11/11); that this specimen is an amazing Ultra Cameo piece in the grade and singular as such is a wonderful bonus. The gold-frost, pale over decisively struck devices, supplies the contrast to gold-or-black mirrors that are at once flashy and deep with a hint of "orange-peel" texture. This piece shows few irregularities that could serve as pedigree markers; two small milky spots to the right of the portrait will have to do. (#98492)

## Deep Cameo Gem Proof 1898 Half Eagle
## 'Black-and-Gold Contrast' Defined

**4919** **1898 PR65 Deep Cameo PCGS.** The best Deep Cameo proof coins produce a stunning mirror-and-frost contrast that is described as "black-and-gold" for the rare gold specimens. This Gem, struck at the tail end of the Mint's golden age for classic Cameo coinage, offers pale yellow mirrors with slight orange-peel texture that turn "black" at the proper angle to the light. On both sides but especially the reverse, the frost over sharply struck devices is exquisite. For future pedigree identification, a tiny right-angle-shaped lintmark is noted to the right of the last 8 of the date. Garrett and Guth suggest a surviving population of 30 to 40 proofs, regardless of contrast category. Population: 4 in 65 Deep Cameo, 2 finer (11/11).

*Ex: Long Beach Signature (Heritage, 9/2003), lot 8034, which realized $23,000.* (#98493)

## Ultra Cameo Gem Proof 1900 Half Eagle
## A Turn-of-the-Century Classic

**4920** **1900 PR65 Ultra Cameo NGC.** Despite a sudden surge in the official mintages of proof Liberty half eagles from 99 pieces in 1899 to 230 specimens in 1900, the half eagles of the latter eagle are not much more common than their 1899 counterparts, indicating that a fair number were melted as unsold. This exquisitely contrasted Gem specimen has wonderful frost-and-mirrors and sharp detail. A flaw near star 3 largely accounts for the technical grade, while an apparent strike-through to the left of Liberty's neck supplies a useful pedigree marker for future appearances. Great all-around visual appeal. Census: 6 in 65 Ultra Cameo, 6 finer (11/11). (#98495)

## Seldom-Seen 1903 Half Eagle, PR67 Cameo Unusual Contrast for the 'Semibrilliant' Era

**4921** **1903 PR67 Cameo NGC. CAC.** Any proof gold coinage from the classic era of U.S. numismatics is rare to a greater or lesser degree, depending on numerous factors including overall survival and conditional rarity. The certified populations are of little use in determining actual survival, as they tend to be heavily inflated with resubmissions, a reflection of the great incentives that proof gold coinage of the 19th and early 20th centuries can achieve for a one-point grade bump.

Cameo or Deep/Ultra Cameo proof gold made after 1902 is doubly rare, since that was the year that the Mint changed its method of manufacturing proofs, whether copper, silver, or gold, to a finish that Breen called "semibrilliant" in his *Proof Encyclopedia,* as opposed to the former format of frosty devices contrasting against reflective, mirrored fields.

The present Superb Gem Cameo is thus doubly rare, and conditionally more so, by its status as a proof Liberty Head gold coin with the Cameo designation, as well as by ranking as one of four at the grade level at NGC, with a single PR68 Cameo finer (11/11).

Garrett and Guth note of the 1903 Liberty Head fives:

> "In comparison to many of the other, very rare, Proof half eagles, the 1903 issue is one of the most common. As a type, however, any Proof Liberty Head half eagle should be considered very rare and desirable. The 1903 issue is mostly seen with brilliant surfaces, and it lacks the deep cameo devices seen on the earlier issues. Although the total number of certified examples is very high for the mintage, these include a great number of resubmissions."

This Superb Gem proof boasts bright yellow gold color overall, with contrast that is more pronounced on the reverse than on the obverse. The fields are deeply mirrored, and there are no noticeable marks. This piece is apt to attract a good deal of attention as one of the few Cameo proofs available from late in the Liberty Head series. (#88498)

## Rare PR65 Cameo 1904 Five Dollar
## One Cameo Finer at PCGS

**4922** **1904 PR65 Cameo PCGS. CAC.** Jeff Garrett and Ron Guth in *Encyclopedia of U.S. Gold Coins* estimate that only 50 to 75 proof 1904 half eagles survive from the original mintage of 136 pieces. Other experts agree, including Breen, who considered this date a "sleeper." Without question, this is a rare proof issue in any grade, but at the Gem proof level the issue is prohibitively rare. PCGS has certified a mere three examples at the PR65 Cameo level with just one coin grading higher, a PR66 Cameo (11/11). A review of memorable collections reiterates the rarity of the issue in Gem or better condition. The Smithsonian 1904 proof five is considered a PR64 Cameo by specialists, as is the Eliasberg coin. Of the handful of Gem or better examples of this date, most are pedigreed to famous collections, such as the Pittman and Bass estates. The present example boasts near-pristine black-on-gold surfaces with a high degree of contrast. The reverse is essentially free of distractions and is choice for the assigned grade, while the obverse shows a couple of trivial, dotlike contact points in the fields. The small projection at Liberty's throat is a strike-through, as made.

*Ex: Long Beach Signature (Heritage, 6/2007), lot 2399.* (#88499)

# INDIAN HALF EAGLES

## 1908 Indian Head Five Dollar, MS66
## Extremely Rare Any finer

**4923** **1908 MS66 PCGS.** This is the first year of Bela Lyon Pratt's Indian Head half eagle. Sporting a mintage exceeding 577,000 pieces, it is available in most Mint State grades through near-Gem. Gems are somewhat scarce, but can be located with patience. Premium Gems are extremely scarce—indeed, PCGS and NGC have certified only about 35 pieces in this grade. Higher grade examples are extremely rare.

Both sides of this MS66 example display vibrant luster and beautiful apricot-gold patina, and a solid strike delivers virtually full definition to the design elements. This piece has been very well cared for and exudes outstanding eye appeal. Population: 17 in 66, 1 finer (11/11). (#8510)

## 1908-S Half Eagle, MS66
## Elusive in This Grade

**4924** **1908-S MS66 NGC.** The 1908-S half eagle is a low-mintage (82,000 pieces) but high-survival date, apparently saved in relatively high numbers as a first-year issue. Examples can be had through near-Gem with minimum difficulty; even Gems can be acquired with patience and searching. The issue becomes very elusive in MS66 and finer.

Bright luster emanates from the peach-gold surfaces of this Premium Gem, and a solid strike imparts sharp definition to the design elements, including the Indian's hair and headdress feathers and the eagle's plumage. This is a wonderfully preserved specimen. We mention a couple of minute milling marks just to the left of the left (facing) wing solely for pedigree purposes. Census: 12 in 66, 7 finer (11/11). (#8512)

## Gem 1909 Indian Five
## Only Seven Finer Coins at PCGS

**4925** **1909 MS65 PCGS.** The 1909 Indian half eagle claims a generous mintage of 627,138 pieces and is one of the more available issues of the series. The 1909 is a condition rarity, however, with coins reasonably available in grades up to the Gem level but extremely difficult to locate in finer grades.

The present coin is a delightful Gem, with sharply detailed design elements and vibrant mint luster. The attractive orange-gold surfaces display highlights of green and lilac. Eye appeal is extraordinary. Housed in a green label holder. Population: 87 in 65, 7 finer (11/11). (#8513)

## Gem 1909 Half Eagle
## Seldom Seen Finer

**4926** **1909 MS65 PCGS Secure.** The 1909 Philadelphia half eagle is a common issue in the lower Mint State grades, but Mike Fuljenz writes in *Indian Gold Coins of the 20th Century* that "as with all dates of this design, examples graded MS64 and higher are very scarce and properly graded Gems are very rare." This is one such, with deep orange-gold surfaces accented with mint-green at the Indian's neck. Generous luster complements surfaces that are unmarked, save for a single scrape near the eagle's head. This would make a beautiful acquisition for a type or date set, or even a Registry Set for bold collectors with deep pockets. Seldom seen finer. Population: 87 in 65, 9 finer (11/11). (#8513)

## Rich Orange-Gold Gem 1909 Half Eagle

**4927** **1909 MS65 PCGS. CAC.** The 1909 Indian half eagle is a second-year issue that is generally available for a price even up to the Gem level, but it is exceptionally elusive any finer. The year was notable for the last O-mint gold coinage, the low-mintage 1909-O, but Philadelphia managed to strike a respectable 627,060 business strikes. The present Gem boasts rich orange-gold surfaces that show occasional accents of lilac. The obverse is fully struck, and strike softness on the reverse is confined to the top of the eagle's wing. No noticeable abrasions mar the considerable aesthetic appeal. PCGS has seen only seven submissions in finer grades (12/11). (#8513)

## 1909-O Half Eagle, AU55
## A Popular, Sought-After Issue

**4928** **1909-O AU55 NGC.** The 1909-O is one of the most sought-after issues in the Indian Head half eagle series because it has a low mintage (34,200 pieces), it is the final gold coin produced at the New Orleans Mint, and it is the only Indian Head five to be struck at this mint. Indeed, Douglas Winter, in *Gold Coins of the New Orleans Mint: 1839-1909*, opines: "In recent years, the level of demand for this coin has soared and it now ranks as one of the most popular New Orleans issues of any denomination."

The present Choice AU offering displays better definition than ordinarily seen on the issue, including the lower feathers of the headdress and those on the eagle's legs, and the mintmark, which is often very weak. Some detail is also visible on the eagle's shoulder feathers, despite high-point wear. The scattered marks on the yellow-gold surfaces are much fewer and of lesser severity than seen on "the vast majority of 1909-O half eagles (that) have heavily abraded surfaces" (Winter, p. 120). (#8515)

## 1910-S Five Dollar, MS64
## Scarce in This Grade

**4929** **1910-S MS64 NGC. CAC.** The 1910-S half eagle, from a relatively high mintage of 770,200 pieces, can be located without too much trouble through the lower Mint State grades. The issue becomes scarce at the Select and near-Gem levels, and extremely rare any finer.

This MS64 specimen displays excellent detail on its design features, including the Indian's bonnet feathers, the eagle's shoulder feathers, and the mintmark. Its lustrous surfaces give off yellow-gold hues imbued with subtle mint-green, and are wonderfully preserved save for minuscule reverse handling marks. Census: 18 in 64, 2 finer (11/11). (#8519)

## 1910-S Five Dollar, MS64
## Exceptionally Clean Surfaces

**4930** **1910-S MS64 PCGS. CAC.** Perusal of PCGS and NGC population data indicate that nearly all of the available 1910-S five dollar coins are concentrated in the MS60 to MS62 grade range. MS63 and MS64 examples become scarce, and higher-grade specimens are quite rare. Mike Fuljenz opines in his *Indian Gold Coins of the 20th Century* that most pieces are "noticeably marked," helping to explain why the typical 1910-S is in the MS60 to MS62 range.

The present near-Gem offering is exceptional in that it reveals no mentionable contact marks on its well preserved surfaces. Pleasing luster glows through the peach-gold patina imbued with mint-green accents, and all design elements are sharply struck, including crispness on the eagle's shoulder feathers and mintmark. Population: 19 in 64, 4 finer (11/11). (#8519)

## Incredibly Rare Gem 1910-S Half Eagle
## Ex: Green-Farouk-Pittman

**4931** **1910-S MS65 NGC.** Ex: Pittman. This Gem piece is certainly one of the finest 1910-S half eagles in existence, a coin that was formerly in the august collections of Colonel Green, King Farouk, and then John Jay Pittman. David Akers described this in the Pittman Collection using these words:

> **"1910-S, Gem Uncirculated.** Another beautiful and very rare Indian Head Half Eagle from the Farouk collection. Although not quite as superb as the incredible 1910-D in the preceding lot, this coin is still a solid Gem and ranks as one of the finest known 1910-S Half Eagles, surpassed in my experience only by the Dr. Thaine Price-Louis Eliasberg-John Clapp example last offered in Auction '83 as Lot 406. This coin is very sharply struck with great luster and beautiful rich orange and greenish gold color. There are just a few trivial marks on the surfaces, and the overall 'eye appeal' of this specimen is absolutely first-rate, Purchased as part of Lot 266 from the Farouk sale in 1954. Formerly in the Col. E.H.R. Green Collection.
>
> *"The 1910-S Half Eagle is readily available in circulated condition, which is not really surprising given its rather high mintage of 770,200 pieces. However, in Mint State, this is a rare issue, and in Choice Uncirculated condition, it is very rare and almost never available. Gems are of the highest rarity and it is my estimate that no more than 6-10 such specimens exist."*

There is little that needs adding to that glowing but accurate description, save to reinforce the incredible frosted luster this piece possesses, along with a sharp strike including the mintmark, and clean surfaces overall. Pedigree identifiers in the form of a small contact mark near star 2 and one above IN will allow future identification, as well as a short, angling dark grease mark on the second-highest headdress feather. The combined NGC-PCGS data show five Gems certified, with one finer. Census: 2 in 65, 0 finer (11/11).

*Ex: Col. E.H.R. Green; King Farouk/Palace Collections of Egypt (Sotheby's, 2/1954), part of lot 266; John Jay Pittman; Pittman Collection I (Akers, 10/1997), lot 1103.* (#8519)

## 1911 Five Dollar, MS65
## Extremely Rare Any Finer

**4932** **1911 MS65 PCGS.** The 1911 five dollar is readily obtainable in grades through near-Gem, but MS 65 examples become very challenging, and are the finest grade most collectors will likely encounter as PCGS and NGC have each seen a solitary specimen better.

This Gem specimen displays wheat-gold surfaces that are generally well struck, save for minor softness in the lower feathers of the headdress. Most of the eagle's shoulder plumage is intact. Luster is about average, which is typical for the issue. A few light handling marks are consistent with the grade. Population: 47 in 65, 1 finer (11/11). (#8520)

## MS65 1911 Half Eagle
## Conditionally Rare

**4933** **1911 MS65 PCGS. CAC.** Thanks to a mintage of 915,000 pieces, the 1911 half eagle enjoys a reputation as one of the more accessible dates in the series. This may be true in circulated condition and the Mint State grades through MS64, but Gems are borderline condition rarities and finer examples all but nonexistent. This MS65 piece offers a pleasing mixture of orange-gold and yellow-gold colors. Fully struck with softly frosted luster, it is an impressively preserved and elegantly appealing survivor. PCGS has certified 47 examples in MS65 and only one coin numerically finer (11/11). (#8520)

## Select Mint State 1911-D Half Eagle With CAC Green Label

**4934** **1911-D MS63 PCGS. CAC.** The 1911-D half eagle is only one of a number of challenging issues in the Indian Head series, starting with the famous 1909-O. This is unlike the 1911-D quarter eagles, where the 1911-D is the sole key to the set. In the half eagles, besides the 1909-O and the low-mintage 1911-D, with a mintage of 72,500 coins, collectors will find several other S-mint issues and the 1929 to all be stoppers in high grade. This Select Mint State 1911-D displays minimal marks consistent with the grade over mattelike wheat-gold surfaces. The mintmark is bold, and the strike is well-executed save for the lowest necklace ornament. Population: 33 in 63, 17 finer (11/11). This piece is one of only two at this grade level with the CAC sticker. (#8521)

## 1913 Five Dollar, MS65 Sharply Struck

**4935** **1913 MS65 PCGS.** The 1913 half eagle is an obtainable date from a mintage of more than 900,000 pieces. Indeed, even near-Gem examples can be located with little trouble. The population drops precipitously in MS65, rendering this issue scarce in that grade level. Finer specimens are very rare.

Dazzling luster issues from the greenish-gold surfaces of this Gem, and a well directed strike imparts sharp definition to the design features, including the Indian's hair and bonnet feathers and the eagle's shoulder and leg plumage. This piece might grade even higher were it not for a milling mark located on each side. Population: 47 in 65, 1 finer (11/11). (#8525)

## 1913-S Five Dollar — Rich, Lustrous MS64 Conditional Key to the Series

**4936** **1913-S MS64 PCGS Secure.** While the 1913-S half eagle is relatively available in the circulated and lower Mint State grades, it becomes very scarce, almost non-existent above the MS63 level. This lovely near-Gem specimen exhibits the average strike and shapeless mintmark that characterize the issue. The luster, however, is above par and the satiny surfaces exude vivid orange-gold patina. A skilled Mint employee evidently polished the dies that struck this coin because the area bordering the eagle's head and leading wing exhibit a smooth, shiny appearance. A wonderful example that readily justifies its near-Gem designation. Population: 14 in MS64, only two finer (11/11). (#8526)

## Impressive Gem 1914 Half Eagle Great Yellow-Orange Color

**4937** **1914 MS65 PCGS. CAC.** Almost all Indian half eagle issues qualify as condition rarities at the Gem level, even recognized type coins such as the 1914. This attractive MS65 example has a blush of peach over warmly lustrous yellow-orange surfaces. The strike is crisp, including complete pendants on the necklace, and a few small copper streaks at the central reverse add character. An impressive coin from a mintage of just under a quarter-million pieces that would have a place in almost any high-level cabinet containing 20th century gold. Population: 26 in 65, 1 finer (11/11). (#8527)

## Fully Struck 1914 Gem Half Eagle Virtually Unobtainable Any Finer

**4938** **1914 MS65 PCGS. CAC.** Coming from a mintage of 247,000 pieces, the 1914 five dollar is encountered fairly regularly in the market through the near-Gem level of preservation. The certified population drops significantly at the MS65 level, where the issue becomes very challenging. Coins grading higher than Gem are virtually unobtainable, as PCGS and NGC combined have certified a mere two specimens finer.

A subtle mix of yellow-gold, apricot, and mint-green resides on the lustrous surfaces of the Gem specimen in this lot, and a solid strike imparts virtually full detail to the design elements. A couple of minute obverse contact marks are within the parameters of the grade designation. Population: 26 in 65, 1 finer (11/11).

*From The Jim O'Neal Gold Type Collection.* (#8527)

## 1915 Half Eagle, MS65+ Tied for Finest Certified

**4939** **1915 MS65+ PCGS.** The 1915 Indian half eagle is a reasonably available date in most grades, from a mintage of 588,000 pieces. Examples in MS65 condition are very scarce, and curiously the issue is unknown in any higher numerical grade.

The present coin is a high-end Gem, one of the two finest certified. It exhibits sharply detailed design elements, including the often troublesome areas of the lower headdress feathers and the eagle's shoulder feathers. The surfaces show only minor signs of contact, with vivid orange-gold color. Mint luster is frosty and vibrant, and eye appeal is outstanding. Population: 2 in 65+, 0 finer (11/11). (#8530)

## Underrated 1915-S Indian Half Eagle, MS64 Formerly in the O'Neal Collection

**4940** **1915-S MS64 PCGS. CAC.** The relatively low-mintage 1915-S half eagle (164,000 pieces) is elusive in all grades, particularly so in Mint State, where PCGS and NGC combined report approximately 350 submissions — but likely far fewer separate coins. Those two services combined have seen just 19 near-Gems, and a solitary piece finer, in MS65 (11/11).

This piece hails from the Jim O'Neal Collection auctioned in 2007. O'Neal later bought a second MS64 PCGS example that had the CAC green label; that piece brought $54,625 in our FUN Signature (Heritage, 1/2011), lot 5154. When we were cataloging that coin, we wrote:

> "The 1915-S is one of the rarest and most important issues in the Indian Head five dollar series. While the 1914-S issue is more difficult to locate in MS64 or higher grades, the 1915-S is rarer in all grades. Even nice circulated coins can be difficult to find, but it is in Mint State where the '15-S becomes an extreme challenge. Low-grade Uncirculated coins through MS62 are scarce, MS63 pieces are rare, MS64 are very rare, and Gem or better pieces are virtually unobtainable. PCGS and NGC combined have certified only 34 MS63 examples and 18 near-Gems. A solitary MS65 has been graded by NGC. This situation has led David Akers to write in his May 19, 1998 catalog of The Dr. Thaine B. Price Collection that 'the 1915-S Half Eagle is one of the premier rarities among all Twentieth Century United States gold coins.'
>
> "The question arises as to why the 1915-S is such a rarity, as the mintage of 164,000 pieces was not really all that small. Evidently, like most San Francisco issues, they were largely put into circulation at or around the time of issue. Relatively few were apparently saved as mementos or passed along as family heirlooms."

An important analysis in that later O'Neal catalog bears close scrutiny, revealing as it does that *the 1915-S half eagle is perhaps the single most undervalued of all Indian Head gold coins,* in terms of surviving PCGS population versus PCGS price. Both sides of this MS64 PCGS example are awash with potent luster and thick mint frost, displaying a rich blend of apricot-gold and mint-green. The sharp strike has brought up the design features throughout both sides, including the Indian's hair, the feathers in the headdress, the eagle's plumage, and the all-important mintmark. The only mentionable contact mark is a small diagonal tick running inward from star 4. Population: 10 in 64, 0 finer (11/11).

*Ex: Jim O'Neal Collection of Indian Half Eagles/Long Beach Signature (Heritage, 9/2007), lot 3526, which realized $34,500.* (#8531)

## 1916-S Gem Half Eagle
## Excellent Eye Appeal

**4941** **1916-S MS65 PCGS. CAC.** The 1916-S is the final Indian Head half eagle produced at the San Francisco Mint. And as the only date of this denomination to be minted in 1916, it is an essential issue for collectors who are trying to complete year sets. No more Indian Head fives were struck until 1929, the last year of issue.

Gem examples of the 1916-S, such as the one being offered in this lot, are rare, and finer specimens are infrequently seen. PCGS and NGC combined have certified 18 MS65s and a mere four coins finer. Excellent luster issues from peach-gold surfaces displaying whispers of apricot and light green, and an exacting strike delivers strong detail to the design features, including the feathers of the headdress and all of the eagle's plumage. The mintmark is bold, but lacks definition, as is usually the case. Both sides are devoid of significant marks, further enhancing the coin's eye appeal. Population: 9 in 65, 2 finer (11/11). (#8532)

## Premium Gem 1916-S Half Eagle
## Only the Single O'Neal
## Example Finer at PCGS

**4942** **1916-S MS66 PCGS. CAC.** With the buildup to the Great War and the beginning of hostilities, international trade stilled, and the United States, despite its professed neutrality at the start, experienced its own consequences. As demand for American gold coinage dwindled, so did total mintages for various denominations. For half eagles, production across all mints stayed nearly steady from 1914 to 1915, but only San Francisco struck five dollar gold pieces in 1916, and its mintage of 240,000 pieces was less than a third of the previous year's total. The half eagle was also the last denomination to resume production, with the isolated issue of 1929 acting as both its return and its farewell.

Despite its low mintage, the 1916-S is available for a price in lesser Mint State grades; Garrett and Guth (2006) allude to a hoard of hundreds of examples. Better representatives, however, prove elusive; while even Gems command only a minor premium over type, MS66 coins are highly coveted and in exceedingly short supply. NGC and PCGS have graded only five such pieces including a single MS66+ that we offered in the Jim O'Neal Collection (Heritage, 1/2011), lot 5155, with none finer in the combined certified populations (11/11). That coin brought a strong $97,750.

The coloration of this outstanding MS66 PCGS example is its most striking feature, with warm orange-gold surfaces that shift to sun-yellow and rose at parts of the margins. The devices are sharply struck, and the only softness is present on the mintmark. Though a handful of tiny flaws are evident, the overall preservation of this piece is magnificent, and the eye appeal is simply marvelous. Though Heritage has offered this issue in the past, it is impossible to say when an opportunity to acquire an MS66 (or MS66+) representative may come again.

*Ex: FUN Signature (Heritage, 1/2008), lot 3230, which realized $57,500.* (#8532)

# PROOF INDIAN HALF EAGLES

## 1908 Indian Half Eagle, PR66
## Popular First Year of Design
## 167 Pieces Struck

**4943** **1908 PR66 NGC.** Bela Lyon Pratt's incuse Indian Head design was introduced on the quarter eagle and half eagle denominations in 1908, and the general public saved many examples as novelty items. Anticipating great collector demand for proofs of the new issues, the Mint sharply increased proof set production to 167 sets for 1908. Initial orders were large, many coins were preserved over the years, and the 1908 is the most available Indian half eagle proof in today's market.

Unfortunately, the dark matte proof finish of the new coins proved to be extremely unpopular with collectors, who much preferred the brilliant finish of former years. The incuse design of the Indian Head coins was not suitable for this kind of reflective finish, so the Mint resorted to the matte finish that had been popular in European circles. The matte surfaces were coarse in texture and did not reflect light in the manner of the old mirrored proofs, but they had an artistic quality and showcased the sharply detailed design elements of the coins to good advantage. Present-day collectors appreciate the virtues of the matte finish, but contemporary collectors never accepted the matte proof issues. Orders declined every year until the Mint discontinued proof set offerings in 1916.

Probably 60-70 examples of the 1908 matte proof Indian half eagle are still extant today. Most examples seen are in grades below the Gem level, however. Mike Fuljenz notes "They are very rare in PR66 and extremely rare in any grade above this." Population data from the grading services has been somewhat inflated by resubmissions and crossovers.

The present coin is a spectacular Premium Gem, with sharply detailed design elements and virtually pristine fields. The khaki-gold surfaces display the subtle luster characteristic of matte proof issues. Eye appeal is outstanding. Census: 29 in 66, 11 finer (11/11). (#8539)

## Gem Matte PR65 1911 Half Eagle Eight Finer at PCGS

**4944** **1911 PR65 PCGS. CAC.** The recorded proof mintage figures of Indian half eagles is staggeringly low to begin with, but in reality the survival rate of these interesting issues is less than one would expect for coins that were specially prepared for collectors. Breen's *Complete Encyclopedia* states that the proofs of 1908-15 are "much rarer than those of the preceding decade, and rarer than their reported mintages suggest. Doubtless heirs mistakenly spent some, and turned in others during the Great Recall of 1934."

The Mint's experimentation with matte proof finishes in 1908 was poorly received by collectors and was abandoned that year, at least temporarily. After experimenting with Roman Finish (satin) proofs in 1909 and 1910, the Mint returned to the dark matte finishes (as found on 1908 proofs) for the issues of 1911.

This exceptionally attractive matte proof appears much finer than the stated grade. The finely granular surfaces show the slightest evidence of contact with other coins. The rich orange-tan matte surface is accented with bright rose patina in the recesses of the design on each side — quite an unusual and interesting visual accent. Population: 8 in 65, 8 finer (11/11).

*Ex: Central States Signature (Heritage, 4/2008), lot 2465.* (#8542)

## Matte PR67 1913 Half Eagle
## Fine-Grained, Essentially Perfect Surfaces

**4945** **1913 PR67 NGC.** By 1913 the Mint had introduced the matte finish in 1908, switched to the Roman or satin finish in 1909 and 1910, then reverted to the matte or sandblast finish again for 1911 and following years — and it appeared as though many collectors had simply given up on gold proof coinage that was not much to their taste in the first place. (The Mint had switched late in the Liberty Head series- — 1902 — to the semibrilliant surfaces from the deeply contrasted pre-1902 format, and collectors have long memories.)

Just a quick glance at the *Guide Book* mintage figures for proof Indian Head eagles will confirm that the long-term trend was — down. From a promising start in 1908 with 167 proof coins, by the last proof issues of the series, in 1915, the production was less than half, a skimpy 75 coins.

For the present Superb Gem 1913, the proof mintage was 99 coins, but PCGS CoinFacts estimates that only 30 examples survive in PR65 or finer grade. The PR66 level is the highest grade usually seen for the issue, where NGC and PCGS combined have certified 23 submissions, certainly including numerous duplications. Garrett and Guth call the 1913 the third-rarest of the eight-coin Indian Head series.

The present Superb Gem example is one of nine submissions at NGC, and there is a single PR68 finer at that service (11/11). This piece boasts uniform surfaces on both sides that appear essentially perfect, with no signs of contact, no matter how small. The surfaces show the typical tiny granular texture the issue is known for, complementing pale yellow-green coloration. (#8544)

## 1914 Five Dollar Indian, PR67
## Second Rarest Date in the Series

**4946** **1914 PR67 NGC.** In its next-to-last year of production for the matte proof finish, the Mint produced 125 proof half eagles. This number seems uncommonly high and it has been widely speculated that some coins were melted as unsold at year's end. There are probably no more than 25-35 coins known today in all grades. Assuming a 50% attrition rate, that would indicate the original net mintage should in the range of 50 to 70 coins. The coarseness of the grains on the sandblast finish was increased slightly in 1914. This slight increase in grain size causes the coins to generally be darker in appearance when set beside a 1913 five dollar.

As with all proof gold from the 19th and early 20th centuries, there is a strong incentive to try and upgrade. The most obvious blip in the numbers certified is among NGC PR66 coins. A one-point bump in the grade can mean tens of thousands of dollars.

This is a magnificent matte proof five. The surfaces display rich reddish tinted color, and the individual granules are indeed noticeably larger than those seen on previous years (except, of course for the 1908). A pronounced wire rim encircles the entire obverse of this piece. By way of pedigree identifiers, flaws such as they are, are minute. In the obverse field by 2 o'clock there is a faint alloy spot and nearby a tiny planchet flaw can be seen. Another very small planchet flake is located on the reverse above the second T in TRUST. The surfaces are exceptionally smooth on each side, and the microscopic granules in the matte finish sparkle when a loupe is used.

*From The Jim O'Neal Gold Type Collection.* (#8545)

## Gem Proof 1915 Indian Five
## Rarest Proof Date of the Series
## Only 75 Examples Minted

**4947** **1915 PR65 PCGS. CAC.** Demand for matte proof gold coins reached its nadir in 1915, the last year in which the Mint produced proof half eagles. The recorded mintage was a mere 75 pieces, the lowest of the series. Collector interest was so low that even this small production was over-abundant, and David Akers believes more than half the reported mintage went unsold, and was subsequently melted after the end of the year. Experts estimate no more than 25-35 examples are still extant. PCGS has certified only 17 coins in all grades, the finest in PR67 (11/11).

The 1915 proof Indian half eagles were produced using the same Roman finish used on the 1914 issue. This sandblast technique produced larger facets in the granular surfaces of the coins that do not reflect light as readily as the finer-grained surfaces of the 1912-1913 issues. While contemporary collectors preferred the old brilliant finish proofs, present-day numismatists prize the artistic European quality of all the matte proof finishes.

The present coin is a spectacular Gem, with the even honey-gold surfaces typical of this issue. The granular surfaces are well-preserved, and even close inspection with a glass reveals no significant distractions. As expected from a matte proof, the design elements display razor-sharp definition throughout. Even usual problem areas, like the headdress feathers and eagle's leg, show intricate detail. This combination of high technical quality, tremendous visual appeal, and absolute rarity is seldom encountered on a 20th century issue. Population: 8 in 65, 3 finer (11/11).

*From The Jim O'Neal Gold Type Collection.* (#8546)

## Premium Gem Proof 1915 Half Eagle
## Low-Mintage Key Date
## Only One Coin Finer at PCGS

**4948** **1915 PR66 PCGS. CAC.** The 1915 proof Indian half eagle is the key to the proof series, from a minuscule mintage of 75 pieces. To quote David Akers and Jeff Ambio:

> "The Mint struck its final proof Indian Half Eagles in 1915, using the same finish applied to the proof 1914. All proof Indian Half Eagles were poor sellers with the contemporary public, but the proof 1915 was more unpopular than usual. By the time the Mint produced this issue there was little interest in matte proofing techniques. As a result, more than half of the original mintage was destroyed as unsold. Today, the 1915 is the rarest proof in the Indian Half Eagle series."

Easily the rarest proof Indian five dollar gold piece, the 1915 has a surviving population of no more than 25-35 coins. The population data from the grading services seems to contain a number of duplicate submissions, as PCGS and NGC have combined to certify 40 coins in all grades. Further, NGC has graded seven coins in PR66, with two finer, while PCGS has certified only two Premium Gems, with one finer (11/11). A study of auction records over the last 15 years resulted in the roster of PR66 and finer specimens below, in which we can account for only five Premium Gems and a single Superb Gem. It seems likely that the high-grade coins have been submitted for grading more than once, although some specimens may simply not have appeared at auction during the period we studied.

The present coin is a magnificent Premium Gem, with needle-sharp definition on the design elements, including the headdress feathers and the eagle's leg. The pristine surfaces are free of even the smallest distractions and display attractive honey-gold color, with a few green and rose highlights. The mint luster is more vibrant than usually seen on a matte proof issue and visual appeal is tremendous.

**Roster of 1915 Proof Indian Half Eagles, MS66 or Finer.**

**1. PR67 Uncertified.** Robert E. Kruthofer, Jr. Collection (Paramount, 9/1981), lot 32.

**2. PR66 PCGS. The Present coin.**

**3. PR66 PCGS.** Dominic Graziano & Papyrus Way Collections (Stack's, 3/2008), lot 654.

**4. PR66 NGC.** Ed Trompeter; Long Beach Signature Auction (Heritage, 9/98), lot 6978; Richmond Collection, Part One (David Lawrence, 7/04), lot 1559; Central States Signature Auction (Heritage, 5/2005), lot 8743.

**5. PR66 NGC.** C.F. Childs, purchased directly from the Mint in 1915; Walter H. Childs Collection (Bowers and Merena, 8/1999), lot 770; Chicago Signature Auction (Heritage, 8/2011), lot 7586.

**6. PR66 NGC.** 65th Anniversary Sale (Stack's, 12/2000), lot 1457. (#8546)

## EARLY EAGLES

### 1795 Capped Bust Right Eagle 13 Leaves, BD-1 Variety

**4949 1795 13 Leaves Genuine PCGS. Breen-6830, BD-1, High R.3.** The PCGS number ending in .98 suggests Damage as the reason, or one of the reasons, that PCGS deemed this coin not gradable. In our opinion, this coin has the details of an Uncirculated specimen that has reverse rim damage. The BD-1 variety is recognized by the small die lumps near Y in LIBERTY and the position of the leaf nearly touching U in UNITED. This coin is from the Bass-Dannreuther Die State c/a, with extensive die cracks on the obverse, but none showing on the reverse. A few light adjustment marks are evident on Liberty's cheek and hair, and the reverse rim damage consists of a deep cut at 2 o'clock. The design elements are well-detailed and the attractive surfaces display vibrant mint luster. (#8551)

### 1795 13 Leaves Eagle, BD-2, AU Details Appropriate for a High-Grade Type Set

**4950 1795 13 Leaves —Repaired— NGC Details. AU. Breen-6830, Taraszka-2, BD-2, High R.4** On the BD-2 variety, the obverse can be identified by the widely spaced date, with the tip of the 5 touching the bust, and the distance between star 11 and the Y in LIBERTY. On the reverse, one of the leaves in the branch nearly touches the U in UNITED. Dannreuther believes that 90 to 110 examples of this variety still exist from an original mintage of 1,500 to 2,332 coins.

The luminous surfaces of this AU Details specimen display uniform yellow-gold color and well defined design elements, save for weakness on the eagle's torso and about one-half of the dentilation. Some light adjustment marks are noted on the reverse margin, but no mentionable abrasions are evident. A wavy appearance is visible over both sides, perhaps indicating the coin was bent and then straightened. No other repairs are readily evident. This will be a nice addition to a high-grade type collection, despite the NGC disclaimer. (#8551)

## 1795 BD-1 Eagle, AU50
## Early Die State
## First Eagle Variety

**4951 1795 13 Leaves AU50 PCGS. Breen-6830, Taraszka-1, BD-1, High R.3.** Bass-Dannreuther Die State a/a. Both dies of this early state specimen are perfect with no cracks, clash marks, or lapping. It is undoubtedly among the first eagles minted at Philadelphia in September 1795. The production of about 5,000 ten dollar gold pieces dated 1795 was the result of three obverse dies and three reverse dies, combined to form five die marriages. While large quantities of half eagles were exported to Europe in trade, most quarter eagles and eagles remained in this country.

The tip of the 5 overlaps the drapery, and star 11 touches the Y on this obverse. The left serif of the Y extends over the adjacent T. Once the relationship of TY and star 11 is learned, attribution becomes immediate as the obverse die was retired after its only use for 1795 BD-1. The 13 Leaves reverse, with a leaf tip joined to the lower left curve of the U, is found in early die states on BD-1 and later states on BD-2, proving the emission order of the two varieties.

A pleasing piece, this green-gold specimen has traces of luster near the borders with hints of orange-gold in the outer margins. The strike is nicely centered with full border denticles. The central obverse is indistinct, the result of minor adjustment marks on the reverse. A few trivial surface marks and faint scratches are mostly hidden in the design elements. (#8551)

## AU 1795 Small Eagle Ten Dollar, BD-1 13 Leaves Reverse, Early Die State

**4952 1795 13 Leaves AU50 PCGS. CAC. Breen-6830, Taraszka-1, BD-1, High R.3.** Bass-Dannreuther Die State Obverse a / Reverse a. It is always an interesting pursuit to seek the origins of coinage designs. As a small part of a much larger article in *Coin World*, March 1, 1999, Richard Giedroyc wrote of the reverse design:

> "The Small Eagle reverse appearing on the coins of 1795 to 1797 is believed to have been adapted from a first century B.C. Roman onyx cameo in the Kunsthistorisches Museum. The position of the eagle is different on the museum cameo, although the palm branch and circular wreath accompanying the eagle on the U.S. coin is strikingly similar to the design on the cameo."

Only 5,583 pieces were struck of this design type. But then, there was little demand for the ten dollar denomination in the channels of commerce. In 1795 Philadelphia, the average laborer earned ten dollars for two weeks' wages for a six-day work week. As a result, there was minimal need for such a high-denomination gold coin.

This particular coin is pleasing overall with just the slightest friction over the high points. The strike details are well-defined and show strong detailing on Liberty's hair and the eagle's wings. There are no mentionable or distracting abrasions, and each side shows a strong reddish accent of patina around the devices with the remainder of the coin retaining its original greenish-gold. This is a splendid, high-grade example of this popular, first-year design type. As a superlative example of this early type in high circulated grade, this piece may fill the want list of many a collector, providing many of the virtues of a Mint State piece at a relatively more affordable price point. (#8551)

## 1795 BD-1 Eagle, AU53
## Popular Design Representative

**4953 1795 13 Leaves AU53 PCGS. Breen-6830, Taraszka-1, BD-1, High R.3.** Apparently an early die state with no evidence of clash marks or die cracks described in the Bass-Dannreuther reference. The 1795 BD-1 die married is plentiful when compared to the other four varieties of 1795 eagles, with more than 200 survivors. John Dannreuther estimates 225 to 325 examples are known in all grades, suggesting that more of these are known than for all other 1795 varieties combined, making the BD-1 an ideal candidate for type collectors. Die state evidence indicates that BD-1 was the first minted 1795 eagle variety, therefore the first gold eagle variety minted in Philadelphia. These coins were struck late in the year, following the half eagle coinage. Despite the apparent availability of the 1795 BD-1 eagles, these coins and all similar examples of the first design are rare.

The first Small Eagle ten dollar gold pieces were minted in September 1795, with further production of the design, bearing the additional dates of 1796 and 1797, struck through June of the latter year. The total coinage for the design was only 13,344 coins according to Mint records, but may have been as high as 15,000 coins, according to Dannreuther. About two-thirds of that total production bears the date 1795, although those coins were struck in 1795 and 1796. Following the five 1795 varieties, just one 1796 variety was minted, along with a single 1797 Small Eagle variety. Dannreuther estimates a survival in the range of 610 to 822 coins for all seven varieties of the Small Eagle type.

This distinctive AU53 example features abundant luster with brilliant orange, violet, and green toning on both sides. Minor handling marks on each side are consistent with the grade, and slight adjustment marks are evident at the central obverse. This is a highly appealing 1795 Small eagle ten dollar gold piece. (#8551)

## Choice XF 1796 Eagle, BD-1
## Early Die State, Fully Struck Eagle's Breast

**4954 1796 XF45 PCGS. Breen-6832, Taraszka-6, BD-1, R.4.** Only 4,146 eagles were reportedly coined in 1796, the second year of the largest gold denomination of the era. A sole die pairing is known for the entire production, although Bass-Dannreuther allow the possibility that some few hundred may have been produced dated 1795. They estimate that 125 to 175 pieces survive today of the 1796.

The obverse die, besides the obvious date, shows 16 stars aligned eight left and eight right, indicating the die had been likely made after Tennessee joined the Union on June 1, 1796. The reverse die displays 11 palm leaves on the branch at the eagle's feet, and the olive wreath tips meet just at the upright of the E in STATES. The reverse die was reused for the 1797 Small Eagle coinage, so it is theoretically possible that some 1797-dated coins could have been made in 1796, or some of the 1796-dated coins made in 1797, as die state evidence suggests a reuse of the reverse die in a late state, again with a 1796 obverse, after production of some of the 1797s.

The Mint paid no heed to such details as the dates on the coins, so guesswork is in order and prevalent throughout numismatic research. In any case, the present coin seems to exhibit a fairly early die state on each side, as the only mentionable die crack is a small one within the olive wreath, joining the two topmost inner leaves. The light wear this Choice XF piece displays is consistent with the grade, and as a bonus, the reverse is fully defined on the eagle's breast. A few small abrasions dot the surfaces but are of minor import, none worthy of singular mention. Certified in a green-label holder. (#8554)

## 1796 BD-1 Eagle, AU58
## The Only Dies

**4955 1796 AU58 NGC. Breen-6832, Taraszka-6, BD-1, R.4.** Bass-Dannreuther Die State c/b. This piece has the vertical die crack almost always seen below the E in LIBERTY. The reverse die is early in its life, proving that this piece was coined before 1797 pieces that used the same reverse die. Some later die states of the 1796 eagle were coined after the 1797 Small Eagle tens. The scenario creates confusion regarding original mintage figures. Some of the 4,146 eagles reported for 1796 were actually dated 1795, and some of the 3,615 eagles of 1797 were actually dated 1796.

While the 1795 Small Eagle tens are plentiful, those dated 1796 and, especially, 1797, are much rarer. John Dannreuther estimates a total survival of about 500 1795-dated eagles, about 150 1796-dated eagles, and only 60 1797 Small Eagle tens. For all of those issues, higher grades are much rarer. Census: 29 in 58, 17 finer (11/11). An accurate condition census of early eagles is nonexistent but such a record is highly needed. There are probably only 10 to 12 different Mint State 1796 eagles surviving today, with a couple dozen AU coins also known.

This near-Mint specimen is highly lustrous with only a trace of wear on the high points. Both sides have minuscule marks that are expected for the grade. This impressive piece, with its slightly reflective fields and bright yellow surfaces, has excellent eye appeal and will grace a fine cabinet of early eagle varieties. Census: 29 in 58, 15 finer (11/11). (#8554)

## 1797 Large Eagle Ten, BD-2
## Unabraded Choice AU Example

**4956 1797 Large Eagle AU55 PCGS. CAC. Breen-6834, Taraszka-8, BD-2, High R.4.** The three Large Eagle varieties of 1797 mark the transition from the previous Small Eagle reverse design that rapidly went out of vogue. 3,615 examples of the Small Eagle 1797s were reported, versus 10,940 of the three Large Eagle pairings. Bass-Dannreuther estimate that 80 to 100 examples of the BD-2 survive. All three Large Eagle varieties share a common obverse. The reverse of BD-2 has a long, thin eagle's neck with the stars in an even cross pattern. This Choice AU specimen exhibits reddish patina around the margins complementing bright yellow-gold centers. The strike is slightly soft in the centers, and a appears in the field below UM on the reverse. Only small abrasions consistent with the grade dot the surfaces. An excellent type coin. (#8559)

## Near-Mint State 1798/7 Eagle, BD-1
## Popular, Collectible Early Overdate

**4957** **1798/7 9x4 Stars AU58 NGC. CAC. Breen-6836, Taraszka-9, BD-1, High R.4.** Bass-Dannreuther Die State Obverse c / Reverse b. In numismatics, much of the activities of the early Mint are necessarily based on conjecture; facts are few, and much is unrecorded. But much conjecture turns into fact, forcing researchers to go back to first principles. So it is that the current 2012 *Guide Book* records mintages of 900 coins for the 1798/7 eagle, 9x4 Stars (BD-1) and 842 coins for the 1798/7 eagle, 7x6 Stars (BD-2). When one stops to think about it, such "facts" reported in the *Guide Book,* for two varieties in a single year, is unusual — how many times have we seen the footnote "included in number above?" One can turn to Breen's *Complete Encyclopedia* and easily discover the *Guide Book*'s source, his assertion that "the great rarities of this period [Scot's Heraldic Design, 1797-1804] are the two vars. dated 1798/7. The two deliveries of [900] and [842], Feb. 17 and 28, 1798, are believed to comprise, respectively, **6836** with stars 9 + 4, and **6837** with stars 7 + 6. Coinage of eagles was interrupted thereafter until May 14, 1799. Early breakage of both obv. dies may have been why."

Nonetheless, the Breen estimates hardly square with the *Annual Report* of Mint Director Elias Boudinot, submitted to Congress by President John Adams on January 31, 1799. That document reports a *total of 7,974 eagles produced* "since the first of January, 1798; during which time, the coinage has been stopped near three months, occasioned by the late calamitous fever, and the decay of some of the machinery."

Now, there certainly is no guarantee that the eagles produced in 1798 were all dated 1798/7, 1797, 1799, or any other date, for that matter, but it does cast doubt on the "exactitude" of the currently reported *Guide Book* figures. *They are not facts*. It is true that both the BD-1 and BD-2 varieties showed extensive die cracks that may have led to their early retirement — but what dies were used for the remainder of the coinage, if any? Both 1798/7 varieties were struck with the Large Eagle reverse die that was carried over from the BD-3 of 1797, based on die state evidence.

Bass-Dannreuther estimate that 80 to 100 examples of the 1798/7 BD-1 survive. Both the overdate and the 9x4 star arrangement — the only such among early gold issues — make it an extremely popular and collectible overdate. The present near-Mint State specimen exhibits bright green gold color with deep reddish patina around all the devices on each side. Only minor rub is visible on the high points, but there is little luster. Three tiny field marks appear near star 12. Census: 11 in 58, 9 finer (11/11). (#8560)

## 1799 Eagle, MS62
## Large Stars, BD-10 Variety
## Early Die State

**4958 1799 Large Stars Obverse MS62 PCGS. CAC. Breen-6841, BD-10, R.3.** The 1799 Large Stars Capped Bust Right eagle shared a large mintage of 37,449 pieces with its Small Stars counterpart. There are 10 different die varieties known for the date, with eight varieties featuring small obverse stars, and just two die marriages that show the Large Stars motif. This coin is a representative of the more available BD-10 variety, identified by the large obverse stars and the position of the final berry under the right foot of the last A in AMERICA. A significant portion of the reported mintage probably consisted of BD-10 coins, possibly as much as 12,500-17,500 pieces. John Dannreuther estimates the surviving population at 300-400 examples in all grades.

The Mint was successful in improving the quality and length of service of its dies by 1799, and both of these dies produced a significant number of coins. The BD-10 obverse was used earlier to strike the other Large Stars variety of this date, the BD-9. The reverse was particularly hardy, as it was used again to strike all of the 1800 eagles and the BD-1 variety of 1801. This coin is from an early state of the dies, Bass-Dannreuther Die State a/a, with no clashing, lapping, or cracks.

The present coin is an attractive MS62 specimen, with sharply detailed design elements in most areas, and just a touch of softness on the arrows and left (facing) eagle's claw. The pleasing surfaces are a rich yellow-gold color, with hints of orange and green. The fields show only minor signs of contact and retain much original mint luster. Visual appeal is quite strong. Population: 32 in 62, 66 finer (11/11). (#8562)

## Mint State 1799 Eagle
## Small Stars, BD-7 Variety

**4959 1799 Small Stars Obverse MS61 PCGS. Breen-6840, BD-7, R.3.** The 1799 Capped Bust Right eagle claims a reported mintage of 37,449 pieces, with 10 die varieties known for the date. Eight varieties display small stars on the obverse, while the final two exhibit large stars. This coin is an example of the Small Stars BD-7 variety, with the 17 in the date slanted to the right, and star 13 on the reverse positioned away from the ribbon. The BD-7 is one of the more available varieties, probably accounting for 10,000-15,000 pieces of the reported mintage. John Dannreuther believes 250-350 examples are still extant in all grades.

The present coin is an attractive Mint State example, with vivid lemon-yellow and greenish-gold surfaces. The design elements are sharply detailed, and the surfaces retain much prooflike reflectivity in sheltered areas. Population: 14 in 61, 38 finer (11/11).

## 1799 BD-3 Small Stars Eagle, MS62
## Late Die State

**4960 1799 Small Stars Obverse MS62 NGC. Breen-6839, Taraszka-15, BD-3, High R.6.** A Mint State example of the rare BD-3 variety. This piece is the later die state with cracks through the B and L of LIBERTY. Harry Bass only found one example of this variety in all his years of collecting.

This piece is possibly the finest known example, comparing quite favorably to the Bass coin that is on loan to the ANA museum. Prooflike greenish-gold surfaces have traces of orange patina near the borders. Both sides are moderately abraded, consistent with the grade. The definition is strong on each side with fine detailing on Liberty's hair curls and the breast feathers of the eagle.

*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#98562)

## 1799 Small Stars Ten, Irregular Date, BD-7 MS64, Extensively Clashed Apparently an Unlisted Die State

**4961 1799 Small Stars Obverse MS64 NGC. CAC. Irregular Date, Breen-6840, Taraszka-19, BD-7, R.3.** Bass-Dannreuther Unlisted Die State. "Irregular Date" is an apt name for this variety: The 17 in the date is evenly spaced but canted crazily to the right, with the 7 noticeably higher. The second 9 is higher than the first 9, and it butts up against the underside of the bust of Liberty. On the reverse used in this die pairing, the star near the eagle's beak is well away from it, and one of its points touches the scroll below.

The mintage of eagles in 1799 was reported as 37,449 pieces, by far the largest to date for the new denomination that was launched in 1795 along with its half eagle counterpart. Ten different pairings are known from the six obverse and six reverse dies employed for the coinage. The BD-1 through BD-8 obverses (1 through 5) show the Small Obverse Stars feature, while the BD-9 and BD-10 share the Obverse 6 with Large Obverse Stars.

The BD-7 is by far the most available of the eight Small Obverse Stars varieties; Bass-Dannreuther rate it R.3, with 250 to 350 examples surviving. The Irregular Date feature, of course, makes it more popular still. The obverse is shared with BD-8 as well, but that variety is rare, Bass-Dannreuther estimating its survival at only 45 to 55 pieces.

What is this coin's most interesting feature is the bold clash marks that appear throughout the obverse, a die state apparently unlisted in Bass-Dannreuther. This piece could easily be called the Extra Star Obverse, as the remnants of one of the reverse stars are boldly clashed in front of Liberty's neck. Also clear throughout the obverse fields, on both sides of Liberty and above the date, are extensive clash marks from other elements on the reverse. The reverse is also extensively clashed. The surfaces of this near-Gem are fully struck, bright and lustrous on each side, with light reddish-gold color. There are no mentionable contact or adjustment marks. A fascinating coin that will, no doubt, reward further study by dedicated early gold specialists. For all 1799 varieties, Census: 46 in 64, 8 finer (11/11). (#98562)

## Choice AU 1800 Eagle, BD-1
## Lustrous, Lovely Two-Toned Surfaces

**4962 1800 AU55 NGC. Breen-6842, Taraszka-23, BD-1, High R.3.** Bass-Dannreuther Die State b/c. There is only a single die marriage known for the year. The obverse die dated 1800 is new, of course, while the reverse is a carryover from 1799, used on the BD-10 of that year and reused again for the 1801 BD-1. The 1 in the date and star 8 nearly touch the lowest curl and Y in LIBERTY, respectively. On the reverse, a leaf touches the I in AMERICA at the lower right serif, and a berry appears under the right foot of the last A. A die crack runs through LIBERTY, more heavily through the last four letters, and on the reverse a wispy die crack runs through the lower-right devices.

This Choice AU piece has lots of brilliant luster over attractive orange-gold surfaces with lighter yellow at the margins. The fields on each side are moderately abraded, but none of them are deep or require singular mention, and there are no adjustment marks. Census: 27 in 55, 70 finer (11/11).

*Ex: Central States Signature (Heritage, 4/2010), lot 2278, which brought $19,550; ANA Signature (Heritage, 3/2011), which realized $20,709.*

*Seller is donating 100% of their proceeds, and Heritage is donating 100% of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#8563)

## 1800 BD-1 Eagle, MS62
## Only 12 Finer at NGC

**4963 1800 MS62 NGC. Breen-6842, Taraszka-23, BD-1, High R.3.** Both sides have faint die cracks as John Dannreuther describes, although this specimen is not the terminal state. A surviving population of 200 to 300 eagles dated 1800 is the estimate of John Dannreuther, who suggests that the mintage may have been as high as 12,500 coins. Since Mint records show just 5,999 coins struck in 1800, the Dannreuther estimate suggests that some 1800 eagles were actually struck in 1801. We know that is exactly what happened, as the reverse die was used for coins dated 1799, 1800, and 1801, and some of the 1800 coins were struck after others dated 1801. The latest state of 1800 has die cracks advanced beyond any specimens of 1801 BD-1.

The 1800 ranks sixth in availability among nine dates of the early ten dollar gold series from 1795 to 1804, based on the total number of appearances in our Permanent Auction Archives. We have offered this issue 104 times in the past, compared to 299 offerings of 1801 eagles, 248 of 1799, 178 of 1795, 143 of 1803, and 115 of 1797. Other dates include 1796 with 51 offerings, 1798 with 30 appearances, and 1804 with 30 appearances.

Although both sides of this sharply defined early eagle have myriad marks, few stand out among the others, and the overall eye appeal remains considerable. The fields are lightly reflective and the surfaces are brilliant with a combination of green and yellow-gold. Census: 18 in 62, 12 finer (11/11). (#8563)

## 1801 Ten Dollar, AU53, BD-2
## Scarce Early Gold Denomination

**4964 1801 AU53 NGC. Breen-6843, Taraszka-25, BD-2, R.2.** Bass-Dannreuther Die State a/a. BD-2 is most interesting for its series of nine die lines within Liberty's cap, which at first glance look like clash marks from the shield, but in fact do not match up. The lines appear early in the life of BD-2, since some examples are known without them, and represent unknown damage to the die, reminiscent of the Spiked Chin 1804 half cent. This is a lightly circulated and original example of this coveted early gold denomination. Rose-red toning is present where luster persists, while the remainder of the coin is peach-gold. Minor wear is present on high points such as Liberty's hair, cap, and drapery, but there are no consequential marks and luster emerges from design elements. (#8564)

## 1801 Ten Dollar, BD-2, Unc Details
## An Excellent Type Selection

**4965 1801 — Improperly Cleaned — NGC Details. Unc. Breen-6843, BD-2, R.2.** Star 8 is close to Liberty's cap, and shows two points to the cap, and star 13 almost touches the bust, confirming the BD-2 variety. Bass-Dannreuther note that the majority of eagles dated 1801 are this variety.

The bright yellow-gold surfaces of this example display luster in the protected areas, and the design features are sharply impressed, including relatively strong definition on the eagle's breast and neck feathers. The obverse dentilation is full, while that on the reverse is about two-thirds complete. High magnification brings out some wispy hairlines, but these do not significantly detract from the coin's overall appeal. Indeed, prospective bidders should not be dissuaded in the least from giving this piece serious attention, despite the NGC disclaimer. It will make an excellent addition to a high-grade type collection. (#8564)

## 1801 BD-2 Eagle, MS61
## Prooflike Reverse

**4966 1801 MS61 NGC. Breen-6843, Taraszka-25, BD-2, R.2.** Bass-Dannreuther Die State a/a. Both dies are perfect with no clash marks, die cracks, or evidence of lapping. The obverse has nine vertical spines in the cap, but their source is unknown. They are not clash marks.

On the obverse, star 1 is distant from the hair curl, star 8 is close to the cap, and star 13 nearly touches the drapery. Each of those star positions is individually diagnostic for the plentiful BD-2 of 1801, far the most common early eagle variety of any date from 1795 to 1804.

This lovely Mint State specimen has satiny yellow surfaces with faint violet overtones. The prooflike reverse shows numerous faint adjustment marks that were mostly obliterated when this piece was minted. (#8564)

## 1801 Capped Bust Right Ten, MS62
## Popular BD-2 Variety, Early Die State

**4967 1801 MS62 NGC. Breen-6843, BD-2, R.2.** The 1801 Capped Bust Right eagle enjoyed a substantial mintage of 44,344 pieces, with just two die varieties known for the date. This coin represents the more available BD-2 variety, with two points of star 8 pointing to the cap, and star 13 near the bust. The BD-2 must have accounted for the majority of the reported mintage, probably around 30,000-40,000 pieces. John Dannreuther estimates 600-800 specimens are still extant in all grades.

The present coin is a well-detailed MS62 example, with light greenish-gold surfaces that retain much original mint luster. Only minor contact marks are evident, and eye appeal is quite good. From a very early state of the die, this specimen does not show the 9 die lines in the cap, or the rust lump between stars 2 and 3, that are often seen on the BD-2. Census: 64 in 62, 74 finer (11/11).

*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#8564)

Smithsonian

## Fully Struck 1801 Eagle, BD-2, MS64
## A Remarkable Early Type Coin

**4968 1801 MS64 NGC. CAC. Breen-6843, Taraszka-25, BD-2, R.2.** Bass-Dannreuther Die State Obverse a / Reverse a. The 1801 eagles were produced to the extent of a recorded 44,344 coins, besting the total reported for 1799 at 37,449 pieces. Clearly, the Mint was getting better at producing coinage dies that would last for many thousands (or even tens of thousands, in some cases) of impressions. The Mint nonetheless would press any serviceable coinage die into use, regardless of date, design type, or die cracks, if the need arose and the dies were still usable. Thus it is that, despite the recorded mintage of only 5,999 eagles in 1800, it is likely that some of the eagles produced in 1801 bore that date, and certainly conceivable that some were dated 1799, as well.

Only two die pairings are known for the 1801 eagles, BD-1 and BD-2. The BD-1 obverse shows a different star style from the BD-2, and stars 8 and 13 are distant from the cap and bust, respectively. The stars on the BD-2 are thinner with longer spines, and stars 8 and 13 touch, or nearly so, the cap and bust. The BD-2, the present variety, is far more available than the R.5 BD-1; Bass-Dannreuther estimate that 30,000 to 40,000 of the total mintage was of this variety, with 600 to 800 surviving today.

The surfaces on the present near-Gem are bright yellow-gold accented with tinges of olive. The strike is full throughout both sides, with semiprooflike reflectivity apparent in the fields. There are no planchet adjustment marks, and the only mentionable contact is a single scrape through UNI. This is a remarkably nice candidate for a type set, a coin that will not come cheap but is relatively more affordable than most of its early 19th century fellows. Census: 27 in 64, 2 finer (11/11). (#8564)

**1801 MS65 PCGS. Breen-6843, Taraszka-25, BD-2, R.2**

**1801 MS65 PCGS. Breen-6843, Taraszka-25, BD-2, R.2**

# 1801 BD-2 Eagle, MS65
# A Census Level Specimen

**4969** **1801 MS65 PCGS. Breen-6843, Taraszka-25, BD-2, R.2.** Of all Capped Bust eagles struck between 1795 and 1804—inclusive of both the Small and Large Eagle subtypes—only 28 examples have been certified at the MS65 level by NGC and PCGS combined, with just three finer specimens, each MS66 (11/11). That's only 31 Gem or better survivors from a collective mintage of over 130,000 ten dollar gold pieces for the entire series—a percentage too small to record. Specific to the date, PCGS has certified only three 1801 tens as MS65, with none finer. It is not surprising, therefore, that the current offering is only the third MS65 1801 eagle to cross the auction block at Heritage, and is a reappearance of one earlier offering.

How an early ten could have survived to this day in such pristine condition is difficult to contemplate. The number of dedicated coin collectors in America would have numbered in the teens, at most, and in 1801 the Mint was in the business of striking coins for circulation only, as opposed to the more commercial Philadelphia operations beginning in the mid-1800s, where numismatic items were struck with the intention of being sold to collectors. Even the production and distribution of coins during the early years of the first Mint was haphazard; attention was focused on proper weight with little regard afforded to aesthetic quality, and storage methods were designed around convenience as opposed to quality of preservation. So how did this piece survive the years without being subjected to even the most innocent of usage or, worse yet, succumbing to mishandling? Perhaps a banker set this eagle aside as a sample of the new issue, or maybe a wealthy family saved this coin as a memento of a child's birth. Could it have been a special sample saved by the Mint, only to subsequently be transferred to an employee's private collection at a later date? We can only speculate.

A mere two die pairings were necessary to strike the 44,344 or so 1801-dated tens. This fact is impressive to those familiar with early coin issues. Other die marriages of this era struggled to produce 1,000 coins before falling into disrepair. Of the two die varieties for the year, one is rare with fewer than 50 examples extant, while the other, BD-2, is considered relatively common with between 600 to 800 survivors in all grades. The latter die marriage produced the piece offered here. It is most easily distinguished from BD-1 by the location of star 1 relative to Liberty's lower curl and the position of star 13 to the bust, although some researchers prefer to differentiate the two varieties by classifying the obverse stars. On BD-1 the stars have shorter spines, whereas the stars on BD-2 are more spindly in definition. The reverse dies are also different, but quite similar in appearance. Attribution is best achieved by observing the relation of the star adjacent to the eagle's beak; on BD-1 the eagle's upper and lower beak touch one spine of the star, while only the upper beak is close to the star point on BD-2.

Lemon-gold coloration is illuminated by velvety luster on both sides of this well preserved ten. The strike is crisp and the overall eye appeal is reminiscent of the quality found on a modern coin production. This monumental offering will be recorded in future works on the subject as an important numismatic event. And, as with the sale of other great numismatic rarities, it is possible that this piece will remain in a tightly held collection for many years to come. Population: 3 in 65, 0 finer (11/11).

*From The Estate of Jack Lee (Heritage, 1/2009), lot 4110.*

*From The Jim O'Neal Gold Type Collection.* (#8564)

## 1803 Small Stars Reverse Ten Dollar, BD-3 AU58, Late State of the Dies

**4970** **1803 Small Stars Reverse AU58 PCGS. CAC. Breen-6844, Taraszka-28, BD-3, R.4.** Bass-Dannreuther Die State c/d. Only one obverse die was employed for all six varieties of 1803 eagle, so the reverse dies (plus the date on the obverse) are sufficient to identify the specific marriage. The BD-3 is one of the four Small Stars Reverse die pairings, in this case using a leftover die from 1801 that shows the eagle's upper beak nearly touching a star just below its point. The right bottom serif of the E in STATES is over a space between clouds. Noticeable mint luster appears around the margins of this near-Mint example, with deep reddish patina. Some light die cracks and clashes are indicative of the late state of the dies on each side. An area of small abrasions along the jawline and into the right field is among the few mentionable signs of contact. (#8565)

## 1803 Small Stars Eagle, BD-3, MS63 Late State with Clashed Dies

**4971 1803 Small Stars Reverse MS63 NGC. Breen-6844, Taraszka-28, BD-3, R.4.** Bass-Dannreuther Die State c/d. Both dies show moderate clash marks. The reverse die appeared earlier on 1801 BD-2, the plentiful 1801 variety (Dannreuther incorrectly said BD-1).

A single obverse dated 1803 was used with six different reverse dies, including four Small Stars and two Large Stars dies. The BD-3 is far more plentiful than the other five, making it the ideal candidate for *Guide Book* collectors who seek two coins showing the different reverse star sizes, or for date collectors seeking a single 1803 eagle.

Die states of the 1803 obverse provide the necessary evidence to determine the emission sequence, or the order that the 1803 eagle varieties were minted. BD-1 and BD-2 are only known with a perfect obverse die, while BD-3 is known with a perfect obverse or a clashed obverse as here. BD-4 developed heavier clash marks and was then lapped, sometimes showing a crack through LIBERTY. The final two varieties, BD-5 and BD-6, also show the lapped obverse, eventually developing a die crack at star 5.

Although BD-3 is plentiful among 1803 eagles, it is scarce in the context of early eagle varieties. John Dannreuther estimates that 150 to 200 examples survive in all grades. Although no census of early gold varieties exist, the present specimen is likely among the best survivors. Rich olive tones reside on brilliant and frosty yellow luster. Only a few scattered marks are evident on each side, some in the fields and others hidden in the devices. Design weakness is evident on the lower drapery, opposite light reverse adjustment marks. Census: 17 in 63, 9 finer (11/11).

*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#8565)

## 1803 BD-5 Eagle, AU Details Extra Star Variety

**4972 1803 Extra Star — Improperly Cleaned — NGC Details. AU. Breen-6845, Taraszka-30, BD-5, High R.4.** This is the Extra Star variety, although light wear obliterates the tiny extra star on top of the cloud. Harry W. Bass, Jr. was the first to notice the extra star, and the variety was thought to be quite rare, until notice was publicized. Today it is ranked as the second commonest of six die varieties for the 1803 eagles.

The cleaning subdues the luster of this yellow-gold specimen with minor surface marks on each side. A few diagonal adjustment marks are visible at the central obverse.

## 1803 Eagle, Large Stars Reverse, BD-5 With Extra Reverse Star, MS61

**4973 1803 Extra Star MS61 NGC. CAC. Breen-6845, Taraszka-30, BD-5, High R.4.** Bass-Dannreuther Die State g/a-b. There are no obvious die cracks on the reverse as noted in Bass-Dannreuther, but we note a die line running though the eagle's right (facing) wing. The BD-5 is the famous Extra Star Reverse that was discovered by Harry W. Bass, Jr., in 1966. The star here is faint but certainly perceptible. This Mint State example exhibits bright, even yellow-gold surfaces that are sharply struck and slightly reflective. There are numerous light, inoffensive abrasions that explain the grade, but much eye appeal is present for the assigned grade. For the BD-5, Census: 6 in 61, 19 finer (12/11). (#88565)

## 1803 Capped Bust Right Ten, MS62
## Extra Star, BD-5 Variety
## Only Seven Finer Examples at NGC

**4974 1803 Extra Star MS62 NGC. Breen-6845, Taraszka-30, BD-5, R.4.** The six varieties of 1803 eagle all share a common obverse die, which was mated with six different reverse dies to produce four Small Reverse Stars and two Large Reverse Stars die combinations.

This interesting BD-5 variety has a most unusual feature: On the cloud on the extreme right, below the letter F, a small star was impressed in the die, lying entirely within the borders of the cloud itself. A leaf point is beneath the left corner of the I in AMERICA (on the other Large Reverse Stars die, the leaf point is between RI), and the A's in the legend are complete, save the last (on the other, the punch broke and the left inner feet on the right stand of the A's are missing). We can think of no other variety in any series where this happened in exactly this manner. The only similar occurrence is on the 1799 B-3 dollar, which has two stars partially buried beneath the clouds. As such it is quite rare, and remained unknown until Harry Bass discovered this feature in 1966.

This sharply struck example boasts essentially full definition, except on a few breast feathers and the stars above the eagle's head. Some adjustment marks of Mint origin are near the arrow shafts and a couple of the clouds, distant from the focal points of the coin. The fields have semiprooflike luster, and the apricot-gold color is attractive. A couple of tiny dark spots are in the eagle's shield, and the obverse has the expected number of minor marks. An important offering for both the specialist and the early gold type set collector. 14 Star Reverse NGC Census: 12 in 62, 7 finer (11/11).

## 1804 BD-1 Crosslet 4 Eagle, MS61
## The Only 1804 Production Variety

**4975 1804 Crosslet 4 MS61 NGC. Breen-6847, Taraszka-31, BD-1, High R.4.** Bass-Dannreuther Die State b/b. The Crosslet 4 variety was coined for circulation in 1804, and the other variety, the Plain 4, is only known in proof format, produced in the 1830s for inclusion in the presentation coinage sets that also included the 1804 silver dollar. Between 80 and 100 of these Crosslet 4 coins are believed to survive in all grades. The ten dollar gold piece was the largest denomination at the time, discontinued by an executive order of President Thomas Jefferson, as its intrinsic value exceeded its nominal value. The denomination reappeared 34 years later in 1838.

The Crosslet 4 is sufficient to identify the BD-1 variety. The reverse die is a "carryover" from the BD-6 of 1803, although Bass-Dannreuther notes that the 1803 BD-6, based on die state evidence, was actually struck *after* the 1804 BD-1. The obverse here shows a die crack from star 1 to the 18 of the date. The reverse displays one crack through the tops of UNITED, and a second crack from the top left of the U, through the eagle's tail, and thence to the top of the last A in AMERICA.

Die polishing has created moderate brightness in the obverse fields of this MS61 specimen. That side also displays pronounced planchet adjustment marks from stars 11-13 upward through the upper portion of Liberty's profile. More adjustment marks appear on the lower bust and the lower hair curls, running into the left field. The strike on the reverse is a trifle irregular, fully defined on the eagle's breast but soft on the right (facing) wing tip and head. There is no evidence of reflectivity on the reverse. Both sides exhibit light, consistent orange-gold coloration, with minimal abrasions. We suspect that the extensive planchet adjustment marks account for much of the grade, yet they fail to detract from the appeal and historic importance of this early gold type example. Census: 13 in 61, 12 finer (11/11). (#8566)

## LIBERTY EAGLES

### Lightly Circulated 1859-S Ten Dollar Unusually High-End at AU53

**4976** **1859-S AU53 NGC.** In the space between the sinking of the *S.S. Central America* and the onset of the Civil War, strikings of non-double-eagle gold coins at San Francisco were small in absolute terms: just 7,000 1859-S eagles were struck, for example. That mintage of a few thousand coins saw considerable circulation, and even Choice XF examples rate as condition rarities. This AU53 representative retains ample peach-laced yellow luster and a hint of a swirl on the reverse. Better-defined on central devices than the peripheries with scattered light abrasions through the fields and a shallow pin-scratch to the left of Liberty's earlobe. Census: 4 in 53, 5 finer (11/11). (#8630)

## 1861-S Liberty Ten, MS61
## Unique Mint State Survivor

**4977** **1861-S MS61 NGC. CAC.** Although 15,500 pieces were minted, and AU pieces are encountered from time to time, the 1861-S Liberty eagle is unique in Mint State. This piece is the only Mint State specimen that NGC has certified, and two AU58 coins are the finest that PCGS has examined. Those grading services have put 140 examples in holders over 25 years. Unlike coins produced at the Eastern Mints in 1861, the San Francisco Mint gold coinage actually entered circulation, and most of those that survive today are well worn with an average certified grade of just over XF40.

The old Type One reverse hub appears on the 1861-S eagles, from left over dies that had been in use since 1858, featuring a Large S mintmark that is taller than either S in STATES on this reverse, an extremely unusual situation on any U.S. coin. That mintmark is centered below the inverted V formed by the branch stem and arrow feather, with its left serif over the right upright of the N in TEN. This early die state piece shows no clash marks, die cracks, or signs of lapping on either side.

A highly appealing specimen, this sharply defined eagle has bold detail throughout; 12 of the 13 stars are sharp, and every detail on the reverse is fully rendered, including the eagle's claws. Myriad marks are evident but they are entirely trivial with no singular marks on either side. The luster is complete and frosty with brilliant yellow surfaces.

*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#8634)

Smithsonian

## Important AU50 1871-CC Ten Dollar Four-Figure Mintage, Few Surviving

**4978** **1871-CC AU50 NGC. Variety 1-A.** The date is farther to the right relative to the bust on the 1-A variety compared to its 2-A counterpart, and the 1-A lacks the die scratch found on the 2-A. Like its 1870-CC predecessor, the 1871-CC eagle is an important date from early in the Carson City Mint's history, with a four-figure mintage and survival rates that make it very scarce at any grade level and even midrange coins condition rarities. This example is pale yellow-gold, radiant overall with tiny pools of reflectivity clinging to the fields around the stars and similar devices. Softly struck on the highest parts of the design with a die flaw and copper spot just under the left (facing) wing of the eagle. Census: 8 in 50, 25 finer (11/11). (#8661)

## 1873-CC Ten Dollar, XF45 Exceptional for the Issue

**4979** **1873-CC XF45 PCGS. CAC.** Ex: Dallas Bank Collection. The 1873-CC, having a mintage of just 4,543 pieces, most of which was released at the time of issue and circulated heavily in the regional economy, is one of the rarest Carson City issues of the ten dollar denomination. Rusty Goe, in his *The Mint on Carson Street*, estimates a survival rate of 75 to 85 pieces in all grades. This estimate is in line with the 86 examples of '73-CC tens currently certified by PCGS and NGC combined, a number of which are likely resubmitted or crossover coins.

This Choice XF specimen is an exceptional example for the issue, that typically is heavily abraded, poorly struck, and lacking eye appeal. Distributed minute marks are much less offensive than the usually seen deep abrasions on Liberty's face, and her portrait exhibits much better detail than typically seen for the issue. Additionally, a good amount of mint luster remains on the yellow-gold surfaces of both sides, more than what might be expected for the designated grade. These attributes result in above-average eye appeal, aptly recognized by CAC. Population: 13 in 45, 14 finer (11/11).

*Ex: The Dallas Bank Collection (Sotheby's/Stack's, 10/2001), lot 469.*

*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#8667)

Smithsonian

## 1875-CC Ten Dollar, AU50
## Rarest Carson City Ten

**4980** **1875-CC AU50 PCGS. Variety 1-A.** The 1875-CC is a well-known absolute and condition rarity in the Carson City gold series. Only 5,908 pieces were struck, and it ranks as the #1 date in the series in both overall rarity and high grade rarity. Only 65-75 pieces are believed known in all grades and none are known in Uncirculated condition. Even in Almost Uncirculated, Doug Winter estimates a mere 6-7 pieces are extant. Undoubtedly because the mintage was so low, the initial die polish never had a chance to wear off, and as a result this piece shows significant brightness on each side from striated dies. This issue is known for heavily abraded surfaces. While this piece displays the abrasions expected from 10 points of circulation, it cannot be said that it is abnormally marked for an AU50 (which makes it above average for the issue). The lemon-yellow surfaces show deeper orange-gold in the fields and over the design elements. The strike is also significantly stronger than the usual 1875-CC ten with only modest softness in the centers and a well-balanced appearance overall. Population: 3 in 50, 16 finer (11/11). (#8673)

## 1879 Eagle, MS65
## Only One at PCGS, Just Two Finer

**4981** **1879 MS65 PCGS.** A substantial mintage of 384,740 coins suggests that collectors should have no trouble finding a nice example of the 1879 Liberty ten at any time. However, that is far from the case as survivors, when they are encountered, tend to be in lower grades. The average certified grade of this issue is only about AU55.

This impressive Gem is a coin of extraordinary beauty. The surfaces are pristine with brilliant light yellow luster and faint traces of rose toning. There are few marks of any kind, and the strike is bold with virtually full design definition. Population: 1 in 65, 2 finer (11/11). (#8683)

## Superb Gem 1905 Ten Dollar Among Finest Certified

**4982** **1905 MS67 PCGS. CAC.** Even though the 1905 eagle, with its mintage of 200,992 coins is considered a common date, it is much more difficult to locate than some of the true common dates, such as the 1901 or 1901-S. Jeff Garrett and Ron Guth comment in their *Encyclopedia of U.S. Gold Coins 1795-1833*: "The 1905 eagle is one of the more common 'tough' dates of the 20th century, meaning that it is fairly easy to obtain, but it is not nearly as plentiful as dates such as 1901, 1901-S, and 1907. As is typical for coins of this period, low-end Uncirculated coins rule the day, whereas gem examples are rare." In his 1980 Analysis of Auction Records, David Akers summed up his similar observation by writing: "Gem uncirculated examples of this date are scarce, but specimens below that quality level are generally available."

Only four submissions of this date have been certified MS67 or MS67+ by PCGS. In our past auctions dating back to the beginning of our auction archives in 1993, we have offered only other PCGS MS67 example of the 1905 eagle, which appeared in our FUN Signature two years ago.

A radiant beauty, this example has highly lustrous and frosty yellow surfaces with hints of orange and honey-gold toning. The strike is bold with only stars 7 and 13 slightly weaker than normal. The central portrait and eagle are both exceptionally full. The surfaces are immaculate with only tiny blemishes visible under a strong glass.

*From The Jim O'Neal Gold Type Collection.* (#8757)

## 1866 Motto Ten, Exceptional PR64+ ★ Only 30 Pieces Struck

**4983** **1866 Motto PR64+ ★ Ultra Cameo NGC. CAC.** As significant as the With Motto type is to collectors today, Mint officials (other than Salmon Chase) apparently did not appreciate the significance of the design change at the time. The mintage of proofs throughout the decade varied from a low of 25 pieces to a high of 69 (in 1861). Only 30 proof tens were struck in 1866 with the new motto on the reverse. Fortunately for collectors, the majority of survivors are either Ultra/Deep Cameo or Cameo. A paltry 11 coins have been certified in all conditions — either without contrast, Cameo, or Ultra/Deep Cameo. Undoubtedly the freshness of the dies explains the six Ultra/Deep pieces graded by both services as well as the three Cameo examples certified. Of the 11 "submission events" recorded for the 1866 ten, surely a couple must be resubmissions, which would place the actual number extant around 9 or possibly 10 pieces (the Smithsonian has a piece that was donated in the year of issue and grades PR63 Cameo, according to Garrett-Guth). The highest auction record for this date was in an ANR sale from 2003, a PR66 Cameo realized an amazing $97,750.

The fields on this piece show remarkable depth of mirrored reflectivity with profoundly contrasting mint frost over the devices. Slight orange-peel texturing is seen on each side. Only the slightest hairlines prevent an even higher designation. The only pedigree identifiers we see are a tiny planchet flake out of the reverse field above the upper arrow and a cluster of minute contact marks just above. The surfaces are bright yellow-gold throughout. Census: 1 in 64+ ★ Ultra Cameo, 2 finer (10/11). (#98806)

## Incredibly Rare 1867 Eagle, PR65 Cameo Only One Certified Finer

**4984** **1867 PR65 Cameo NGC.** Although a proof mintage of 50 pieces was recorded for the 1867 eagles, the issue is extremely rare. Most examples of the issue, when found, come with nicely contrasted Cameo surfaces. The only non-Cameo pieces we know of are two impaired proof at PCGS, one PR53 and one PR55. NGC has also certified one Ultra Cameo example in PR64. The remainder of certified examples, which we believe to be most of the few survivors available publicly today, are Cameo specimens. Those number four, all at NGC, two in PR64 Cameo, the present PR65 Cameo, and one PR66 Cameo. The total certified pieces thus number seven in all.

Garrett and Guth provide further context to the data above:

> "Despite a higher mintage for this year, the 1867 is an exceedingly rare date in Proof condition. It is at least as rare as any other date from this decade and may, in fact, be the rarest. Auction appearances are very infrequent and the sale of an NGC PF-66 cameo set a record price of $92,000 in early 2005, indicating the intense demand for high-quality Proofs. None have been certified above PF-66, and only one coin has earned that grade. All known 1867 Proof eagles have strong to exceptional cameo contrast, with frosty devices surrounded by orange-peel surfaces. The Smithsonian has a nice example that grades cameo PF-65."

The above was published in 2006, and as far as we can determine, none of the data have changed in the six years intervening. The description, too, is completely accurate for this piece. Bold, deep reddish-orange patina creates instant eye appeal in the eye of the beholder, with strong mint frost and thoroughgoing field reflectivity on each side. The strike is full or virtually so, and there are absolutely no mentionable distractions. An incredibly nice — and incredibly rare — proof coin from the Reconstruction era. (#88807)

## Still-Bright PR58 1871 Ten Dollar
## One of 30 Proofs on the Year

**4985** **1871 PR58 NGC.** Many proof eagle issues from the decade after the Civil War are paired with low-mintage business strikes, putting additional pressure on dates that saw just 20 to 50 proofs coined. The 1871 is no exception, at only 30 specimens struck, and any example is a great rarity regardless of impairment. The present piece shows signs of brief ill-use: hairlines in the fields, a pinscratch on the cheek, and contact marks from reeding in a line above star 12 on the obverse. Nonetheless, it offers the detail that signifies a true proof, and in the protected areas near the devices, pockets of reflectivity retain their irrepressible gleam. (#8811)

## 1873 Close 3 Eagle, PR64 Deep Cameo
## Only 25 Pieces Minted
## Finest Certified at PCGS

**4986** **1873 PR64 Deep Cameo PCGS. CAC.** Business-strike 1873 Liberty eagles are known in two different types, one with an Open 3 in the date and another with a Close 3. The Close 3 was used first, and subsequently changed because Chief Coiner A. Louden Snowden believed it was difficult to distinguish it from an 8. All known proofs are of the Close 3 variety, as they were struck early in the year.

The 1873 Liberty eagle is rare in both formats, as only 800 business-strikes and 25 proofs were struck. Writing in 1988, Walter Breen estimated the surviving proof population at just 10-12 examples, including one in the ANS and another in the Smithsonian. PCGS estimates a slightly higher number of 12-15 coins still extant. PCGS and NGC have combined to certify a total of 16 specimens in all grades, probably including a few resubmissions and crossovers (11/11). Jeff Garrett and Ron Guth caution against gold-plated aluminum die trial pieces that have been passed off as proofs in the past.

The present coin is a magnificent Choice example that shows startling black-on-gold Deep Cameo flash when tilted in the light. The devices are richly frosted to provide profound contrast with the brightly reflective fields. The design elements are sharply detailed in most areas, but a touch of softness is apparent on the central obverse and the arrow fletching. The vivid greenish-gold surfaces show the slight "orange-peel" texture often seen on 19th century proofs. A few minor hairlines and contact marks, none worthy of individual mention, explain the grade. Population: 1 in 64 Deep Cameo, 0 finer (11/11). (#98813)

## Rare Gem Deep Cameo Proof 1884 Eagle, Finest Such at PCGS

**4987** **1884 PR65 Deep Cameo PCGS. CAC.** The present Gem Deep Cameo proof 1884 eagle is the sole example so certified at PCGS, and there are none finer (11/11). The second-finest graded are a trio of submissions in PR64 Deep Cameo, and NGC has never certified an Ultra Cameo example of the issue. Another non-Cameo Gem proof at PCGS is numerically tied with the present coin as the finest certified. PCGS has seen only nine submissions of the 1884 proof eagle in all grades.

NGC has certified six submissions, all Cameo coins ranging from PR63 to PR65. This makes a total of 15 submissions at both services combined, a remarkably small total when one considers that some may be duplicates.

The proof mintage of 1884-dated eagles is recorded as 45 pieces in Breen's *Encyclopedia* and 48 for half eagles; however, Breen notes that older references in the 1949-65 timeframe reported 18 half eagles, casting some doubt that the 30 proof sets reported for January 1884 might in fact be *holdovers from 1883,* which would make only 15 proof eagles produced for 1884.

Regardless of the exact numbers minted and surviving today, it seems clear that the 1884 eagle in proof format is a remarkably rare bird, and the present Gem is among the finest known. The surfaces overall are an even yellow-gold with a tinge of red. The fields are deeply mirrored throughout, complementing the thick mint frost coating the raised devices. The only mentionable contact marks are minuscule, one in the field between stars 1 and 2, one above the eagle's head, and one to the left of U(NITED), all quite trivial. (#98824)

## 1885 Ten Dollar, PR66 Ultra Cameo
## One of Two Finest Certified

**4988** **1885 PR66 Ultra Cameo NGC.** A total of 65 1885 proof ten dollar gold pieces were reportedly minted. NGC and PCGS have graded 21 examples to date, a number of which are likely resubmitted or crossover coins. One has to wonder what happened to to the remaining 40 or so coins, especially as Breen (1977) indicated that "none were recorded melted."

In any event, the 1885 proof ten is a very rare coin., and the present Premium Gem Ultra specimen is one of the two finest certified by either service! Stunning gold-on-black contrast stands out on both sides, and the frosty design elements are fully struck. The yellow-gold surfaces are immaculately preserved, further enhancing the coin's outstanding eye appeal. This may well be the opportunity of a lifetime for the gold and/or proof specialist. (#98825)

## Impressively Contrasted 1890 Eagle
## PR64 Ultra Cameo

**4989** **1890 PR64 Ultra Cameo NGC. CAC.** With a stated mintage of just 63 proofs and significantly fewer than that number available today, the proof 1890 ten dollar coins are rarities in any condition, much less with the quality and contrast seen on the present specimen. The bright yellow-gold color takes multiple forms, frosted to Ultra Cameo standards on the devices and deeply mirrored through the fields; the fields also show a degree of orange-peel texture. A handful of faint hairlines combine to account for the grade, but the all-around visual appeal is impressive, as is only proper for what Walter Breen called "a coiner's caviar." Census: 2 in 64 Ultra Cameo, 8 finer (11/11). (#98830)

## 1895 Ten Dollar, PR65 Ultra Cameo
## A Rarely Seen Proof Date

**4990** **1895 PR65 Ultra Cameo NGC.** This stunning Gem has exceptional aesthetic appeal, and should prove to be a delightful addition to the connoisseur's collection. Both sides have impressively deep mirrors around highly lustrous and brilliant yellow devices. In addition, every individual star, numeral, and letter on the obverse and the reverse are fully lustrous and stand boldly against the fields, with the frosty border serving to frame the entire presentation. Only the faintest hairlines are reflected in the mirrors to limit the grade.

The mintage of this issue was limited to just 56 proofs, and a rather small percentage of those pieces, probably just one-third, still exist today. We estimate the total population in the range of 15 to 20 coins in all grades, including two pieces in the Smithsonian Institution. From that population, we believe that this example ranks among the top two or three pieces.

NGC and PCGS have combined to certify 42 examples of the 1895 proof eagles, with 13 pieces certified in Ultra or Deep Cameo quality. The best of these include two PR65 Deep Cameo PCGS; two PR65 Ultra Cameo NGC; two PR66 Deep Cameo PCGS; and one PR66 Ultra Cameo NGC coins. Of course, these totals include the possibility of resubmission, so the actual high-grade population is probably less. The opportunity to bid on and acquire such a magnificent specimen only comes along once in a great while. Census: 2 in 65 Ultra Cameo, 1 finer (11/11).

*Ex: Long Beach Signature (Heritage, 5/2008), lot 3457.* (#98835)

## Ultra Cameo Gem Proof 1896 Ten
## A Stunningly Contrasted Rarity

**4991** **1896 PR65 Ultra Cameo NGC. CAC.** Among many U.S. coinage series but especially within gold, a lesson new collectors must learn is that mintages alone do not tell the story of a coin's rarity. The most obvious demonstration of the principle comes with late-date Saint-Gaudens twenties, where survival is determined not by original mintages but by how many coins were sent outside U.S. jurisdiction before the gold recall and meltings of the 1930s. Similarly, albeit to a lesser extent, the survival of proof gold is a function of how many coins were sold, not the quantity originally struck.

This quirk of survival affects both prominent and obscure issues, rendering some underrated. The 1896 ten dollar is among the "underrated;" due to its mintage, it is often lumped in with the proof eagles of 1898 and later, but it has far more in common with earlier 1890s proofs; Garrett and Guth note that the 1896, despite having a mintage of 78 pieces that is well above the production for the 1895 issue, is only slightly more common than its immediate predecessor.

The present specimen, an Ultra Cameo Gem proof, has both solid technical credentials and excellent eye appeal. Only a handful of post-striking defects, which also serve as the coin's major pedigree markers, are visible to the unaided eye: on the obverse, a hairline appears just to the left of the bridge of Liberty's nose, while on the reverse, a couple of hairlines run into the left side of the eagle's neck. These do not threaten the coin's essential qualities as a Gem, and the contrast between sharply struck gold-frosted devices and deeply reflective "orange-peel" mirrors is marvelous. Census: 2 in 65 Ultra Cameo, 3 finer (11/11). (#98836)

## Exquisitely Contrasted 1897 Ten Dollar PR67 Ultra Cameo

**4992** **1897 PR67 Ultra Cameo NGC.** The middle to late 1890s saw some of the highest production values ever on pre-World War II proof coinage. The contrast between mirror fields and frosty devices is remarkable on many (most?) examples, yet there are a handful of astonishing specimens that transcend even this high baseline. This is the *single finest* proof 1897 eagle in the combined certified population, with only a PR66 Ultra Cameo for company among better-than-Gem specimens regardless of contrast (11/11). Exquisitely detailed with amazingly reflective fields, this Superb Gem proof shows only a couple of tiny pedigree markers, including a minuscule lint mark under Liberty's chin and a pinpoint flaw below the base of the eagle's beak. (#98837)

## The Trompeter 1898 Ten Dollar PR63 Ultra Cameo

**4993** **1898 PR63 Ultra Cameo NGC. CAC.** Ex: Trompeter. This Ultra Cameo Select proof bears one of the most famous proof gold pedigrees of all: Ed Trompeter, whose numismatic estate was purchased by Heritage for more than $15 million in 1998, setting a world record for a private coin transaction. The obverse of this proof Liberty eagle shows just a few light hairlines in pale yellow fields that show generous orange-peel texture, and that side looks great for a PR63 Ultra Cameo grade. The reverse shows two small clusters of contact on either side of the eagle's neck that contribute to the final technical designation, but the contrast on that side exceeds even the Ultra Cameo effect of the obverse. A great combination of beauty, rarity, and numismatic history that should prove irresistible to even the most discerning collectors. (#98838)

**1899 PR68 ★ Ultra Cameo NGC**

**1899 PR68 ★ Ultra Cameo NGC**

## 1899 Ten Dollar, Essentially Flawless PR68 ★ Ultra Cameo
## The Finest Proof Known of Approximately 25 Survivors

**4994** **1899 PR68 ★ Ultra Cameo NGC.** There is and should be no doubt that this piece is the finest existing 1899 proof eagle. In addition to this piece, the only PR68 example that either service has certified, NGC has certified two PR67 Ultra Cameo examples, and likewise, PCGS has certified two PR67 Deep Cameo coins. The 1899 proof mintage was just 86 coins, with a current estimated population of about 25 different coins, including two in the Smithsonian Institution.

Proofs struck in the 1890s, especially those from the last few years of that decade, are among the best-produced proofs until contemporary coins were produced in mass quantities. This is true of gold as well as silver proof coinage. The most notable years for high-grade proofs were 1896 and 1898. But 1897 and 1899 also show a remarkable attention to detail and display an almost "hand-crafted" quality. Garrett-Guth comment that, "Most were well preserved and hardly any were spent (unlike in previous years)." This is most likely because the date represented the final opportunity to have a proof, of whatever denomination, from the 19th century. An inordinately high number of proofs of this date have been through the grading services. Adding together non-Cameo, Cameo, and Ultra/Deep Cameo coins, there have been a total of 68 certification events. With an estimated population of 25 pieces, that number represents a high number of resubmissions. Undoubtedly the generally high quality of production and higher-than-usual level of preservation account for the ever-hopeful number of resubmissions and crossovers.

This amazing Superb Gem is fully brilliant with light yellow-gold surfaces. The fields are fully and deeply mirrored with the watery appearance of pristine proofs. Each side, but the obverse more so, has the often-encountered orange-peel texture commonly found on late 19th proof gold. All of the devices, including the central motifs, the peripheral stars, letters, and numerals, and the borders are fully and completely lustrous with exceptional mint frost. Careful examination with a 10x magnifier fails to reveal any visible pedigree markers. Those tiny flecks and flakes that are present are entirely minimal and virtually invisible to the naked eye.

Among the attractive proofs that we have either seen or handled, in addition to this coin, are the Garrett, Carter, Eliasberg, Bass, Norweb, Trompeter, and Pittman examples, in addition to the two Smithsonian Institution. In fact, the present piece *might* be from one of those named collections, although we are unable to make a specific match from existing plates. Census: 1 in 68 Ultra Cameo, 0 finer (11/11).

*Ex: Long Beach Signature (Heritage, 5/2008), lot 3458.*

*From The Jim O'Neal Gold Type Collection.* (#98839)

## 1901 PR66 Cameo Ten Dollar
## Strongly Contrasted Example

**4995** **1901 PR66 Cameo NGC.** The mintage for proof 1901 tens was only 85 pieces, and there is no reason to doubt the accuracy of the Mint records. The general rule-of-thumb for 19th and early 20th century proof gold is a 50-60% survival rate. That would put the number of survivors for the 1901 proof ten around 45-50 coins. (In his 1988 reference, Breen estimated 30-40 pieces.) If one looks at population data, however, there have been a total of 93 proofs certified by both of the major services, more than the original mintage and a total that underscores the fallibility of population data. The reason is easy to see when the value of each grade is examined. From PR64 Cameo to PR65 Cameo the price roughly doubles. The result is a huge bulge of resubmissions in NGC coins with 31 submission events!

The 1901 ten was the last year a cameo finish is relatively easy to find. The following year the Mint went to an all-brilliant finish for proofing and cameo contrast is very rare on coins from 1902 onward. This is a starkly contrasted proof. The fields are "black" with noticeably contrasting mint frost over the devices, and the coin is well-balanced in appearance on each side. Heavy die polish is evident when the coin is closely examined. Polish has created a shiny spot below Liberty's ear, the hair curls behind the head are detached, and several feathers are missing or diminished in detail around the fletchings of the upper arrow. Predictably, the fields show die striations. The only mentionable identifier is a tiny horseshoe-shaped lint mark just to the right of the eagle's neck. Exceptional overall quality. Census: 2 in 66 Cameo, 2 finer (11/11). (#88841)

## Unusual Gem Cameo Proof 1906 Eagle

**4996** **1906 PR65 Cameo NGC.** The present piece is unusual — besides its status as a proof Liberty Head gold coin — as a Cameo example produced during the Mint's post-1901 "semibrilliant" era, to use the Breen term. Proof gold (and proofs in general) were no longer intentionally made with strong field-device contrast. This Gem Cameo 1906 eagle displays yellow-gold coloration on each side, with contrast that is perceptible even if insufficient to attain an Ultra Cameo designation. The fields are profoundly mirrored, with moderate mint frost coating the devices. A tiny planchet mark on the cheek provides a pedigree marker. Census: 3 in 65 Cameo, 5 finer (12/11). (#88846)

## 1907 Liberty Head Eagle, PR65 Cameo Seldom Seen With Cameo Designation

**4997** **1907 PR65 Cameo NGC. CAC.** The 1907 eagles were the last proofs of the denomination that the average collector could obtain until 1909, as the new Saint-Gaudens eagles dated 1907 were issued in proof format only to the extent of a tiny handful of pieces. It appears as though many collectors saved the last-year Liberty Head proofs, but they are nonetheless seldom seen with the Cameo designation. This piece displays yellow-gold surfaces with moderate but not intense field-device contrast. A tiny planchet flaw appears at the bottom of Liberty's throat, and another in the field above the E in TEN. Census: 6 in 65 Cameo, 1 finer (12/11). (#88847)

## 1907 Indian Eagle, MS65
## Wire Rim Variety, Judd-1901
## Net Mintage of 472 Pieces

**4998** **1907 Wire Rim MS65 NGC.** The initial mintage of 1907 Wire Rim Indian eagles was a mere 542 pieces, but 70 examples went unsold and were subsequently melted in the period between 1915 and 1918. None of the remaining 472 specimens were released into circulation, but were instead treated in the manner of some pattern issues, like the four dollar Stellas, being presented to Congressmen, Treasury Department officials, and other VIP's, or sold to citizens who ordered the coins from the Mint. The Wire Rim issue is actually collected with the pattern series, as Judd-1901, although 20th century gold collectors have adopted it as well. The issue was prized by contemporary collectors because of its limited mintage, and examples began to appear at auction a short time after they were issued. A typical description came from the Frank Clemes Smith Collection (B. Max Mehl, 1/1914), lot 565:

> "1907 St. Gaudens type. Indian head. Rev., standing eagle. **Wire edge,** periods. The rare variety of which only 500 specimens were coined. Uncirculated. Rare."

Although the coin was included in the Smith catalog, it actually came from the collection of Henry Wisler, of Los Angeles. Wisler was one of the few West Coast collectors of that time, and his collection included many mintmark issues, which were just becoming popular in the early 20th century.

The 1907 Wire Rim eagle is the only variety that shows Augustus Saint-Gaudens original design for this denomination. This attractive Gem does full justice to that design, with sharply detailed central design elements and strong satiny mint luster. Even on close inspection, the pleasing yellow-gold surfaces show only minimal signs of contact, with a few highlights of green color. Census: 35 in 65, 28 finer (11/11). (#8850)

## No Periods 1907 Eagle, MS66 Rich Mint Frost

**4999** **1907 No Periods MS66 PCGS. CAC.** According to Mint Superintendent Landis, 238,864 Indian Head, No Periods eagles were minted at the Philadelphia facility in 1907, along with 542 Wire Rim examples. Apparently, many examples were saved of this first-date-of-issue design, as it is readily available in Mint State grades today. The issue is easily located in grades through MS64, making this date a popular choice with type collectors. The date is scarce at the Gem level, and coins finer than MS66 are rare.

This is a splendid Premium Gem with thick mint frost and delightful color. The original surfaces offer intermingled shades of rose and lilac on both sides. No noticeable marks are present to the naked eye, though magnification reveals a few minor marks on Liberty's cheek. This example combines high technical grade with stunning visual appeal. Population: 77 in 66, 7 finer (11/11). (#8852)

## Near-Gem 1908-D No Motto Ten Dollar Sole Mintmarked No Motto Ten

**5000** **1908-D No Motto MS64 PCGS.** The Denver 1908 is the only No Motto Saint-Gaudens ten dollar issue struck at a branch mint, and only 210,000 pieces were produced. While examples are available for a price through MS62 condition, Select and near-Gem coins are scarce, and anything finer is rare. This MS64 representative offers pale peach overtones across wheat-gold luster that takes a yellow turn on the reverse. A few small abrasions and a shallow, stuttering scrape just off the left side of the truncation contribute to the grade. It is interesting to note that on this issue, the mintmark placement is above the olive branch, whereas most later issues put the "D" or "S" below the branch, next to the arrowheads. Population: 38 in 64, 3 in 64+, 7 finer (11/11). (#8854)

## 1908-D No Motto Ten Dollar, MS64
## Not Widely Saved Issue

**5001** **1908-D No Motto MS64 PCGS. CAC.** Few 1908-D No Motto tens were set aside in spite of the substantial mintage. Fuljenz explains: "This is mostly to a lack of continued interest in the novelty of the new design." This is a frosted example that displays rich, even reddish patina over each side. The frosted finish is noteworthy as most 1908-D No Mottos are lackluster or satiny. The surfaces are also finely granular, as seen on most gold coins from 1908 through 1916. The striking details are a bit soft on the hair strands, but the reverse is especially sharp. Numerous small abrasions are scattered over each side, but none are worthy of individual mention. Population: 38 in 64, 7 finer (11/11). (#8854)

## 1908-D Saint-Gaudens Ten, MS65
## Scarcer No Motto Type

**5002** **1908-D No Motto MS65 NGC.** The 1908-D No Motto Indian eagle claims a mintage of 210,000 pieces and is much more elusive in high grade than its Philadelphia No Motto counterpart. David Akers and Jeff Ambio consider the 1908-D No Motto an underrated date and Jeff Garrett and Ron Guth rate the issue in the top third of the series in terms of high-grade rarity.

The present coin is a delightful Gem, with a better-than-average strike for the issue, which is almost always weakly impressed on the central obverse. This coin also possesses vibrant mint luster, another area in which the typical specimen is lacking. The pleasing yellow and greenish-gold surfaces are free from any serious blemishes. Census: 11 in 65, 8 finer (11/11). (#8854)

## MS66 1908 Motto Ten Dollar Outstanding Eye Appeal

**5003** **1908 Motto MS66 PCGS.** Congress disagreed with President Theodore Roosevelt's decision to omit the motto IN GOD WE TRUST from the newly designed ten and twenty dollar gold coinage. As an expression of public sentiment, Congress passed the Mint Act of 1908 mandating that the motto be restored to gold coinage. On the tens, it was placed in the field near the eagle's breast where it remained for the duration of coinage.

A subtle blend of peach-gold, mint-green, and lilac patina resides on the highly lustrous surfaces of this gorgeous Premium Gem, and a well executed strike imparts crisp definition to the design features. A few unobtrusive ticks fail to take away from the coin's outstanding overall eye appeal. Population: 30 in 66, 7 finer (11/11). (#8859)

## Apricot-Gold 1908 With Motto Ten, MS66 Satiny, Unabraded Surfaces

**5004** **1908 Motto MS66 NGC.** The 1908 With Motto ten dollar coins have a mintage more than an order of magnitude greater than their No Motto counterparts, a nearly perfect inversion of the pattern for the Philadelphia Saint-Gaudens twenties of the same year. Despite the mintage of over a third of a million 1908 Motto tens, though, few were saved with a purpose, and so better-than-Gem coins such as this MS66 NGC example are condition rarities. The hair over Liberty's ear is the softest point of this example, but individual strands are still visible, and the eagle's feathers are sharply defined. Apricot-gold luster is generous and smooth with a hint of satin. Census: 35 in 66, 8 finer (11/11). (#8859)

## Premium Gem 1908 No Motto Ten
## Lustrous Two-Toned Example

**5005** **1908 Motto MS66 PCGS. CAC.** An impressive 341,370 business strike 1908 ten dollar coins were struck with the motto IN GOD WE TRUST on the reverse. Collectors seeking Uncirculated pieces should have little trouble locating a nice one, as PCGS and NGC have certified several hundred examples through MS64. Higher-grade Uncirculated coins, especially MS66 and finer, are considerably more difficult to acquire.

Rich orange-gold patina with lime-green accents occupies both sides of this marvelous Premium Gem, as does outstanding luster, which is typical for the issue. The strike is razor-sharp, creating excellent definition in the Indian's hair and bonnet feathers and the eagle's plumage. Only a couple of trivial reverse marks prevent an even finer grade. Population: 30 in 66, 8 finer (11/11).

*Ex: Central States Signature (Heritage, 5/2007), lot 2351.* (#8859)

## MS66 1910 Eagle
## Brilliant Luster, Sharp Strike

**5006** **1910 MS66 PCGS. CAC.** The moderate mintage of 318,500 coins and good subsequent survival ensure that this date is available in collectible grades. Garrett and Guth write of the 1910 eagle:

"The 1910 issue is one of the more available dates in all grades, including Gem Mint State and higher. As with other Philadelphia Mint coins, the luster and strike are all that a collector could hope to find. Although the mintage is small when compared with a few other common dates, enough were saved to satisfy collector demand."

Actually, coins such as the present Premium Gem that exceed the MS65 grade level are not so plentiful, as the PCGS data indicate. This piece offers frosty honey-gold color with a sharp strike and brilliant luster. Population: 18 in 66, 4 finer (11/11).

*Ex: ANA Signature (Heritage, 3/2007), lot 2113.* (#8865)

## Near-Gem 1910-S Ten Dollar Scarce in MS63 and Up

**5007** **1910-S MS64 PCGS.** Despite having a mintage well over twice that of its Philadelphia counterpart, the 1910-S eagle has less than half the PCGS-certified population of the 1910. It is scarce at the MS63 or Select level and rare any finer; according to the *Population Report,* there are 27 MS64 coins, one in MS64+, and four numerically finer, as of (11/11). The obverse of this near-Gem has a yellow-gold shade between canary and butter, while the reverse is more overtly orange. The two sides share impressive luster and a decent strike, albeit one incomplete on the high points. A small coppery area is noted near 8 o'clock on the obverse rim. (#8867)

## Satiny MS64 1912-S Ten Dollar

**5008** **1912-S MS64 PCGS.** With a flat mintage of 300,000 pieces that experienced the typical tribulations of a gold issue of the 1910s, the 1912-S eagle is a very scarce coin in MS64 condition and a rarity any finer. Most striking about this near-Gem is its combined color and luster: satiny orange-gold surfaces show glimpses of lavender and silver, and a tiny copper spot appears just to the right of the headband with another below the LL of DOLLARS. The hair over Liberty's ear is typically soft, and a handful of light abrasions nearby account for the grade. PCGS has certified only eight pieces as MS65 or better (11/11). (#8872)

## 1913-S Ten Dollar, MS64
## Above-Average Eye Appeal

**5009** **1913-S MS64 NGC.** The 1913-S, with an original mintage of just 66,000 pieces, is one of the rarest dates in the Indian Head ten dollar series in high grade. In fact, the 1913-S was once considered the undisputed key to the series. Since the advent of third-party grading, however, this issue has been moved out of top place by the 1911-D (Mike Fuljenz, *Indian Gold Coins of the 20th Century*).

NGC and PCGS population reports indicate that most 1913-S ten dollar survivors are in the Very Fine to About Uncirculated range, where they remain very scarce. The two services combined have certified a little over 200 coins in Mint Sate, primarily in the MS60 to MS63 level. The certified population consists of only 24 examples in near-Gem and a mere six pieces finer, some of which are likely resubmitted or crossover coins.

The present MS64 offering displays a soft orange-gold color imbued with traces of mint-green. Both sides are granular in texture with frosty surfaces, which is characteristic for the issue. Overall though, this piece exhibits above-average, vibrant luster. Sharp definition is noted on most of the design elements, especially Liberty's hair curls and bonnet feathers. Most of the eagle's plumage is also strong, except for softness on the eagle's shoulder and trailing leg. A handful of minute marks barely precludes Gem classification. That said, the surfaces of this coin fare much better than most '13-S survivors that show "almost always ... noticeably abraded surfaces. Very few examples can be found without some distracting bagmarks" (David Akers, *20th Century United States gold Coins*, p. 179). All in all, this piece displays above-average eye appeal for the issue. Census: 12 in 64, 3 finer (11/11). (#8874)

## Choice 1913-S Indian Eagle
## Second-Rarest Indian Eagle in High Grade
## Only Three Finer PCGS Coins

**5010** **1913-S MS64 PCGS. CAC.** The 1913-S Indian eagle is one of the leading condition rarities of the series. The reported mintage was only 66,000 pieces, a small production total for any 20th century coin. Unlike many gold issues produced after World War I, the 1913-S seems to have circulated extensively at the time of issue, and few specimens were saved for numismatic purposes. Today most examples seen are in circulated grades, and David Akers remarks, "After the 1911-D, the 1913-S is the rarest Indian Eagle in high grades" and "...this date is, without question, one of the 'stoppers' of the series for a collector trying to assemble a nice uncirculated set." PCGS has certified only 11 coins in MS64, with four examples finer, while NGC has graded an even dozen pieces in Choice condition, with a mere three specimens finer (11/11). Even these small totals may include some duplicate submissions.

The 1913-S began to appear at auction by the 1940s, with an "extremely fine" specimen in lot 1493 of the Flanagan Collection (Stack's, 3/1944) bringing $34. The date improved its performance by leaps and bounds as the few high-grade examples began to come on the market. Currently, the record prices realized for a 1913-S belongs to the magnificent MS66 PCGS coin in lot 3520 of the FUN Signature Auction (Heritage, 1/2009), which realized $299,000.

The present coin is a delightful Choice specimen, with sharply detailed design elements. Liberty's hair shows fine definition on the individual strands, and the lower headdress feathers are strongly delineated. There is a semicircular area of roughness in the lower left obverse field that is seen on many specimens of this date. The greenish-gold surfaces have a slightly granular texture, with frosty mint luster. A comparable specimen will be quite difficult to locate. (#8874)

## Gorgeous MS66 1914 Ten Dollar
## The Jim O'Neal Specimen

**5011** **1914 MS66 PCGS. CAC.** While the San Francisco and the occasional Denver issue are most prominent in collectors' minds, the generally higher-mintage Philadelphia coins have a couple of champions, even among With Motto pieces. While the 1909 is rated slightly higher in terms of high-grade collecting difficulty, the 1914 sports the lowest mintage of any Philadelphia With Motto Saint-Gaudens eagle issue. With much of Philadelphia's gold coinage dedicated to overseas trade, particularly European transactions, it is less than coincidental that Philadelphia's smallest With Motto eagle output should come in the same year that World War I began in Europe.

Mattelike, richly colored yellow-gold surfaces show occasional peach accents and a touch of green-gold at the upper reverse, and the luster is above-average even by the standards of the issue. Surfaces are carefully preserved and highly suggestive of an even finer grade, though a handful of small, wispy faults combine to preclude such a designation. Nevertheless, this marvelous Premium Gem survivor is sure to delight its next owner. PCGS has graded just eight examples at this level and only two finer (11/11).

*Ex: The Jim O'Neal Collection of Saint-Gaudens Eagles (Heritage, 1/2009), lot 3521.*

*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#8875)

Smithsonian

## MS65 1914-D Saint-Gaudens Eagle
## Last D-Mint Circulating Ten

**5012** **1914-D MS65 PCGS.** There are no absolute rarities among Saint-Gaudens ten dollar coins from Denver — unlike Philadelphia and San Francisco, both of which produced at least one issue in the 1930s, Denver stopped striking the denomination after the 1914-D issue, and the next ten dollar coins struck at Denver were proofs of the Los Angeles Olympics commemoratives in 1984.

This is a Gem example of the final classic-era ten dollar issue struck at Denver, greatly appealing and a borderline condition rarity this fine. Wheat-gold and yellow surfaces swirl with luster and show only a few tiny marks and scuffs. PCGS has graded only eight examples as MS66 or better (11/11). (#8876)

## Pristine Superb Gem 1914-D Eagle
## One of Three at PCGS

**5013** **1914-D MS67 PCGS. CAC.** The present Superb Gem 1914-D Indian eagle is tied for the finest known at PCGS, one of only three submissions at the MS67 level with none finer (11/11). NGC has also graded six submissions at the Superb Gem level, and again there are none finer.

It is one thing for a piece of Philadelphia Mint matte proof gold to grade PR66 or PR67, but it is another thing entirely when a *business strike branch mint gold piece* from early in the 20th century manages to achieve so lofty a grade as MS67. Of course, it does not hurt that the issue is generally known to be a well-produced one, as well as a generously minted one, struck to the extent of some 343,500 coins. Even so, most of the mintage was subsequently melted, and the journey of the survivors that Garrett and Guth describe makes the existence of high-grade survivors seem all the more miraculous:

> "It is likely that a significant number of survivors traveled from Denver to Eastern banks. From the banks of the East coast, these coins were soon sent over to Europe to wait out the First World War, subsequent depression, and the next world war as well, before returning to these shores."

The surfaces on this pristine Superb Gem display fantastic reddish-gold and lilac tones interspersed over each side. The surfaces show a pronounced mattelike finish over surfaces that are quite sharply struck and exhibit no obvious marks. This coin would be an excellent acquisition to fit either a date, type, or complete set, as one of the finest known representatives of one of the best-made issues in the series. (#8876)

## Premium Gem 1915 Ten Dollar Condition Rarity

**5014** **1915 MS66 PCGS.** Even the commonest dates in the Saint-Gaudens eagle series become challenging in the best grades. For the 1915 Philadelphia, which is among the most accessible pre-1926 issues, PCGS has certified only seven MS66 examples, and the sole finer coin in its *Population Report* is an MS67+ (11/11); moreover, there are only 55 total With Motto Saint-Gaudens tens in MS67 or better regardless of date. This yellow-orange and peach Premium Gem has sweeping luster and just a few tiny copper spots. The design definition is above-average, if incomplete on the hair covering Liberty's ear. (#8878)

## 1915 Ten Dollar, MS66 Challenging in This Grade

**5015** **1915 MS66 NGC. CAC.** The 1915 ten dollar is a well-made and reasonably plentiful issue that collectors frequently turn to for type purposes. Premium Gems, such as the specimen in this lot, are more challenging to locate. Its frosty surfaces yield excellent luster and a delicate mix of yellow-gold, mint-green, and apricot coloration. The design elements are sharply struck, as almost always seen on the 1915. A few minuscule marks concealed within the eagle's wings do not detract in the least. Indeed, this coin generates excellent overall eye appeal, appropriately recognized by CAC. Census: 21 in 66, 5 finer (11/11). (#8878)

## Premium Gem 1915 Eagle
## Excellent Surface Aesthetics

**5016** **1915 MS66 NGC. CAC.** The 1915 eagle issue is one that is well-known for a generally excellent strike and good overall aesthetics. Despite the healthy mintage of 351,000 business strikes, Gems are far more available than examples at the next grade level. The present piece reinforces the issue's aesthetic superiority, displaying as it does rich orange -gold color intermingled with lilac that complements thick mint frost and a sharp strike. As demanded at the Premium Gem grade level, there are no distracting marks. A super coin for a type or complete set. Census: 21 in 66, 5 finer (12/11). (#8878)

## Low-Mintage 1915-S Ten Dollar, MS64

**5017** **1915-S MS64 PCGS.** The Saint-Gaudens ten dollar series is studded with low-mintage issues, usually produced at one of the branch mints. Among them is the 1915-S, mintage 59,000 pieces and widely recognized as a scarce issue at the Select level. MS64 coins like this one are condition rarities, as are their betters, which number only a handful. The luster is mainly wheat-gold with a subtle orange overtone, and faintly frosted as seen by a small patch of brilliance opened up by a scrape above the E in E PLURIBUS UNUM. Minor striking incompleteness has little influence on the overall eye appeal. (#8879)

## 1915-S Ten Dollar, MS65
## Outstanding Eye Appeal

**5018** **1915-S MS65 PCGS.** Ex: Kutasi. The 1915-S is an absolute as well as a condition rarity in the ten dollar Indian series. Only 59,000 pieces were struck, and apparently few were shipped overseas as no hoards are mentioned in the literature and so few Uncirculated pieces known. Fewer than 250 Mint State pieces have been certified to date by PCGS and NGC combined, with the vast majority of these graded MS63 or less. At the Gem level, only eight other coins have been certified with four in higher grades (11/11).

This is a particularly clean and attractive example. It is also a coin that has been an integral part of four major collections of ten Indians. The surfaces have pronounced granularity (not always the case on 1915-S tens) with satiny mint luster. Both sides exhibit lovely peach-gold and mint-green color with occasional whispers of lilac interspersed, and each is impeccably preserved. The latter is a significant attribute because most Mint State 1915-S survivors display "numerous abrasions" (David Akers, *20th Century United States Gold Coins,* p. 193). The only identifiers that can be reliably used for pedigree purposes on the present coin are a short horizontal mark below Liberty's eye, and a tiny alloy stain at 5 o'clock on the obverse. Finally, the design features are sharply impressed, as almost always the case on the '15-S. In summary, this Gem exhibits outstanding technical quality and aesthetic appeal.

*Ex: Thaine Price Collection (Akers, 5/1998), lot 65; William Michael Thomas (Stack's, 1/2004), lot 3026; Kutasi Collection (Heritage Auctions, 1/2007), lot 3185.*

*From The Jim O'Neal Gold Type Collection.* (#8879)

## 1916-S Ten Dollar, MS64
## Attractive Color

**5019** **1916-S MS64 NGC.** Most surviving 1916-S Indian ten dollar pieces are in the About Uncirculated to low-level Mint State grade range. Select and near-Gem examples become quite scarce, and higher-grade coins are extremely rare. The frosty surfaces of this MS64 specimen yield pleasing luster and attractive peach-gold color with blushes of subtle mint-green. Its design features are well struck, including strong definition on the 1 and 9 of the date, digits that are sometimes soft. A few minute marks, more so on the reverse, preclude Gem classification. Census: 30 in 64, 7 finer (11/11). (#8880)

## Near-Gem 1916-S Saint-Gaudens Ten
## Rich Satin-Frost Luster and Color

**5020** **1916-S MS64 PCGS.** The 1916-S enjoys considerable fame within the ten dollar Saint-Gaudens series. It is a moderate rarity, in both absolute and conditional terms, that made its reputation between the 1930s and 1960s, when it was largely unavailable, before the emergence of two hoards in the 1970s that made it the last accessible San Francisco issue of the classic eagle denomination. This lovely near-Gem has reddish-gold color with subtle hints of lilac interspersed over the satin-frosted surfaces. Several small- to medium-sized marks scattered over each side account for the grade, but none are worthy of individual mention.

*Ex: The Little Rock Collection, Part Two (Heritage, 7/2011), lot 4996.* (#8880)

## 1920-S Ten Dollar, AU58
## A Major 20th Century Rarity

**5021** **1920-S AU58 PCGS.** The 1920-S ten dollar has long been acknowledged as one of the prime rarities of U.S. 20th century gold coinage. David Akers opines in his handbook entitled *20th Century United States Gold Coins* that most of the 126,500 pieces minted are believed to have been melted at the Mint. The issue is rare in all grades, evidenced by the fact that PCGS and NGC combined have certified only about 100 examples.

This near-Mint State offering displays ample luster on apricot-gold surfaces imbued with traces of mint-green. The design features are better struck than ordinarily seen, especially on the hair around Liberty's ear, on all letters in LIBERTY, and on the digits 192; these elements are typically soft. The circulation marks encountered do not detract. Population: 7 in 58, 25 finer (11/11). (#8881)

## 1930-S Ten Dollar, MS64
## Intense Mint Luster

**5022** **1930-S MS64 PCGS.** No ten dollar coins were minted between 1926 and 1930, perhaps because so many were produced in the former year (1,014,000 pieces) that no more were needed for a few years. The coinage of this denomination resumed in 1930 when the San Francisco Mint struck 96,000 pieces. Relatively few of these S-mint eagles apparently left the mint prior to President Franklin Roosevelt's issuance of the Gold Recall Act in 1933 when the majority of the original mintage must have been destroyed. The small number that did survive melting were probably obtained directly from the Mint, which may help to explain that most known 1930-S eagles are in Mint State condition.

Both Walter Breen and David Akers mention the existence of small hoards of the 1930-S ten dollar. Breen writes in his 1988 *Complete Encyclopedia of U.S. and Colonial Coins*: "For some decades one 1930-S turned up in the San Francisco area every three years, probably from a single roll." Jim Halperin et al. write in the *Coinage of Augustus Saint-Gaudens* (2006): "If Breen's speculation of the existence of a roll is correct, and if the owner did indeed release a single coin every three years, by now the original supply would be exhausted." And Akers writes in his *20th Century United States Gold Coins* (2008): "A small hoard (40-50 coins) of 1930-S Eagles had been kept intact in the San Francisco area until at least 1988. It is believed that those coins have since been dispersed into the market."

Variegated apricot-gold and mint-green patination resides on the intensely lustrous surfaces of this near-Gem. The design features are sharply struck, including the Indian's hair curls and the lower part of the eagle's right (facing) wing, elements that are often soft. The trailing leg is a tad soft, as usually seen. A handful of minute marks precludes Gem status. All in all, this piece yields tremendous eye appeal. Population: 40 in 64, 20 finer (11/11). (#8883)

## Gem 1930-S Ten Dollar
## A Major Absolute and Condition Rarity

**5023** **1930-S MS65 NGC.** The 1930-S has long been compared to the previous S-mint ten, the 1920-S. Other than both being series rarities, there is little similarity between the two. The 1920-S is a condition rarity, the 1930-S is almost always found in mint condition. The reason for the preponderance of Uncirculated coins was addressed in a *Numismatic News* article by Paul Green in 2006:

> "It is less surprising that the 1930-S was also a heavily melted date. Coming a decade after the 1920-S, the 1930-S was probably part of a response to demand for gold that was surfacing as the Great Depression was starting to take hold of the nation. The 1930-S had a low 96,000-piece mintage. ... It appears, though, that there was relatively little circulation of the 1930-S. Most of the examples seen are Mint State. In fact, only three [today there are 10 circulated examples] of the 100 coins seen [today the total are 172] were called circulated, and all were AU-58 [today one AU53 is known], which suggests bad handling as much as extensive circulation.
>
> "If anything, the 1930-S probably ended up in some of the small hoards at the time as some people, seeing the financial crisis of the time, turned to gold and hid what they had. That would have been especially likely in the West where distrust of paper had always been present. A coin that would have naturally made its way into the small hoards was the last San Francisco gold eagle, the 1930-S. The Mint State numbers also include a number of especially nice coins as the 1930-S seems to have been one Indian Head eagle that was reasonably well made and which avoided the problems found on other dates."

This indeed was a well-made coin. The mint frost has a distinctive reddish-gold tinge overall with faint lilac accents around the margins. When found the 1930-S is usually a heavily abraded issue, but this is a remarkably clean example (thus the Gem grade). An extreme rarity in Gem condition, only 14 other pieces have been so graded by NGC with two finer (11/11). (#8883)

**1933 MS64+ PCGS Secure**

**1933 MS64+ PCGS Secure**

# 1933 Ten Dollar, MS64+
# Only 30-35 Pieces Believed Known

**5024** **1933 MS64+ PCGS Secure.** The 1933 eagle and double eagle issues are inextricably linked, owing to the great Gold Recall of 1933 and the subsequent Bank Holiday, beginning on March 6.

The order of President Franklin D. Roosevelt barred private U.S. citizens for many years from owning gold coins (and related paper certificates) *except for items of numismatic significance*. Both the 1933 eagle and the 1933 double eagle are fabled rarities. On the surface, the coins bear many similarities, but, fortunately for bidders on the current lot, there are key differences. The United States continued minting gold coins intermittently for several months after Roosevelt took the country off the gold standard. Two executive orders banned the release of additional gold coins for circulation, but by longstanding practice, collectors could obtain examples of the current year's coinage from the Mint cashier, a practice that apparently continued through at least the first several months of 1933. On April 5, 1933, a Presidential order decreed that owners of gold coins (and gold certificates) were to return them to the Federal Reserve System by May 1, except for amounts of less than $100 per person.

The 1933 double eagle issue has no record of release through official channels before the President's declaration, and only a single specimen is clearly legal to own, having been "remonetized" by the U.S. government. That coin, the former possession of King Farouk of Egypt, set a price of $7.59 million in a Sotheby's/Stack's auction in July 2002, a record that still stands today as the highest price ever paid for a single coin, U.S. or otherwise. The legal status of several other 1933 double eagles was recently decided in the government's favor, who contended the 10 coins in question had been stolen since they were not legally released. However, the legal status of the 1933 ten dollar issue has never been in question. In an article in the March 2003 Numismatist, Lawrence Lee wrote:

> "Most of the 1933 coins still were at the Philadelphia Mint when the executive order was issued, and all coins on hand were melted.
>
> "Because the $10 coin was intended for commerce and some had been released legally into circulation, it is not against the law to own a 1933 eagle today; it just takes really deep pockets."

The subject of legal ownership came up recently in the long and convoluted trial of the Langbord family's legal right to own ten 1933 twenties. In his daily summation of the trial for July 14, Steve Roach wrote about the interaction between defense attorney Barry Berke and the prosecution's key witness, David Tripp:

> "Berke questioned Tripp about the relationship of 1933 double eagles to 1933 Indian Head gold $10 eagles, to which the government objected, as the coins are not the subject of this litigation. Despite Mint records showing that only four 1933 Indian Head gold $10 eagles left the Mint legally, there are estimates that as many as 35 are available today. Yet the the $10 eagles are not the subject to confiscation, unlike the 1933 double eagles.
>
> "Tripp countered that the 1933 $10 eagles differ from the 1933 $20 double eagles in that no 1933 double eagles left the Mint through legitimate means, while 'once the barn door is open' through legal distribution of 1933 $10 eagles, it became impossible to differentiate legitimate versus illegitimate coins. Berke used this example as further proof that the Mint records of 1933 didn't accurately show what was happening at the time."

The number of examples known has never wavered much. Breen estimated that 30 or fewer pieces were known. Akers estimate has remained constant over the years at 30-35 pieces. The combined certifications by PCGS and NGC show only 36 coins, minus an uncertain number of resubmissions. All known 1933 tens are Uncirculated. The finest is a single MS66, a coin that brought $718,750 in 2004. This is the only Plus coin among the 19 total MS64 pieces (11/11), placing it first among equals — and very close to Gem condition.

This upper-end MS64 coin shows intense frosted mint luster with a bright sheen and a silky texture. As always, the striking details are strong throughout. The abrasions that account for the less-than-Gem grade are almost all located on the reverse. A couple of angling marks are seen on the eagle's tail feathers and another on the hind leg. The location of these marks are fortunate, especially if the coin is displayed obverse-up, in which case the coin appears to be a full blown Gem. Each side shows even reddish patina with just the slightest hint of lilac around the eagle on the reverse. An outstanding example of this 20th century rarity.

*Ex: FUN Signature (Heritage, 1/2007), lot 3694.* (#8885)

## Premium Gem Matte Proof
## 1908 Motto Ten Dollar
## None Finer at PCGS

**5025** **1908 Motto PR66 PCGS. CAC.** The Saint-Gaudens design for the new ten dollar denomination was introduced in 1907 with the No Periods modification as developed by Charles Barber. The only proof gold eagles made generally available for collectors, however, were of the series-ending Liberty Head design. The 1908 With Motto eagles were the first proofs of the Saint-Gaudens design that the average collector could purchase from the Mint, produced in the new matte proof format (or formats) to the extent of 116 pieces. Walter Breen describes three proof formats in his *Proof Encyclopedia* — a "pale orange-yellow, many shades lighter than next"; the usually seen finish on almost all known examples, a dark matte proof finish "between khaki and olive color"; and a single specimen Breen reports with the satin or Roman gold finish.

Garrett and Guth write that "as a date, this is the most commonly available of the Proof issues. Orders for these coins were large, as the 1908 coins were the first Proofs generally available to collectors. Many survive in Gem condition."

The present Premium Gem is one of eight submissions certified at PCGS, and there are none finer at that service (11/11). The surfaces on this piece appear every bit as flawless as the grade implies, with no visible luster grazes or signs of contact. The surfaces show a fine-grained matte surface with slightly lighter color near the obverse rim — a compelling and eminently collectible example of this early 20th century gold rarity. (#8890)

## Superb Gem Proof 1910 Indian Eagle Among the Finest Certified Artistic Roman Finish

**5026** **1910 PR67 NGC.** A fairly generous mintage of 204 proof Indian eagles was achieved in 1910, but the issue is more elusive than that total suggests. Jeff Garrett and Ron Guth state, "In fact, the 1910 issue rates as the second-rarest date of the eight Proof dates that are generally available to collectors." The Mint switched to a Roman finish for gold proofs in 1909, after collectors rejected the matte proof finish of 1907 and 1908. This process produced a lighter, more reflective surface than the matte proof style, but collectors still preferred the old brilliant proofs of previous years. It is likely that many specimens went unsold and were subsequently melted after the end of the year. Present-day collectors appreciate the artistic merits of the Roman finish, and prize these coins whenever they become available.

This magnificent Superb Gem is among the finest known 1910 Indian eagles, and neither NGC nor PCGS has certified any coin in higher numeric grade (11/11). The design elements display razor-sharp definition throughout, with fine detail evident in Liberty's hair and the eagle's feathers. Even the lower headdress feathers are sharply defined. The attractive yellow-gold surfaces are highlighted by vivid hints of peach and orange, with slightly granular texture and vibrant mint luster on both sides. This coin possesses tremendous eye appeal to complement the high technical grade. This is only the second time Heritage has been privileged to offer a 1910 Indian eagle in PR67 condition. Census: 5 in 67, 0 finer (11/11).

*Ex: Old West and Franklinton Collection (American Numismatic Rarities, 8/2006), lot 1581.*

*From The Jim O'Neal Gold Type Collection.* (#8892)

## Choice Proof 1912 Indian Ten
## Rare Series Issue, 83 Coins Minted

**5027** **1912 PR64 PCGS.** The 1912 proof Indian ten dollar gold piece claims a low mintage of just 83 pieces. Although some dates have even lower mintages, Jeff Ambio and David Akers believe the 1912 is tied with the 1915 issue as the rarest date of the series in terms of total number of coins known.

Because the matte proof issues of previous years were so unpopular with collectors, the Mint changed to a fine-grain sandblast finish in 1912. This coin displays lighter surfaces than most 1911 proofs, with an even mustard-gold color. The design elements exhibit razor-sharp definition throughout, and close inspection with a glass reveals only a few minor signs of contact. Population: 4 in 64, 10 finer (11/11). (#8894)

## Premium Gem Proof 1913 Eagle
## Rare Sandblast Proof
## Only 71 Pieces Minted

**5028** **1913 PR66 NGC.** The 1913 Indian ten dollar gold piece claims the second-lowest mintage of the series at just 71 pieces. Michael Fuljenz believes the surviving population of the 1913 is only 20-25 coins, while Jeff Ambio and David Akers favor a slightly more liberal total of 20-35 examples in all grades. In high grade, the 1913 maintains a high place in the rarity rankings, as Ambio and Akers note, "The 1913 is the second-rarest proof Indian Eagle in high grades, barely edging out the 1910 and 1912 for this honor."

Although collectors failed to appreciate the artistic merits of the various matte proof issues, catalogers recognized the elusive nature of the 1913 at an early date. B. Max Mehl noted that the issue was rare as early as February of 1921, when he cataloged the specimen in lot 346 of the Dr. G.F.E. Wilharm Collection. The 1913 has enjoyed great success at auction, with prices realized rising steadily over the years. The record for this issue belongs to the magnificent PR68 NGC coin in lot 8022 of the Long Beach Signature Auction (Heritage, 6/2005), which realized $92,000.

The 1913 proofs were struck with a sandblast finish, an innovation the Mint introduced in 1912, because the matte and Roman proofs of previous years had proved so unpopular with the public. The sandblast proofs have a much finer texture than the finishes of earlier years. As Walter Breen said in his 1988 *Encyclopedia*, this finish displays 'millions of sparkling facets under a magnifier.' The sandblast proofs have an attractive medallic appearance, with sharply defined devices and evenly textured surfaces. Unfortunately, the sandblast proofs were no more popular than the matte or Roman proofs had been, and the Mint changed finishes again after 1913.

The present coin is a spectacular Premium Gem, with razor-sharp definition on all design elements, including Liberty's hair and the eagle's leg. The light honey-gold surfaces are virtually free of distractions, and eye appeal is outstanding. Census: 8 in 66, 7 finer (11/11). (#8895)

## Near-Flawless 1913 Eagle, Matte PR66 'Beautiful Work of Numismatic Art'

**5029** **1913 PR66 NGC. CAC.** Even though the matte proofs of the Saint-Gaudens design, the eagles and double eagles, generally saw mintages on a downward spiral as the respective series lengthened, today collectors seem to be considerably more fond of the pieces than were contemporary collectors. After launching the new gold coins in 1908 with a dark matte finish that was unpopular, the Mint in 1909 and 1910 launched a hybrid texture alternatively called Roman or satin finish, one that seemed to displease collectors even more. The 1911- and later-dated matte or sandblast proofs were similar to the matte texture of 1908, although differences in the granular texture and color could be achieved for individual coins within a year by subtle alterations in the sandblasting process.

The present-day numismatists have been much more kind to the matte proofs. Garrett and Guth write of the 1913 proof eagles:

> "The fine sandblast finish used in 1912 was also used to coin these Proofs. This date ranks as the third-scarcest issue of the series by a tiny margin in gem Proof or finer grades. Eye appeal and surface quality remain superb, and these coins are truly beautiful works of numismatic art."

The surfaces on the present Premium Gem are khaki-colored, with medium-sized granules appearing from sandblasting. One minute contact mark occurs in the reverse field below the T in UNITED, but the surfaces otherwise appear flawless. NGC has certified eight pieces at the PR66 level with seven finer, while PCGS has seen three submissions in PR66 with two finer, the totals as usual comprising some duplicates (11/11). (#8895)

**1907 Wire Rim Indian Head Ten Dollar, Judd-1902**
**formerly Judd-1774A, Pollock-1996, R.8, PR62 NGC**

**1907 Wire Rim Indian Head Ten Dollar, Judd-1902**
**formerly Judd-1774A, Pollock-1996, R.8, PR62 NGC**

# 1907 Plain Edge, Wire Rim Indian Eagle, Judd-1902
# PR62, Likely the Only Coined Example of His Work That Saint-Gaudens Ever Saw

**5030** **1907 Wire Rim Indian Head Ten Dollar, Judd-1902, formerly Judd-1774A, Pollock-1996, R.8, PR62 NGC.** It is believed that this specimen is the sole surviving representative of the plain edge 1907 Indian eagle pattern, although there is an outside chance that a second example may still exist. The plain edge coins were struck from newly created dies before the segmented collar was finished. In a July 28, 2008, *Coin World* article, P. Scott Rubin compared this piece to the Ultra High Relief double eagle:

> "It is so closely related to another pattern that has always been collected with the regular U.S. coinage that it is hard to separate the two. The other coin is the 1907 Ultra High Relief Saint-Gaudens double eagle, or twenty dollar gold piece."

The offering of this specimen in our January 2003 FUN Signature was the first-ever appearance of the plain edge pattern. No previous provenance exists for the coin. Roger W. Burdette remarked to Rubin that two plain edge patterns were struck in July 1907. One was sent to Treasury Secretary George B. Cortelyou and forwarded to President Theodore Roosevelt; the other was sent to Augustus Saint-Gaudens. Rubin remarked: "The latter information was startling to me and immediately made the 1907 plain edge eagle one of the most historically important numismatic items in history."

Archived letters show that the coin sent to President Roosevelt was eventually returned to the Mint, while the piece sent to Saint-Gaudens disappeared from the historical record. Unless by chance that second example survives today in some long-forgotten cache, **the present piece is not only unique, it is quite likely the only actual coin of his design that the sculptor personally saw.** All other Indian eagles and Saint-Gaudens double eagles were struck after the artist died on August 3, 1907.

On the other hand, if this is the example sent to Cortelyou and forwarded to Roosevelt, it is also historically important. In *Renaissance of American Coinage, 1905-1908,* Roger W. Burdette notes: "The experimental plain edge coin sent to the secretary [Cortelyou] was recorded as being returned to the mint on August 20; the Saint-Gaudens piece was still at Aspet."

The historic numismatic importance of this coin must be emphasized. Either this piece or the single other plain edge coin is the only example of any of his designs that Saint-Gaudens saw in person before his untimely death. According to Rubin:

> "Not only do we have the world-famous artist Saint-Gaudens possessing one of these coins, but we have the other going to Roosevelt, who had taken such a personal interest in creating an artistic coinage that he was the person who prodded Saint-Gaudens to create the design. So even though we do not know the pedigree of the only known coin struck with a plain edge, we do know that the coin was either at one time in the possession of Saint-Gaudens or Roosevelt. Not a bad pedigree either way!"

Before this coin reappeared in our ANA 2010 Platinum Night, an article appeared in the *CoinLink* online news from July 26, 2010. An excerpt from that article below expresses a similar sentiment in a slightly different way, including a quote from Heritage President Greg Rohan:

> "This coin's history is largely unknown, and it is impossible to say with certainty whether it was sent to Roosevelt or Saint-Gaudens, but it is a coin of tremendous importance regardless of the answer. Either it was sent to President Roosevelt, whose dedication to coinage redesign had been vital to the whole project; or it went to Saint-Gaudens, the artist who had spent more than two years bringing the President's ambition to life.
>
> " 'With the Roosevelt specimen being returned to the Mint, it seems more likely that this is the coin Saint-Gaudens saw,' said Rohan. 'The possibility is remarkably poignant: a great artist, just days away from death, gets a glimpse of his last major work. This could be the only Saint-Gaudens gold coin that he ever held.' "

After a visit to the Smithsonian Institution in 1905 where he viewed an exhibit of Greek coins, Roosevelt commissioned world-renowned sculptor Saint-Gaudens to redesign the eagle and double eagle. For the eagle obverse, Saint-Gaudens chose a Liberty head that he had originally prepared for his Sherman Monument (which one can still see at the southern terminus of New York City's Central Park). Alice Butler posed as the model for this rendition of Liberty, which Saint-Gaudens based on a Hellenistic wingless Liberty on the temple of Zeus Soter at Pergamon. Although the sculptor originally placed an olive wreath on Liberty's head, Roosevelt insisted that it be replaced by an Indian feathered war bonnet. The president also switched Saint-Gaudens' original reverse design for the eagle with that for his double eagle, the former coin now displaying a majestic eagle striding left with a bundle of arrows and an olive branch in its claws. Thirteen stars around the upper obverse periphery, the date below Liberty, and the usual statutory inscriptions on the reverse rounded out the design of what would become famous as the Indian eagle. It should be noted that, at this juncture, the design omitted the motto IN GOD WE TRUST because Roosevelt felt the presence of the Deity's name on coinage was, in the words of Walter Breen (1988), "a debasement amounting to blasphemy."

The surfaces of this PR62 NGC-certified example have a fine-grained sandblast finish and are textured with a satiny finish. A few shallow luster grazes are faintly evident, but the only mark of any note is in the reverse field below the M in UNUM. The physical appearance of this plain edge piece is different from other Wire Rim Indian eagles. Rubin notes:

> "... the other interesting thing about this coin is the appearance of the coin itself. It is quite different in appearance than all other 1907 Indian Head, Wire Rim eagles. For one thing the coin has a satin surface, not matte or the surface of a normal circulation strike. Secondly, after examining the photos of the only known example ... I noticed that the striking is very different than the rare 46 stars on edge variety. Most of the strike looks weaker on the plain edge coin. This is most apparent in the details of the Indian's headdress on the obverse and the eagle's feathers on the reverse. Yet, other parts of the strike look sharper on the plain edge issue, such as the Y in LIBERTY and the date"

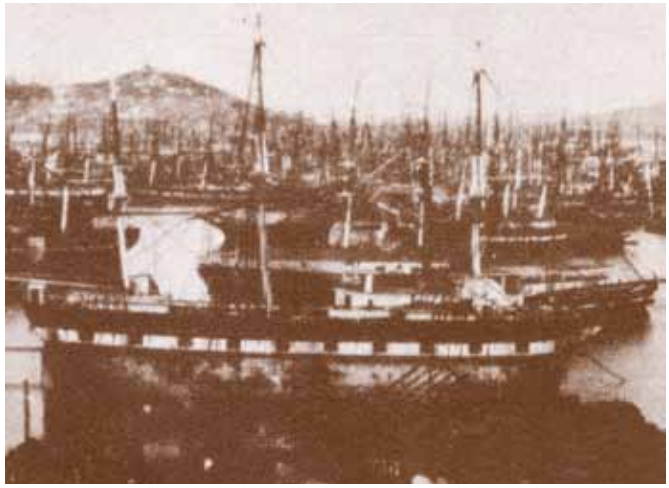
The standard Wire Rim eagles with stars on the edge were set aside for collectors, specifically as President Roosevelt ordered. Normally experimental strikings were destroyed, but the Wire Rim tens were set aside, as Roosevelt waived the regulation requiring their destruction. The two plain edge coins were not only the first Indian eagles ever minted, but they are also the only true patterns of this issue, alongside four or five other examples that Burdette describes with "irregular stars" on the edge.

Few coins in American numismatic history are entitled to be called unique. This single 1907 Wire Rim Indian eagle with its plain edge is arguably even more important than the Ultra High Relief double eagles, and it deserves a place of honor in an advanced collection of U.S. coin rarities. *Ex: 2003 FUN Auction (Heritage, 1/2003), lot 8914, which brought $195,500; Stack's (7/2008), lot 4241, which garnered $322,000; ANA Platinum Night (Heritage, 8/2010), lot 3561, which realized $359,375.* (#62236)

# Introducing The Galt's Gulch Complete Collection of High-Grade S-Mint Type One Liberty Double Eagles

*Discover it, and they will come.*

With apologies to *Field of Dreams,* the lure of gold in California exerted a far stronger attraction than any cornfield in Iowa ever could.



After the January 1848 discovery of gold in John Sutter's mill-race on the American River, hordes of "Forty-Niners" descended upon California, their heads swimming with gilded dreams of untold wealth.

There was no way to make the journey that was free of hardship and difficulty, great expense, peril, and the threat of death.

But the gold-seekers came nonetheless. They came from China, from Australia, from Oregon, Hawaii, Latin America and the mountains of Mexico, as well as the many Americans who came from back East. They came on foot, they came on horseback, they came by clipper ship, and more by steamship. They took railroads through 48 miles of mosquito-infested jungle across the Isthmus of Panama. They came via the Oregon Trail, the California Trail, and the Gila River Trail. They crossed the Continental Divide on wagons, on horses, on mules, a journey of 2,000 miles or more with little food and less water. They sailed around Cape Horn in yearlong voyages on stinking steamships with stale water and rotten food.

Thousands upon thousands came, and thousands more died in the attempt. All told, perhaps 300,000 people made the journey successfully.

Of those who came, few would fulfill their dreams of golden riches. The most successful were not those who panned, sluiced, and dredged for gold, but those who sold them supplies at exorbitant prices.

*Hundreds of ships were abandoned in the San Francisco Harbor. Passengers and crews deserted their vessels and joined the rush to the gold fields in the 1850s. The evacuation of the California towns included merchants closing shops and soldiers deserting posts, as well as sailors leaving ships.*

San Francisco was the epicenter of the golden fever. The town grew from a sleepy outpost of 200 people in 1846 to a bustling boomtown of 36,000 by 1852. The need for more reliable mediums of exchange than unassayed gold dust brought in a wave of assayers and private coiners to fill the vacuum. From 1849 to 1853 only Territorial gold would be minted in California, either of a private or semiofficial character, as the first San Francisco Mint would open only in 1854, six years after the first gold discoveries.

Heritage is pleased to present the Galt's Gulch Collection, a remarkable, high-grade complete set of Type One Liberty Head double eagles, 14 coins, all struck at the San Francisco Mint during its historic first years from 1854 through 1866. The collection is among the finest known from both technical and aesthetic perspectives, encompassing legendary rarities such as an 1861-S Paquet Reverse in AU58 and the even-rarer 1866-S No Motto in MS62, the finest certified and the single finest that we have ever offered by four grade points.

As we wrote elsewhere, the collection encapsulates the economic, political, and demographic history of the United States during the middle decades of the 19th century. The collection starts with the birth of the San Francisco Mint in 1854 and ends with the era of Reconstruction, passing in-between with the bloody Civil War and the heyday of steamship travel.

Besides the many attractions of the Galt's Gulch Collection per se, it is also one that, due to its immense historicity, is extensible both forward and backward in time. Its immediate predecessors would be the aforementioned Territorial gold coined in California between 1849 and 1855. Those coins would include the historic octagonal fifty dollar "ingots" or "slugs" of 1851-52 produced by the U.S. Assay Office of Gold, the first California coinage of a semiofficial character. (It is quite likely that many of those coins were melted down to make Type One S-mint twenties such as those in the Galt's Gulch Collection.) The collection is obviously capable of extending forward as well, into the challenging but short-lived Type Two twenties (1866-1876) and the long-running Type Three issues, of which San Francisco would make its last entry in 1907.

We expect that collectors today will find the lure of gold in the Galt's Gulch Collection every bit as powerful as when the noble metal for these pieces was mined, 150 years ago.

## LIBERTY DOUBLE EAGLES

# Historic Gem 1854-S Double Eagle
# Tied for the Finest Certified
# The First San Francisco Twenty

**5031** **1854-S MS65 NGC.** Broken A. This historic 1854-S double eagle is the single finest and only Gem certified of the issue at NGC, tied with two others at PCGS as the highest graded (10/11).

The San Francisco Mint opened on April 3, 1854, as a direct result of the historic California Gold Rush — although it was six years late to the party. The first major discovery of California gold was made by James Marshall and Peter Wimmer on January 24, 1848, on the American River at the sawmill under construction of John Sutter. Word hit San Francisco in March by way of newspaper publisher Sam Brannan, but it took until August 1848 for the news to hit East Coast newspapers, and President James K. Polk confirmed the discovery in a Congressional address in December. Wave after wave of "Forty-Niners" would soon head westward, dreaming of golden riches.

Those early miners brought gold dust and nuggets by the tons up from the ground and water. Barter and foreign currency were pressed into service; there simply was insufficient federal currency, pointing up the need for coiners and assayers. The gold coinage of the first few years of the Gold Rush would, however, be of a private or semiofficial character, as years of bureaucratic indifference in Washington and Philadelphia would precede the opening of the San Francisco Mint.

That facility finally opened in a renovated building formerly owned by Moffat & Co., striking a proof 1854-S double eagle as their first gold coin, a national treasure now housed in the National Numismatic Collection at the Smithsonian. The San Francisco Mint continued the year by striking a moderate production of Type One gold dollars, a tiny smattering of quarter eagles (which are extremely rare today) and half eagles (which are even rarer).

The emphasis in 1854, however, was on the two largest gold denominations, the eagle and double eagle. The eagle was struck to an extent exceeding 123,000 coins, while the double eagle's emission was slightly larger, more than 141,000 pieces. Most of the 1854-S double eagles circulated in the coin-starved local economy of the era; the certified survivors today average AU to Choice AU in grade, but those certified coins would be the top end of the entire population. The recovery of the *S.S. Yankee Blade* shipwreck, which foundered off the California coast on October 1, 1854, brought to light some 200-300 new high-grade examples.

This Gem bears no specific provenance but shows satiny luster over clean yellow-gold surfaces that show remarkably few signs of contact. We cannot say whether this is a *Yankee Blade* coin or not. The obverse is punched with the Small Date logotype, as all of the S-mints; the P-mint 1854 double eagles are known with both Small and Large Date punches. The reverse shows the Broken A die, with the left side of the A's (in STATES) crossbar broken away. Many interesting die cracks traverse the reverse at the peripheries, including one place at the top-left serif of the first T in TWENTY where three die cracks intersect. The large S mintmark touches the eagle.

This remarkable example of the first-year S-mint double eagle issue introduces an equally remarkable collection of Type One S-mint double eagles spanning the years 1854-S through 1866-S, including the 1861-S Paquet issue — a fitting start to this Platinum Night offering.

# Near-Gem 1855-S Double Eagle Tied for Finest Certified Second-Year San Francisco Issue

**5032** **1855-S MS64 NGC.** This second-year S-mint 1855 double eagle continues the amazing and complete Galt's Gulch Collection of Type One San Francisco Mint double eagles in high Mint State grades, save for the ultrarare 1861-S Paquet Reverse twenty, which is an AU58 NGC coin.

The complete collection in many ways encapsulates (pun unintended) the economic, political, and demographic history of the United States during the middle decades of the 19th century. The first Type One issue, the 1854-S, embodies the importance of the California Gold Rush, the ensuing great westward migration of hordes of miners, minters, merchants, and miscreants, and the eventual establishment of the San Francisco Mint, The later issues in the mid-1850s show a new mint at the dawn of one of its most robust production eras, before the Civil War and after California and San Francisco entered periods of explosive growth. (In 1849 alone, the California Gold Rush increased the population of San Francisco from 1,000 to 25,000 persons.) Other issues in this collection demonstrate the commercial significance of steamship travel to and from San Francisco, its perils to persons and property, and its eventual eclipse by railroads and rail travel. The 1860s double eagles in the Galt's Gulch Collection reflect the national travail and tribulation of the divisive War Between the States.

The 1855-S double eagle shows a San Francisco Mint that "hit the ground running," despite some early shortages of critical supplies. While the 1854 gold coinage was largely double eagles, struck to the extent of 141,468 pieces, the 1855-S gold coinage comprised all six authorized gold denominations — gold dollar, quarter eagle and three dollar (for the first time), the half eagle, eagle, and double eagle. The double eagles were struck in a generous quantity of 879,675 coins, or more than *six times* the number minted in the prior year. In this interesting time in U.S. numismatic history, five mints made half eagles — but San Francisco made as many as Charlotte and Dahlonega *combined*.

Despite the enormous double eagle mintage, the burgeoning West Coast economy was still strapped for circulating coinage. Most survivors of the 1855-S twenty grade no more than Choice XF or thereabouts. The present near-Gem is the sole finest certified at NGC and tied with seven examples in that grade at PCGS. Those PCGS pieces are almost certainly recently certified shipwreck recoveries from the *S.S. Central America,* which sank in 1857, as when we offered this piece in 2004, it was the sole finest certified at either service. We wrote at that time:

> "This tantalizing example would capture the eye of even the most casual observer. We can find no areas of unduly bothersome striking softness and the surfaces are incredibly clean for the issue. One milling mark is detected on Liberty's chin, the only mentionable grade-limiting identifier. The texture is warm and satiny, and contiguous cartwheel effects are noted at every angle. With bright yellow-gold patina overall, it is little wonder that this premium quality specimen is the single finest certified survivor between both major grading services."

To that accurate description we would merely append that the mintmark is of the Small or Medium S type, considerably smaller than that displayed on the 1854-S, and placed to the left of the eagle's tail point. The A and E in STATES are unbroken. This piece represents a second opportunity to partake of the many joys of this landmark collection.

*Ex: Palm Beach Signature (11/2004), lot 8735, which realized $29,900.*

# 1856-S Double Eagle, MS66, No Serif, Left S
# From the *S.S. Central America*
# Among the Finest in Existence

**5033** **1856-S No Serif, Left S MS66 PCGS. CAC.** Ex: *S.S. Central America*. *SSCA* 7621. Dies 17O, No Serif, Left S. It is incredible to be able to see Type One S-mint Liberty Head double eagles in the amazingly high grades of MS66 PCGS (as here) and MS67 PCGS (for the 1857-S Spiked Shield that follows). For many a collector, the MS62 or MS63 level is the finest to which they can aspire — and those grades are for the Type Three S-mint twenties, which are far more available overall.

The present MS66 PCGS piece is tied with one other submission as the finest at that service of this reverse die variety. The No Serif refers to the missing upper-left serif on the U in UNITED rather than to the mintmark. The Left S describes the mintmark, which cants slightly left at its top. *This piece is also tied with one other 1856-S at the finest certified at PCGS regardless of die variety,* reinforcing its status among the few finest 1856-S double eagles in existence. Several reverse die varieties are known for the 1856-S and 1857-S double eagles in particular, most of which came to light after the recovery of thousands of examples dated 1854-S, 1855-S, 1856-S, and 1857-S from the *S.S. Central America,* which sank on September 12, 1857.

Before the recovery of the 1856-S double eagles from the *Central America,* David Akers wrote in 1982 of the issue:

> "Although scarce, particularly in mint state, the 1856-S is one of the commonest Type I Double Eagles from the San Francisco Mint. It appeared at auction in the 443 catalogues surveyed more times than any other except the 1865-S, and it is offered in Unc. more times than any of the rest. These auction data coincide with my own personal experience and I would rate the 1856-S as the most likely Type I S-Mint Double Eagle to be available in full mint state."

Akers' 1982 comments are unsurprising when one considers that the 1856-S double eagle mintage, at 1.19 million coins, was more than the mintages of the previous two years, the 1854-S and 1855-S, combined. (Today, of course, the 1857-S Type One is commonest in Mint State, due to the *S.S Central America* tragedy.

The San Francisco Mint was in full stride in its third year of operation, producing a wide variety of gold and silver coin denominations in addition to nearly 1.2 million examples of the 1856-S twenties. As expected at the Premium Gem level of the present coin, the surfaces are virtually pristine. The obverse shows a luster graze in the left field and a tiny tick or two. The reverse has some thin, wispy straight scrapes that are quite minor, and a couple of dull hits show at the extreme rim. All of those picayune complaints pale, however, before the overall marvelous aesthetic quality this piece presents. The strike is full throughout both sides — a new mint showing pride of workmanship — and the orange-gold coloration complements surfaces that are extraordinarily appealing. One of the finest 1856-S double eagles in existence, and the only MS66 PCGS piece with the CAC green label. Comes with certificate of authenticity, book-style case, and outer box. PCGS Population: 2 in 66, 0 finer (10/11).

# MS67 1857-S Double Eagle, Spiked Shield
# One of the Finest From the *S.S. Central America*

**5034** **1857-S Spiked Shield MS67 PCGS. CAC.** Ex: *S.S. Central America*. *SSCA* 2099. Dies 20A, Spiked Shield. This incredible Superb Gem 1857-S double eagle is one of only eight submissions of this variety and grade level at PCGS. There are three other examples of the 1857-S Bold S die variety in MS67 at PCGS. Between the two, they comprise the entire population in MS67 at PCGS, 11 coins in all.

The 1857-S double eagle marked the third full year of operations at the bustling San Francisco Mint, a robust and vigorous operation during this era. The year is one of the most significant in U.S. coinage history. The "old copper" half cent and large cent were retired in favor of the Flying Eagle cents. In 1857 five different mints again struck the workhorse half eagle denomination, but San Francisco would coin more than the other branch mints combined. San Francisco also produced every authorized gold denomination, six in all, in generous quantities.

San Francisco's total output of 970,500 double eagles more than doubled that of Philadelphia, at 439,475 specimens. Even though the 1857-S double eagles were produced in generous quantity, the mintage was down 20% from the 1856-S. Today the 1857-S is more available, of course, due to the sinking of the *S.S. Central America* in a hurricane off the coast of North Carolina on September 12, 1857.

It was the *Titanic* of its day.

At least 425 passengers and crew perished in the disaster, out of 578 passengers and crew listed on the ship's rosters. More than three tons of gold was reported "officially" on board, but that excludes the sizeable sums that private passengers and crew carried. One passenger reportedly locked himself in his cabin and drowned with $70,000 in gold rather than face life penniless. Aboard were some 5,200 1857-S double eagles freshly minted in San Francisco — including the present piece, clearly one of the finest onboard. Also in the cargo were vast quantities of Territorial gold assayer's ingots from very small to enormous, privately minted California gold coins, and a large cache of Chilean silver coins.

The sinking of the ship exacerbated the Panic of 1857, a financial crisis precipitated by the failure of the Ohio Life Insurance and Trust Co. A subsequent run on bank deposits in New York required them to pay out more than 20 percent of their total gold reserves — which the $1.5 million in gold aboard the *S.S. Central America* (worth hundreds of millions of dollars today) was intended to replenish.

The Spiked Shield variety is the most widely seen of the eight reverse dies recognized at PCGS, characterized by two deep die lines at the left (facing) shield border. One scarcely knows where to begin in describing a coin of such beauty in such pristine condition. The obverse appears entirely free of mentionable contact and appears fully struck, with yellow-gold centers and glints of orange-gold closer to the rims. The reverse is of similar character, save for a couple of tiny contact marks below the last A and to the right of the mintmark that serve as pedigree identifiers. This coin appears close to the next grade level, as impossible as that might seem. Certificate of authenticity, book-style case, and outer box included. Population: 8 in 67, 0 finer (10/11).

S

# MS63 1858-S Double Eagle
# Tied for Finest Certified

**5035** **1858-S MS63 NGC.** This 1858-S double eagle from the Galt's Gulch Collection, certified MS63 by NGC, is the sole finest certified at NGC. It is tied with one coin at PCGS in the same grade, unless the two grading events represent a single piece (10/11).

The San Francisco Mint in 1858 would strike only four of the six authorized gold denominations, forgoing the lowly quarter eagle and the three dollar. In 1857 the nation's six mints combined would strike some $32,217,040 in gold coins, with more than $28 million of that in double eagles (and much of that from San Francisco).

In comparison, in 1858 the total U.S. gold coin output would drop by nearly $10 million, to $22,875,737.50, likely reflecting the reduced economic activity precipitated by the financial Panic of 1857. And as in 1857, most of the year's total gold output comprised double eagles from San Francisco, nearly $17 million worth.

The lack of high-Mint State 1858-S Type One twenty dollar gold coins today can be attributed both to collecting habits of the era and to the lack of any shipwreck recoveries that carried significant quantities of the issue. While the 1856-S and, much more so, the 1857-S double eagles are available in high Mint State due to the sinking of the *S.S. Central America* in 1857, the next major shipwreck recoveries were of the *S.S. Republic* and *S.S. Brother Jonathan,* both of which sank in 1865 (October 25 and July 30, respectively).

Regarding collector preferences, collecting U.S. coin issues by date *and mintmark* was a habit that was still in the distant future in 1858. There were few collectors with sufficient wealth to collect double eagles of any sort, and most of them would have preferred a proof over a business strike. In any case, the collecting tastes of the era ran much more to Colonial coins, Washingtonia, and early American rarities much more than modern-day issues, whether proofs or business strikes. (There is no recorded proof mintage, but Akers comments that "this is the first date of which proofs were definitely made for collectors.") Breen writes, "After the financial panic of 1857, evidently few collectors were willing to risk tying up their capital in proof gold coins," and the same principle would apply doubly to business strikes.

This coin, likely at the top of the Condition Census, is apparently one of those special coins that survived through happenstance — perhaps a treasured family heirloom passed down through the generations from some couple who moved to San Francisco in 1858. Although its history is lost to us, this Select Mint State yellow-orange example offers much charm and eye appeal on its own, despite the existence of a couple of grade-defining contact marks. The obverse is boldly struck if not absolutely, and on the reverse minor softness appears at UNUM on the scroll ornament. The obverse is also free of mentionable abrasions, while the reverse shows a straight tick in the field near the last A in AMERICA, and a straight, thin scrape crosses part of the lower shield stripes. Census: 1 in 63, 0 finer (10/11).

S

# 1859-S Twenty Dollar, MS63
# The Sole Finest Certified

**5036** **1859-S MS63 PCGS.** The present 1859-S double eagle from the Galt's Gulch Collection is certified MS63 by PCGS, making it the sole finest at that service. NGC has never certified an example at that level. In fact, between PCGS and NGC combined, there are less than two dozen submissions in MS62, a grade point lower than this specimen.

Between 1848 and 1849, the massive influx of Forty-Niners made San Francisco grow from 1,000 to 25,000 inhabitants in one year; within a decade, the population would double yet again. Nonetheless, the year 1859 marked an inflection point for San Francisco, the California Territory, and for the nation as a whole. The rich gold- and silver-laden Comstock Lode would be discovered in the hills near Carson City, Nevada, in 1859. The Carson City Mint would open in 1870, but it never assumed more than the role of a niche player compared with San Francisco, which had superior government and private facilities for refining and assaying gold and silver alloy; ready access to local markets for pure silver and gold bars; and access via shipping lanes to the markets in the Orient for precious metals.

And in the mintage of double eagles in particular, San Francisco had unparalleled capacity and prodigious outputs that lasted throughout the 19th century. The San Francisco Mint would strike 636,445 double eagles in 1859, still a healthy number even though the yearly total had decreased every year since the 1.2 million examples of 1856 — likely the lingering effects of the financial Panic of 1857. The 1859-S twenty is an issue that shares much in common with the 1858-S in MS63 from this collection that precedes it. Despite its ample mintage, most examples circulated widely in the rough-and-tumble Old West, and the average certified survivor of both issues is Choice XF to AU at best. Unlike the 1856-S and 1857-S twenties, which were available in Mint State in generous supply because of the *S.S. Central America* recovery, the next shipwrecks in 1865 of the *S.S. Brother Jonathan* and *S.S. Republic* meant that most examples recovered there were circulated, as well. Jeff Garrett and Ron Guth comment in their *Gold Encyclopedia*:

> "There were 67 examples found on the *S.S. Republic*, but most were About Uncirculated, and only one attained a Mint State designation. Like most of the coins of this era, the 1859-S double eagle is very rare in Mint State, and just one or two are known at the choice level."

This Select Mint State 1859-S twenty is well-struck and shows generous, unbroken luster over each side, with a few minor ticks that determine the grade, none worthy of singular mention. A thin vertical stripe of darker brownish toning) runs from Liberty's ear to the lower curls. As the single finest certified example of the issue, this piece poses a marvelous opportunity for enthusiasts of the Liberty Head double eagle series. Even within this Platinum Night session loaded with conditionally rare double eagles in both the Liberty Head and Saint-Gaudens series, this is a standout coin.

*Ex: Bowers and Merena (3/2004), lot 3198; Bowers and Merena (10/2004), $67,500.*

## Select Mint State 1860-S Double Eagle
## One Coin Certified Finer

**5037** **1860-S MS63 PCGS.** The present 1860-S double eagle is certified MS63 by PCGS, making it the single MS63 of the issue at either service and surpassed by a single MS64 at PCGS. For the many enthusiasts of the Liberty Head double eagles or conditionally rare gold, this collection poses many significant bidding opportunities.

Even in far-off San Francisco, one could nearly hear the drumbeats of war that resounded in 1860 — the year this piece was produced. The election of Abraham Lincoln as the nation's 16th president would prompt 11 Southern states to secede from the Union. Californians narrowly chose Lincoln over the two Democratic Party candidates.

But San Francisco was a city concerned with growth and its increasing prosperity. The population had increased 50-fold since 1849, to 56,000-plus inhabitants by the Federal Census of 1860, and in the next decade the city would see its population nearly triple, to about 150,000 people.

The job of the San Francisco Mint was to enable the free flow of goods and services via ample supplies of federal coinage, a task it fulfilled admirably. The facility would again strike every authorized gold denomination from gold dollar through double eagle, including the three dollar denomination for the last time (save for the unique 1870-S). By far the lion's share of that output would consist of double eagles, produced to the extent of 544,950 pieces — admittedly down somewhat from earlier years, but still a large output.

Except for the 1854-S and 1857-S issues, the other S-mint Type One twenties show an average certified grade around XF45 or a tad finer, indicating the extensive circulation that these millions of coins saw in the years after their production. The 1854-S coins were saved in larger numbers as first-year issues, and some were recovered aboard the shipwreck of the *S.S. Yankee Blade*. More famously, the 1857-S double eagles were recovered by the thousands from the *S.S. Central America,* bringing up the average grade.

The average grade for the 1860-S twenty is a bit over XF45. Garrett and Guth describe the 1860-S as a "workhorse of commerce" and add that "only about two dozen Uncirculated coins are known, including examples found on the wrecks of the *S.S. Brother Jonathan* and the *S.S. Republic*." Both ships sank in 1861.

The present MS63 PCGS example boasts superlative eye appeal that might be expected on a much finer coin. Subdued but thorough frosty luster radiates from each side, and the obverse is sharply struck overall, displaying even the tiny "J.B.L." letters on the neck truncation. The reverse is fairly sharp, although minor weakness appears on the wing tips. The obverse shows a small series of reeding marks in the field near the forehead, but otherwise there are few signs of contact. Some planchet discoloration above the head deepens into a small planchet flaw near the rim at 1 o'clock. The reverse shows some smaller planchet defects near the lower rim. The surfaces show antique-gold prevailing, but some deeper reddish color on the reverse may be the product of some improper alloy mix. These are nonetheless minor quibbles on such a rare, well-preserved, and nearly unmarked coin.

## *S.S. Brother Jonathan* 1861-S Twenty
## MS63, Tied for Finest Graded

**5038** **1861-S MS63 NGC.** Ex: *S.S. Brother Jonathan. Brother Jonathan* 2000, according to the NGC insert.

In this year that the Civil War began, the San Francisco Mint would make 768,000 double eagles with the Normal Reverse (as here) and 19,250 pieces with the rare Paquet Reverse. The present Normal Reverse example, certified MS63 by NGC, is one of the finest known at either service. It is the sole example so certified at NGC; PCGS also reports but a single specimen in that grade. Since the PCGS specimen is depicted on the CoinFacts website, we see that the two pieces are different, but they appear markedly similar in terms of overall quality.

The *S.S. Brother Jonathan* was so-called in much the same way that Americans today refer to Uncle Sam; Brother Jonathan was another nickname for America during the 1850s. The ship was owned from 1853 by the famous Commodore Cornelius Vanderbilt, and San Francisco was her home port. On her outbound voyages she sometimes carried a million dollars' worth or more of gold coins and bullion. In 1854 she assisted in the rescue of the *S.S. Yankee Blade,* shipwrecked on the way to Panama (see the 1854-S double eagle in this sale). The ship later changed hands numerous times.

Post-California Gold Rush strikes in Idaho, Oregon, and other places meant that the *S.S. Brother Jonathan* sometimes carried gold *to* rather than *away from* San Francisco. On July 30, 1865, the ship was steaming northward from San Francisco when she encountered a gale and struck an uncharted rock off the coast of Crescent City, California, rapidly sinking with millions of dollars' worth (today's value) of gold and 225 hapless passengers and crew. Only 19 souls made it to shore. In the 1990s the Deep Sea Research team finally located the wreckage, eventually bringing up some 1,207 gold coins.

Most of the coins recovered were double eagles from 1863-S to 1865-S, but some pieces were dated as early as 1834. The NGC Census Report shows 192 examples of the 1865-S in all grades attributed to the *Brother Jonathan.*

The present Select Mint State example of the 1861-S is one of only five *Brother Jonathan* examples at NGC, and it is the finest graded by far of those coins, as the second-finest are two pieces in AU58. It is also the finest NGC example regardless of provenance; the next finest non-*Brother Jonathan* coins are two coins in MS62 (10/11). This coin is orange-gold with frosty luster prevailing throughout both sides. The strike is well-executed, show full star centrils, good high-point hair definition, and bold detailing on the eagle feathers and glory of rays on the reverse. A few small contact marks account for the grade, most notable in the center of Liberty's cheek and a small scrape through the digit 1 in the date. The reverse is relatively free of abrasions, although some interesting die cracks join many of the peripheral letters, indicating the die-economy measures that prevailed during this era of Mint history at the branch mints: The Philadelphia Mint made all coinage dies, and it was a long, long way from there to San Francisco in the event more dies were needed.

# 1861-S Paquet Reverse Twenty, AU58
# Recovered From the *S.S. Republic*

**5039** **1861-S Paquet AU58 NGC.** Ex: *S.S. Republic*. This is a remarkable and historic coin in two ways, as one of the finest known 1861-S Paquet Reverse double eagles and an amazing recovery from the *S.S. Republic* shipwreck. This piece is one of nine AU58 Paquets certified at NGC, and the only 1861-S Paquet in any grade attributed to the *S.S. Republic*.

That such a rare and high-grade coin could be recovered aboard the *S.S. Republic* must be laid at the feet of equal parts distant tragedy and modern-day serendipity.

German emigré Anthony C. Paquet came to the United States in 1848 and had done contract work for the Mint from his engraving shop in New York City before he was hired as an assistant engraver on October 20, 1857. Although he worked on letter punches and various pattern issues, his work on circulating U.S. coinage proved remarkably short-lived. One example was the modified obverse for the 1859 Seated Liberty half dime, the so-called Transitional patterns listed in the *Guide Book*. The modified Paquet Reverse for the double eagles was similarly short-lived — purportedly because the rim was too narrow according to Philadelphia Mint officials, who promptly notified the San Francisco Mint by telegraph to discontinue the issue. Despite the claimed unsuitability of the design, 19,250 Paquet Reverse double eagles had been struck before the message was delivered from the telegraph terminus in St. Joseph, Missouri, to the West Coast mint. Those pieces were put into circulation and promptly forgotten about. The issue is unknown in Uncirculated condition, although NGC and PCGS combined have certified a few dozen examples in the various AU grades.

Acquisition of any Paquet Reverse double eagle can be considered a badge of accomplishment for advanced numismatists. The issue is one that slipped quietly into the channels of commerce with no contemporary numismatic notice. The 1937 discovery of a Paquet Reverse 1861-S under an old barn in Hull, Texas, reignited interest in the variety, but it would be late 1959 before Walter Breen would publish correct information on the issue in *Numismatic Scrapbook* magazine in the general form we know it today.

The *S.S. Republic,* like the *S.S. Brother Jonathan*, sank in 1865, although in this case in the Atlantic Ocean off the Georgia coast, sailing from New York for New Orleans with a reported $400,000 (face value) in gold coins. (Note that in the four years after its production, this Paquet Reverse coin had managed to work its way from San Francisco all the way to the East to find itself aboard the doomed vessel.) Recoveries in 2003-2004 yielded a wide variety of eagles and double eagles, along with several hundred silver Seated half dollars.

Even among the many treasures of the Galt's Gulch Collection, this high-grade Paquet Reverse 1861-S stands out equally for its rarity and eminent collectibility. Only a trace of high-point wear appears on the obverse, on Liberty's eyebrow and the hair just above, separating this piece from Mint State. A few small marks on the cheek are undisturbing but among the few signs of contact worth mentioning, along with a small field scrape just below the forward bust truncation. The reverse shows two small digs in the field, above the W in TWENTY and left of the C in AMERICA, also minor. Generous luster proceeds from surfaces that display moderate orange-gold coloration prevailing and splendid eye appeal overall. The strike is well-executed, showing no mentionable weakness, allowing the curious Paquet font on the reverse to be seen to full advantage. Comes with *S.S. Republic* presentation box and DVD. Census: 9 in 58, 0 finer (10/11).

# Unimprovable 1862-S Twenty Dollar, MS63 With Repunched 86 in Date, Breen-7214

**5040** **1862-S MS63 NGC. Breen-7214.** Repunched 86. The present MS63 NGC 1862-S twenty from the Galt's Gulch Collection, like most of its brethren in this complete run of Type One S-mint double eagles, is among the few finest obtainable of the issue. NGC shows only three submissions at this grade level, and there is one in equal grade at PCGS (10/11).

In Philadelphia during 1862, the second year of the Civil War, the mintage figure for double eagles plummeted to a relatively meager 92,133 business strikes, as the outcome of the conflict was increasingly in doubt. Today the 1862 Philadelphia twenty is among the rarest P-mint Type One issues, one that is rare in all grades, according to Garrett and Guth. The only shipwreck coins that were discovered were nine pieces aboard the *S.S. Republic,* including a few in Mint State.

In San Francisco, however, the 1862 narrative was considerably different. Gold and silver continued to circulate in the West until World War I, unlike in the East, where it was seldom seen in quantity in circulation after the Civil War; even when "parity" between gold, silver, and paper currency was achieved in late 1878, paper currency was favored for most domestic transactions. San Francisco's double eagle mintage actually increased from the previous year, 787,250 pieces (including the Paquet Reverse coins) for 1861 versus 854,173 for 1862.

We are unable to say if the present piece is a *treasure* coin or not, but we are sure that it will be a *treasured* coin in any collection in which it resides. Examination of our Permanent Auction Archives confirms our suspicions: Only a single time before have we offered an example of the 1862-S in so fine a grade. An MS63 NGC example with CAC green label in our Sacramento Signature (Heritage, 3/2011), lot 4925, realized $57,500. That piece, however, while an attractive coin in its own right, lacked the Repunched 86 feature of the present piece, an attribute that significantly increases the already-broad appeal. The 8 shows the top and bottom loops of a previously punched digit slightly lower in both loops of the final digit. What is quite curious, however, is that the *remains of a much lower (in comparison to the 8) previous 6 appear beneath the subsequent 6*. If these dies were made using four-digit date logotypes as we have been led to believe by Bowers in his *Guide Book* of double eagles, how is it that the repunched 6 in the date can be positioned so much lower than the 8? We cannot answer, but the piece is a fascinating one for that reason.

Besides the interesting variety, listed in Breen's *Complete Encyclopedia* as "rare," this piece offers much aesthetic appeal to boot. The obverse is well-struck and displays frosty luster over surfaces that are relatively unmarked for the grade. The reverse is of similar quality, showing just a few minor, scattered marks of no importance. A lovely example of this mid-Civil War date, and another essentially unimprovable representative of the issue from this stunning collection.

## MS64 ★ 1863-S Double Eagle, Small S
## Breen-7217, From the *S.S. Republic*
## Tied for Finest Certified

**5041** **1863-S MS64 ★ NGC. Breen-7217.** Small S. Ex: *S.S. Republic.* This superlative 1863-S double eagle from the Galt's Gulch Collection is the single finest certified and only MS64 example of the issue we have ever had the privilege to offer, and it also has the added NGC Star for superior eye appeal. The single finest we had previously offered was an MS63 NGC example more than five years ago in our Long Beach Signature (Heritage, 9/2006), lot 4067, another Small S example recovered from the *S.S. Republic* that brought $27,600. All of our other offerings have been in MS62 or lower grades. This MS64 ★ example is tied with another MS64 ★ at NGC as the finest graded there, and together with two MS64 submissions at PCGS, those four are the only MS64s certified (10/11).

The *S.S. Brother Jonathan* and *S.S. Republic* both sank in 1865, the former in the Pacific, the latter in the Atlantic, and both shipwrecks carried high-grade examples of the 1863-S, 1864-S, and (especially) the 1865-S among their inundated treasures. Two years after their mintage, of course, there were a quite a few circulated specimens of the 1863-S, but some Mint State coins were found as well. The NGC *Census Report* attributes 172 examples of the 1863-S to the *S.S. Republic* and 23 examples to the *Brother Jonathan* in all grades. Of those, a total of 47 Mint State pieces came from the *S.S. Republic* and 13 from the *Brother Jonathan*.

Due to the shipwreck recoveries the 1863-S double eagle was, of course, in earlier days much rarer in Mint State than it is today. Despite the mintage approaching 1 million coins, these large gold pieces were workhorses of commerce in San Francisco and throughout the West. Both Philadelphia and San Francisco concentrated on double eagle coinage in 1863, the midpoint of the Civil War, at the expense of other gold denominations, most of which were produced in only token quantities (and proof-only format, in the case of the 1863 Philadelphia quarter eagle).

Writing in his 1988 *Complete Encyclopedia,* well before the discoveries of any shipwreck treasures containing the 1863-S, Walter Breen wrote that both the Medium S (Breen-7216) and Small S (Breen-7217) were "very scarce" and "rare," respectively, regardless of condition, but that both varieties were "ex. rare UNC." Now, of course, the shipwreck recoveries have thrown all those earlier rarity estimates into a cocked hat. This near-Gem Star-designated example is still conditionally quite rare, of course, but it appears that the Small S coins in our Permanent Auction Archives outnumber the Large S pieces by a factor of about two to one.

The eye appeal of the present piece is blatant even to the most casual observer, and if this piece were in a Gem-certified holder, one would be unsurprised. Warm orange-yellow color and a bold strike prevail throughout. The obverse is essentially free of distracting contact, save for a small patch of scrapes near star 4. A few tiny luster grazes appear on the reverse but are equally minor. Another standout S-mint Type One double eagle in this great collection of historic, mostly shipwreck coins. Offered with *S.S. Republic* presentation box and DVD.

## Gem 1864-S Twenty Dollar, Ex: *S.S. Republic*
## Sole Finest Certified of the Issue

**5042** **1864-S MS65 NGC.** Small S. Ex: *S.S. Republic*. This Gem-certified NGC 1864-S double eagle is the single finest of the issue at that service; in fact, even in MS64, there is only a single NGC specimen in *that* grade. The finest at PCGS are a trio of submissions at the MS63 level. This is a conditionally extremely rare coin.

The present Galt's Gulch Collection of high-grade S-mint Type One Liberty Head double eagles presents some interesting similarities and differences with the Duckor Collection of Saint-Gaudens double eagles also in this Platinum Night offering. Both feature some of the highest-graded examples of their type, both technically and aesthetically among the finest of their kind. One of the chief differences in the two collections, aside from the obvious design-type difference, is the reasons that such high-grade representatives have managed to survive until today.

In the case of the Saint-Gaudens double eagles, even casual collectors of the series are aware that for many mintmarked issues in the 1920s in particular, the mintage figures are meaningless. Many coins were actually released during the 1920s in numbers far smaller than the reported mintages, and those pieces that remained in U.S. Treasury vaults were melted after the Gold Recall of 1933. However, some members of the series — 1924-S, 1926-D, 1926-S — were also apparently shipped overseas in considerable numbers, only to be repatriated a few decades later when collecting of the series by mintmark really picked up, in the 1940s-50s and afterward.

The Type One Liberty Head double eagles from the first dozen years of the San Francisco Mint had a considerably different history. Despite high mintages, they were workhorse coins, mainstays of commerce in the West, which maintained its hard-money traditions and affinity for precious metal coinage over paper currency up until the end of World War I, when gold coins virtually disappeared from circulation. The few high-Mint State survivors are either the product of occasional happenstance, a scattered hoard or so, or, more frequently, the result of treasure recoveries from tragic shipwrecks, among them the *S.S. Yankee Blade* (1854), *S.S. Central America* (1857), *S.S. Republic*, and *S.S. Brother Jonathan* (1865).

The present Gem 1864-S is clearly the finest recovered from the *S.S. Republic* — or from any other source. David Akers wrote in 1988 concerning this issue:

> "The 1864-S is quite rare by S-Mint standards and is on the second level of rarity along with such other dates as the 1854-S, 1860-S, 1861-S, 1862-S, 1866-S Motto, 1867-S and 1868-S. Strictly graded AU specimens are decidedly rare and true mint state pieces are very rare. If a choice or gem uncirculated 1864-S exists, I have not seen it."

Needless to say, the shipwreck recoveries have increased the existing populations since Akers wrote the words above, but we believe he would nonetheless find this coin quite a special one. The golden-yellow surfaces boast incredible eye appeal as well as technical quality. The obverse is almost entirely free of contact, save for some insignificant little ticks on Liberty's chin. A couple of the lower star centrils are not fully struck up. The date is quite large, and the reverse carries the Small S mintmark, possibly a carry-over from one of the 1863-S reverse dies. The reverse is similarly unabraded: To single out any contact would be to overemphasize its importance. Even among the many special coins in the Galt's Gulch Collection, this one stands out in quality and importance. Comes with *S.S. Republic* presentation box and DVD.

## Premium Gem 1865-S Double Eagle
## Ex: *S.S. Brother Jonathan,* Tied for Finest Graded

**5043** **1865-S MS66 NGC.** Small S. Ex: *S.S. Brother Jonathan*. Like the 1864-S double eagle that precedes it, this MS66 NGC example of the 1865-S twenty is among the finest available of the issue, with eight in this grade at NGC and two others at PCGS, and duplications likely in those numbers (10/11). Only once before have we offered an example in this grade, another *Brother Jonathan* MS66 NGC piece that failed to meet its reserve in our Central States Bullet Sale (Heritage, 5/2000), lot 530. An MS66 NGC 1865-S traded in a Bowers and Merena auction in June 2009 (lot 3827) for $46,000.

Both the *S.S. Brother Jonathan* and the *S.S. Republic* sank during the crucial year 1865, the last of the Civil War and the next-to-last for the Type One double eagles, those bearing no motto IN GOD WE TRUST above the eagle on the reverse.

As we wrote for an earlier *Brother Jonathan* coin in a different auction:

> "When the *Brother Jonathan* smashed against a large rock and sank on July 30, 1865, off the coast of Crescent City, California, it was not only gold coins that were lost. That may be all that we remember today, but 219 people also slipped beneath the waves. General George Wright, who was to assume his new post at Fort Vancouver; Anson Henry, governor of the Washington Territory; and eight prostitutes (or 'soiled doves' in the contemporary vernacular) were among the more colorful passengers who lost their lives that fateful day. Additionally, $300,000-$500,000 in cargo went down, 346 barrels of whiskey, $200,000 in payroll for U.S. troops at Fort Vancouver, and more than $100,000 in jewelry and cash in the purser's safe. Many of the gold bars carried on the steamship were recovered between 1916 and the early 1930s. But only in the past few years have high-grade double eagles been recovered and entered the numismatic marketplace."

The year 1865 was a crucial year in U.S. history, one that would mark various turning points in not only politics but commerce. Besides the obvious conclusion to the Civil War that had engulfed the nation for four years, the sinking of two major steamships in one year presaged another major shift in commerce and transportation. Travel and transportation by steam-powered locomotive would soon overtake the steamship industry as the dominant means of moving passengers and cargo. Only four years later, in May 1869, America's first transcontinental railroad would be completed by the joining of the Union Pacific and Central Pacific railroads at Promontory Summit in the Utah Territory, observed by the driving of the famous "golden spike."

Another important precursor of San Francisco's history from 1865 is largely forgotten today: A magnitude-6.5 earthquake would hit the San Francisco area on October 8, an event well-chronicled by the author Mark Twain, who was in San Francisco at the time. The earthquake presaged the much larger and disastrous Great Earthquake and Fire of April 18, 1906, with a magnitude variously estimated from 7.7-8.2. More than 3,000 persons lost their lives in the quake and terrible infernos that followed, worsened by firefighter incompetence and insurance policies that covered damage by fire but not earthquake.

As might be expected from the grade, the present MS66 1865-S double eagle is virtually flawless, with apricot-gold surfaces that display only the most minor marks, largely confined to Liberty's lower cheek and chin and the obverse field nearby. The reverse is virtually contact-free, and the strike is impeccable on each side. The 1865-S is known with both Small S and Large S mintmarks; this example is a Small S. Census: 8 in 66, 0 finer (11/11).

# MS62 1866-S No Motto Liberty Twenty
# The Finest Graded Example of a Legendary Rarity

**5044** **1866-S No Motto MS62 NGC.** Small S. This last offering in the Galt's Gulch Collection is a fitting capstone to this monumental assemblage of Type One S-mint double eagles — the single finest certified example of the 1866-S No Motto twenty, a legendary rarity that is among the rarest double eagle issues in the entire Liberty Head series.

The still-United States of America breathed a collective sigh of relief when the horrible Civil War was officially concluded at Appomattox Courthouse, Virginia, on April 9, 1865. With the stroke of a pen rather than a sword the "great Civil War, testing whether this nation, or any nation so conceived and so dedicated, can long endure," was finished. That nation, of which President Lincoln spoke about so eloquently in his Gettysburg Address, had passed its longest and severest trial.

The surge in religious fervor that the conflict engendered led the Rev. M.R. Watkinson, of Ridleyville, Pennsylvania, to write to Treasury Secretary Salmon P. Chase in November 1861, suggesting that U.S. coinage should bear a reference to God. Although the first regular issue to bear IN GOD WE TRUST was the two cent piece which debuted in 1864, pattern coins exist from as early as 1861, bearing various short forms of the motto, GOD OUR TRUST and OUR TRUST IS IN GOD.

Only the U.S. coins with a larger "canvas" or surface area bore the new, finalized inscription IN GOD WE TRUST, which appeared in 1866 on the silver quarter, half dollar, and dollar, and on the gold half eagle, eagle, and double eagle.

The San Francisco Mint produced about 950,000 double eagles in 1866, but only 120,000 were the No Motto type, an anachronism produced in February 1866 from a leftover reverse die (a usual custom) before the new With Motto reverse dies arrived in March. Only San Francisco produced the 1866 variety lacking the motto. Even though the issue has a larger mintage, it was apparently saved in percentage terms in much lower numbers than the 1861-S Paquet Reverse twenties.

As mentioned, the present MS62 1866-S No Motto double eagle in the Galt's Gulch Collection is a fitting conclusion to this marvelously high-grade and historic complete collection of Type One double eagles from the first dozen-plus years of the San Francisco Mint. The 1866-S No Motto is a fabulously rare issue even in AU, much less in any grade approaching Mint State. As recently as 2008, no Mint State examples of the 1866-S No Motto had been certified, when Garrett and Guth wrote, "Even by today's more liberal grading standards, there are no known Mint State examples." Today, however, PCGS has graded a single specimen at the MS60 level, while NGC has certified two pieces in MS60, one in MS61, and the present piece the sole finest certified, at MS62 (11/11).

The present piece shows complete, generous luster flowing from each side, with orange-gold color prevailing and ample eye appeal. The grade determinant is a couple of intersecting digs on the cheek of Liberty, not overlarge but situated on a focal point of the coin. The reverse is relatively contact-free, with a Small S mintmark likely carried over from the 1865-S issues.

This piece should incite intense fervor when it crosses the auction block, as the *finest of the issue that we have offered by four grade points*. An AU58 PCGS example in our FUN Signature (Heritage, 1/2007), lot 3717, realized $195,500, and a similarly graded piece in our Central States Signature (Heritage, 4/2006), lot 4217, realized $172,500. We fully expect this MS62 NGC piece to set a new price record for the issue.

*From The Galt's Gulch Collection.* (#8945)

## ERROR

Rare Twenty Dollar Gold Blank Planchet
Type One, Without Upset Rim

**5045 Blank Type One Planchet for a Double Eagle — Not Graded — NGC.** It is an almost universal opinion among error enthusiasts that gold errors are the rarest of all; the highest-value coins produced by the U.S. Mint received the most scrutiny, and so errors were far more likely to be caught before release. This blank planchet for a double eagle gold coin, however, somehow escaped its minting facility undetected. The weight listed by NGC, 33.45 grams, is within tolerance for a double eagle; the standard weight, converted from grains to grams, is 33.436 grams. A Type One planchet without upset rim, this blank is predictably smooth save for the usual pre-striking abrasions and two narrow scrapes that run the length of the coin, likely artifacts of the rolling process used to create the "strip" from which planchets are punched.

## ADDITIONAL LIBERTY DOUBLE EAGLES

1852-O Double Eagle, AU58+
Sharply Struck

**5046 1852-O AU58+ NGC.** The 1852-O double eagle, from a mintage approaching 200,000 pieces, can be obtained through Choice AU condition, and even near-Mint State pieces appear at auction with some frequency. That said, the coin in the present lot is the only one that NGC has designated AU58+, and 15 examples finer.

Bright yellow-gold surfaces retain ample luster in the recessed areas and exhibit sharply struck design features. Both sides reveal distributed small marks, but no more or more serious than what might be expected for a large, heavy gold coin that has experienced some circulation. (#8907)

## 1857-O Twenty, AU53 Single Die Pair

**5047** **1857-O AU53 PCGS.** Following the low mintages of New Orleans double eagles in 1854, 1855, and 1856, production reached 30,000 coins in 1857, the second highest mintage New Orleans twenty coined after 1853, exceeded only by the 35,250 pieces struck the next year. This example matches the criteria for the single variety known to Doug Winter, who states that seven Mint State pieces are known, with an estimate of 50 to 60 AU coins. This pleasing specimen has intermingled light yellow and honey-gold color with considerable remaining luster and only light, scattered marks rather than the heavy abrasions of most survivors. Population: 7 in 53, 19 finer (11/11). (#8921)

## *S.S. Central America* 1857-S Double Eagle Rare MS63 Deep Mirror Prooflike Grade

**5048** **1857-S Spiked Shield MS63 Deep Mirror Prooflike PCGS. Variety 20A.** Ex: *S.S. Central America*. *SSCA* 3007. Aside from a handful of modern issues such as the Ultra High Relief twenties of 2009 and the five-ounce America the Beautiful silver quarters, PCGS usually has restricted Prooflike and Deep Mirror Prooflike designations to Morgan dollars. That said, it is easy to see why PCGS decided to make an exception for this remarkably reflective shipwreck treasure, mostly sun-yellow and paler canary with a dusky streak at right reverse. A small blue-green coppery area at the I of UNITED adds character to the coin, and while reed marks and a few wispy abrasions render the Select grade accurate, that designation does not speak to this Deep Mirror Prooflike beauty's remarkable eye appeal.

## Gem 1857-S Spiked Shield Double Eagle Smooth *S.S. Central America* Coin

**5049** **1857-S Spiked Shield MS65 PCGS. Variety 20A.** Ex: *S.S. Central America*. *SSCA* 4091. The obverse has a fairly traditional *Central America* "look," deeper yellow at the rims than the interiors. The reverse has several in-between cloudy areas complicating the pattern, adding visual interest and a suggestion of the coin's shipwreck story. Few coins occupy the dual roles of priceless treasure and "common" issue, yet the *S.S. Central America* twenties are simultaneously irreplaceable pieces of history and the most available Gem-and-better No Motto double eagle type coins. This piece is offered with book-style case and box; no certificate of authenticity is included, but the PCGS holder's guarantee will suffice for most. (#70000)

## *S.S. Central America* 1857-S Twenty A Boldly Lustrous Gem

**5050** **1857-S Spiked Shield MS65 PCGS. CAC. Variety 20A.** Ex: *S.S. Central America*. *SSCA* 7601. The traditional border hue of *Central America* coins is almost orange on this Gem, particularly on the left side of the obverse. Through most of the devices the strike is characteristically sharp, though a touch of softness appears in the hair behind the coronet and the lowest curls. The grade-determining flaws are more wispy marks or luster grazes than out-and-out abrasions, though one such flaw starts as a horizontal dig and ends as a shallow vertical graze, suggesting a hard object glanced off the coin; the imagination flies to many possibilities, such as the coin striking a rock or timber before coming to rest on the ocean floor. (#70000)

## Amply Lustrous 1857-S Spiked Shield Twenty
## An *S.S. Central America* Gem

**5051** **1857-S Spiked Shield MS65 PCGS. CAC. Variety 20A.** Ex: *S.S. Central America*. *SSCA* 5040. The border color is only narrowly visible on this Gem, but what it lacks in width it makes up for in hue. Boldly impressed devices are rendered in the same pale yellow-gold as the surrounding fields. Lightly marked, as expected for the grade, though the die line off the left side of the shield (the "spike") should not be counted among their number. A fantastically lustrous piece of numismatic history, billed in its initial sale a decade earlier as "America's national treasure that everyone can share." Claim your piece. (#70000)

## Marvelous 1857-S Twenty, MS65
## *S.S. Central America* Gold Label

**5052** **1857-S Spiked Shield MS65 PCGS. CAC. Variety 20A.** Ex: *S.S. Central America*. *SSCA* 5039. The "rind" or deep border color has a richer and more varied hue than usually seen on *Central America* twenties. Reddish aspects appear in small dots along parts of the reverse margins, but the interiors have the classic pale yellow "look" with the exception of a few tiny splashes within the horizontal stripes of the shield. Boldly impressed and only lightly marked, this is a great representative of the shipwreck date that is suitable for high-end type collectors, series enthusiasts, and treasure-seekers alike. (#70000)

## Boldly Lustrous MS66 1857-S Double Eagle Spiked Shield Reverse

**5053** **1857-S Spiked Shield MS66 PCGS. CAC. Variety 20A.** Ex: *S.S. Central America*. *SSCA 2158*. The many *S.S. Central America* 1857-S double eagles packed aboard the ship when it sank share many characteristics, as expected for coins produced at roughly the same time and kept in roughly the same environment until encapsulation. The saturated yellow-and-orange of the borders has the classic *Central America* appearance, and the paler interiors are also consistent. Excellent detail, too, is the rule. Where this example deviates from the norm is in how well-preserved the surfaces are; this Premium Gem looks the part, and if not for a tiny nick at the left side of Liberty's neck, the piece would have a chance at an even finer grade. (#70000)

## Sharply Struck MS65+ 1857-S Twenty Bold S Reverse

**5054** **1857-S Bold S MS65+ PCGS Secure.** This Bold S beauty is not specifically attributed to the *S.S. Central America,* but there are few other sources for Gem-plus 1857-S double eagles. This excellent example also has the signature colors of the *Central America* coins, deep yellow close to the rims with a shift to paler yellow and almost-straw at the interiors. It is exactingly detailed with more luster grazes and scrapes than actual marks, with the vertical flaw just to the right of Liberty's lips falling into the former category. An ideal type selection. Population: 1 in 65+, 48 finer (11/11).

*From The Marilou Collection*. (#70001)

## Gem 1857-S Double Eagle, Bold S Reverse
## A Classic *S.S. Central America* Coin

**5055** **1857-S Bold S MS65 PCGS. CAC. Variety 20B.** Ex: *S.S. Central America. SSCA* 7641. The concentrated coins recovered from the *Central America* afforded an unprecedented (and unlikely to be repeated) window into the die varieties for San Francisco double eagles. This gold-label example comes from the Bold S subtype, named for its deeply punched mintmark below the eagle's tailfeathers. While a mark between Liberty's eye and nose renders this coin "just" a Gem, the surface quality elsewhere is remarkable. Trademark frosty luster is pale at the interiors and deeper yellow on the margins. Lines passing through the word STATES appear to be roller marks left on the planchet, not post-striking damage. (#70001)

## Gem *S.S. Central America* 1857-S Twenty
## Bold S Reverse, Variety 20B

**5056** **1857-S Bold S MS65 PCGS. CAC. Variety 20B.** Ex: *S.S. Central America. SSCA* 7351. The transition from outer to inner color is less pronounced than usual on this *S.S. Central America* beauty, but the coin still shows a distinctly richer yellow at rims than centers. The strike is excellent and the luster smooth with just the right amount of satin-frost to temper the flashiness. The reverse with Bold S mintmark is in a later state than usually seen, as noted by a die crack bridging the D of UNITED and the first S in STATES. The usual scattered small marks account for the grade but cannot dim the eye appeal. (#70001)

## 1861-S Paquet Twenty, AU Details Well Defined and Minimally Abraded

**5057 1861-S Paquet — Improperly Cleaned — NGC Details. AU.** Anthony Paquet's few designs for the Mint show a commonality with elongated top and bottom serifs of the letters. The Paquet-designed 1865 pattern quarter shows these same taller letters. Specifically, by lengthening the serifs on the E's this creates two nearly enclosed spaces divided by the middle serif. Letters that have two downward or upward strokes — A, R, Q, M, D, U — will alternate thick and thin strokes, as on M, A, U, or else have two thick strokes, as on D, Q, R. Exposed serifs, as on L and E, are exaggerated to make them as long as possible.

While the Paquet Reverse twenty dollar legends are different in execution, the overall style is unmistakably the same — an arch, quasi-Gothic approach to font creation that adds to the appeal of these coins. The Paquet Reverse twenties made at the San Francisco Mint to the extent of 19,250 pieces all apparently slipped quietly into circulation, and the issue today is unknown in Mint State. The finest certified examples at NGC and PCGS are coins in the AU55-AU58 range.

The acquisition of a Paquet Reverse double eagle is a milestone accomplishment for most collectors. The present example is well detailed and shows remarkably few abrasions for a coin that has such a lowered rim. The surfaces are otherwise uniformly subdued in appearance, a result of cleaning. Each side has light yellow-rose patina. (#8936)

## Uncirculated 1864-S Type One Twenty Bright Orange-Gold Surfaces

**5058 1864-S MS61 NGC.** The 1864-S double eagle did hard duty in the Old West, where gold coinage circulated even during and after the Civil War, which was far removed from local concerns at the time. Before the shipwreck recoveries of the *S.S. Brother Jonathan* and *S.S. Republic,* only circulated examples could be obtained, but now examples have been certified as high as MS65. This MS61 example shows a weak strike on the figure of Liberty, but other details are boldly impressed. The luster is somewhat subdued over lightly marked orange-gold surfaces. As an S-mint Civil War-era double eagle, this coin should prove attractive to more than one collector segment. Census: 29 in 61, 16 finer (11/11). (#8942)

## 1866-S No Motto Twenty, AU50
## Struck Early in 1866

**5059** **1866-S No Motto AU50 NGC.** The San Francisco Mint struck the No Motto double eagles early in 1866 before receiving the new With Motto, or Type Two, reverse dies later in the year. While Mint records suggest a mintage of 120,000 coins, the actual production may have been much smaller. The number of surviving specimens is similar to the early 1861-S Paquet double eagle that had a mintage of only a little over 19,000 coins. A low level AU specimen, this piece retains considerable luster with minor surface marks on each side. Hints of pinkish toning appears on the light yellow surfaces. (#8945)

## 1871-CC Liberty Twenty, XF45
## Second-Rarest CC-Mint Double Eagle

**5060** **1871-CC XF45 NGC. Variety 1-A.** The Carson City Mint produced only 17,387 double eagles in 1871, in its second year of operations. The 1871-CC is the second-rarest Carson City double eagle, with a surviving population of 200-250 pieces. The coins circulated widely in the regional economy and the issue is most often seen in VF and XF grades today. The 1871-CC is also the second most elusive date of the series in high grade.

The coin offered here is an attractive XF45 example, with lightly worn devices and a scattering of minor abrasions that explain the grade. The pleasing greenish-gold surfaces display prooflike reflectivity in sheltered areas. Census: 34 in 45, 94 finer (11/11). (#8961)

## 1873-S Open 3 Double Eagle, MS61
## Rare Any Finer

**5061** **1873-S Open 3 MS61 NGC.** The Open 3 is the scarcer of the two varieties known for the year and mint. NGC has graded fewer than 70 coins in Mint State, three of which are MS62, and none finer. It is probably safe to assume that the current MS61 offering is going to be the finest that most collectors are going to encounter. Its peach-gold surfaces exhibit well struck design elements and just occasional interruption in the luster flow associated with a few minute marks. Nevertheless, this is a rather pleasing coin for the designated grade. (#8979)

## 1875-CC Twenty Dollar, MS62
## Appealing for Grade

**5062** **1875-CC MS62 PCGS.** The 1875-CC double eagle is readily available in circulated grades, and even examples in the lower Mint State grades through MS62 are not that difficult to locate. Select pieces are elusive, and higher-grade examples are nearly unobtainable.

Our present MS62 offering displays attractive peach-gold patination and nearly full luster, and a well directed strike leaves strong definition on the design elements. While a scattering of light marks limit the grade, this is still a coin with high eye appeal. Housed in a green-label holder. (#8974)

## 1875-CC Double Eagle, MS62
## Nice Eye Appeal for Grade

**5063** **1875-CC MS62 PCGS. CAC.** The 1875-CC double eagle is considered the most common Liberty Head, with Motto issue from the Carson City Mint. PCGS and NGC have graded an abundant number of circulated examples, and even lower Mint State coins can be located with a bit of searching. MS63 and finer specimens are elusive.

This MS62 example displays bright peach-gold surfaces with nearly full luster and generally well struck design features, though portions of Liberty's hair show some softness. Scattered marks limit the grade, nevertheless this piece displays nice overall eye appeal for the grade, aptly recognized by CAC. (#8974)

## Near-Gem 1876-S Double Eagle
## Important Type Two Example

**5064** **1876-S MS64 PCGS.** Unlike famous Type One issues such as the 1857-S and 1865, preserved in quantity by shipwreck sinkings, the Type Two dates present a much greater challenge to type collectors. The 1876 and 1876-S are most plentiful in Mint State, but by the MS64 level, they are the only issues with double-digit PCGS populations, and only by a whisker. More broadly, just three Type Two double eagles have been certified as a Gem by that service, and an exceptional 1875-S twenty in MS67 leads the way (11/11).

It is easy to see that this near-Gem, then, is one of the best options for type collectors seeking a Type Two representative. Saturated butter-yellow luster has a distinct orange overtone and a couple of small copper spots on Liberty's cheek. Scattered minor marks have little influence on the eye appeal but combine to account for the technical grade. (#8978)

## 1882-CC Double Eagle, MS62
## Only Two Finer Coins at PCGS

**5065** **1882-CC MS62 PCGS. Variety 2-B.** No double eagles were coined at the Carson City Mint in 1880 and 1881, but coinage resumed in 1882 with a mintage of 39,140 pieces. The 1882-CC is one of the more available issues from this decade, with a surviving population of 800-900 pieces in all grades. Mint State examples are quite rare, however, as most of the coins circulated extensively at the time of issue.

The present coin is an impressive MS62 specimen, with sharply detailed design elements, including full star radials and fine definition on Liberty's hair. The pleasing orange-gold surfaces retain much of their original mint luster and show a moderate number of abrasions for the grade. Population: 17 in 62, 2 finer (11/11). (#8997)

## Ultralow-Mintage 1885 Double Eagle, MS62
## 751 Business Strikes Manufactured

**5066** **1885 MS62 PCGS. CAC.** The year 1885 is a signal one in American numismatics, one that brought forth numerous rarities on the scene. The 1885 Trade dollars are the most celebrated rarities of the year, although they were clandestine issues with an uncertain date of manufacture. The Carson City Mint struck only double eagles and silver dollars in the brief period before the superintendent, James Crawford, died on March 8 of that year, beginning a four-year hiatus for the facility. But it was the double eagles of Philadelphia rather than Carson City that ended up being the rarest of the year, struck to the extent of only 751 coins. Although there are several P-mint double eagle issues from the 1880s that are low-mintage, only the 1882, at 571 pieces, had a lower production than the 1885.

The reasons for the drastically lower double eagle mintages from Philadelphia are not easily explained in isolation; but from a macroeconomic viewpoint, they resulted from an overall change in Treasury policy beginning in 1882, one aimed at expanding the distribution nationwide of half eagles and eagles. Treasury officials believed that if sufficient lower-denomination gold coins were on hand, depositors of bullion at the nation's mints would accept those coins rather than wait a period of time to receive double eagles. (Note that in 1882, Philadelphia struck more than 2.3 million eagles.)

The fields on this MS62 example are bright and semiprooflike, but this is a function of the small quantity struck rather than the nonexistent possibility that this piece could be a mishandled proof. Numerous small abrasions are peppered throughout both sides, none of them individually significant. The strike is sharp, even though some minor high-point softness appears on the hair curls over the face and a couple of the stars on the reverse. Consistent orange-gold coloration is a plus. Population: 3 in 62, 2 finer (10/11). (#9003)

## Business Strike 1886 Double Eagle
## One of 1,000 Such Coins

**5067** **1886 Genuine PCGS.** The PCGS number ending in .92 suggests Cleaning as the reason, or perhaps one of the reasons, that PCGS deemed this coin not gradable. In our opinion, the piece has the details of an XF specimen that has been harshly cleaned. A business strike based on date placement, though as expected for this low-mintage issue of just 1,000 pieces made for circulation, tiny pockets of reflectivity persist in the protected areas despite light wear and a heavy cleaning. Assorted minor to moderate abrasions are as expected for the amount of rub on the high points. (#9006)

## Gem 1888-S Double Eagle
## Finest Certified at Either Service

**5068** **1888-S MS65 NGC.** Although the 1888-S is among the most common S-mint double eagle issues from the 1880s, until this wonderful coin was certified, apparently in the last couple of years, no MS65 coin of the issue had ever been graded at either service. Proof is in the 2006 edition of the Garrett-Guth *Gold Encyclopedia:* "Choice pieces are scarce but offered at auction with regularity. The number of examples that have been graded MS-64 is surprisingly high for the mint and era. There are no known examples in Gem condition."

This since-certified issue is the single finest and only 1888-S at either service in MS65 condition (11/11), and a marvelous coin it is. Both sides show swirling cartwheel luster emanating from the peach-gold surfaces. Extensive perusal with a loupe only confirms the initial impression that the coin is remarkably clean and abrasion-free. The coin is fully struck throughout, with no visible weakness. Finally, the eye appeal is enormous. In an auction full of incredible coins, this piece must be seen as a highlight among highlights.

As enthusiasts of the Liberty Head double eagle coinage are acutely aware, there are many issues in the series for which lower-Mint State coins are plentiful, and higher-grade Uncirculated pieces are either rare or nonexistent. With the number of later Type Three twenties in Gem condition is substantial, the earlier era, including the first decade or so of S-mints, remains underrated. The knowledgeable collector will pursue this beauty with a strong bid. (#9009)

## 1892 Near-Gem Double Eagle
## One of Three Finest PCGS-Certified

**5069** **1892 MS64 PCGS.** The 1892 double eagle, coming from a sparse circulation strike mintage of 4,430 pieces, is scarce in all grades and is considered to be a key date in the series. Garrett and Guth sum up the appeal of this business strike: "Of those minted, just 150 to 200 coins remain. Many of the great collections assembled in the past did not have an example of a circulation-strike 1892 double eagle. The date was usually represented by Proof examples."

The 1892 is very rare in Mint State. PCGS and NGC have certified roughly 60 Uncirculated examples, some of which are undoubtedly resubmitted or crossover coins. The present near-Gem is among the finest PCGS-certified specimens. Peach-gold patination laced with hints of mint-green rests on its lustrous surfaces, and a solid strike leaves bold detail on the design elements. A couple of obverse marks keep this piece from full Gem. Population: 3 in 64, 0 finer (11/11). (#9019)

## 1897-S Double Eagle, MS65
## Strong Mint Luster

**5070** **1897-S MS65 PCGS.** One of several heavily repatriated S-mint double eagle issues of the late 19th century, the 1897-S is generally available in lesser Mint State grades. For the collector who seeks a more attractive example, however, the options are far more limited. Garrett and Guth observe that MS64 pieces are elusive, if slightly more available than for other San Francisco issues from the same time period.

A Gem such as the present piece, however, is an undeniable treasure. This wheat-gold example, imbued with peach and honey in the fields, offers decisive detail and strong luster with a touch of satin. The surfaces are remarkably well-preserved, and only a tiny flaw on Liberty's neck precludes an even finer designation. Population: 8 in 65, 2 finer (11/11). (#9032)

## MS66 1904 Double Eagle
## Conditionally Scarce Gold Type Coin

**5071** **1904 MS66 PCGS.** Every collector of Liberty double eagles knows that the 1904 is the most prevalent date of the series, but a supermajority of certified examples are in MS64 or lower grades. MS65 examples are available, yet scarce relative to type demand. Premium Gems are very scarce and prized as representatives of the Liberty design. The present butter-gold piece provides dazzling luster and a crisp strike. Tiny abrasions are difficult to locate, even on Liberty's cheek, which is usually bagmarked on the many Uncirculated coins that have returned to America from European bank holdings. (#9045)

# PROOF LIBERTY DOUBLE EAGLES

# 1874 Double Eagle, PR64 ★ Ultra Cameo
# Second-Finest Certified
# Ex: Trompeter

**5072** **1874 PR64 ★ Ultra Cameo NGC. CAC.** While the circulation-strike examples of the 1874 double eagle are relatively common (366,780 mintage), proofs of this dated are extremely rare. Only 20 coins were struck, making this the lowest number of proof double eagles produced after 1858. Writing in the 2008 edition of their book *Encyclopedia of U.S. Gold Coins, 1795-1933,* Jeff Garrett and Ron Guth say:

> "Today, fewer than 10 examples can be traced, including the two that are housed in the Smithsonian and the American Numismatic Society. At least one or two examples known are seriously impaired. The date has also been missing from many important collections offered in the last two decades, including the Harry W. Bass Jr. Collection, which was nearly complete. An NGC PR-64 coin (the coin offered here) sold at auction in mid-2004 for $103,500."

The experts are in close agreement about the rarity of this issue. David Akers states that, "Proofs of this date (1874) are among the rarest after 1860. Of the 20 minted, less than half can be accounted for today." Q. David Bowers estimates 8-10 pieces are still extant and Walter Breen suggests that, "Possibly 7-9 proofs survive."

The population figures indicate that a total of 11 1874 proof twenties have been seen by NGC and PCGS combined. The present coin is the only Ultra Cameo proof to receive the star designation from NGC (11/11). Even though one coin has received a higher numeric grade, a PR65 Ultra Cameo at NGC, it is hard to believe any example could match the stunning visual appeal of this specimen, which traces its history to the fabled Trompeter Collection. Writing about proof 1874 double eagles in their treatise entitled *Type Two Double Eagles, 1866-1876: A Numismatic History and Analysis*, Doug Winter and Michael Fuljenz state: "It is estimated that seven to nine of these exist today with the finest being a lovely NGC Proof-64 which is part of the Ed Trompeter Collection of United States proof gold coins."

Both sides of this gorgeous 1874 near-Gem ★ Ultra Cameo are embraced with attractive peach-gold color, and the outstanding motif-field contrast assumes a gold-on-black appearance when the coin is viewed from directly overhead. A well-executed strike manifests itself in sharp definition on all of the design features, including the star centrils, Liberty's hair, the eagle's plumage, and the horizontal and vertical lines of the shield. An even higher grade is precluded by a few wispy obverse handling marks. A curved lint mark located beneath Liberty's eye may help to pedigree the coin. This outstanding example is sure to draw the interest of aficionados of gold coinage who want nothing but the best. As such, we expect spirited bidding on what is the second-finest certified 1874 proof double eagle. Census: 1 in 64 ★ Ultra Cameo, 1 finer (11/11).

*Ex: Amon Carter Collection (Stack's, 1/84), lot 899, where it realized $39,600; Ed Trompeter; Ed Trompeter Estate; Heritage Rare Coin Galleries; Philadelphia Bullet Sale (Heritage, 8/2000), lot 760, realized $51,750; Pittsburgh ANA Auction (Heritage, 8/2004), lot 7688, realized $103,500.* (#99089)

# 1896 Liberty Double Eagle, PR66 Ultra Cameo
# Classic Proof Gold Rarity
# One of the Finest Known Examples

**5073** **1896 PR66 Ultra Cameo NGC. CAC.** A nearly perfect representative of this classic proof rarity, this 1896 proof double eagle is one of the finest known survivors from the mintage of 128 pieces struck 115 years ago. While the production figure is minuscule in absolute terms, it was quite generous in the context of the series. Time has taken a toll on the original mintage, and it is doubtful if more than 40 specimens are extant today in all grades. Examples with profound cameo contrast are particularly rare. Currently, PCGS has certified only four coins in PR66 Deep Cameo, with none finer, while NGC has graded five specimens in their corresponding grade of PR66 Ultra Cameo, with one finer i n PR67 ★ Ultra Cameo (11/11). The roster below suggests there may be some duplication in these figures, due to crossovers and resubmissions, as only four coins have appeared at public auction in PR66 Ultra Cameo, with none finer.

Collecting 19th century proof gold has always been the province of the most elite numismatists, especially the ten and twenty dollar pieces. While a number of collectors saved the smaller denominations in date sets, the number of numismatists systematically collecting large-denomination gold coins could probably be counted on two hands before the 1890s. During that decade the demand for gold proof sets seems to have increased, as famous collectors like Virgil Brand, John M. Clapp, and James Ten Eyck religiously purchased sets from the Mint every year. While the smaller denominations were often purchased in multiple orders of individual coins, the eagle and double eagle were almost always acquired as part of a complete set. For example, Virgil Brand ordered a complete set of the four gold denominations in 1896, plus an extra half eagle and nine more quarter eagles.

The coins have always been rare, and the passage of time has only diminished the small supply, as the original sets were broken up and unwanted pieces were sold for small premiums or spent for face value. Writing in 1907, S.H. Chapman estimated "there are not over five sets in existence of the years prior to 1890." Gold sets from later years suffered a similar fate when proof coins fell into disfavor during the matte proof era, and intact sets were seldom encountered in auction catalogs after about 1920.

The increased demand during the 1890s brought about a bubble of larger proof mintages in the last half of the decade, with the 1896 mintage of 128 double eagles taking top honors for the entire century. While the economy was hampered by the Panic of 1893 in the earlier years of the decade, it rebounded in 1896 with the discovery of gold in the Klondike. The economic optimism probably accounts for the unusually large proof mintage in 1896. Technical improvements probably played a part as well, since hydraulic presses were used to coin proofs from 1894 on, replacing the labor-intensive screw press used in earlier years. Present-day collectors can thank this combination of circumstances for the relative availability of 1896 proof double eagles in today's market. Of course, high-grade proofs with deep cameo contrast are still very rare in an absolute sense.

The present coin is an amazing Premium Gem proof, with razor-sharp, frosty devices. All star centrils are fully brought up, each strand of Liberty's hair shows pinpoint definition, and the devices have a rich, frosty texture that provides intense cameo contrast with the incredibly deep mirrors. The virtually unmarked fields display a slight orange peel texture, often seen on proofs of this era. The surfaces are a delicate orange-gold with green highlights. Visual appeal is tremendous.

The following roster includes all known specimens of the 1896 proof double eagle with the Deep Cameo or Ultra Cameo designations that have appeared at public auction since we began our Auction Archives about two decades ago.

**1. PR66 Deep Cameo PCGS.** Ex: Brentwood Park Estate (Goldberg, 9/2007), lot 3460**.**

**2. PR66 Deep Cameo PCGS.** Ex: Elite Coin Auction (Superior, 7/2003), lot 691.

**3. PR66 Ultra Cameo NGC.** Ex: FUN Signature Auction (Heritage, 1/2008), lot 3340, Realized $143,750.

**4. PR66 Deep Cameo PCGS.** Ex: Pre-Long Beach Auction (Goldberg, 9/2008), lot 1297.

**5. PR65 Ultra Cameo NGC.** Ex: Purchased from the Hostetler Collection on January 17, 1960; Norweb Collection (Bowers and Merena, 11/1988), lot 4056; The Charles River Collection (American Numismatic Rarities, 6/2004), lot 1544.

**6. PR64 Deep Cameo PCGS.** Ex: Ohringer Family Trust (Goldberg, 5/2008), lot 4473.

(#99112)

## 1897 Double Eagle, PR65 Ultra Cameo
## A Curiously Low-Survival Date in Better Grades

**5074** **1897 PR65 Ultra Cameo NGC.** Among the well-produced proofs from the late 1890s, the 1897 represents a low point in availability but not in production quality. A mere 86 proof twenties were produced, of which perhaps only 20 to 25 individual coins have been estimated to exist today. The Fuljenz-Winter reference on Type Three twenties has an interesting passage about the 1897 proof:

> "Interestingly, about half of the known Proof 1897 Double Eagles are impaired from mishandling or severe cleaning and grade in the Proof-60 to Proof-62 range while the other half are very choice pieces grading Proof-64 or better. Gems are extremely rare."

The estimate of 20 to 25 individual coins may be a bit on the light side. The grading services have certified a total of 42 coins as non-Cameo, Cameo, and Ultra/Deep Cameo. Once resubmissions are factored out, we believe that number may be more representative of 30 to 35 coins. But their point about the prevalence of lower-grade survivors is well taken. In Gem condition and in all finishes, only seven coins have been graded (two as Ultra Cameos and three PCGS Deep Cameos), while as Cameo and non-Cameo coins they have only certified three pieces in PR65, and with all finishes there are only four finer coins. The percentage of higher grade survivors increases significantly in 1898 and subsequent years.

As expected, this coin has exceptionally deep reflectivity in the fields on each side. The devices also show strong frosted contrast. The fields are also noticeably textured with the orange-peel effect so often seen on proof gold from the last half of the 19th century. The surfaces are uniformly bright yellow-gold. A curved lint mark in front of the bridge of Liberty's nose serves as a useful pedigree identifier. (#99113)

## 1898 Double Eagle, PR66 Deep Cameo
## Only 75 Pieces Struck, None Finer at PCGS
## Ex: Kern/Pittman

**5075** **1898 PR66 Deep Cameo PCGS.** The 1898 Liberty double eagle boasts a low mintage of just 75 pieces, and the issue is prized for its high quality. By the late 1890s, the Mint had perfected the art of proof coinage, and some of the proofs of that era are a match for the best the Mint produces today. The present coin is certainly a case-in-point, with deeply mirrored fields and richly frosted devices that produce a dramatic Deep Cameo flash when the coin is tilted in the light. The vivid yellow-gold surfaces show just a hint of copper color on the obverse, and the fields are virtually unmarked. Even close inspection with a glass reveals only a few minor hairlines in the fields.

This coin traces its history to the John Jay Pittman Collection, one of the most famous collections of all-time. Pittman was known as a connoisseur, and only the finest coins found a place in his collection. In their *Encyclopedia of U.S. Gold Coins 1795-1933,* Jeff Garrett and Ron Guth mention this particular coin:

> "The John Jay Pittman example is another very choice coin seen by the authors in recent years. It sold for $77,000 in 1997. In 1950, Pittman paid $225 for the piece."

The 1898 proof double eagle has appeared at auction with some frequency in recent years, but many appearances have consisted of mishandled specimens, and only about a half dozen really nice coins have been offered. Most experts agree only 35-40 examples are still extant in all grades. This lot represents an opportunity for the quality-conscious collector that will not be repeated soon. Population: 4 in 66 Deep Cameo, 0 finer (11/11).

*Ex: Golden Jubilee Sale (B. Max Mehl, 5/1950), lot 618; John Jay Pittman Collection, Part I (David Akers, 10/1997), lot 1172, realized $77,000.* (#99114)

LIBERTY
1899

UNITED STATES OF AMERICA
IN GOD WE TRUST
TWENTY DOLLARS

# Amazing Ultra Cameo Superb Gem Proof
# 1899 Twenty, Tied for Finest Known

**5076** **1899 PR67 Ultra Cameo NGC.** This is only the second time Heritage has been privileged to offer a PR67 Ultra Cameo example of this important turn-of-the-century issue. The first instance came in March 2008, with the offering of *The Ultra Collection's* specimen. In a remarkable coincidence, the present coin made its most recent auction appearance in October of the same year, in the Stack's 73rd Anniversary Sale. The Stack's cataloger called this coin, offered as part of the A. Rockford Cummings Collection, "easily one of the top two or three Proofs of this date, and barring the opportunity of making a side-by-side comparison with similarly graded coins, may indeed be the finest known." The assessment is supported by the NGC *Census Report,* in which three PR67 Ultra Cameo coins are the finest known, and the PCGS *Population Report,* which lists no equivalent Deep Cameo representatives; this was true as of the 2008 printings of both catalogs and remains true as of (11/11).

Less supportable is the Stack's cataloger's enthusiastic follow-up: "An example at this numerical grade level has not crossed the auction block in at least 15 years!" (Perhaps the excitement of seeing this coin caused him or her to forget the events of seven months ago.) The slight inaccuracy, however, underscores a fundamental truth about the proof 1899 double eagles: they are rare regardless of condition. In the *Encyclopedia of U.S. Gold Coins,* Garrett and Guth note that despite a nominal mintage of 84 pieces, "The date is rare, with fewer than 30 coins being accounted for today." Another anecdote from Garrett and Guth underscores that rarity by referencing the National Numismatic Collection: "The Smithsonian contains multiple examples of most all the dates of the Proof double eagles. There is only one 1899 Proof double eagle in the collection, however, and the coin is just PF-63 in quality." That two verifiably different specimens have survived in PR67 Ultra Cameo condition, much less a possible third, is nothing short of remarkable.

"Remarkable" is an excellent word to describe the present specimen as well. On the interior mirrored fields, the color shifts from pale yellow to "black" with the slightest tilt in the light, and the mirrors are utterly impeccable. The contrast is stunning and entirely worthy of the Ultra Cameo designation, and the overall preservation is magnificent. The coin's few faults, which also serve as its major pedigree markers, also give the coin visual interest, and to some, they may not be faults at all. A small milky dot is superimposed against the frost in the middle of Liberty's cheek, for example, and several coppery areas on the rims and just into the denticles form a reddish-brown contrast to the dominant golden hue. A tiny planchet flake under the left side of star 10, roughly equidistant between that star and the hair behind Liberty's coronet, has no influence on the technical grade but is the coin's most reliable pedigree marker after the distinctive pattern of rim copper. The plastic holder has a few light scratches that should not be interpreted as damage to the coin. Just as the two PR67 Ultra Cameo appearances in 2008 were followed by auction silence until now, it is impossible to tell when a proof 1899 double eagle of this quality will come on the market next. Bid accordingly.

*Ex: A. Rockford Cummings (Stack's, 10/2008), lot 1080, which realized $172,500.*

*From The Jim O'Neal Gold Type Collection.* (#99115)

## Select Proof 1904 Twenty
## Rare Example With Cameo Contrast
## Only 98 Pieces Minted

**5077** **1904 PR63 Cameo PCGS.** Only 98 proof Liberty double eagles were struck in 1904, a considerable decrease from the 158 proofs produced the year before. The smaller proof gold denominations of 1904 also enjoyed higher reported mintage totals than the double eagle, but the twenty dollar coin seems to be more available than most of its proof counterparts. In *Type Three Double Eagles 1877-1907, A Numismatic History and Analysis,* Doug Winter and Michael Fuljenz estimate 40-45 examples of this issue are still extant, while PCGS currently postulates a surviving population of 55-65 coins in all grades. PCGS and NGC have combined to certify 108 total coins, 10 more than the original mintage, indicating that the population data is wildly inflated. The true number of survivors is probably close to 50-55 coins.

The Mint switched to an all-brilliant finish on proof coins in 1902, so coins of this era seldom show the popular cameo effect seen on many earlier proofs. The present coin is a happy exception to this rule, as the devices show considerable mint frost on both sides. While the contrast is not profound, this coin still demonstrates striking black-on-gold flash when tilted in the light. The design elements are sharply detailed, with full star centrils and fine definition on Liberty's curls. The surfaces are a vivid lemon-yellow color, with highlights of green and lilac. The fields are brightly mirrored, and show few signs of contact. Eye appeal is quite strong. We expect spirited competition when this lot is called. Population: 6 in 63 Cameo, 12 finer (11/11). (#89120)

## 1904 Liberty Head Twenty, PR65 Cameo None Finer at PCGS With Cameo Surfaces

**5078** **1904 PR65 Cameo PCGS. CAC.** Proof Liberty Head double eagles are big, massive, incredibly rare gold coins that many dedicated collectors simply love. Heritage has been fortunate in recent offerings to have handled a wealth of high-grade proof Liberty twenties. And while this Platinum Night is memorable for quite a few business strike Saint-Gaudens and Liberty Head double eagles in remarkably high grade, the Liberty Head proof coins will also stand up in quality, even if fewer in number.

The year 1904 sticks in many collectors' minds as the largest mintage of the Philadelphia and San Francisco business strike twenties, massive productions totaling more than 11 million pieces between both mints combined. Even today, the 1904 double eagle is the issue most chosen for type purposes, and thousands survive in Mint State.

The proof 1904 double eagles, however, was produced in the small extent of only 98 pieces, and it is doubtful that more than half of that number survive to the present day. The population reports are, of course, laden with duplications.

The Mint had moved away from the deeply contrasted method of proof production in 1902, making Cameo examples such as the present Gem seldom seen. The surfaces show sufficient field-device contrast to merit the Cameo designation over bright yellow-gold surfaces that show no noticeable marks. The strikes appear full throughout each side, and the eye appeal is excellent. The last Gem Cameo PCGS example of this issue was a piece that brought $74,750 in our Stamford Coinfest Signature (Heritage, 10/2010), lot 5089. (#89120)

## PR64 Cameo 1906 Liberty Twenty Extraordinarily Deeply Mirrored

**5079** **1906 PR64 Cameo NGC.** The year 1901 is the last in the Liberty Head proof gold series for which Cameo and Deep/Ultra Cameo coins are fairly obtainable, for a price. The Mint decided in 1902, for reasons that are lost in the mists of time, to change the "deeply mirrored fields against thickly frosty devices" format for proof gold to one that showed far less contrast, a format that Breen calls "semibrilliant." A glance at the NGC *Census Report* will quickly confirm that for several proof Liberty Head twenty issues after 1901, there are no (or only a small handful of) Ultra Cameo pieces certified, while most of the issue is regular uncontrasted proofs or Cameo-designated coins.

As a later entry in the Liberty Head series, it appears that more of the 1906s actually issued have survived to the present day, perhaps 50 to 60 examples of the original mintage of 94 pieces. At the PR64 Cameo grade of the present piece, it is one of nine submissions at NGC, with seven Cameos finer, and there are also 24 non-Cameos at that service. All told, there are 44 submissions at NGC and 55 at PCGS for a total of 99 pieces, more than the original number reported made. It is a certainty that a goodly number of those certification events represent duplicate coins.

This piece boasts extraordinarily deeply mirrored fields with bright yellow-gold color prevailing against a slight overlay of reddish patina. The devices are not quite frosted sufficiently to merit the Ultra Cameo designation, although the cameo contrast is evident. Light hairlining in the fields and a couple of microscopic field contact marks that require a loupe to see explain the numeric grade. (#89122)

## 1907 Liberty Twenty, PR64 Cameo Significant Contrast on Each Side

**5080** **1907 Liberty PR64 Cameo PCGS. CAC.** After a run of 57 years, the Philadelphia Mint retired the Liberty design from the double eagle in 1907 without much fanfare given to the collector market. On the contrary, the excitement created by the new Saint-Gaudens design may have actually lessened the already limited demand for proofs and a mere 78 pieces were struck, the lowest production of any 20th century double eagle up to this point. Population data would suggest that 45 to 55 specimens survive as identifiable proofs. There are a considerable number of lower grade and even impaired examples known of this date, undoubtedly spent in later decades when twenty dollars represented a significant amount of money rather than a bauble to be held onto during hard times.

This is one of the flashier proof 1907 twenties we have seen recently, a Choice specimen with unusually bold, frosted contrast for a proof gold coin from this time frame. Most proof gold after 1901 lacks any significant cameo contrast, especially as pronounced as seen on this piece. The depth of mirrored reflectivity is excellent and there are no signs of contact or mishandling. Inspection with a glass reveals a small pocket of wispy hairlines to the left of the date and lower portion of the portrait. A small lintmark in the reverse field at 9 o'clock should be useful for attribution. The specialist in high quality proof gold should find this dazzling specimen of considerable interest. Population: 9 in 64 Cameo, 3 finer (11/11).

*Ex: Long Beach Signature (Heritage, 6/2006), lot 3938, where it brought $46,000.* (#89123)

## Choice AU 1907 High Relief Twenty
## An Accessible Wire Rim Coin

**5081** **1907 High Relief, Wire Rim AU55 NGC.** Few 1907 High Relief double eagles of either rim type truly circulated; instead, most examples outside of the Mint State categories slid around as pocket-pieces before they were saved. Such is likely the case with this pale yellow-gold Wire Rim example, lightly rubbed on Liberty's knee and other high points but with generous luster remaining in the fields. The rub does little to affect the coin's essential majesty, but it does bring the piece within reach of a much wider range of collectors. Two tiny marks on Liberty's upper gown and a rim nick between STATES and OF on the reverse contribute to the grade. (#9135)

## 1907 Wire Rim Twenty, Choice AU
## Bright Surfaces, Pronounced Wire Rim

**5082** **1907 High Relief, Wire Rim AU55 PCGS.** Slight handling has not diminished the powerful figure of Liberty striding forward toward the viewer. The three-dimensional nature of the design is still fully intact. The luster is diminished in the fields and over the high points of the design, but the surfaces are bright yellow-gold. There are also a number of small contact marks on each side. What is remarkable is how strong the design elements are: full columns on the Capitol building, full face and toe definition. Another remarkable element is how pronounced the wire rim is around each side. Allegedly bankers in 1907-1908 said the coins would not stack, and this was the reason for modifying the die-collar arrangement to produce the Flat Rim variant. Looking at this coin, it makes us wonder if there might be some merit to the stacking complaint. (#9135)

## Near-Mint 1907 High Relief Twenty Accessible Wire Rim Example

**5083** **1907 High Relief, Wire Rim AU58 NGC.** The most celebrated U.S. coinage design has an original mintage in the low five figures, and demand exceeds supply regardless of condition. Nonetheless, it is a fact that worn examples, no matter how slight the friction, are significantly more accessible to most collectors than their Mint State brethren. This AU58 representative shows only minor rub across the high points of the design, and its wheat-gold luster and majestic character are essentially untouched. Apart from a rim mark just to the left of the L in LIBERTY, the surfaces are minimally abraded and broadly pleasing. An important opportunity in the service of a worthy cause.

*Seller is donating 100% of their proceeds, and Heritage is donating 100% of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#9135)

Smithsonian

## High Relief, Wire Rim 1907 Twenty Distraction-Free MS62 Example

**5084** **1907 High Relief, Wire Rim MS62 PCGS. CAC.** The Wire Rim variant is unspecified on the older green-label PCGS holder, but it is nonetheless quite visible around the rims on each side. Without discussing the merits of any potential upgrade on this particular coin — always a matter of conjecture — suffice it to say that some coin dealers and collectors specialize in buying and selling coins in the older green-label holders, some to the exclusion of all else. The present piece offers exceptionally lustrous yellow-gold surfaces with a tinge of red patina that show a couple of undistracting ticks on Liberty, and some light strike weakness on the left (facing) foot, but the lettering on the upper reverse is fully separated from the rim. This piece offers an overall pleasing appearance that is well suited to the budget-minded collector who nonetheless desires a midgrade Mint State example of this beautiful type coin.

*Ex: Central States Signature (Heritage, 5/2007), lot 2383.* (#9135)

## 1907 High Relief Double Eagle, MS62 A Wire Rim Example, In Our Opinion

**5085** **1907 High Relief, Wire Rim MS62 NGC. CAC.** The old NGC holder does not designate whether this is a Wire Rim or Flat Rim. We have labeled it as a Wire Rim, but just barely. Both sides together appear to have a "fin" around more than half of the rim. What is most persuasive, though, is something we have not observed on other Wire Rim coins. There is an irregular, folded-down bit of extruded metal at 9 o'clock on the reverse rim. This unusual trait convinces us the Mint had not addressed the problem of the wire rim yet. The surfaces are bright and satiny, as expected, and close examination shows only the smallest contact marks scattered over each side. (#9135)

## Bright 1907 High Relief Twenty Wire Rim Variant, Remarkable MS64

**5086** **1907 High Relief, Wire Rim MS64 NGC.** The striding figure of Liberty on Saint-Gaudens' design for the twenty dollar gold piece was modeled after his Sherman Monument at the entrance to Central Park. Both designs trace their inspiration back to antiquity with the Nike of Samothrace, positioned at the top of the Grand Staircase in the Louvre. This would have been a work Saint-Gaudens was familiar with from his days as a student in Paris. This particular coin has a bright yellow-golden sheen over each side with the usual smooth, satin-like finish as well. The striking details are unusually crisp throughout, and there are surprisingly few contact marks on either side of this magnificent, upper-end High Relief. (#9135)

## Gem MCMVII High Relief, Wire Rim Twenty Exceptional Satiny Surfaces

**5087** **1907 High Relief, Wire Rim MS65 PCGS.** As usual, this sale provides a wonderful choice between several High Relief double eagles, providing a wide range of quality, including this amazing Gem. The High Relief double eagles have a medallic appearance that was the intent of Augustus Saint-Gaudens. Since he was a sculptor and not so much a coin designer, Saint-Gaudens produced a design that would have been ideal for a commemorative coin or medal, or for some special coinage issue intended for collectors. He had previously designed medals for the Columbian Exposition and Theodore Roosevelt's inauguration. However, that experience was not helpful when it came to the requirements for the high-speed operations of the Mint for a regular issue coin.

This example is an amazing Gem with brilliant luster and exceptional eye appeal. Both sides are pristine with amazing surfaces that are free from any distractions. This piece actually has many of the characteristics usually associated with those coins certified as proofs. The fields are full of fine, swirling die polish lines, with a heavy buildup close to the borders. The only disqualifying characteristic is the quality of the strike, falling a little short of the requirements for a proof coin. The two grading services, NGC and PCGS, disagree about the status of such pieces. NGC will certify examples of this issue and also the Flat Rim variety as proofs, while PCGS will not grade any High Relief as a proof. We are delighted to offer this Gem example, an exceptional Mint State High Relief double eagle.

*Ex: Central States Signature (Heritage, 5/2007), lot 2389.* (#9135)

## Gem MCMVII Double Eagle
## Classic High Relief Design
## Popular Wire Rim Variety

**5088** **1907 High Relief, Wire Rim MS65 PCGS.** The friction between Mint Chief Engraver Charles Barber and Augustus Saint-Gaudens was long-standing by the time the sculptor was enlisted by the president to help redesign the nation's coinage. The first instance of conflict between the two occurred in 1892 with the design of the Columbian Exposition award medal. It was no secret that Barber resented Saint-Gaudens' interference in the design of coinage, and he sought to obstruct the production of Saint-Gaudens' designs by passive-aggressive means. The dies could not be used in regular coinage presses, the rims were too high and the coins couldn't be stacked properly, modifications would have to be made before the coins could be struck. All these objections were quickly swept away once President Roosevelt realized the coins, which he called his "pet crime" were not being struck. On November 22, 1907, he ordered production to begin immediately, "even if it took them all day and night to issue one coin." Hydraulic presses normally used for medals were employed, the wire rim was reduced in December, and by the end of that month 12,367 High Relief twenties had been struck. The difficulty with not stacking properly hardly mattered, the coins were immediately popular with collectors and brought a premium over face as soon as they were issued.

The combined efforts of President Roosevelt and Augustus Saint-Gaudens produced a coin that remains unequaled in terms of artistic merit since its issuance. Of equal importance, the production of High Relief twenties and the later, reduced relief twenties, paved the way for other sculptors and artists outside the Mint to produce coins of great artistic merit: James and Laura Fraser, Victor David Brenner, Adolph Weinman, and Hermon MacNeil all designed coins over the next 15 years of such high artistic standards that the period from 1907 through 1921 is now considered the Renaissance of American Coinage.

The present coin is a magnificent Gem, with pristine greenish-gold surfaces that are highlighted by hints of rose. The eagle and figure of Liberty show the sharp definition expected from this issue, but the sun is a little soft because of the curvature of the fields. Outstanding eye appeal complements the high technical quality. Housed in a green label holder.

*From The Klamath Mountain Collection.* (#9135)

## Thick, Satiny Gem MCMVII Twenty Wire Rim Variant

**5089** **1907 High Relief, Wire Rim MS65 PCGS.** In a comment by Burke Wilkinson for his *Uncommon Clay, The Life and Works of Augustus Saint-Gaudens*, art critic and museum curator Lewis Sharp remarked on the question of design influences on the works of Augustus Saint-Gaudens. He framed his answer in broader, generational terms rather than restricting them to specific influences. In the Paris of the 1870s and 1880s:

> "It was all around ... Everyone copied everyone else. The past was an open book ... It would have taken quite an insensitive man *not* to be influenced."

When one looks at the works of Saint-Gaudens in this light, especially his design for the twenty dollar gold coin, Sharp's comments explain much about the obvious derivative nature of both obverse and reverse of the double eagle. The obverse was taken from his own Sherman Monument at the entrance to Central Park. The striding depiction of Liberty from this figural group, and subsequent use on the twenty, was undoubtedly based upon the Nike of Samothrace in the Louvre. And the basic layout for the obverse of the twenty dollar was based on a bas-relief of his good friend Paul Dubois that dated back to the 1870s. The eagle on the reverse Saint-Gaudens freely admitted was inspired by the Flying Eagle cent; which, of course, was in turn based upon Christian Gobrecht's design from twenty years before. This was fertile ground indeed for artistic influence, and the result was the creation of the most beautiful coin ever produced. Saint-Gaudens added his own interpretation of what coins should look like, along with the urging of President Theodore Roosevelt, and both insisted the new double eagle be struck in high relief in imitation of the coins from ancient Greece. This added a three-dimensionality that had never been seen previously on American coinage. The impracticality of the new High Relief twenties mattered little to either Saint-Gaudens or Roosevelt. These were sculptural works in coin format, and the Mint would just have to adapt. This adaptation was insisted upon after Saint-Gaudens' death when the president ordered the Mint to proceed with striking the twenties in High Relief "if it took all day and night to strike a single coin." It didn't take quite that long, but it was a long and tedious process to produce the 11,250 pieces that were minted. This lovely Gem displays the usual thick, satiny mint luster and slight tinge of reddish patina. A few tiny marks can be made out with magnification, but the only one of any note is a diagonal abrasion across the breast of Liberty. (#9135)

## 1907 Saint-Gaudens Double Eagle, MS65 High Relief, Wire Rim Variety Only 12,367 Pieces Struck

**5090** **1907 High Relief, Wire Rim MS65 PCGS. CAC.** Although the obverse of the Saint-Gaudens double eagle harkened back to classical art, the reverse drew inspiration from Longacre's Flying Eagle cent, which in turn was influenced by Gobrecht's 1836 silver dollars. This design originated from sketches by Titian Peale, son of the famous artist Charles Willson Peale and brother of Philadelphia Mint Chief Coiner Franklin Peale. Saint-Gaudens considered the Flying Eagle cent to be his favorite United States coin, and on June 28, 1906, he wrote to President Roosevelt:

> "Now I am attacking the cent. It may interest you to know that on the 'Liberty' side of the cent I am using a flying eagle, the modification of the device which was used on the cent of 1857. I had not seen that coin for many years, and was so impressed by it that I thought if carried out with some modifications, nothing better could be done. It is by all odds the best design on any American coin."

It appears that Herman C. Hoskier, a banker-turned-scholar, was the first to suggest a flying eagle for the reverse of the double eagle in a now-lost letter to Augustus Saint-Gaudens. At the time, the artist intended to have a winged figure of Liberty on the obverse, and he wrote to Hoskier that he was hesitant about "overdoing the spread wings."

On June 20, 1906, in response to an inquiry from Saint-Gaudens, Mint Director George Roberts wrote that there were no legal objections to using a Flying Eagle design on the cent, but he was incorrect. When the artist later learned that the eagle was impermissible on the cent, he decided, rather than waste months of hard work, to move the design to the reverse of the double eagle. The obverse was then simplified to avoid having two sets of "spread wings" on the coin, and the Saint-Gaudens double eagle took its familiar form.

This impressive Gem example exhibits the sharply detailed central devices produced by multiple blows of the coining press, with vibrant mint luster and smooth greenish-gold surfaces. The Wire Rim was produced in the period before mid-December 1907, when metal was squeezed between the collar and the die during striking. This feature was eliminated in later strikings, because of stacking problems, but collectors have always found the Wire Rims endearing. Housed in a green label holder.

*From The Klamath Mountain Collection.* (#9135)

## Gem 1907 High Relief Twenty Pleasing Wire Rim Variety

**5091** **1907 High Relief, Wire Rim MS65 PCGS. CAC.**

"What garlic is to salad, insanity is to art."
—Augustus Saint-Gaudens

"Realism, Naturalism, Influenced by the Renaissance." These terms all apply to the sculpture of Augustus Saint-Gaudens. Another term that might well apply is "19th century." His sculpture transcended the throwback to Neoclassicism that was so popular for much of the 19th century; instead, he embraced Realism in a sense not practiced since Michelangelo. From the above quote it is easy to imagine what Saint-Gaudens' opinion would be of the sculpture of Alberto Giacometti, Constantin Brancusi, or Henry Moore. But these sculptors worked in and represented the 20th century. It is ironic that one of Saint-Gaudens' final commissions, the twenty dollar gold piece, is universally understood to represent the ascendancy of America on the world stage in the 20th century, yet his training and most of his works were accomplished in the 19th century. Nevertheless, he was able to combine the real with the ideal on the design for the double eagle, produce it in high relief format, and create an immediately recognizable icon for American progress and dominance for the 20th century. And Saint-Gaudens vision of America was produced when the new century was only seven years old.

These tangible remnants of Saint-Gaudens' vision for the new century have been collectible since they were first issued in 1907. The famous High Relief claims a limited mintage of just 12,367 pieces, and many consider this design the most beautiful ever conceived for an American coin. The coin offered here is a spectacular Gem, with razor-sharp definition on the central devices and lustrous yellow and greenish-gold surfaces. The Wire Rim feature was perceived as a problem for practical reasons, but numismatists have always prized the issue for its distinctive quality. Housed in a green label holder.
*From The Klamath Mountain Collection.* (#9135)

## 1907 Wire Rim High Relief Twenty
## Exceptional MS67 Example
## One of the Finest

**5092** **1907 High Relief, Wire Rim MS67 NGC.** The term "The American Century" is often used to underline the United States' importance in matters of finance and warfare. But just as surely as the centers of power in these areas shifted from London and Paris in the 19th century to New York and Washington, D.C. in the 20th century, it also slowly shifted in the world of art. In artistic endeavors America was never completely dominant, but it took on more and more of a leadership role as the new century evolved. In 1878 French dominance of the art world was so complete that the sculpture section of *Gazette des Beaux-Arts* declared: "It has so often been stated that our school of sculpture is at present the highest expression of our art and the guardian of its dignity, that there is little point in re-stating here what is an incontestable truth." The conclusion about American art is basically there was none: "It is hardly surprising that America, born only yesterday, and with no history or past, should not yet have a national art."

Augustus Saint-Gaudens was chosen to be a judge on the panel for the American sculptural section of the 1878 Universal Exposition. Only twenty-two years later, in 1900, Saint-Gaudens was awarded the Legion of Honor, and his works were accepted into the Musée du Luxembourg. In those 22 years between judge and Legion of Honor recipient, Saint-Gaudens transformed sculpture in America from an artistic afterthought to a preeminent form of artistic expression in the newly emerging nation. His drive and ability to infuse feeling and expression into stone, marble, or metal was what so captured the attention of President Theodore Roosevelt. The president saw an opportunity to align his interests with those of the sculptor, with the result being a Renaissance in American coinage, a Renaissance that outlived Saint-Gaudens and outlasted Roosevelt's term in the White House. Saint-Gaudens infused the same feeling and naturalism to the ten and twenty dollar coins he created as he did the Farragut, the Shaw Memorial, or the Adams Memorial. With the teamwork of Roosevelt and Saint-Gaudens, American numismatic designs quickly evolved from workmanlike to objects that bordered on art. That is especially the case with the High Relief twenties. They were totally impractical as a circulating medium, yet produced in sufficient quantities that most contemporary collectors could obtain one with a little effort.

At the upper end of the grading scale, there are remarkably few High Reliefs known. This is surprising since almost all of the mintage of 11,250 pieces was set aside. This is an exceptional piece that displays shimmering, satiny luster. We have tried and tried to trace the pedigree of this coin. It does not appear to have come out of a recent auction. The surfaces are essentially mark-free. The only identifier we see is a short mark across the A in STATE on the upper reverse. Breathtaking quality. Census: 7 in 67, 1 finer (11/11). (#9135)

## Bright 1907 High Relief Twenty Flat Rim Variant, MS64

**5093** **1907 High Relief, Flat Rim MS64 NGC.** High Relief double eagles have been popular with collectors since first appearing on the scene a century ago, not strictly for reasons of rarity — although they are by no means common in an absolute sense — but because the beauty of Augustus Saint-Gaudens' depiction of an advancing Liberty transcends numismatics into fine art. These coins are known with two different edge variations — Wire (or Knife) Rim, and Flat Rim, although the latter is a bit of a misnomer, as most such coins, including the present example, carry more than a trace of raised metal around the rim.

This piece has an impressive metallic sheen under pale gold color on the obverse, with the reverse showing a bit of an orange tint. A couple of minor, grade-defining marks appear in the sun's rays above the Capitol building, but the overall eye appeal is unquestionably impressive.

*Ex: Central States Signature (Heritage, 5/2007), lot 2392.* (#9136)

## Gem High Relief Twenty
## Much Scarcer Flat Rim Variant

**5094** **1907 High Relief, Flat Rim MS65 PCGS.** The story of the High Relief twenties is well-known to numismatists. President Theodore Roosevelt personally asked famed sculptor Augustus Saint-Gaudens to rework several of the more uninspired coinage designs that were current in 1905. Over the next two years, in spite of declining health, Saint-Gaudens produced plaster models for the ten dollar and twenty dollar gold pieces. Each of these denominations went through several modifications before working dies were produced within the Mint that led eventually to the production of millions of gold coins. The Flat Rim variant of the High Relief is actually another minor, but significant modification that was made to the High Relief design. To produce each coin, between five and seven blows from a hydraulic press were required to fully bring up the details in the dies. However, it was soon discovered that in the striking process a tiny rim of extruded metal protruded between the die and the collar, producing the so-called Wire Rim variant. This was perceived as a problem by Mint personnel, not as an aesthetic element as it is by collector's today. The answer to the "problem" of the Wire Rim was the creation of the Flat Rim coins, pieces that had no extruded metal on either side. Such pieces are four to five times scarcer than their Wire Rim counterparts. This particular coin shows strong, bold definition throughout and the satiny surfaces are virtually free from any post-striking defects. Rarely seen in Gem condition and an important coin for advanced gold collectors.

*Ex: ANA Signature (Heritage, 8/2004), lot 7544; Dallas Signature (Heritage, 11/2005), lot 2485.* (#9136)

## High Relief 1907 Twenty Dollar
## Flat Rim Variant
## Magnificent MS66 Example

**5095** **1907 High Relief, Flat Rim MS66 PCGS. CAC.** Augustus Saint-Gaudens was not above borrowing artistic ideas from others as well as from his own previous works. The striding figure of Liberty on the High Relief twenty from 1907 owes an obvious nod to the Nike of Samothrace in the Louvre, a work Saint-Gaudens was undoubtedly familiar with from his study at the Beaux-Arts school in Paris in the late 1860s, and also from occasional visits to the City of Lights in later years. He even had a studio in Paris in the late 1890s and completed the Sherman Monument there. The figure of Victory that forms a central part of the Sherman Monument was the predecessor of the figure of Liberty seen 10 years later on the High Relief double eagles. The Victory figure was completed in stages as related by Thayer Tolles in *Augustus Saint-Gaudens in the Metropolitan Museum of Art*:

> "Once in Paris Saint-Gaudens worked obsessively on the winged allegorical figure of Victory that he had begun modeling in New York in early 1897. First, as was his custom, he sculpted the figure undraped. He used a highly sought-after artists' model, Hettie Anderson, an African American woman whom he said had 'a figure like a goddess.' Later, in Paris, he found the arrangement of the drapery for the clothed version of Victory particularly challenging, spending two weeks arranging flowing cloth on four different models to arrive at the desired swirling, windswept effect."

When a similar allegorical figure was needed for the double eagle, it proved a relatively easy task to adapt and slightly rearrange the figure of Victory and transform it into Liberty. After the wings, palm branch, and laurel crown were dropped from Victory, and a torch and an olive branch were added, the figure became the central motif seen on the obverse of the double eagle. In both cases the striding figure is dynamic and powerful. The two weeks Saint-Gaudens spent arranging the drapery gives Victory/Liberty the windswept appearance similar to that seen on Hellenistic statuary — perfect for a coin President Roosevelt wanted modeled after the high relief pieces produced in ancient Greece.

This is a magnificent example of the latter-stage Flat Rim variant of the High Relief twenty. The surfaces exude a bright yellow-gold, satiny sheen that gently rolls around each side as the coin is angled beneath a light source. The striking details are complete in all areas, including full separation of UNITED STATES OF AMERICA from the upper reverse rim. There are, of course, no mentionable contact marks on this remarkable coin.

*From The Jim O'Neal Gold Type Collection.* (#9136)

## MCMVII Flat Rim High Relief Twenty, MS67 Astonishing Quality, Virtually Perfect Surfaces

**5096** **1907 High Relief, Flat Rim MS67 NGC.** Augustus Saint-Gaudens was known for being a slow and meticulous worker. His Shaw Memorial in Boston took 14 years to complete. In the two years he had to work on the ten and twenty dollar gold pieces, the correspondence between the sculptor and President Roosevelt shows how far the design evolved from the initial concept. In a 1905 letter to Roosevelt, Saint-Gaudens outlined his then unfocused idea for the design on the twenty dollar:

> " ... some kind of (possibly winged) figure of Liberty striding energetically forward as if on a mountain top, holding aloft on one arm a shield bearing the stars and stripes with the word 'Liberty' marked across the field, in the other perhaps a flaming torch, the drapery would be flowing in the breeze. My idea is to make it a living thing and typical of progress ... "

Roosevelt wanted to add an Indian headdress on the figure of Liberty, and Saint-Gaudens made a plaster of such a depiction of Liberty. But it is evident from reading the above initial concept that while the main idea of the figure of Liberty and the basic layout remained, many figural elements changed before the High Relief twenties were actually struck.

One of the unexpected design elements was the presence of a wire rim around most High Reliefs. This "fin," as it was called by Mint employees, was actually extruded metal between the collar and die face when the planchet was struck multiple times by the powerful hydraulic press. This was seen as a design flaw, and modifications were made to eliminate it. The modifications were only partially successful, and the Flat Rim coins we have seen have invariably had some portion of the wire rim still remaining. This coin was certified before NGC designated High Reliefs as either Wire Rim or Flat Rim. We have called it a Flat Rim, primarily because there is significantly more flatness on the rims than any trace of a wire or fin. Beyond that, the surfaces are wonderful. The rich yellow-gold luster is bright and satiny. We just do not see any contact marks that would aid in tracing the pedigree of this magnificent High Relief. Census: 16 in 67, 2 finer (11/11). (#9136)

## SAINT-GAUDENS DOUBLE EAGLES

### 1907 Arabic Numerals Double Eagle, MS67 Among Finest Certified Fully Struck

**5097** **1907 Arabic Numerals MS67 PCGS. CAC.** By June 20, 1907, Augustus Saint-Gaudens and President Theodore Roosevelt had agreed that the double eagle should be struck in low relief and with the date in European digits. The sculptor's assistant, Henry Hering, was supposed to begin work on low relief models right away, but when Roosevelt decided to have a separate design for the ten dollar coin, everything was put aside so that new models could be prepared. The result was that nothing was done about the double eagle until after Saint-Gaudens died. By mid-August, Hering at last began the work. His sculpting went quickly and by September 20 he had completed the third and last set of double eagle models. These were sent to Philadelphia where reductions and hubbing were begun immediately.

Charles Barber made working dies and struck a few samples, but quickly realized that much of the fine detail had been lost in the process. With President Roosevelt demanding gold for circulation use, Director Leach and Barber agreed to alter the hubs that had already been made. Much of his work consisted of re-engraving details lost during reduction of the final models. Using the High Relief version as a guide and his own judgment as to line depth, Barber succeeded in making changes in a manner that has proven elusive until the present. According to recent research by Roger Burdette, we now know that circulation dies came from Hering's plaster model, with European date, after Barber retouched the original hub. Thus, it is now known that the High Relief and Low Relief coins originated with different design models.

Superb examples are rarely seen of the 1907 Low Relief. The present example is among the finest certified by both PCGS and NGC. Only 13 other PCGS coins have been certified in MS67 and seven have been so graded by NGC, with none finer at either service (11/11). The frosted surfaces yield potent luster and show a light overlay of reddish and mint-green patina. The design features are fully struck throughout, with complete definition on the pillars of the Capitol building, the fingers on Liberty's hand, and the eagle's plumage. There are no mentionable or noticeable marks on either side of this impeccably preserved, magnificent specimen.

*Ex: Heritage Auctions (8/2004), lot 7547; Long Beach Sale (Heritage Auctions, 2/2005), lot 9453; Kutasi Collection (Heritage Auctions FUN Sale, 1/2007), lot 3260; Long Beach Sale (Heritage Auctions, 2/2008), lot 2788.*

*From The Jim O'Neal Gold Type Collection.* (#9141)

## 1908-D Motto Twenty Dollar, MS66 Sharply Struck

**5098** **1908-D Motto MS66 PCGS.** A hoard of several hundred 1908-D with Motto double eagles uncovered in Central America in 1983 elevated the Mint State population through near-Gem. Gems can be located with patience and searching, but Premium Gems are scarce and higher-grade pieces are quite rare.

This MS66 specimen displays yellow-gold color laced with hints of mint-green. Its frosty surfaces yield pleasing luster and exhibit sharply struck design features, including virtually full detail on the fingers of both hands, on the panels of the Capitol building, and the eagle's plumage. Some minute marks concealed within the eagle's feathers do not detract. Population: 25 in 66, 3 finer (11/11). (#9148)

## 1908-S Twenty, MS64 Memorable Mintage of Only 22,000 Pieces

**5099** **1908-S MS64 PCGS.** All San Francisco Mint double eagles of this design type were from the With Motto design type. With a mintage pegged at just 22,000 coins, this issue has the distinction of being the lowest-mintage date of all With Motto coins. Although some examples of this date have been returned from overseas, this remains an elusive date in all grades. This is an impressive coin, nearly Gem quality, with sharp design definition and satiny orange-gold luster. Only a few small marks, including a tiny nick on the inside of Liberty's knee, preclude an even finer designation. Population: 29 in 64, 28 finer (11/11). (#9149)

## 1909-D Double Eagle, MS64+
## Low-Mintage, Early-Series Issue

**5100** **1909-D MS64+ PCGS.** The 1909-D Saint-Gaudens double eagle is a low-mintage issue that remains scarce today in grades up to the Select level. Choice Mint State examples are quite elusive, and Gems are nothing short of rare. A high-end Choice specimen, like the present coin, offers an excellent balance of quality and value for the series specialist.

The coin offered here is sharply detailed throughout, with a short, squat, but well-defined mintmark. The pleasing orange-gold surfaces radiate vibrant mint luster, and only a few minor contact marks are evident. Population: 13 in 64+, 21 finer (11/11). (#9152)

## Multihued Gem 1911 Double Eagle

**5101** **1911 MS65 NGC.** Both sides of this Gem 1911 double eagle are equally attractive but present distinct appearances. The obverse has a peach-orange tint to yellow-gold surfaces and appreciable cartwheel luster with a little flash, while the reverse displays a greenish overtone at certain angles while presenting as peach-gold otherwise. The luster on the reverse is also a touch more intense. Aside from a few tiny marks and a small scrape hidden in the reverse rays, this is a carefully preserved example. NGC has certified a mere 14 numerically finer pieces (9/11). (#9157)

## 1911 Twenty Dollar, MS65 Extraordinary Ex: Browning Coin

**5102** **1911 MS65 NGC.** Ex: Browning. This is an exceptionally attractive Gem 1911 twenty. The surfaces are so clean, so lustrous, so sharply struck, it makes one wonder: How nice does a coin have to be to grade MS66? The Jeff Browning catalog, a.k.a. The "Dallas Bank" Collection, described the coin this way: "Of a very pleasing, pale yellow gold hue. The obverse fields are fully satiny smooth, showing completely unbroken mint frost. With but a couple of tiny field marks, most noticeable on the reverse." The coin realized $4,600 on a $2,000-$2,500 estimate.

*Ex: "Dallas Bank" Collection (Sotheby's/Stack's, 10/2001), lot 167.* (#9157)

## 1911 Gem Double Eagle Sharply Struck

**5103** **1911 MS65 PCGS Secure.** The 1911 double eagle can be obtained with relative ease in Mint State grades through near-Gem. The certified population takes a precipitous drop at the MS65 level, where PCGS and NGC have graded fewer than 80 pieces, a number of which are likely resubmitted or crossover coins. The two services have seen only 25 specimens finer.

The current Gem displays honey-gold patination residing on lustrous surfaces, and an exacting strike leaves sharp definition on the design elements, including Liberty's facial features and fingers, the Capitol building, and the eagle's feathers. Well preserved surfaces reveal no more marks than expected for the grade designation. Population: 34 in 65, 10 finer (11/11). (#9157)

## 1913-S Double Eagle, MS65 Above-Average Strike

**5104** **1913-S MS65 PCGS. CAC.** The 1913-S double eagle can be located in Mint State grades through near-Gem with patience and searching. Few Gems are known, however, and the issue is virtually unobtainable any finer.

Potent luster on this MS65 example emanates from the peach-gold surfaces laced with whispers of mint-green. The design elements are well impressed, including the lower obverse, an area often revealing weakness (David Akers, *20th Century United States Gold Coins*, p. 269). Both sides have been well cared for, which is unusual for the issue that is typically bagmarked. Population: 21 in 65, 1 finer (11/11).

*Seller is donating a portion of their proceeds, and Heritage is donating the same portion of the Buyer's Premium, from the sale of this lot to the National Numismatic Collection at the Smithsonian Institution. See page 3 for details.* (#9163)

## Gem 1914 Double Eagle Five-Figure Mintage

**5105** **1914 MS65 PCGS.** The 1914 Saint-Gaudens issue is one of the many series entries that confirm that there is not necessarily a relation between the initial mintage figures and the subsequent survival rates. Hoarding, exporting, repatriation, mass meltings, and happenstance have all played major roles in the survivorship of one issue over another. In the case of the 1914 twenty, while only 95,200 coins were produced, judging from the population figures it appears as though somewhere from 6% to 10% of that original mintage survives today, including both certified and "raw" specimens.

PCGS has certified 36 coins as MS65, including the present example, with two pieces numerically finer (11/11). Intermingled greenish-gold and hazel-gray combine delightfully on both sides of this Gem, with wonderful bright-frosted luster radiating from distraction-free surfaces. A real treat for the Saint-Gaudens enthusiast. (#9164)

## 1915 Double Eagle, MS65 Variegated Color

**5106** **1915 MS65 NGC.** This Gem Saint-Gaudens twenty from Philadelphia has distinctive coloration, primarily orange-gold over sun-yellow with a significant greenish overtone that appears when the surfaces are tilted away from the light. Features such as Liberty's torch hand are a trifle softly struck, but the definition is better elsewhere. While the 1915 double eagle defies its lower mintage to be a relatively accessible date in grades through MS64, better examples such as the present piece prove far more elusive, and are actually condition rarities. Census: 40 in 65, 1 finer (11/11). (#9167)

## Super-Slider AU58+ 1920-S Double Eagle
## 'The Closest Thing to Mint State'

**5107** **1920-S AU58+ PCGS. CAC.** If mintages alone determined rarity, the 1920-S would be among the more available Saint-Gaudens dates. The truth is far more complicated: the patterns of gold commerce and the mass meltings of the 1930s severed the relationship between mintages and survival, especially for many of the post-World War I branch mint issues, of which the 1920-S was the first. Garrett and Guth write, "The 1920-S double eagle is one of the most significant rarities of this series. ... No significant numbers have turned up from overseas hoards, and the few that remain are apparently simply here by chance."

Perhaps most intriguing about the present example is its grade, AU58+. Only a couple of tiny flat spots are visible on the obverse, most notably at the upper gown and raised knee, yet the luster of the apricot-gold fields is all but intact. In the past, an AU58 coin such as this would have traded as a "slider." Today, it is the closest thing to Mint State without the attendant price tag, a potential boon to collectors putting together an otherwise Mint State set of Saint-Gaudens twenties.

As mentioned above, the luster is nearly intact and has a subtle warmth. A narrow grease streak links the tops of the letters in LIBERTY, adding character as well as a distinctive pedigree marker. Lightly abraded, including a scrape just above the eagle's higher wing, with a typical strike for the date that includes softness on the Capitol building and to a lesser extent on other peripheral devices. (#9171)

## Select 1920-S Saint-Gaudens Twenty
## Rare Key Issue in High Grade

**5108** **1920-S MS63 PCGS.** In Mint State grades, the 1920-S double eagle is more difficult to locate than the prized 1927-D, 1929, 1930-S, 1931-D and 1932 issues and ranks as one of the premier rarities in the Saint-Gaudens series. In an average year, the elusive, heavily melted 1920-S makes a handful of auction appearances most often in lightly circulated condition, those few pieces having entered commerce for a few years and subsequently having survived the gold recall of the 1930s. While not the extraordinary rarity in Uncirculated condition that it was a generation ago, when Walter Breen estimated only 8-12 examples were extant, this issue still compares favorably with most of the elites of the Saint-Gaudens series in Mint State. Even after the release of a small number of coins from European banks during this time frame, Select pieces are quite rare and there are fewer than 20 examples known in finer grades.

This impressive Select specimen has the soft, frosted luster expected of Uncirculated survivors and displays blushes of reddish patina over both sides in addition to a hint of pastel-gold at the margins. Surface marks are generally modest, with several abrasions that are confined mostly to the right obverse field. A short contact mark on the ray below the olive branch could serve as a pedigree marker. Overall eye appeal is outstanding. An important offering for the quality-conscious 20th century gold specialist. Population: 11 in 63, 17 finer (11/11).

*Ex: Long Beach Signature Auction (Heritage, 2/2000), lot 6900, realized $33,350; FUN Signature Auction (Heritage, 1/2005), lot 30564, realized $55,200.* (#9171)

## 1921 Double Eagle, Unc Details
## Rarest Saint-Gaudens Twenty in High Grade

**5109** **1921 — Improperly Cleaned — NGC Details. Unc.** The 1921 Saint-Gaudens double eagle is the most difficult collectible issue of the series to locate in high grade, even eclipsing such rare dates as the 1927-D and the famous Late-Dates of the series. The coins were all minted late in the year, apparently intended as currency reserves, and only a small number were ever released into circulation.

It seems unlikely that many of these coins were used in international trade, as only a few scattered examples have turned up in European banks over the years. A few specimens were preserved by Mint personnel and Treasury Department officials, who rescued the coins from the massive government melts of the 1930s and sold them to Eastern coin dealers at a small profit. A few collectors obtained specimens through official channels, as well. Unfortunately, the great majority of the mintage of 528,500 pieces was melted, transformed into gold bars, and stored at the Fort Knox Bullion Repository.

Experts believe 90-130 examples of the 1921 are still extant, with about half of that total in circulated condition. The Mint State population is concentrated in lower Uncirculated grades, and an attractive Unc Details example is a prize for the Saint-Gaudens specialist.

The present coin is a pleasing specimen, with well-detailed design elements and slightly subdued mint luster. The strike is a little soft on the figure of Liberty and the lower left obverse, as often seen on this issue. The fields are lightly abraded, but a few diagonal contact marks show on Liberty's upper thighs and midsection. Attractive yellow and rose-gold patina graces both surfaces. This coin remains an appealing example of this sought-after date, and the astute collector will recognize this as an important opportunity. (#9172)

## Choice 1924-D Double Eagle Predominantly Melted Issue

**5110** **1924-D MS64 PCGS.** The 2012 Guide Book states a mintage of 3,049,500 pieces, but what it omits is how much of the mintage was eventually melted. Like most branch mint issues from the 1920s and 1930s, the production remained largely in Treasury vaults until the FDR gold recall in 1933. Although the 1923-D was exported in quantity to Europe, the 1924-D is very scarce today. Most survivors are in MS62 to MS64 grades. The present orange-gold and olive-green example is above average for the issue, since the lustrous surfaces exhibit only moderate marks and there is no indication of high point friction. (#9178)

## Gem 1924-S Double Eagle
## Historic Condition Rarity
## Only One Finer Coin at NGC

**5111** **1924-S MS65 NGC.** The 1924-S Saint-Gaudens double eagle claims a mintage of more than 2.9 million pieces, but the issue is scarce in all grades in today's market, and coins at the Gem level are major rarities. Most of the large mintage was melted after the Gold Recall of 1933, making the reported production figures totally irrelevant. In fact, during the decade of the 1940s, the 1924-S was regarded as the rarest date of the series, with prominent coin dealers like B. Max Mehl and Abe Kosoff estimating the surviving population at just 3-6 pieces. Fortunately for present-day collectors, a number of coins were discovered in European banks, beginning in the 1950s, causing the 1924-S and many other double eagle issues to become more available. Currently, NGC and PCGS have certified nearly 1,000 coins in all grades, but that total undoubtedly includes many duplicate submissions.

On the other hand, when collectors seek a truly high-quality example of the 1924-S, they find the situation has changed little from the early days of the 1940s. The coins found in European holdings were subjected to the rigors of transport and storage in bags with other large gold coins. Few examples escaped without significant surface marks, and the great majority are in lower Uncirculated grades, below MS64. At the Gem level, the same handful of pristine survivors that were in the hands of collectors in the 1940s constitute the available supply. NGC has certified 19 specimens in Gem condition, with a single example in MS66, while PCGS has graded only two coins in MS65, with a single piece finer at MS67 (11/11). Even these small totals probably include some resubmissions and crossovers.

The present coin is a spectacular Gem, with well-detailed design elements and vibrant mint luster. The light orange-gold surfaces display attractive rose highlights, and only the most minor signs of contact are evident. As in the historic days of the 1940s, specimens of this quality are seldom encountered. The discerning collector should bid accordingly.

## 1925-D Double Eagle, MS64 Sharply Struck

**5112** **1925-D MS64 PCGS.** While some of the nearly 3 million 1925-D double eagles minted were released into general circulation (reflected by a few About Uncirculated and lower-grade certified examples), most were apparently sent to Europe as exchange payments and remained stored in bank vaults. These represented the bulk of the coins that escaped the meltings of the 1930s. According to David Bowers in his book *American Coin Treasures and Hoards*:

> "During the late 19th and early 20th centuries Swiss and other foreign banks were not the slightest bit interested in holding U.S. paper money, and when President Franklin D. Roosevelt called in gold coins in 1933-1934, Swiss and other banks held on to their gold reserves more tightly than ever."

A mix of yellow-gold and apricot patination runs over the highly lustrous, frosty surfaces of this near-Gem representative. The design elements are sharply impressed, including the fingers on Liberty's hands and the eagle's plumage. A few minute marks preclude Gem classification. The 1925-D is scarce in MS64 and rare any finer. PCGS has seen only seven pieces finer (11/11). (#9181)

## Choice 1925-S Saint-Gaudens Twenty Only Four Finer Coins at NGC

**5113** **1925-S MS64 NGC.** The 1925-S Saint-Gaudens double eagle is a condition rarity in the series, the only mintmarked issue from the 1920s that is seen more often in circulated grades than Mint State. Unlike many dates of the series, the 1925-S never surfaced in large quantities in overseas holdings. Examples in MS64 condition are rare in today's market.

The present coin is an attractive Choice example, with sharply detailed devices that show the slightest touch of softness on Liberty's torch hand and some of the eagle's feathers. Some die striations are noted at O in DOLLARS. The fields display pleasing green and yellow-gold color, with vibrant mint luster and strong eye appeal. Census: 21 in 64, 4 finer (11/11). (#9182)

## 1925-S Double Eagle, MS64+
## Prime Condition Rarity
## Only Four Finer Coins at NGC

**5114** **1925-S MS64+ NGC.** The 1925-S Saint-Gaudens double eagle was produced in huge numbers, but the great majority of the mintage was destroyed after the Gold Recall of 1933. The issue has always been recognized as a scarce date, but the coin's real distinction is as a condition rarity. In their *Handbook of 20th Century United States Gold Coins 1907-1933,* David Akers and Jeff Ambio state:

> "Scarce-to-rare in all grades, the 1925-S is one of the leading condition rarities in the Saint-Gaudens Double Eagle series. Even MS-64s are elusive, and the combined population of Gems and Superb Gems is less than 10 coins."

Population data from the leading grading services confirms these assertions, as NGC has certified two coins in MS65, one example in MS66, and one specimen in MS67, while PCGS has graded two Gems, one Premium Gem, one Superb Gem, and a single piece in MS68, for a combined total of just nine coins (11/11). The 1925-S is the only mintmarked Saint-Gaudens double eagle of the decade that is easier to locate in circulated condition than Mint State. With such a small supply of high-grade coins available, this high-end Choice example should provide a good balance of quality and value.

The coin offered here is a well-detailed specimen, with fine definition on the Capitol building and just a touch of softness evident on the eagle's feathers. The attractive yellow and greenish-gold surfaces display vibrant mint luster, unusually frosty for the issue. The only surface marks of note are a few minor digs in the left obverse field at 9 o'clock. Visual appeal is outstanding. Census: 1 in 64+, 4 finer (11/11). (#9182)

## 1926-D Twenty, MS63
## An Enduring Scarcity in the Series

**5115** **1926-D MS63 PCGS. CAC.** While other issues in the Saint-Gaudens series, such as the 1922-S and 1926-S, were once considered great rarities, over the past 50 years substantial hoards of these have been found in European bank vaults. In fact, very few of the rarities from the 1940s and early 1950s have withstood the test of time. However, the 1926-D is one that has. Probably fewer than 300 pieces are extant today in all grades, and the vast majority of those are MS62 or less. When writing the reference on the ten Indians and Saint-Gaudens twenties in the Morse Collection, we compared the 1926-D to the 1925-S, an issue that is similarly unavailable in the better grades of Uncirculated. However, one striking dissimilarity between the two issues are the large number of circulated 1925-S twenties that are known. Apparently an effort was made to actually circulate that issue, but only a couple of dozen circulated 1926-D twenties are known.

As initially indicated from the CAC sticker, this is a premium coin for the grade. Much of this comes from the subtle interplay of reddish-golden and lilac color on each side. The surfaces are also remarkably clean for the MS63 grade. The only marks of any note are a diagonal series of shallow abrasions that trails down to Liberty's right (facing) arm from the T in LIBERTY. A short, diagonal abrasion is also located just below the bottom of the R in LIBERTY. Sharply defined as well, the only area of softness is seen on the Capitol building, but this appears to be a trait common to most 1926-D twenties.

*Ex: ANA Signature (Heritage, 7-8/2008), lot 2122.* (#9184)

## MS65 1926-S Twenty
## Seldom Seen So Fine

**5116** **1926-S MS65 PCGS.** Just a fraction of the coins from this issue are believed to be extant from an original mintage of more than 2 million pieces, and the Mint State population dwindles rapidly above the Choice level. This Gem has a pleasing, nearly full strike, and also displays exceptionally appealing medium golden-orange color. The glowing satiny luster is lovely as well, if not flashy, and helps to accent the exquisitely preserved features. Only the smallest abrasions can be seen with magnification. This is an uncommonly attractive and minimally abraded example of this mass-melted issue. Most certified 1926-S Saints fall into the MS62 to MS64 grade range, and specimens grading as high as the present example can be considered very scarce. Population: 31 in 65, 2 finer (11/11).

*Ex: Central States Signature (Heritage, 5/2005), lot 9183.* (#9185)

## 1928 Saint-Gaudens Twenty, MS67
## Just One Coin Certified Finer

**5117** **1928 MS67 PCGS.** The 1928 is famous as the highest mintage double eagle, and a generous number of survivors exist in typical Mint State grades. However, Superb Gems are rare, since most pieces expatriated from Europe were indifferently handled and loosely stored. The present piece has exceptional eye appeal due to an absence of consequential abrasions. The smooth lime-green and apricot surfaces are well struck and awash in luster. Strictly as an identifier, we note a minute spot on the reverse margin near 8:30. Population: 70 in 67, 1 finer (11/11). (#9189)

## Choice 1929 Double Eagle
## First of the Late-Date Saints
## Elusive Semi-Key Issue

**5118** **1929 MS64 PCGS.** Two major disruptions in global trade affected production of the American double eagle, which was struck more for international consumption than domestic use during much of its 20th century run. The first and more famous disruption, World War I, led to a multiyear hiatus in the denomination. The second disruption was the onset of the Great Depression. Garrett and Guth (2006) discuss the 1929 double eagle in this context:

> "As seen on earlier mintmarked issues, the 1929 double eagle was summarily rounded up and melted down in the 1930s. Few examples of this issue had left the country at this time, as the world economies sunk into a deepening depression, which started in mid-1929 with contracting trade and was loudly announced by the American stock market crash on October 29, 1929."

By combined certified populations, the 1929 is on roughly the same tier of rarity as mintmarked issues such as the 1927-S and 1926-D, a gateway issue that marks the transition to the even rarer end-dates such as 1930-S and 1931. Garrett and Guth note, "Beginning with the 1929 double eagle and continuing through the 1933 issue, any collector who undertakes obtaining these issues does so with extreme care and financial fortitude."

This charming Choice Mint State coin offers excellent quality and eye appeal for its grade. Both sides are well struck save for Liberty's torch hand, and the yellow-orange luster on each side is strong and pleasing. Minimally marked, with an appearance that comes tantalizingly close to Gem standards. PCGS has graded 30 numerically finer pieces (11/11). (#9190)

## 1929 Saint-Gaudens Twenty, MS65 Exceptional High-Example of This Rarity

**5119** **1929 MS65 PCGS.** The year 1929 marks a distinct line of demarcation in the Saint-Gaudens double eagle series between common and rare. The 1928 Philadelphia twenty is a well-known and popular type issue that is well-produced and generally available in high grades. The David Akers *Handbook* (second edition, 2008) says, "The 1928 is one of the most common Saint-Gaudens Double Eagles, and it is obtainable in quantity in all grades from MS-60 to MS-66."

On the other hand, each Saint-Gaudens double eagle, beginning with the 1929 and continuing through the series' end in 1933, is a major rarity. Excluding the uncollectible 1933s, the five issues that usher in the series' end comprise the 1929, the 1930-S, the 1931 and 1931-D, and the 1932. Of those five issues, the 1929, while still quite rare in an absolute sense, is the most available overall. Most examples of the 1929, however, are confined to the lower Mint State grades, and in Gem and finer condition, the issue takes a sudden leap upward, becoming rarer than the 1931 and 1932 issues.

Writing in the 1988 edition of the *Handbook,* Akers commented that there is little appreciable rarity difference from MS60 to MS63 for the 1929,

> " ... since there are as many choice Mint State examples of this issue in existence as there are minimal Mint State ones. I have seen only a few really exceptional quality 1929 double eagles, coins that were definitely better than MS-65, but I know of at least two in prominent private collections that have strong claim to grading full MS-67. However, I have seen more super examples of the 1931 and 1932 than I have of the 1929, so it may come as a surprise to some that one is probably more likely to be able to find an MS-65+ or better 1931 or 1932 than a similar quality 1929."

This is an exceptional MS65 example, and is seldom seen as such. The surfaces are satiny and virtually unmarked. The strike is complete throughout, and each side displays light, even orange-gold color. (#9190)

## 1931 Saint-Gaudens Twenty, MS63
## Only 66-85 Pieces Believed Known

**5120** **1931 MS63 PCGS.** The 1931 Saint-Gaudens double eagle is one of the premier rarities in the 20th century U.S. gold series, and any auction appearance is a noteworthy, and frequently record breaking, numismatic occasion. Last year's sale of the finest-known specimen, a stunning PCGS graded MS67 example, in the ANA Signature Auction (Heritage, 8/2010), lot 3650, realized $322,000. While the present coin may not equal the fantastic quality of that piece, its appearance is sure to generate excitement among series enthusiasts.

The 1931 is one of the famous "late dates" of the series — coins that were primarily held in domestic banks and Treasury vaults from the day they were minted until the day they were melted, after the Gold Recall of 1933 — whose mintage figures are meaningless in relationship to their availability today. The 1931 claims a huge reported mintage of 2.9 million pieces, but virtually all of this production was never released into circulation. Ground-breaking research by Dr. Charles W. Green in the 1940s suggests only 45 coins were actually released through official channels. It is certain that other examples were saved by Mint personnel and Treasury officials, who made a cottage industry of exchanging common-date double eagles for the 1931-dated coins, and selling the 1931s to Philadelphia and New York area coin dealers, but the supply has always been quite small. Noted gold specialist David Akers believes the 1931 is the sixth rarest coin in the 53-coin series, with a surviving population of 65 to 85 specimens in Mint State. The 1931 is almost always seen in Uncirculated condition. Current population data from NGC and PCGS suggests a slightly larger population, with a combined total of 113 submission events between them, but this figure is undoubtedly inflated by resubmissions.

The 1931 double eagles were well produced, with surprisingly good quality control for such a large mintage. The strike is usually sharp, and the luster is vibrant and frosty, and surface abrasions are seldom a problem. This holds true for this example. The softly frosted surfaces display a subtle interplay of rose and orange-gold color, and there are no singularly mentionable abrasions on either side. (#9192)

## 1931-D Twenty Dollar, MS65 Rare, Late Date and Seldom Located in Gem Condition

**5121** **1931-D MS65 PCGS.** In 1931, amid the Great Depression, the Philadelphia Mint struck a substantial number of double eagles, primarily intended for export. The Denver Mint produced only 106,500 pieces. But most of the year's double eagles never left Treasury or bank vaults and were ultimately melted. Both the 1931 double eagle and the 1931-D — the Denver Mint's last — were victims of Franklin Delano Roosevelt's Presidential Executive Order 6102, The Gold Confiscation Act of April 5, 1933, calling for holders of significant quantities of gold to sell their coins at the prevailing price of $20.67 per ounce. Evidence that most 1931-D twenties were melted is verifiable by the lack of coins certified by third-party grading services. Of the few certified coins, most are in some degree of Mint State.

In *American Coin Treasures and Hoards,* Q. David Bowers tells of his experience with four 1931-D double eagles that survived the confiscation:

> "In 1960 a Sidney, New York, businessman took from his bank safety deposit box four 'ordinary' $20 pieces and brought them to a coin dealer [Bowers], for he had heard there was a premium above face value for all gold coins.
>
> "The dealer glanced at them, found they were all of the extremely rare 1931-D variety and in blazing gem Mint State, showed him the listing in *The Guide Book,* and expected that the finder would be delighted. Just the opposite occurred. Uncertainty set in—what were they *really worth?* Could they be sold for more elsewhere? Maybe they shouldn't be sold after all.
>
> "Back into the safe deposit box the rare 1931-D $20 pieces went. Had they been common dates they would have been sold for the current market value at the time, which would have been between $40 and $50."

Bowers never found out what happened to those coins. Most other specimens were less fortunate, and ended up in the melting furnace.

Initially, David Akers considered the 1931-D the fourth rarest issue in the series. Over time, he reevaluated the rarity based on newly found coins. Several mini-hoards of the 1931-D were discovered, but "relatively few of these pieces graded better than Choice Uncirculated and the majority were heavily marked and lackluster." He further modified his opinion in the late 1980s, after a "mini-hoard" of 15 or 20 pieces surfaced. He then opined that the 1931-D's true population rarity was more in line with the slightly less rare 1931 and 1932 double eagles.

The 1931-D is still conditionally rare, as most of that hoard graded between MS60 and MS63. In *A Handbook of 20th-Century United States Gold Coins,* Akers writes, "In MS64 or better condition, the 1931-D is an extreme rarity, and there may well be only 12 to 15 examples at that level still in existence. I have seen only a handful of true gems." Jeff Garrett handled a group of eight examples in late 1998, most of which would grade MS63 by today's standards. PCGS and NGC combined have graded only 21 Gem coins (several likely resubmissions), with five higher, all MS66 (11/11).

This exceptionally attractive example is, in fact, an upper-end Gem. A light red-orange patina that turns hazel-gray around the margins covers the softly frosted surfaces. Each side is smooth and virtually unabraded. The lack of marks and original color suggest careful preservation since 1931. This specimen is indeed an uncommon find, a fact that will not be lost on the perceptive specialist.

*Ex: FUN Signature (Heritage, 1/2007), lot 3831; Long Beach Signature (Heritage, 5-6/2007), lot 2820.* (#9193)

## Superb Gem Proof 1908 Double Eagle
## First Matte Proof Issue
## Only Two Finer Certified

**5122** **1908 Motto PR67 NGC.** Matte proof double eagles were produced for the first time in 1908, all of them featuring the newer design with the motto IN GOD WE TRUST. The matte proof finish is prized by present-day collectors, for its artistic European quality, but contemporary collectors preferred the old brilliant finish proofs of earlier years. Anticipating an enthusiastic reception of the new style, the Mint accomplished a generous proof mintage of 101 pieces in 1908, but orders fell far short of the expected total. It is likely that many examples went unsold, and were subsequently melted after the end of the year. In *A Handbook of 20th Century United States Gold Coins 1907-1933,* David Akers and Jeff Ambio estimate the surviving population at 60-85 specimens in all grades. PCGS, which has certified a total of 37 coins, none finer than PR66, estimates a slightly smaller total of 60-75 pieces (11/11). A single Roman finish proof is also reported.

The present coin is a magnificent Superb Gem, certainly among the finest known examples. The design elements are fully brought up, with exquisite definition on the figure of Liberty and the eagle on the reverse. The columns of the Capitol building are individually countable and Liberty's torch hand shows all fingers sharply delineated. The pleasing khaki-gold surfaces are virtually free of shiny spots or other distractions. The coarse texture of the matte finish does not produce bright mint luster, but promotes an even medallic appearance that focuses attention on the sharply detailed features of the design. This coin possesses incredible eye appeal to go with its high technical grade. Census: 10 in 67, 2 finer (11/11). (#9205)

## 1909 'Roman Finish' Twenty, PR66 ★
## Two-Year Proofing Method
## Very Rare and Popular With Collectors Today

**5123** **1909 PR66 ★ NGC.** After the Mint received a nearly unanimous rejection of the matte proofing process introduced in 1908, officials attempted to appease the collecting community in 1909 by striking proofs in what we now call the "Roman Finish." The difference between the two finishes was profound, especially when an example of each is placed next to the other. The finish used in 1909 and 1910 was essentially a non-finish. Instead the coins were struck from with special dies on special planchets, but unlike the previous sandblasted coins these pieces received no post-striking treatment. The so-called "Roman Finish" was really just the use of special dies on untreated planchets. Some brightness is seen on the coin overall, but it is not necessarily limited to the fields, as seen on proofs struck prior to 1902. Again, collectors were not impressed. Many could not tell the difference between the "Roman Finish," which has also been called a "bright proof," or "new style proof," or "yellow proof" and a fully struck coin produced for circulation. The highly influential William Woodin (later Secretary of the Treasury under Franklin Roosevelt) commented to Assistant Treasury Secretary A. Piatt Andrew: "The present [satin] proofs of the Saint-Gaudens design are simply rotten. I know of no other word to express it ... "

A mere 67 pieces were struck using this proofing process, one that lasted only two years. We believe only 30 to 40 individual twenties of this date are known today in all grades. Both services have certified a total of 57 coins in all grades from PR62 to PR68. A small cluster of submission events is seen at the NGC PR66 level with eight pieces certified.

One can easily see why these coins were called bright proofs or yellow proofs. This piece is both bright and yellow. The fields show very fine granularity when examined closely with a loupe. There are no obvious defects we can point to as a ready pedigree identifier. While this bright finish proof was unpopular when struck, it has become one of the most desirable of all 20th century coins for modern collectors. (#9206)

## PR66 Roman Finish 1909 Twenty Dollar
## Ex: Dr. Loewinger

**5124** **1909 PR66 NGC. CAC.** When the new gold coin designs were introduced in 1907 and 1908, the Mint also experimented with special finishes for the proof issues. Most years from 1907 through 1915 witnessed a variation on the matte proof theme, although in 1909 and 1910 the Mint issued proofs with a satin finish, sometimes called a "Roman finish." It is just such a coin that we offer here. Just 67 of these coins were minted and distributed to the few interested collectors. In terms of relative monetary investment, collecting proof gold was no easier in 1909 than it is today. For the average person, an annual investment of more than 20 dollars a year to collect these pieces was impossible. Similarly today, the average person would have a hard time spending six figures a year to acquire pieces such as this coin. Proof examples of this date are extremely rare and infrequently offered.

This lovely Gem is plated on page 79 of *Proof Gold Coinage of the United States* by Robert J. Loewinger, M.D., published in 2003. It has extremely sharp design details on both sides, as expected. The surfaces have bright lemon-yellow color that provides exceptional aesthetic appeal. A few minor rim blemishes along the left side of the obverse are almost certainly the result of an aberration in the minting process. Although a few finer examples of this issue have been certified, this highly attractive coin should easily meet the demands of the exacting connoisseur. As an example pedigreed to one of the experts on proof gold, this piece boasts added cachet that few other pieces can match. Census: 8 in 66, 5 finer (11/11).

*Ex: Dr. Robert J. Loewinger Collection/FUN Signature (Heritage, 1/2007), lot 3146, which realized $74,750.* (#9206)

## 1910 'Roman Gold' Twenty Dollar, PR65 Rarely Seen Gem Example of This Two-Year Type

**5125** **1910 PR65 NGC.** The recorded number of 1910 proof double eagles produced, 167 examples, appears to be on the high side, but it is true that there are considerable numbers certified at the major grading-authentication services. Garrett and Guth comment concerning the issue:

> " ... this is one of the more available dates in Proof condition [sic]. Sales to collectors recovered after tumbling in 1909, the year after the unpopular matte Proofs were sold. The Roman or satin finish coins proved much more popular with collectors. The 1910 issue is available in most grades, including 17 examples reported by NGC and PCGS as PF-66, four as PF-67, and even two coins as PF-68. This date ranks as the seventh scarcest of the 10 Proof coin series."

The authors also confirm the existence of a single matte proof bearing the 1910 date, last seen in 1998. Between the two grading services combined, there are 68 proof examples of this issue certified — as always, factoring in an unknown number of duplications — and of course there are likely still uncertified examples that reside in old-time collections (or perhaps as unrecognized proofs in some newer collections).

The present Gem example bears the unmistakable hallmarks of a proof striking, including crisply delineated details on Liberty's head, hair, toes, and the Capitol building, for example. A few small contact marks, none individually severe, both keep this piece from an even higher grade. The yellow-gold surfaces are bright and boast much appeal. Census: 8 in 65, 18 finer (10/11).

*Ex: FUN Signature (Heritage, 1/2008), lot 3411.* (#9207)

## 1910 Saint-Gaudens Twenty, PR66 Satin Finish Proof, Ex: Dr. Loewinger

**5126** **1910 PR66 NGC. CAC.** In 1908 the Mint sold the first proof double eagles of the new Saint-Gaudens design, as modified by Mint Chief Engraver Charles Barber for circulation-strike coinage. This was a time that the Mint was predisposed to experimenting with different proof finishes for gold coinage, in keeping with the new design introductions. (How interesting and ironic it is that in 2006 and 2011 the Mint has again issuing new experimental proof coins, in the form of Reverse Proof gold and silver American Eagle coins.) The majority of the 1908 double eagle proofs featured a matte or sandblast finish and were unpopular with collectors. Accordingly, proof double eagle sales plummeted the following year, in 1909, although the Mint switched to a brighter "Roman gold" or satin finish, even though it, too, was unpopular. Most of the 167 proof examples produced in 1910 were also of the Roman or satin finish.

This is a beautiful, bright proof. The surfaces show fine granularity and the fields have a semireflective quality — a finish only found on proof gold from these two years. There are no observable contact marks on either side of this magnificent coin.

The combined population data confirm that this issue and the 1908 are in the median echelons in terms of certified proofs, with nearly six dozen examples of the 1910 at both services combined, and 109 matte proof examples of the 1908. Those figures undoubtedly include numerous duplications, as the recorded mintage for the 1908 matte proof is only 101 pieces! The present PR66 coin offers the brighter Roman or satin finish. It is one of 14 examples so graded at NGC with four coins finer, PR68 the finest (11/11).

*Ex: Dr. Robert J. Loewinger Collection/FUN Signature (Heritage, 1/2007), lot 3147, which brought $74,750.* (#9207)

## COMMEMORATIVE GOLD

### MS68 1903 Louisiana Purchase/McKinley Gold Dollar, One of Five Tied for Finest

**5127** **1903 Louisiana Purchase/McKinley MS68 NGC.** Even in Superb Gem condition, the 1903 Louisiana Purchase gold dollars with McKinley portrait are available for a price, if scarce. By the MS68 level, by contrast, only five coins have been certified by the major grading services, four at NGC and one at PCGS (11/11), with none of the NGC coins awarded the Star designation. Be that as it may, this MS68 example is sure to be a "star" of whatever collection holds it next. Apricot-gold surfaces show lovely peach and pink tints, and the luster swirls with hints of both flash and satin. As exquisitely preserved as the grade demands and an all-around impressive coin.

*From The Jim O'Neal Gold Type Collection.* (#7444)

### 1904 Lewis and Clark Gold Dollar MS67 Condition Rarity

**5128** **1904 Lewis and Clark MS67 PCGS.** As popular as the two Lewis and Clark gold dollar issues are today, they were poor sellers in their own time; collectors who felt "burned" by the Louisiana Purchase Exposition gold dollars' rapid price plunge stayed away from the Lewis and Clark pieces, and even the relative few purchasers experienced short-term pain. This Superb Gem, by contrast, will be a great gain for the collector who wins it. Both portraits have marvelous hair detail with a hint of orange supplementing the sun-yellow base color. The preservation is marvelous, and a few apparent long flaws are in the plastic case, not on the coin itself. Population: 15 in 67, 1 finer (11/11).

*From The Jim O'Neal Gold Type Collection.* (#7447)

## MS66 1905 Lewis and Clark Gold Dollar Only Three Finer PCGS Coins

**5129** **1905 Lewis and Clark MS66 PCGS.** The 1905 Lewis and Clark Exposition, which opened on June 1 in Portland, Oregon, was conceived as a commemoration of the famous exploratory expedition. It quickly evolved, however, into a world's fair emphasizing the Pacific Ocean, the West Coast states, the natural resources of the region, and the potential for trade with Asia.

This 1905 Lewis and Clark gold dollar has rich mint luster cascading over both sides and deep, even reddish-gold color. Prominent die flow lines, visible with magnification around the peripheries, make the coin appear to have a textured appearance. Both portraits are free of mentionable abrasions, as expected for the Premium Gem grade. PCGS has certified only three coins finer than the present specimen (11/11).

*From The Jim O'Neal Gold Type Collection.* (#7448)

## 1905 Lewis and Clark Gold Dollar, MS66 Exemplary Quality and Aesthetic Appeal

**5130** **1905 Lewis and Clark MS66 PCGS.** A total of 35,041 Lewis and Clark gold dollars dated 1905 were struck, but sales were apparently so poor that slightly more than 10,000 were distributed, and the remainder melted (David Bowers, *A Guide Book of United States Commemorative Coins*).

The frosty surfaces of this Premium Gem display excellent luster and variegated greenish-gold and apricot coloration, and are devoid of post-strike impairments. Moreover, a solid strike leaves the design features sharply impressed. This piece generates exemplary technical quality and aesthetic appeal, and as such is sure to generate spirited bidding. Population: 67 in 66, 3 finer (11/11). (#7448)

## 1905 Lewis and Clark Gold Dollar, MS66

**5131** **1905 Lewis and Clark MS66 PCGS.** The 1905 Lewis and Clark gold dollar in the highest Mint State grades is much more elusive than its 1904-dated counterpart. A comparison reveals that while PCGS has certified 15 examples of the 1904 in MS67 and one piece in MS68, they have graded only three examples of the 1905 finer than the present piece (11/11).

This Premium Gem boasts rich canary-gold color. While being two-faced is usually a bad thing, on this coin it is a good thing, as both faces, Lewis and Clark, are remarkably free of the pesky little abrasions on the cheek that so frequently plague this design. (#7448)

## Scarce 1915-S Panama-Pacific Two and a Half, MS67

**5132** **1915-S Panama-Pacific Quarter Eagle MS67 NGC.** Despite a net mintage of just 6,749 pieces, there are enough coins in a variety of grades that collectors can find examples they want for a price. The only exceptions are in MS67 and better grades; the former is scarce, and according to the combined NGC and PCGS populations, the latter are nonexistent (11/11). Butter-yellow outer color lightens toward the centers on this softly frosted, amply lustrous Superb Gem. A faint orange cast picks up at certain angles to the light. Softly struck as almost always on Columbia's head, but the surface quality is rewarding.

*From The Jim O'Neal Gold Type Collection.* (#7450)

## 1915-S Panama-Pacific Two and a Half
## A Scarce Superb Gem

**5133** **1915-S Panama-Pacific Quarter Eagle MS67 NGC.** After Evelyn Longman took ill and could not complete her commission for the Panama-Pacific quarter eagle, it fell to Chief Engraver Charles Barber and long-serving assistant George T. Morgan to render the dies. Artistic opinions of their collaboration are mixed, but there is little dispute that the coins struck from those dies are scarce as Superb Gems and effectively impossible to find any finer, with none in the combined certified population (11/11). This carefully preserved example is broadly lustrous with a hint of orange at the margins of otherwise yellow-gold surfaces and a small copper dot over the P of EXPOSITION. (#7450)

## Near-Gem 1915-S Pan-Pac Round Fifty
## Key to the Classic Gold Commemoratives

**5134 1915-S Panama-Pacific 50 Dollar Round MS64 NGC. CAC.** The 1915-S Panama-Pacific round fifty dollar commemoratives are a testament to contrarian thinking. Since the octagonal fifty dollar pieces were more unusual, more of them were sold originally than of the round pieces. After the unsold pieces were melted, the net distribution was 645 of the octagonal coins surviving, versus 483 of the round. The round Pan-Pac fifty is the most desirable and lowest-mintage single issue in the entire classic commemorative era, although both round and octagonal pieces are highly prized among collectors.

The Condition Census for the round pieces includes four certified in MS67 at NGC, with 17 examples in MS66. The finest certified at PCGS is a single MS66 specimen. There are fewer examples of the octagonal in MS66 and MS65 at NGC than of the round, likely due to the octagonal's greater propensity for occasional rim bumps. NGC has, however, certified an equal number, four, of the octagonal in MS67, the finest graded.

Heritage has handled two MS67 octagonal pieces, each bringing well over the $200,000 mark:

**—MS67 NGC.** San Francisco Signature (Heritage, 7/2005), lot 10443, realized $289,671.20; and

**—MS67 NGC.** FUN Signature (Heritage, 1/2009), lot 4216, realized $207,000.

Among MS66 round specimens, we have handled three different examples on four occasions:

**—MS66 NGC.** FUN Signature (Heritage, 1/2006), lot 3651, realized $149,500;

**—MS66 NGC.** FUN Signature (Heritage, 1/2006), lot 3650, realized $149,500; Denver Signature (Heritage, 8/2006), lot 5739, realized $172,500; and

**—MS66 NGC.** FUN Signature (Heritage, 1/2009), lot 4212, realized $138,000.

The present near-Gem shows surfaces that are nearly flawless with a shallow luster graze in the center obverse apparently the only limiting factor that keeps it from grading even higher. The satiny surfaces show a slight reddish patina over each side. An important opportunity for collectors of classic gold commemoratives to own "the key." (#7451)

# 1915-S Panama-Pacific Round Fifty Dollar, MS65 One of the Few 'Global Classics' With Internationally Recognized Value

**5135** **1915-S Panama-Pacific 50 Dollar Round MS65 NGC.** The 1915-S Panama-Pacific coins were sold and packaged in numerous options, from single coins to single five-coin sets for $200 and double sets of each of the five coin designs and denominations mounted in copper frames under glass, which sold for $400. It nonetheless was a fact of life that the cheapest a fifty dollar Pan-Pac could be had for was $100, double the face value and a costly burden to most collectors. Of the net 3,000 authorized fifty dollar coins, only 483 round and 645 octagonal pieces were saved from the melting pot.

It appears that Farran Zerbe, the well-known numismatic huckster and tireless promoter of the Pan-Pac fifties as well as other commemorative gold coins, had the last laugh when it came to his detractors.

Zerbe wrote to the editor of *The Numismatist* in March 1921, saying:

> "After reading in your January issue your pertinent comment re the *New York World's* item on special coins passing to circulation at face value, there was an additional relish to find on another page that a set of the Panama-Pacific coins, which sold for $200 in 1915-16, brought $315 in Low's recent sale. The next generation will pay $500 for this set. It is a satisfaction for me to know that all of the many special coins I have been associated with have no remainder for hoarders or speculators to obtain under conditions that sent any of them on the market to be sold at prices less than originally established. All now command a premium over their introductory price."

Just recently, PCGS founder David Hall was interviewed in the June 2011 *Rosen Numismatic Advisory,* where he called the 1915-S Pan-Pacs "global classics": "What coin can I stick in my pocket and take anywhere in the world? A Pan-Pac $50 fills that bill, as does a $4 Stella, a Bust $10, a 1795 $5. I really like those kind of classic rarities."

This is a lovely, high-end example of this "global classic." The satiny mint luster has taken on a slight reddish tinge. Each side is remarkably unmarked, the only pedigree identifier we see is a tiny planchet flake out of the obverse field in front of the mouth of Minerva. (#7451)

## 1915-S Panama-Pacific Octagonal Fifty, MS64
## A Capstone of the Classic Gold Series

**5136 1915-S Panama-Pacific 50 Dollar Octagonal MS64 NGC. CAC.** Collectors of the "classic" or "legacy" 1903-1926 period of U.S. gold commemoratives sometimes dismiss the so-called "modern" commemorative series. For silver commemorative U.S. coins, the "modern" era dates to 1982, when the George Washington commemorative halves debuted. Modern gold commemoratives harken back to the 1984 Olympic ten dollar gold coins, the first such in more than a half-century. Modern gold bullion coins premiered in 1986 with the popular American Eagle sets in four denominations (or weights).

In order to understand the Panama-Pacific round and octagonal coins and their incredible popularity, it is helpful to remember that at one time, they were both "new modern gold commemorative U.S. coins" as well as, broadly speaking, "gold bullion coins."

In that context, an interesting recent publication sheds new light on the Pan-Pacs: Eric Jordan's 2010 *Modern Commemorative Coins.* A primary reason that the Pan-Pacs are so rare today is that they were considered enormously expensive. Containing proportionally 2.5 times the gold content of a double eagle, they were sold for double face value, or $100 each. This was at a time when, for example, a proof Liberty Head double eagle could be obtained for only a few dollars over face. A Ford Model T touring car could be bought, brand-new, for $490.

Jordan writes of collecting in the era from 1906 to 1936:

> "... while we can look through today's coinage books and say that we would have acquired for our collection a 1916-D Mercury dime, a 1916 Standing Liberty quarter, a matte proof gold Indian type set, a matte proof $20 gold Saint-Gaudens, all the key date fractional gold, at least one 1915 Pan Pac $50 commemorative gold and a 1936 proof set, the likelyhood [sic] of us actually having done so if we lived and collected in that era is remote. The reason is every coin listed other than the dime and quarter was an unpopular modern [issue] rejected by the collecting public at the time of its issue."

While collectors of the era may have loved the neoclassical Robert Aitken designs and themes, $100 for a single-coin souvenir of the Panama-Pacific Exposition, no matter how aesthetically pleasing and desirable, was a considerable outlay.

The present example of the 1915-S octagonal shows orange-gold patina over satiny surfaces. Magnification reveals a few tiny marks on Minerva's face and the owl, nothing distracting, and the strike is sharp throughout both sides. (#7452)

## 1922 Grant With Star Dollar, MS68 ★ The Finest Certified

**5137** **1922 Grant With Star MS68 ★ NGC.** A condition rarity of the highest order. The combined certified population shows just nine pieces at the MS68 level with none finer, eight of them graded by NGC and one by PCGS. With this being the *only* NGC-certified example awarded the Star designation (11/11), one could make an argument for this piece as the finest Grant with Star 1922 gold dollar in existence. The well-defined portrait is as smoothly lustrous as the fields, which are lemon-gold at the upper obverse and reverse with generally orange-gold surfaces below, though the obverse also shows a hint of rose-violet and even sea-green near the jaw.

*From The Jim O'Neal Gold Type Collection.* (#7459)

# PROOF COMMEMORATIVE GOLD

## 1903 Jefferson Louisiana Purchase Gold Dollar PR67 ★ Ultra Cameo, Finest Certified

**5138** **1903 Jefferson PR67 ★ Ultra Cameo NGC.** Just 100 1903 Louisiana Purchase Exposition, Jefferson obverse gold dollar proofs "... were distributed to favored insiders as well as Exposition and government officials, not to the collecting fraternity" (David Bowers, *United States Commemorative Coins,* p. 47). Since the coins were not distributed to collectors but to non-numismatists, many proofs have experienced some degree of impairment. Obscuration of the cameo contrast or even the proof finish is common. A Jefferson gold dollar proof that retains its powerful contrast is a rare prize, avidly sought by the most advanced commemorative gold aficionados.

This magnificent survivor combines gleaming lemon-gold mirrors and rich frost across sharply struck devices. Boldly squared rims help distinguish this proof from the many prooflike circulation strikes also found in the marketplace. The surfaces are marvelously preserved throughout with an easily appreciated cameo effect and inimitable eye appeal. Out of the original mintage of 100 proofs, the NGC *Census Report* lists eight specimens with Ultra Cameo contrast; of these, the two numerically finest are graded PR67, and this coin is the only one of the two to have received the Star designation (11/11).

*From The Jim O'Neal Gold Type Collection.* (#97482)

## 1903 McKinley Portrait Gold Dollar
## PR65 Cameo
## 100 Coin Mintage

**5139** **1903 McKinley PR65 Cameo PCGS.** As with the Columbian half dollars, the first classic silver commemoratives, the first classic *gold* commemoratives, the Louisiana Purchase gold dollars with both Jefferson and McKinley obverses also had a limited quantity of proofs struck, 100 of each design, for distribution to selected recipients. This Cameo Gem survivor of the latter design has unusually bold honey-gold mirrors and shining, frosted devices. Both preservation and eye appeal offer undeniable excellence. A great opportunity for the series enthusiast. Population: 3 in 65 Cameo, 1 finer (11/11).
*From The Jim O'Neal Gold Type Collection.* (#87483)

## 1916 McKinley Gold Dollar, PR63 Possibly One of Four Extant

**5140** **1916 McKinley PR63 NGC. CAC.** Little concrete information survives concerning the proof McKinley gold dollars. It is clear that few exist, probably four or five in all. Walter Breen wrote in his *Proof Encyclopedia* of four examples, including one in the Smithsonian Institution.

However, we offered a PR63 Cameo PCGS example in our Chicago Signature and Platinum Night (Heritage, 8/2011), a piece that brought $48,875. At that time we published a roster of three specimens, which included none certified by NGC. We repeat the roster below, adding the current PR63 NGC example and the August 2011 appearance. We wrote in August 2011:

> "Proof examples are extremely rare, with only three confirmed specimens. Walter Breen recorded a proof in the Smithsonian Institution, but Jeff Garrett and Ron Guth report that the Smithsonian coin 'is not a true Proof by today's standards.' "

As far as we can determine, the addition of the NGC piece below to the previous roster represents a new discovery of a fourth piece:

**—Choice Proof.** RARCOA (Auction '89, 7/1989), lot 363. Part of a three piece set that also included a business strike and a nickel trial piece, Judd-1802. This is probably the piece that PCGS has graded PR64 Cameo, and it appears to be the same piece that is illustrated in the Garrett and Guth reference.

**—PR64 PCGS.** Superior (10/1990), lot 2283; Superior (5/1994), lot 1745.

**—PR63 Cameo PCGS.** Bowers and Merena (1/1996), lot 2320; Stack's (11/2008), lot 5076; Chicago Signature (Heritage, 8/2011), lot 7718.

**—PR63 NGC. The present specimen.**

The present coin is an unquestionable proof, with razor-sharp strike details far sharper than any business strike could possibly show. The surfaces are a medium yellow-gold, incredibly reflective on each side. A few minor contact ticks appear only a loupe. Census: 1 in 63, 0 finer (11/11). (#7487)

## 1925 Norse American Gold Medal, PR66 Uninterrupted Provenance Since 1925

**5141** **1925 Norse Gold PR66 Matte NGC.** Ex: Pittman. Identical designs appeared on the Norse American Centennial silver and gold medals. The 1.5 inch octagonal silver medals are known on thick and thin planchets, and they are popular with commemorative collectors. The Philadelphia Mint coined 6,000 on thin planchets and 31,750 on thick planchets.

The slightly smaller size 1 inch octagonal gold medals are known with matte proof surfaces. Just 100 were minted and 53 of those were later melted, leaving a net distribution of just 47 pieces. Only a few survivors remain for today's commemorative collectors.

John Jay Pittman purchased this beautiful yellow-gold matte proof in 1950. A tiny reverse edge nick above and right of the E in THE will mark the provenance to Pittman, and back to the Philadelphia Mint in 1925. Pittman acquired this piece from William T. Bartholomew, a former employee of the U.S. Mint in Philadelphia at the time these pieces were produced. This is the eighth appearance of a Norse gold medal in our sales since 1993.

*Ex: U.S. Mint, Philadelphia (1925); William T. Bartholomew (3/10/1950); John Jay Pittman (David Akers, 10/1997), lot 825.*

*From The Stephen L. Schechter Collection.* (#9452)

## (1831-34) C. Bechtler Five Dollar, K-15, AU55 Gold Content Exceeds Federal Coinage

**5142 (1831-34) C. Bechtler Five Dollar, 150 G. 20C. AU55 PCGS. CAC. K-15, R.7.** The earliest Bechtler five dollar gold pieces, struck in the early 1830s, contained 150 grains of 20 carat gold, for a net gold weight of 125 grains of pure gold. The federal half eagles of the early 1830s contained 135 grains of 22 carat gold, for a net gold weight of 123.75 grains of pure gold. The Bechtler pieces were actually produced to a higher standard than Federal issues of the same period. Perhaps that is the reason that local residents of North Carolina and the surrounding region preferred the Bechtler gold pieces to those of the U.S. government. Local production may have been another reason in the days before the Charlotte and Dahlonega Mints opened.

The Bechtler family immigrated from Germany, arriving in New York about 1829. The elder family statesman was Alt Christoph Bechtler who was born in Baden, Germany, in 1782, and died in 1842. Bechtler and his sons August and Karl, along with a nephew, Christopher, settled in Rutherfordton, North Carolina, where they carried on a jewelry trade. The community is located about 70 miles west of Charlotte, and about 45 miles southeast of Asheville.

A considerable issue of gold coinage began about 1831 and continued until the late 1840s. Denominations included one dollar, two-and-a-half dollars, and five dollars, and the inscription identified the source of the gold, North Carolina or Georgia.

This remarkable Choice AU specimen has brilliant green-gold surfaces with considerable luster and pale rose toning. Minor marks and faint scratches are evident on this piece, as they are on nearly all known survivors. Listed on page 364 of the 2012 *Guide Book*. Population: 5 in 55, 2 finer (11/11). (#10118)

## 1860 Clark, Gruber Quarter Eagle, K-1 MS63, Lustrous Green-Gold Surfaces

**5143 1860 Clark, Gruber & Co. Quarter Eagle MS63 PCGS. K-1, R.4.** The Colorado Gold Rush inspired the creation of Clark, Gruber & Co. to coin local gold dust into coinage, just as earlier the California Gold Rush had spurred numerous local minters and assayers to produce gold coins and ingots. The Clark, Gruber facility was the distant forerunner of the Denver Mint, which would open many years later in 1906. This Clark, Gruber 1860 quarter eagle is the first issue of a two-year run for the quarter eagles, but the 1860 pieces read CLARK & CO. on the coronet, while the 1861 coins read PIKES PEAK on the coronet. This lustrous, greenish-gold example shows the typical weak strike through the centers, but abrasions are relatively minor. Listed on page 381 of the 2012 *Guide Book*. (#10135)

## 1851 Humbert Fifty Dollar, XF45 880 THOUS. Scarce K-2 Variety

**5144 1851 Humbert Fifty Dollar, Lettered Edge, 880 THOUS. XF45 PCGS. CAC. K-2, R.5**. Europe seems an unlikely location to find a first-rate collection of California Territorial Gold, but the present European consignor assembled a memorable gathering of U.S. gold coins, including six fifty dollar slugs. It seems these huge gold coins circulated extensively in international commerce during the 19th century, and there is a rich history of European collectors preserving these distinctive historical relics of the famous Gold Rush. For example, Englishman John G. Murdoch shared the present consignor's enthusiasm for these coins and, when his collection was sold by Sotheby, Wilkinson & Hodge in 1903, it included five California fifty dollar gold pieces.

The present coin is an example of the scarce K-2 variety, minted in 1851, with the date and inscription AUGUSTUS HUMBERT UNITED STATES ASSAYER OF GOLD CALIFORNIA placed on the edge of this octagonal gold piece. The edge lettering greatly increased the difficulty of producing these coins, as the letters had to be punched into each side of the coin in a separate operation. The inscription was moved to the obverse, and a much more efficient reeded edge device was employed on varieties produced later in the year. The denomination was ingeniously expressed by the letters D and C on the dies, standing for dollars and cents. The value 50 was punched in front of D after the coin was struck, with the space in front of C left blank. Although this device could have been used to express a wide range of values while still using the same dies, only fifty dollar coins of this design were actually used in commerce. The fineness 880 THOUS. was indicated on a ribbon in the upper obverse field.

This attractive Choice XF specimen shows some flatness on the central devices, but much of the original detail has been preserved. The yellow and greenish-gold surfaces retain much original mint luster, and a scattering of minor abrasions is consistent with the grade. Housed in a green label holder. Listed on page 367 of the 2012 *Guide Book*. Population: 8 in 45, 30 finer (11/11).

*From The Klamath Mountain Collection*. (#10196)

## Choice XF 1851 Humbert Fifty Dollar Slug 887 Thous., 50 Reverse, K-4 Variety

**5145 1851 Humbert Fifty Dollar, Lettered Edge, 887 Thous. 50 Rev. XF45 PCGS. Gold CAC. K.4, High R.5.** The United States Assay Office was established by an act of Congress on September 30, 1850, and the firm of Moffat & Company secured the contract for coining operations. Augustus Humbert, a New York watchmaker, was appointed assayer, and Charles Cushing Wright engraved the first dies, which Humbert brought with him when he arrived in California on January 30, 1851. Later dies were engraved locally by Albert Kuner. Coinage operations commenced immediately, and fifty dollar slugs were being produced by February 14. The new coins were of great benefit to the local economy, as their weight and fineness were accurate and they were accepted for customs duties. The new issues soon drove most of the private mints in the area out of business, as their coins were perceived as being light weight and of low intrinsic value.

The coin offered here represents the very scarce K-4 variety, with a lettered edge, a fineness of 887 THOUS., and the number 50 in the center of the reverse. The reverse design was "engine turned", similar to the design on many watch cases of the era. Don Kagin reports a possible variety K-4a, resembling K-4 in all other respects, but with no 50 on the reverse. The existence of this variety is unconfirmed.

The present coin is a lightly worn XF45 specimen, with lustrous greenish-gold surfaces. The edges show a few rim minor bruises and the surfaces display the usual number of abrasions for a large gold coin in this grade. Housed in an old green label holder with a gold CAC sticker. Listed on page 368 of the 2012 *Guide Book*. Population: 3 in 45, 19 finer (11/11).

*From The Klamath Mountain Collection.* (#10208)

## 1851 Humbert Slug, XF40
## Reeded Edge, 880 THOUS., K-5

**5146 1851 Humbert Fifty Dollar, Reeded Edge, 880 THOUS. XF40 PCGS. Gold CAC. K-5, Low R.5.** The popular K-5 variety of the famous Humbert fifty dollar slug belongs to the second technical generation of this denomination, the first design to use a reeded edge rather than the cumbersome lettered edge of earlier varieties. The fineness is expressed as 880 THOUS., with the numerals raised and the denomination stated as FIFTY DOLLS. This lightly circulated XF40 example offers smooth orange and greenish-gold surfaces, with much original mint luster and few abrasions for the grade. Housed in a green label holder with a gold CAC sticker. Listed on page 368 of the 2012 *Guide Book*. Population: 23 in 40, 46 finer (11/11).

*From The Klamath Mountain Collection*. (#10211)

## 1851 Humbert Fifty, AU53
## First Reeded Edge Design
## 880 THOUS., K-5 Dies

**5147 1851 Humbert Fifty Dollar, Reeded Edge, 880 THOUS. AU53 PCGS. CAC. K-5, Low R.5.** Despite the obvious need for smaller denomination coinage in the California economy, and many importunities from local businessmen, the United States Assay Office was only legally authorized to issue fifty dollar gold pieces in 1851. Unfortunately, the demand for these coins fell late in the year, because of the lack of small change in the economy, and John Moffat noted that business in November was only half that of October. Competitor Wass, Molitor & Co. began preparing dies for smaller denomination coinage, and their coins soon began to pass at a two percent premium compared to the coins of the Assay Office.

Some improvement in the design of the coins was achieved partway through the year, with the advent of the K-5 dies. The K-5 variety is the first design to place the inscription AUGUSTUS HUMBERT UNITED STATES ASSAYER OF GOLD CALIFORNIA 1851 on the outside border of the coin, rather than on the edge. The edge was reeded, in the manner of most precious-metal coins of the period, greatly increasing the ease of production. The fineness was listed as 880 THOUS., with the numerals raised rather than punched into the die and the ribbon ends were folded in.

The present coin is an impressive AU53 example, with a little softness showing on the central design elements, but only a touch of actual wear. The attractive orange-gold surfaces are lightly abraded for the grade and retain much of their original mint luster. Housed in a green label holder with a gold CAC sticker. Listed on page 368 of the 2012 *Guide Book*. Population: 6 in 53, 16 finer (11/11).

*From The Klamath Mountain Collection.* (#10211)

## 1851 Augustus Humbert Slug, K-5, MS61
## 880 THOUS Fineness

**5148 1851 Humbert Fifty Dollar, Reeded Edge, 880 Thous. MS61 NGC. K-5, Low R.5.** The central obverse device is an eagle, wings outstretched, with a shield and ribbon in its beak. A scroll above the eagle states the 880 THOUS fineness of the gold. The legend, UNITED STATES OF AMERICA, and denomination, FIFTY DOLLS, are contained within an inner circle, with identification of the maker, AUGUSTUS HUMBERT UNITED STATES ASSAYER OF GOLD CALIFORNIA, and the date, 1851, in the outer margin. The reverse is the usual engine turned design.

The Assay Office, located in San Francisco, operated as a provisional U.S. Mint in California prior to the official San Francisco Mint that opened in 1854. Trained as a watchmaker, Augustus Humbert received Congressional approval as the government assayer, arriving in San Francisco early in 1851. He returned to his New York home in 1860 where he lived another 13 years.

The inscription tells us that this slug is 88% gold with 12% alloy. Perhaps as much as half of the alloy is silver, imparting the distinct green-gold appearance to this impressive Humbert slug. Both sides show the usual minor surface marks and rim bumps that typify survivors, although to a smaller degree on this specimen that on most others. The Humbert and U.S. Assay Office slugs were official government coinage issues, unlike other private California gold issues, and they should be collected as part of the federal gold series. Listed on page 368 of the 2012 *Guide Book*. (#10211)

## 1852 Humbert Fifty, XF40
## Reeded Edge, 887 THOUS., K-11

**5149 1852 Humbert Fifty Dollar, 887 THOUS. XF40 PCGS. K-11, R.5.** The 1852 K-11 Humbert fifty dollar gold piece was the last of the famous slugs issued under the auspices of Moffat & Company. Later issues were struck by the Assay Office under the management of Curtis, Perry and Ward. The K-11 design featured a reeded edge and a fineness of 887 THOUS. This attractive XF40 specimen shows some wear on the eagle and rock, but the pleasing greenish-gold surfaces are lightly abraded and retain much original mint luster. Housed in a green label holder. Listed on page 368 of the 2012 *Guide Book*. Population: 11 in 40, 13 finer (11/11).
*From The Klamath Mountain Collection*. (#10217)

## AU 1852 Assay Office Fifty 887 THOUS., K-13 Variety

**5150 1852 Assay Office Fifty Dollar, 887 Thous. AU50 PCGS. CAC. K-13, R.5.** John L. Moffat sold his interest in Moffat & Company to Joseph R. Curtis, Philo H. Perry, and Samuel T. Ward effective February 14, 1852. The new firm of Perry, Curtis and Ward was authorized to continue the coining operations of the United States Assay Office under the same terms as the old firm. Augustus Humbert remained as assayer. The offices moved to a larger location at 608 Commercial Street, and lower rates were advertised for coining gold dust into coins or bullion. The Assay Office continued to operate successfully until late 1853, surviving the death of one of the partners (Ward), and the reorganization into a new firm of Cutis and Perry. Its facilities were eventually transformed into the San Francisco Mint, which commenced operations on April 15, 1854.

Early in 1852, the Assay Office began to issue fifty dollar gold pieces of the K-13 variety, similar to the older Humbert design, but with the inscription UNITED STATES ASSAY OFFICE OF GOLD SAN FRANCISCO CALIFORNIA 1852 around the border. The edge was reeded and the fineness was expressed as 887 THOUS., with the figures raised rather than punched in. The reverse featured the familiar engine turned design, but with smaller concentric circles in the center. These coins circulated extensively until September of 1852, when a new federal law required the customs collector to accept only coins of .900 fineness. This, and other developments, effectively ended the circulation of fifty dollar gold slugs, except for an emergency issue of .900 fine K-14 slugs in early 1853.

The present coin is an lightly circulated AU specimen, with rich greenish-gold surfaces that retain much original mint luster. The surfaces are remarkably free of abrasions for such a large gold coin. Housed in a green label holder. Listed on page 370 of the 2012 Guide *Book*. Population: 12 in 50, 15 finer (11/11).

*From The Klamath Mountain Collection*. (#10016)

## K-18 1853 Assay Office Twenty, MS64 Seldom Seen Finer

**5151 1853 Assay Office Twenty Dollar, 900 Thous. MS64 NGC. K-18, R.2.** Someday, someone is going to do a detailed die variety (and possibly die state) study of the 1853 Assay Office twenties. The Kagin 1981 reference notes that 2.5 million examples were produced from some 30 different dies destroyed in the fire of 1906, alluding to the great earthquake and fire of that year. There are many minute variations from die to die, most noticeable on the obverse. This piece shows the left end of the scroll missing that contains 900 THOUS, but the A's in AMERICA have crossbars. Beautiful frosty luster emanates from deep reddish-gold surfaces with superb eye appeal. There are few abrasions of note. Listed on page 371 of the 2012 *Guide Book*. Census: 14 in 64, 5 finer (11/11). (#10013)

## (1854) Kellogg Twenty Copper Die Trial Extremely Rare K-1 Variety, MS64 Brown Ex: Virgil Brand

**5152 (1854) Kellogg Twenty Dollar Copper Die Trial MS64 Brown PCGS. K-1, R.8.** Kellogg & Co. struck approximately 300,000 twenty dollar gold coins in 1854 and 1855, using dies that closely resembled those used for regular federal coinage, but with legends that reflected the issuing company and place of striking. This extremely rare undated copper dies trial was struck before the date was added to the die. Don Kagin listed the K-1 copper die trial as an R.8 issue in his definitive reference on Territorial Gold, and this is the only time Heritage has been privileged to offer an example of this remarkable, historic pattern. Housed in a green label holder. Population: 1 in 64 Brown, 0 finer (11/11).

*Ex: Chicago Coin Company, purchased on December 30, 1911; Virgil Brand, inventory number 60,760; Jane Brand Allen; The Virgil M. Brand Collection Part II (Bowers and Merena, 6/1984), lot 1547.*

*From The Klamath Mountain Collection.* (#10219)

## 1854 Kellogg & Co. Twenty, K-1b
## Rare Uncirculated Example

**5153 1854 Kellogg & Co. Short Arrows Twenty Dollar MS60 PCGS. K-1b, R.5.** John Glover Kellogg and G.F. Richter were both employed at the United States Assay Office until that institution was dissolved in December 1853. The two men subsequently founded Kellogg & Co. on December 19, 1853. The firm was petitioned by local businessmen to produce coins for the regional economy until the San Francisco Mint could produce sufficient coinage to satisfy the need. Kellogg & Co. responded by striking approximately 300,000 twenty dollar coins in 1854 and 1855.

The present coin is a sharply detailed Mint State example, with pleasing greenish-gold surfaces and vibrant mint luster. This coin represents the K-1b variety, identified by the thin date and Short Arrows on the reverse. Housed in a green label holder. Listed on page 378 of the 2012 *Guide Book*. Population: 2 in 60, 8 finer (11/11).

*From The Klamath Mountain Collection*. (#10222)

## 1860 Mormon Five Dollar, AU58
## Rare K-6 Variety
## The Last Mormon Gold Issue

**5154** **1860 Mormon Five Dollar AU58 NGC. CAC.** The discovery of gold in Colorado in 1858 prompted this final attempt at a Mormon coinage in Utah. Brigham Young sponsored the coinage, which was accomplished by J.M. Barlow and Douglas Brown, at a mint established in Barlow's jewelry store. According to Mormon records, the coins were of full weight and value, and they circulated readily in the local economy. Outside the Mormon community there was considerable mistrust of the coinage, and it only circulated at a discount of 10% to 25%. The coinage continued until 1861, when governor Alfred Cumming prohibited further production by the Mormon mint.

The coins benefited from an attractive design, with a recumbent lion on the obverse, with the date below, and the motto HOLINESS TO THE LORD around. The lettering was inscribed in the Deseret alphabet, and is historically important as one of the few examples of this script to survive today. The reverse features an eagle behind a beehive, with the legend DESERET ASSAY OFFICE. PURE GOLD. around, with 5.D. below. The reverse is lettered in Latin script.

The present coin is an attractive AU58 example with well-struck design elements that show just a little softness on the central reverse. Few signs of actual wear are apparent, and the lustrous surfaces display only minor abrasions. The surfaces are a pleasing yellow-gold with green highlights. The 1860 Mormon five is prized by Territorial gold collectors, and this piece should find a home in the collection of a lucky specialist. Housed in a green label holder. Listed on page 381 of the 2012 *Guide Book*. Census: 7 in 58, 16 finer (11/11).

*Ex: Summer FUN Signature Auction (Heritage, 7/2011), lot 5298, realized $80,500.* (#10268)

## 1849 Norris, Gregg, and Norris Five, MS60 Reeded Edge, Period After ALLOY, K-4

**5155 1849 Norris, Gregg, & Norris Five Dollar R.E. MS60 PCGS. Gold CAC. K-4, R.4.** The firm of Norris, Gregg, and Norris probably issued the first California Territorial Gold coins in May of 1849. The coins bore the mysterious initials N.G & N., which were only deciphered in 1902 when the Chapman brothers sold the collection of Augustus Humbert and found a note explaining "the long sought for name of the firm issuing this coin." Unfortunately, the Chapman's rendering of the name was Norris, Grigg, and Norris, but this was close enough to eventually identify the firm. The present coin is a delightful Mint State specimen, with vibrant mint luster and pleasing green and reddish gold surfaces. The reeded edge and period after ALLOY identify the scarce K-4 variety. Housed in a green label holder with a gold CAC sticker. Listed on page 366 of the 2012 *Guide Book*. Population: 1 in 60, 4 finer (11/11).

# *S.S. CENTRAL AMERICA* GOLD BAR

# 87.17-Ounce Kellogg and Humbert Gold Ingot Recovered From the *S.S. Central America* Made Between 1854 and 1857

**5156 87.17-Ounce Kellogg and Humbert Gold Ingot Recovered From the *S.S. Central America*. CAGB-409.** This ingot made by the California assayer-coiners Kellogg & Humbert has a stamped serial number 248, weight of 87.17 ounces with fineness of 923 (923/1000ths), for a nominal or face (melt) value in 1857 of $1,663.21.

In today's terms (as of December 1, 2011), with gold hovering around $1,750 an ounce, the melt value would work out to 80.46 ounces of pure gold, with a bullion value of $140,800. Of course, such *mercenary measures* border on sacrilege to collectors of various stripes, to whom these ingots are immeasurably more valuable than "mere melt" as historic mementos of the headiest days of the California Gold Rush.

Like all ingots recovered from the doomed steamship *S.S. Central America,* this one is described by Q. David Bowers in the Appendix to his reference: "Large-size ingot. Inscriptions on face. Vertically oriented. Reverse stamped with repetition of serial number, but in different font."

The ingot shows interesting coloration, light veins of reddish-brown covering much of the surface in an irregular pattern. Other smaller areas display rich burgundy patination. The assayers' nameplate is stamped in a rectangle as KELLOGG / & / HUMBERT / ASSAYERS, with ASSAYERS in a different and slightly smaller font from the rest. The CAGB number derives from the massive Bowers reference, *A California Gold Rush History featuring the treasure from the S.S. Central America*. Two assayers' test cuts, small diagonal slices through opposite corners, one on each end, are seen on all such ingots.

This assayer's ingot is undated; again, as all such, since they were merely a convenient rectangular storage form of the most transient nature, usually intended for melting at the other end of a commercial journey. The ingot was made between late 1854 and September 1857, the bookends being the foundation of the firm of Kellogg & Humbert and the foundering of the *S.S. Central America* on Sept. 12, 1857.

John Grover Kellogg arrived in California on October 12, 1849, and first went to work for Moffat & Co. By late December 1853, he set up the Kellogg & Richter firm with George F. Richter, a government assayer, just a few days after the United States Assay Office had closed. Kellogg & Richter produced many twenty dollar coins during early 1854, a period during which the San Francisco Mint had not yet opened and no other private firm was issuing coinage. Kellogg & Humbert was organized in late 1854 with partner Augustus Humbert, the former U.S. assayer of gold. Their place of business was 108 Montgomery St., San Francisco.

Given the excellent credentials of both Kellogg and Humbert, and the large number of Kellogg & Humbert ingots recovered from the *Central America* shipwreck, it is clear that many bankers, or private depositors who desired ingots rather than coinage, placed their faith in the firm to produce ingots of high quality and reliable assay.

Heritage has been privileged to offer numerous examples of the ingots of various California assayers in the past that were recovered from the *Central America*. But we find that as time goes by, it seems that fewer and fewer of these massive, important gold bricks are leaving their owners. For potential bidders who someday desire to own one of these historic ingots, we suggest that "sooner" may be wiser than "later."

End of Session Five

# Terms and Conditions of Auction

**Auctioneer and Auction:**

1. This Auction is presented by Heritage Auctions, a d/b/a/ of Heritage Auctioneers & Galleries, Inc., or Heritage Auctions, Inc., or Heritage Numismatic Auctions, Inc., or Heritage Vintage Sports Auctions, Inc., or Currency Auctions of America, Inc., as identified with the applicable licensing information on the title page of the catalog or on the HA.com Internet site (the "Auctioneer"). The Auction is conducted under these Terms and Conditions of Auction and applicable state and local law. Announcements and corrections from the podium and those made through the Terms and Conditions of Auctions appearing on the Internet at HA.com supersede those in the printed catalog.

**Buyer's Premium:**

2. FOR AUCTION SESSIONS ON OR BEFORE DECEMBER 31, 2011: On bids placed through Auctioneer, a Buyer's Premium of fifteen percent (15%) will be added to the successful hammer price bid on lots in Arms & Armor, Currency, US Coin, Wine, and World & Ancient Coin Auctions or nineteen and one-half percent (19.5%) on lots in all other Auctions. There is a minimum Buyer's Premium of $14.00 per lot. In Gallery Auctions (sealed bid auctions of mostly bulk numismatic material), the Buyer's Premium is 19.5%.

FOR AUCTION SESSIONS ON OR SUBSEQUENT TO JANUARY 1, 2012: All bids are subject to a Buyer's Premium which is in addition to the placed successful bid:

- Fifteen (percent (15%) on Arms & Armor, Currency, US Coin, Wine, and World & Ancient Coin Auctions lots; except that the World and Ancient Coin Auctions 3003 & 3018 shall have a Buyer's Premium of 19.5%;
- Nineteen and one-half percent (19.5%) on Americana & Political, Civil War & Militaria, Comic, Manuscript, Movie Poster, Space Exploration, Sports Collectibles, Texana, and Gallery Auction (sealed bid auctions of mostly bulk numismatic material) lots;
- For all other categories not listed above, twenty-five percent (25%) on the first $50,000, plus twenty percent (20%) of any amount between $50,000 and $1,000,000, plus twelve percent (12%) of any amount over $1,000,000 on each lot.

There is a minimum Buyer's Premium of $14.00 per lot.

**Auction Venues:**

3. The following Auctions are conducted solely on the Internet: Heritage Weekly Internet Auctions (Coin, Currency, Comics, Rare Books, Jewelry & Watches, Guitars & Musical Instruments, and Vintage Movie Posters); Heritage Monthly Internet Auctions (Sports, World Coins and Rare Wine). Signature® Auctions and Grand Format Auctions accept bids from the Internet, telephone, fax, or mail first, followed by a floor bidding session; HeritageLive! and real- time telephone bidding are available to registered clients during these auctions.

**Bidders:**

4. Any person participating or registering for the Auction agrees to be bound by and accepts these Terms and Conditions of Auction ("Bidder(s)").
5. All Bidders must meet Auctioneer's qualifications to bid. Any Bidder who is not a client in good standing of the Auctioneer may be disqualified at Auctioneer's sole option and will not be awarded lots. Such determination may be made by Auctioneer in its sole and unlimited discretion, at any time prior to, during, or even after the close of the Auction. Auctioneer reserves the right to exclude any person from the auction.
6. If an entity places a bid, then the person executing the bid on behalf of the entity agrees to personally guarantee payment for any successful bid.

**Credit:**

7. In order to place bids, Bidders who have not established credit with the Auctioneer must either furnish satisfactory creditinformation (including two collectibles-related business references) well in advance of the Auction or supply valid credit card information. Bids placed through our Interactive Internet program will only be accepted from pre-registered Bidders; Bidders who are not members of HA.com or affiliates should preregister at least 48 hours before the start of the first session (exclusive of holidays or weekends) to allow adequate time to contact references. Credit will be granted at the discretion of Auctioneer. Additionally Bidders who have not previously established credit or who wish to bid in excess of their established credit history may be required to provide their social security number or the last four digits thereof so a credit check may be performed prior to Auctioneer's acceptance of a bid. Check writing privileges and immediate delivery of merchandise may also be determined by pre-approval of credit based on a combination of criteria: HA.com history, related industry references, bank verification, a credit bureau report and/or a personal guarantee for a corporate or partnership entity in advance of the auction venue.

**Bidding Options:**

8. Bids in Signature® Auctions or Grand Format Auctions may be placed as set forth in the printed catalog section entitled "Choose your bidding method." For auctions held solely on the Internet, see the alternatives on HA.com. Review at HA.com/common/howtobid.php.
9. Presentment of Bids: Non-Internet bids (including but not limited to podium, fax, phone and mail bids) are treated similar to floor bids in that they must be on-increment or at a half increment (called a cut bid). Any podium, fax, phone, or mail bids that do not conform to a full or half increment will be rounded up or down to the nearest full or half increment and this revised amount will be considered your high bid.
10. Auctioneer's Execution of Certain Bids. Auctioneer cannot be responsible for your errors in bidding, so carefully check that every bid is entered correctly. When identical mail or FAX bids are submitted, preference is given to the first received. To ensure the greatest accuracy, your written bids should be entered on the standard printed bid sheet and be received at Auctioneer's place of business at least two business days before the Auction start. Auctioneer is not responsible for executing mail bids or FAX bids received on or after the day the first lot is sold, nor Internet bids submitted after the published closing time; nor is Auctioneer responsible for proper execution of bids submitted by telephone, mail, FAX, e-mail, Internet, or in person once the Auction begins. Bids placed electronically via the internet may not be withdrawn until your written request is received and acknowledged by Auctioneer (FAX: 214-443-8425); such requests must state the reason, and may constitute grounds for withdrawal of bidding privileges. Lots won by mail Bidders will not be delivered at the Auction unless prearranged.
11. Caveat as to Bid Increments. Bid increments (over the current bid level) determine the lowest amount you may bid on a particular lot. Bids greater than one increment over the current bid can be any whole dollar amount. It is possible under several circumstances for winning bids to be between increments, sometimes only $1 above the previous increment. Please see: "How can I lose by less than an increment?" on our website. Bids will be accepted in whole dollar amounts only. No "buy" or "unlimited" bids will be accepted.

    The following chart governs current bidding increments.

| Current Bid | Bid Increment | Current Bid | Bid Increment |
|---|---|---|---|
| <$10 | $1 | $20,000 - $29,999 | $2,000 |
| $10 - $29 | $2 | $30,000 - $49,999 | $2,500 |
| $30 - $49 | $3 | $50,000 - $99,999 | $5,000 |
| $50 - $99 | $5 | $100,000 - $199,999 | $10,000 |
| $100 - $199 | $10 | $200,000 - $299,999 | $20,000 |
| $200 - $299 | $20 | $300,000 - $499,999 | $25,000 |
| $300 - $499 | $25 | $500,000 - $999,999 | $50,000 |
| $500 - $999 | $50 | $1,000,000 - $1,999,999 | $100,000 |
| $1,000 - $1,999 | $100 | $2,000,000 - $2,999,999 | $200,000 |
| $2,000 - $2,999 | $200 | $3,000,000 - $4,999,999 | $250,000 |
| $3,000 - $4,999 | $250 | $5,000,000 - $9,999,999 | $500,000 |
| $5,000 - $9,999 | $500 | >$10,000,000 | $1,000,000 |
| $10,000 - $19,999 | $1,000 | | |

12. If Auctioneer calls for a full increment, a bidder may request Auctioneer to accept a bid at half of the increment ("Cut Bid") only once per lot. After offering a Cut Bid, bidders may continue to participate only at full increments. Off-increment bids may be accepted by the Auctioneer at Signature® Auctions and Grand Format Auctions. If the Auctioneer solicits bids other than the expected increment, these bids will not be considered Cut Bids.

**Conducting the Auction:**

13. Notice of the consignor's liberty to place bids on his lots in the Auction is hereby made in accordance with Article 2 of the Texas Business and Commercial Code. A "Minimum Bid" is an amount below which the lot will not sell. THE CONSIGNOR OF PROPERTY MAY PLACE WRITTEN "Minimum Bids" ON HIS LOTS IN ADVANCE OF THE AUCTION; ON SUCH LOTS, IF THE HAMMER PRICE DOES NOT MEET THE "Minimum Bid", THE CONSIGNOR MAY PAY A REDUCED COMMISSION ON THOSE LOTS. "Minimum Bids" are generally posted online several days prior to the Auction closing. For any successful bid placed by a consignor on his Property on the Auction floor, or by any means during the live session, or after the "Minimum Bid" for an Auction have been posted, we will require the consignor to pay full Buyer's Premium and Seller's Commissions on such lot.
14. The highest qualified Bidder recognized by the Auctioneer shall be the Buyer. In the event of a tie bid, the earliest bid received or recognized wins. In the event of any dispute between any Bidders at an Auction, Auctioneer may at his sole discretion reoffer the lot. Auctioneer's decision and declaration of the winning Bidder shall be final and binding upon all Bidders. Bids properly offered, whether by floor Bidder or other means of bidding, may on occasion be missed or go unrecognized; in such cases, the Auctioneer may declare the recognized bid accepted as the winning bid, regardless of whether a competing bid may have been higher.
15. Auctioneer reserves the right to refuse to honor any bid or to limit the amount of any bid, in its sole discretion. A bid is considered not made in "Good Faith" when made by an insolvent or irresponsible person, a person under the age of eighteen, or is not supported by satisfactory credit, collectibles references, or otherwise. Regardless of the disclosure of his identity, any bid by a consignor or his agent on a lot consigned by him is deemed to be made in "Good Faith." Any person apparently appearing on the OFAC list is not eligible to bid.
16. Nominal Bids. The Auctioneer in its sole discretion may reject nominal bids, small opening bids, or very nominal advances. If a lot bearing estimates fails to open for 40–60% of the low estimate, the Auctioneer may pass the item or may place a protective bid on behalf of the consignor.
17. Lots bearing bidding estimates shall open at Auctioneer's discretion (approximately 50%-60% of the low estimate). In the event that no bid meets or exceeds that opening amount, the lot shall pass as unsold.
18. All items are to be purchased per lot as numerically indicated and no lots will be broken. Auctioneer reserves the right to withdraw, prior to the close, any lots from the Auction.
19. Auctioneer reserves the right to rescind the sale in the event of nonpayment, breach of a warranty, disputed ownership, auctioneer's clerical error or omission in exercising bids and reserves, or for any other reason and in Auctioneer's sole discretion. In cases of nonpayment, Auctioneer's election to void a sale does not relieve the Bidder from their obligation to pay Auctioneer its fees (seller's and buyer's premium) and any other damages or expenses pertaining to the lot.
20. Auctioneer occasionally experiences Internet and/or Server service outages, and Auctioneer periodically schedules system downtime for maintenance and other purposes, during which Bidders cannot participate or place bids. If such outages occur, we may at our discretion extend bidding for the Auction. Bidders unable to place their Bids through the Internet are directed to contact Client Services at 1-800-872-6467.
21. The Auctioneer, its affiliates, or their employees consign items to be sold in the Auction, and may bid on those lots or any other lots. Auctioneer or affiliates expressly reserve the right to modify any such bids at any time prior to the hammer based upon data made known to the Auctioneer or its affiliates. The Auctioneer may extend advances, guarantees, or loans to certain consignors.
22. The Auctioneer has the right to sell certain unsold items after the close of the Auction. Such lots shall be considered sold during the Auction and all these Terms and Conditions shall apply to such sales including but not limited to the Buyer's Premium, return rights, and disclaimers.

**Payment:**

23. All sales are strictly for cash in United States dollars (including U.S. currency, bank wire, cashier checks, travelers checks, eChecks, and bank money orders, and are subject to all reporting requirements). All deliveries are subject to good funds; funds being received in Auctioneer's account before delivery of the Purchases; and all payments are subject to a clearing period. Auctioneer reserves the right to determine if a check constitutes "good funds": checks drawn on a U.S. bank are subject to a ten business day hold, and thirty days when drawn on an international bank. Clients with pre-arranged credit status may receive immediate credit for payments via eCheck, personal or corporate checks. All others will be subject to a hold of 5 days, or more, for the funds to clear prior to releasing merchandise. (ref. T&C item 7 Credit for additional information.) Payments can be made 24-48 hours post auction from the My Orders page of the HA.com website.
24. Payment is due upon closing of the Auction session, or upon presentment of an invoice. Auctioneer reserves the right to void an invoice if payment in full is not received within 7 days after the close of the Auction. In cases of nonpayment, Auctioneer's election to void a sale does not relieve the Bidder from their obligation to pay Auctioneer its fees (seller's and buyer's premium) on the lot and any other damages pertaining to the lot.
25. Lots delivered to you, or your representative in the States of Texas, California, New York, or other states where the Auction may be held, are subject to all applicable state and local taxes, unless appropriate permits are on file with Auctioneer. (Note: Coins are only subject to sales tax in California on invoices under $1500 and in Texas on invoices under $1000. Check the Web site at: http://coins.ha.com/c/ref/sales-tax.zx for more details.) Bidder agrees to pay Auctioneer the actual amount of tax due in the event that sales tax is not properly collected due to: 1) an expired, inaccurate, inappropriate tax certificate or declaration, 2) an incorrect interpretation of the applicable statute, 3) or any other reason. The appropriate form or certificate must be on file at and verified by Auctioneer five days prior to Auction or tax must be paid; only if such form or certificate is received by Auctioneer within 4 days after the Auction can a refund of tax paid be made. Lots from different Auctions may not be aggregated for sales tax purposes.
26. In the event that a Bidder's payment is dishonored upon presentment(s), Bidder shall pay the maximum statutory processing fee set by applicable state law. If you attempt to pay via eCheck and your financial institution denies this transfer from your bank account, or the payment cannot be completed using the selected funding source, you agree to complete payment using your credit card on file.
27. If any Auction invoice submitted by Auctioneer is not paid in full when due, the unpaid balance will bear interest at the highest rate permitted by law from the date of invoice until paid. Any invoice not paid when due will bear a three percent (3%) late fee on the invoice amount or three percent (3%) of any installment that is past due. If the Auctioneer refers any invoice to an attorney for collection, the buyer agrees to pay attorney's fees, court costs, and other collection costs incurred by Auctioneer. If Auctioneer assigns collection to its in-house legal staff, such attorney's time expended on the matter shall be compensated at a rate comparable to the hourly rate of independent attorneys.
28. In the event a successful Bidder fails to pay any amounts due, Auctioneer reserves the right to sell the lot(s) securing the invoice to any underbidders in the Auction that the lot(s) appeared, or at subsequent private or public sale, or relist the lot(s) in a future auction conducted by Auctioneer. A defaulting Bidder agrees to pay for the reasonable costs of resale (including a 10% seller's commission, if consigned to an auction conducted by Auctioneer). The defaulting Bidder is liable to pay any difference between his total original invoice for the lot(s), plus any applicable interest, and the net proceeds for the lot(s) if sold at private sale or the subsequent hammer price of the lot(s) less the 10% seller's commissions, if sold at an Auctioneer's auction.

# Terms and Conditions of Auction

29. Auctioneer reserves the right to require payment in full in good funds before delivery of the merchandise.
30. Auctioneer shall have a lien against the merchandise purchased by the buyer to secure payment of the Auction invoice. Auctioneer is further granted a lien and the right to retain possession of any other property of the buyer then held by the Auctioneer or its affiliates to secure payment of any Auction invoice or any other amounts due the Auctioneer or affiliates from the buyer. With respect to these lien rights, Auctioneer shall have all the rights of a secured creditor under Article 9 of the Texas Uniform Commercial Code, including but not limited to the right of sale. In addition, with respect to payment of the Auction invoice(s), the buyer waives any and all rights of offset he might otherwise have against the Auctioneer and the consignor of the merchandise included on the invoice. If a Bidder owes Auctioneer or its affiliates on any account, Auctioneer and its affiliates shall have the right to offset such unpaid account by any credit balance due Bidder, and it may secure by possessory lien any unpaid amount by any of the Bidder's property in their possession.
31. Title shall not pass to the successful Bidder until all invoices are paid in full. It is the responsibility of the buyer to provide adequate insurance coverage for the items once they have been delivered to a common carrier or third-party shipper.

**Delivery; Shipping; and Handling Charges:**

32. Buyer is liable for shipping and handling. Please refer to Auctioneer's website www.HA.com/common/shipping.php for the latest charges or call Auctioneer. Auctioneer is unable to combine purchases from other auctions or affiliates into one package for shipping purposes. Lots won will be shipped in a commercially reasonable time after payment in good funds for the merchandise and the shipping fees is received or credit extended, except when third-party shipment occurs.
33. Successful international Bidders shall provide written shipping instructions, including specified customs declarations, to the Auctioneer for any lots to be delivered outside of the United States. NOTE: Declaration value shall be the item'(s) hammer price together with its buyer's premium and Auctioneer shall use the correct harmonized code for the lot. Domestic Buyers on lots designated for third-party shipment must designate the common carrier, accept risk of loss, and prepay shipping costs.
34. All shipping charges will be borne by the successful Bidder. On all domestic shipments, any risk of loss during shipment will be borne by Heritage until the shipping carrier's confirmation of delivery to the address of record in Auctioneer's file (carrier's confirmation is conclusive to prove delivery to Bidder; if the client has a Signature release on file with the carrier, the package is considered delivered without Signature) or delivery by Heritage to Bidder's selected third-party shipper. On all foreign shipments, any risk of loss during shipment will be borne by the Bidder following Auctioneer's delivery to the Bidder's designated common carrier or third-party shipper.
35. Due to the nature of some items sold, it shall be the responsibility for the successful Bidder to arrange pick-up and shipping through third-parties; as to such items Auctioneer shall have no liability. Failure to pick-up or arrange shipping in a timely fashion (within ten days) shall subject Lots to storage and moving charges, including a $100 administration fee plus $10 daily storage for larger items and $5.00 daily for smaller items (storage fee per item) after 35 days. In the event the Lot is not removed within ninety days, the Lot may be offered for sale to recover any past due storage or moving fees, including a 10% Seller's Commission.
36. The laws of various countries regulate the import or export of certain plant and animal properties, including (but not limited to) items made of (or including) ivory, whalebone, turtle shell, coral, crocodile, or other wildlife. Transport of such lots may require special licenses for export, import, or both. Bidder is responsible for: 1) obtaining all information on such restricted items for both export and import; 2) obtaining all such licenses and/or permits. Delay or failure to obtain any such license or permit does not relieve the buyer of timely compliance with standard payment terms. For further information, please contact Ron Brackemyre at 800- 872-6467 ext. 1312.
37. Any request for shipping verification for undelivered packages must be made within 30 days of shipment by Auctioneer.

**Cataloging, Warranties and Disclaimers:**

38. NO WARRANTY, WHETHER EXPRESSED OR IMPLIED, IS MADE WITH RESPECT TO ANY DESCRIPTION CONTAINED IN THIS AUCTION OR ANY SECOND OPINE. Any description of the items or second opine contained in this Auction is for the sole purpose of identifying the items for those Bidders who do not have the opportunity to view the lots prior to bidding, and no description of items has been made part of the basis of the bargain or has created any express warranty that the goods would conform to any description made by Auctioneer. Color variations can be expected in any electronic or printed imaging, and are not grounds for the return of any lot. NOTE: Auctioneer, in specified auction venues, for example, Fine Art, may have express written warranties and you are referred to those specific terms and conditions. .
39. Auctioneer is selling only such right or title to the items being sold as Auctioneer may have by virtue of consignment agreements on the date of auction and disclaims any warranty of title to the Property. Auctioneer disclaims any warranty of merchantability or fitness for any particular purposes. All images, descriptions, sales data, and archival records are the exclusive property of Auctioneer, and may be used by Auctioneer for advertising, promotion, archival records, and any other uses deemed appropriate.
40. Translations of foreign language documents may be provided as a convenience to interested parties. Auctioneer makes no representation as to the accuracy of those translations and will not be held responsible for errors in bidding arising from inaccuracies in translation.
41. Auctioneer disclaims all liability for damages, consequential or otherwise, arising out of or in connection with the sale of any Property by Auctioneer to Bidder. No third party may rely on any benefit of these Terms and Conditions and any rights, if any, established hereunder are personal to the Bidder and may not be assigned. Any statement made by the Auctioneer is an opinion and does not constitute a warranty or representation. No employee of Auctioneer may alter these Terms and Conditions, and, unless signed by a principal of Auctioneer, any such alteration is null and void.
42. Auctioneer shall not be liable for breakage of glass or damage to frames (patent or latent); such defects, in any event, shall not be a basis for any claim for return or reduction in purchase price.

**Release:**

43. In consideration of participation in the Auction and the placing of a bid, Bidder expressly releases Auctioneer, its officers, directors and employees, its affiliates, and its outside experts that provide second opines, from any and all claims, cause of action, chose of action, whether at law or equity or any arbitration or mediation rights existing under the rules of any professional society or affiliation based upon the assigned description, or a derivative theory, breach of warranty express or implied, representation or other matter set forth within these Terms and Conditions of Auction or otherwise. In the event of a claim, Bidder agrees that such rights and privileges conferred therein are strictly construed as specifically declared herein; e.g., authenticity, typographical error, etc. and are the exclusive remedy. Bidder, by non-compliance to these express terms of a granted remedy, shall waive any claim against Auctioneer.
44. Notice: Some Property sold by Auctioneer are inherently dangerous e.g. firearms, cannons, and small items that may be swallowed or ingested or may have latent defects all of which may cause harm to a person. Purchaser accepts all risk of loss or damage from its purchase of these items and Auctioneer disclaims any liability whether under contract or tort for damages and losses, direct or inconsequential, and expressly disclaims any warranty as to safety or usage of any lot sold.

**Dispute Resolution and Arbitration Provision:**

45. By placing a bid or otherwise participating in the auction, Bidder accepts these Terms and Conditions of Auction, and specifically agrees to the dispute resolution provided herein. Consumer disputes shall be resolved through court litigation which has an exclusive Dallas, Texas venue clause and jury waiver. Non-consumer dispute shall be determined in binding arbitration which arbitration replaces the right to go to court, including the right to a jury trial.
46. Auctioneer in no event shall be responsible for consequential damages, incidental damages, compensatory damages, or any other damages arising or claimed to be arising from the auction of any lot. In the event that Auctioneer cannot deliver the lot or subsequently it is established that the lot lacks title, or other transfer or condition issue is claimed, in such cases the sole remedy shall be limited to rescission of sale and refund of the amount paid by Bidder; in no case shall Auctioneer's maximum liability exceed the high bid on that lot, which bid shall be deemed for all purposes the value of the lot. After one year has elapsed, Auctioneer's maximum liability shall be limited to any commissions and fees Auctioneer earned on that lot.
47. In the event of an attribution error, Auctioneer may at its sole discretion, correct the error on the Internet, or, if discovered at a later date, to refund the buyer's purchase price without further obligation.
48. Dispute Resolution for Consumers and Non-Consumers: Any claim, dispute, or controversy in connection with, relating to and /or arising out of the Auction, participation in the Auction, award of lots, damages of claims to lots, descriptions, condition reports, provenance, estimates, return and warranty rights, any interpretation of these Terms and Conditions, any alleged verbal modification of these Terms and Conditions and/or any purported settlement whether asserted in contract, tort, under Federal or State statute or regulation shall or any other matter: a) if presented by a consumer, be exclusively heard by, and the parties consent to, exclusive in personam jurisdiction in the State District Courts of Dallas County, Texas. THE PARTIES EXPRESSLY WAIVE ANY RIGHT TO TRIAL BY JURY. Any appeals shall be solely pursued in the appellate courts of the State of Texas; or b) for any claimant other than a consumer, the claim shall be presented in confidential binding arbitration before a single arbitrator, that the parties may agree upon, selected from the JAMS list of Texas arbitrators. The case is not to be administrated by JAMS; however, if the parties cannot agree on an arbitrator, then JAMS shall appoint the arbitrator and it shall be conducted under JAMS rules. The locale shall be Dallas Texas. The arbitrator's award may be enforced in any court of competent jurisdiction. Any party on any claim involving the purchase or sale of numismatic or related items may elect arbitration through binding PNG arbitration. Any claim must be brought within one (1) year of the alleged breach, default or misrepresentation or the claim is waived. This agreement and any claims shall be determined and construed under Texas law. The prevailing party (party that is awarded substantial and material relief on its claim or defense) may be awarded its reasonable attorneys' fees and costs.
49. No claims of any kind can be considered after the settlements have been made with the consignors. Any dispute after the settlement date is strictly between the Bidder and consignor without involvement or responsibility of the Auctioneer.
50. In consideration of their participation in or application for the Auction, a person or entity (whether the successful Bidder, a Bidder, a purchaser and/or other Auction participant or registrant) agrees that all disputes in any way relating to, arising under, connected with, or incidental to these Terms and Conditions and purchases, or default in payment thereof, shall be arbitrated pursuant to the arbitration provision. In the event that any matter including actions to compel arbitration, construe the agreement, actions in aid or arbitration or otherwise needs to be litigated, such litigation shall be exclusively in the Courts of the State of Texas, in Dallas County, Texas, and if necessary the corresponding appellate courts. For such actions, the successful Bidder, purchaser, or Auction participant also expressly submits himself to the personal jurisdiction of the State of Texas.
51. These Terms & Conditions provide specific remedies for occurrences in the auction and delivery process. Where such remedies are afforded, they shall be interpreted strictly. Bidder agrees that any claim shall utilize such remedies; Bidder making a claim in excess of those remedies provided in these Terms and Conditions agrees that in no case whatsoever shall Auctioneer's maximum liability exceed the high bid on that lot, which bid shall be deemed for all purposes the value of the lot.

**Miscellaneous:**

52. Agreements between Bidders and consignors to effectuate a non-sale of an item at Auction, inhibit bidding on a consigned item to enter into a private sale agreement for said item, or to utilize the Auctioneer's Auction to obtain sales for non-selling consigned items subsequent to the Auction, are strictly prohibited. If a subsequent sale of a previously consigned item occurs in violation of this provision, Auctioneer reserves the right to charge Bidder the applicable Buyer's Premium and consignor a Seller's Commission as determined for each auction venue and by the terms of the seller's agreement.
53. Acceptance of these Terms and Conditions qualifies Bidder as a client who has consented to be contacted by Heritage in the future. In conformity with "do-not-call" regulations promulgated by the Federal or State regulatory agencies, participation by the Bidder is affirmative consent to being contacted at the phone number shown in his application and this consent shall remain in effect until it is revoked in writing. Heritage may from time to time contact Bidder concerning sale, purchase, and auction opportunities available through Heritage and its affiliates and subsidiaries.
54. Rules of Construction: Auctioneer presents properties in a number of collectible fields, and as such, specific venues have promulgated supplemental Terms and Conditions. Nothing herein shall be construed to waive the general Terms and Conditions of Auction by these additional rules and shall be construed to give force and effect to the rules in their entirety.

**State Notices:**

Notice as to an Auction in California. Auctioneer has in compliance with Title 2.95 of the California Civil Code as amended October 11, 1993 Sec. 1812.600, posted with the California Secretary of State its bonds for it and its employees, and the auction is being conducted in compliance with Sec. 2338 of the Commercial Code and Sec. 535 of the Penal Code.

Notice as to an Auction in New York City. These Terms and Conditions of Sale are designed to conform to the applicable sections of the New York City Department of Consumer Affairs Rules and Regulations as Amended. This sale is a Public Auction Sale conducted by Heritage Auctioneers & Galleries, Inc. # 41513036. The New York City licensed auctioneers are: Sam Foose, #095260; Kathleen Guzman, #0762165; Nicholas Dawes, #1304724; Ed Beardsley, #1183220; Scott Peterson, #1306933; Andrea Voss, #1320558, who will conduct the Sale on behalf of itself and Heritage Numismatic Auctions, Inc. (for Coins) and Currency Auctions of America, Inc. (for currency). All lots are subject to: the consignor's rights to bid thereon in accord with these Terms and Conditions of Sale, consignor's option to receive advances on their consignments, and Auctioneer, in its sole discretion, may offer limited extended financing to registered bidders, in accord with Auctioneer's internal credit standards. A registered bidder may inquire whether a lot is subject to an advance or a reserve. Auctioneer has made advances to various consignors in this sale. On lots bearing an estimate, the term refers to a value range placed on an item by the Auctioneer in its sole opinion but the final price is determined by the bidders.

Notice as to an Auction in Texas. In compliance with TDLR rule 67.100(c)(1), notice is hereby provided that this auction is covered by a Recovery Fund administered by the Texas Department of Licensing and Regulation, P.O. Box 12157, Austin, Texas 78711 (512) 463-6599. Any complaints may be directed to the same address.

Notice as to an Auction in Ohio: Auction firm and Auctioneer are licensed by the Dept. of Agriculture, and either the licensee is bonded in favor of the state or an aggrieved person may initiate a claim against the auction recovery fund created in Section 4707.25 of the Revised Code as a result of the licensee's actions, whichever is applicable.

# Terms and Conditions of Auction

## Additional Terms & Conditions: COINS & CURRENCY

COINS and CURRENCY TERM A: Signature® Auctions are not on approval. No certified material may be returned because of possible differences of opinion with respect to the grade offered by any third-party organization, dealer, or service. No guarantee of grade is offered for uncertified Property sold and subsequently submitted to a third-party grading service. There are absolutely no exceptions to this policy. Under extremely limited circumstances, (e.g. gross cataloging error) a purchaser, who did not bid from the floor, may request Auctioneer to evaluate voiding a sale: such request must be made in writing detailing the alleged gross error; submission of the lot to the Auctioneer must be pre-approved by the Auctioneer; and bidder must notify Ron Brackemyre (1-800-8726467 Ext. 1312) in writing of such request within three (3) days of the non-floor bidder's receipt of the lot. Any lot that is to be evaluated must be in our offices within 30 days after Auction. Grading or method of manufacture do not qualify for this evaluation process nor do such complaints constitute a basis to challenge the authenticity of a lot. AFTER THAT 30-DAY PERIOD, NO LOTS MAY BE RETURNED FOR REASONS OTHER THAN AUTHENTICITY. Lots returned must be housed intact in their original holder. No lots purchased by floor Bidders may be returned (including those Bidders acting as agents for others) except for authenticity. Late remittance for purchases may be considered just cause to revoke all return privileges.

COINS and CURRENCY TERM B: Auctions conducted solely on the Internet THREE (3) DAY RETURN POLICY: Certified Coin and Uncertified and Certified Currency lots paid for within seven days of the Auction closing are sold with a three (3) day return privilege unless otherwise noted in the description as "Sold As Is, No Return Lot". You may return lots under the following conditions: Within three days of receipt of the lot, you must first notify Auctioneer by contacting Client Service by phone (1-800-872-6467) or e-mail (Bid@HA.com), and immediately ship the lot(s) fully insured to the attention of Returns, Heritage, 3500 Maple Avenue, 17th Floor, Dallas TX 75219-3941. Lots must be housed intact in their original holder and condition. You are responsible for the insured, safe delivery of any lots. A non-negotiable return fee of 5% of the purchase price ($10 per lot minimum) will be deducted from the refund for each returned lot or billed directly. Postage and handling fees are not refunded. After the three-day period (from receipt), no items may be returned for any reason. Late remittance for purchases revokes these Return privileges.

COINS and CURRENCY TERM C: Bidders who have inspected the lots prior to any Auction, or attended the Auction, or bid through an Agent, will not be granted any return privileges, except for reasons of authenticity.

COINS and CURRENCY TERM D: Coins sold referencing a third-party grading service are sold "as is" without any express or implied warranty, except for a guarantee by Auctioneer that they are genuine. Certain warranties may be available from the grading services and the Bidder is referred to them for further details: Numismatic Guaranty Corporation (NGC), P.O. Box 4776, Sarasota, FL 34230; Professional Coin Grading Service (PCGS), PO Box 9458, Newport Beach, CA 92658; ANACS, 6555 S. Kenton St. Ste. 303, Englewood, CO 80111; and Independent Coin Grading Co. (ICG), 7901 East Belleview Ave., Suite 50, Englewood, CO 80111.

COINS and CURRENCY TERM E: Notes sold referencing a third-party grading service are sold "as is" without any express or implied warranty, except for guarantee by Auctioneer that they are genuine. Grading, condition or other attributes of any lot may have a material effect on its value, and the opinion of others, including third-party grading services such as PCGS Currency, PMG, and CGA may differ with that of Auctioneer. Auctioneer shall not be bound by any prior or subsequent opinion, determination, or certification by any grading service. Bidder specifically waives any claim to right of return of any item because of the opinion, determination, or certification, or lack thereof, by any grading service. Certain warranties may be available from the grading services and the Bidder is referred to them for further details: Paper Money Guaranty (PMG), PO Box 4711, Sarasota FL 34230; PCGS Currency, PO Box 9458, Newport Beach, CA 92658; Currency Grading & Authentication (CGA), PO Box 418, Three Bridges, NJ 08887. Third party graded notes are not returnable for any reason whatsoever.

COINS and CURRENCY TERM F: Since we cannot examine encapsulated coins or notes, they are sold "as is" without our grading opinion, and may not be returned for any reason. Auctioneer shall not be liable for any patent or latent defect or controversy pertaining to or arising from any encapsulated collectible. In any such instance, purchaser's remedy, if any, shall be solely against the service certifying the collectible.

COINS and CURRENCY TERM G: Due to changing grading standards over time, differing interpretations, and to possible mishandling of items by subsequent owners, Auctioneer reserves the right to grade items differently than shown on certificates from any grading service that accompany the items. Auctioneer also reserves the right to grade items differently than the grades shown in the prior catalog should such items be reconsigned to any future auction.

COINS and CURRENCY TERM H: Although consensus grading is employed by most grading services, it should be noted as aforesaid that grading is not an exact science. In fact, it is entirely possible that if a lot is broken out of a plastic holder and resubmitted to another grading service or even to the same service, the lot could come back with a different grade assigned.

COINS and CURRENCY TERM I: Certification does not guarantee protection against the normal risks associated with potentially volatile markets. The degree of liquidity for certified coins and collectibles will vary according to general market conditions and the particular lot involved. For some lots there may be no active market at all at certain points in time.

COINS and CURRENCY TERM J: All non-certified coins and currency are guaranteed genuine, but are not guaranteed as to grade, since grading is a matter of opinion, an art and not a science, and therefore the opinion rendered by the Auctioneer or any third party grading service may not agree with the opinion of others (including trained experts), and the same expert may not grade the same item with the same grade at two different times. Auctioneer has graded the non-certified numismatic items, in the Auctioneer's opinion, to their current interpretation of the American Numismatic Association's standards as of the date the catalog was prepared. There is no guarantee or warranty implied or expressed that the grading standards utilized by the Auctioneer will meet the standards of any grading service at any time in the future.

COINS and CURRENCY TERM K: Storage of purchased coins and currency: Purchasers are advised that certain types of plastic may react with a coin's metal or transfer plasticizer to notes and may cause damage. Caution should be used to avoid storage in materials that are not inert.

COINS and CURRENCY TERM L: Storage of purchased coins and currency: Purchasers are advised that certain types of plastic may react with a coin's metal or transfer plasticizer to notes and may cause damage. Caution should be used to avoid storage in materials that are not inert.

COINS and CURRENCY TERM M: NOTE: Purchasers of rare coins or currency through Heritage have available the option of arbitration by the Professional Numismatists Guild (PNG); if an election is not made within ten (10) days of an unresolved dispute, Auctioneer may elect either PNG or A.A.A. Arbitration.

COINS and CURRENCY TERM N: For more information regarding Canadian lots attributed to the Charlton reference guides, please contact: Charlton International, PO Box 820, Station Willowdale B, North York, Ontario M2K 2R1 Canada.

COINS and CURRENCY TERM O: Some of the lots offered herein have been assigned to 1031 Services, Inc. for the purpose of consignor's tax deferred exchange.
